The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## SIGNS OF THE SEASON.

THE early warnings of approaching autumn are upon us. Already, a month ago, the tops of the chestnut trees had begun to be patched with masses of long feathery filaments, shining white against the dark green leaves. Slowly the clusters of whiteness yellowed and turned brown, and when their work was done they fell to earth to carpet the green grass with slender shriveled stems. Now on the tips of the great trees' twigs hang the tiny rough balls, which, after nature shall have completed the changes, wrought by her mysterious alchemy, will, at the coming of the early frosts, open their prickly fingers and shower down on the withering grass the shining nuts, dearest to the vagrant small boy and the hungry squirrel, but valued also by nutters of larger size.

The fall of the chestnut blossoms is no great event in nature, but it is full of suggestion. No sudden change follows it, for a time. The weather is only a little hotter, the air only a little more lifeless, the dust in the roads a little deeper and drier, the leaves of the trees a little duller and dirtier. But we know that a change is going on. The half-hour of the year has struck. Since mid-winter all the wonderful forces of nature, those mysterious old but ever new processes which have been working under our eyes, have been tending toward life, growth, increase. The long hand has been moving away from the twelve. But with the falling of the chestnut blossoms begins that other opposite change, not less beautiful when rightly seen and not less important in the economy of nature, which we call maturity, death, decay; and when we see the chestnut blossoms falling we are reminded that soon the ripened chestnuts and the ripened leaves of the year will fall together, and return to the earth which gave them birth.

As we sit out of doors in the evening, longing for some movement in the heavy air, we hear now-a-days the cheerful trill of the cricket, who, standing at the door of his home, keeps up his monotonous cadence all through the night. He is good company for the tired man, and though shrill, his voice has power to soothe. He may seem to be within a foot or two of where we sit, yet it is not easy to place him. Though he ventures close to us, the cricket is shy, and at the least alarm he is silent, and at a movement he vanishes backward into his hole. Now, too, begins nightly the drowsy undertone of some dweller in the treetops, sounding as a faint distant bass to the cricket's high pitched treble; and we begin to hear the sharp rattle of the locust—quaintly marked according to boyish legend for St. John the Baptist, or dreadful threatener of wars to be declared during the coming year—and as the scorching days go by, the children will bring us dead ones, and insist on knowing what they are and all about them. Only a little time will pass before we hear the voices of the earliest katydids, at first only sleepy

mutterings, confidentially exchanged between a few speakers who are far apart, but later rising to a shrill chorus from the contentious multitude who with angry contradiction give each other the lie all through the lengthening night. Six weeks before the first frost, we are told, the first katydids are heard—and the time for them is almost here.

In the ways of the birds we now begin to see another sign of the passing of the year. The mellow voice of the robin sounds but seldom, and rarely in the twilight do we catch the liquid note of the belated woodthrush. Most of the birds have finished their nesting and turned their broods adrift, though families of spotted-vested robins as large as their parents may still be seen on the lawn tagging about after an industrious mother, too tender-hearted to force her lazy offspring to forage for themselves. The melancholy call of the rain-crow may yet be heard as she tends her tardy brood, and sometimes the turtle-dove complaining from the edge of the wood, and nightly the quivering cry of the little screech owl. But most bird songs are silent now, for the birds are resting and beginning to renew their plumage for their coming journey.

And now along the seashore sands, or above the wide salt marshes, or over the pastures where the cattle feed, the swallows are gathering by thousands. All day long they play about, swinging here and there in wide circles, now high in air, then low along the ground, sometimes sweeping close to the resting cows or again disappearing in the cloudless blue. Already they have begun to gather on the telegraph wires and twitter and chatter to one another, and in little companies to take short flights into the air. The annual swallow parliament is being held. Not all are there, but of barn and cliff and bank swallows there is a full contingent, and there are some rough-wings and tree swallows. The chimney swifts are absent. After all have come, speeches are made, ways and means discussed, and soon a decision is reached. The company flies away to the south, not to return for nearly nine months.

Now the few ducks that breed with us are leading their broods to the best feeding grounds, and the young are getting strong and their feathers cover them. A few beach birds are seen along the shore. Close-flying flocks of blackbirds shoot across the wet meadows, bobolinks that have laid aside their gorgeous springtime livery of buff, black and white, and become now simple reedbirds, modestly colored like the ripened grass, swing on the stems of the rushes and call to each other in unmusical notes. The blossoms are showing on the stalks of the wild rice, and the filling heads begin to nod. The flags in the marshes have attained their growth, and the stiff brown cat-tail spikes—their flowers—show above the green masses of ribbons yielding before the passing breeze. Soon the rail will be in season. It is almost time to get out the gun.

## THE ADIRONDACK DEER SEASON.

THE present law defining the period for hunting deer in the Adirondacks opens the season on Aug. 15. This date was then fit to be hunted, or that at that time might be hunted in a decent way. Aug. 15 was selected because the personal convenience of a handful of individuals demanded it; and this handful had enough influence to make their demand heard. Besides these individuals, there were some fishermen, going into camp in August, who hungered for venison, and claimed the privilege of killing it for camp supply; and some hotel keepers, who vociferously declaimed that without August deer killing their business would go to the bow-vows.

In a communication printed the other day it was stated that the law has not given satisfaction to Adirondack deer hunters, the great majority of whom would favor a change. Those opposed to August deer hunting are resident sportsmen and guides, and many of the hotel keepers. It is probable that a canvass to determine local feeling would show a sentiment strongly in support of changing the beginning of the season to a later date.

Such a change would work no hardship anywhere. With the improved transportation facilities of the present, trout fishermen may supply themselves with provisions without killing August venison; and for that matter, there is no more reason for giving the fishermen August deer

hunting than for giving them July and June hunting as well. The deer season should be fixed for the benefit of deer hunters, not of trout fishermen. Nor would the hotel-keepers lose anything by the change. For the patronage of such August guests as visit the woods purely for the purpose of deer hunting, they would have full compensation in the patronage of other sportsmen who would visit the woods later in the year. The communication alluded to represented the hotel men as now being in favor of a later date.

The Adirondack deer question long ago ceased to be a consideration of game protection proper or of sportsmanship proper. It has been made a question of the personal interests of individuals and classes. These considerations will rule. The hunting season will always be determined by them. We would like an expression of opinion, then, on the part of those who may be interested in the deer of the Adirondacks, as to what season would best serve their interests.

## SNAP SHOTS.

THE work of the Anglers' Association of the St. Lawrence River is an object lesson of what may be accomplished in a practical way to protect the fishing for public advantage. The Association began its work at a time when there was much prejudice to be overcome among certain classes of dwellers in the vicinity. Not the least noteworthy among its achievements has been the education of large numbers of its opponents, and their conversion to a hearty support of the work. The Association has worked hand in hand with the local district protector, and the result has been just what has rewarded such a course everywhere.

What is the rule about shooting into wildfowl sitting on the water? There are two schools of partridge or grouse shooters, one which maintains that it is sportsman-like only to shoot the bird on the wing, and one which goes in for potting it on a limb. All are agreed that quail may not be shot on the ground. What is the principle, and what is the practice, with respect to ducks? There are professors of sportsmanship, those who set up to give instruction, guidance and counsel in the art, who write books for the benefit of the novice, and who tell us that a duck is a lawful target whenever and wherever and however it may be covered. In a company of ten duck shooters, how many would subscribe to such a ruling?

A citizen of Newark, N. J., who has refused to comply with the ordinance which requires him to pay a \$5 license fee for a terrier, bases his refusal on the contention that the tax is unconstitutional; and he has obtained from the Supreme Court a writ to carry the new law to that body for review. Prevailing systems of dog taxing, licensing, impounding and destruction, are the gradual outgrowth of loose legislation; and there is hardly room for doubt that some of their requirements and practices would not stand the test of the higher courts. The dog license laws are enforced year after year chiefly because the average person prefers to pay the fee or the fine, however considerable it may be, and so to have done with it, rather than to vex himself with a fight about it in the courts.

The chained-to-business philosopher, who makes the best of it, by perusing the fishing columns of FOREST AND STREAM, may find here in these days a store of reading, for the equal of which in extent, variety and quality one might search the world in vain. The fact is that the FOREST AND STREAM gives an amount of material weekly in its several departments which has no equal; it is not only the largest journal of its class in America but the largest printed anywhere.

Mr. Armin Tenner's proposal to establish a proof house for the testing of guns is likely to be well received. Such an institution would prove of decided advantage to individual shooters by determining the most effective charges for their guns.

At the Izaak Walton celebration at Niagara-on-the-Lake, last Wednesday, there was a go-as-you-please competition in fish stories. Had the Keekoskee fish story man been there he would have been first, with no second.

The vivacious and original "O. O. S." appears to be laboring under the delusion that this is a journal of food and feeding.

## The Sportsman Tourist.

### DANVIS FOLKS.—XI.

#### Hasty Puddin'.

DESERTION by its men folks had not brought complete quiet to the Lovel homestead, any more than to others that day similarly deserted in Danvis, for the women's tongues enjoyed unrestrained freedom to wag at will.

Aunt Jerusha fully realized the privilege, when, after stooping at the shop window to watch her husband's slow progress across the fields, she re-entered the kitchen, and seating herself restfully in her favorite chair, she took out her snuffbox and regaled herself with a long-inhaled pinch of the fragrant powder, to which she in turn invited each nostril with impartial twists of her mouth from side to side. When she had returned the box to the deep pocket and fumbled forth her coppers-checked, homespun handkerchief, she settled back in her chair and made declaration:

"I will say, Huldah, twixt you an' me an' the whippin' pos', 'at it's a raal comfort onct in a while tu be clean red o' men folks. Not tu say but what I set store by well-behaved men folks sech as aourn be, an' consider 'em a necessary blessin', but you du git cly'd o' the best o' things arter tew long spells."

Huldah picked up the baby from the floor, seated him on her lap, wiped his chubby cheeks with a moistened corner of her apron, and kissed them with long inhalations of their subtle fragrance that only a mother can catch, before she answered.

"I spect 'at th' was a time when you couldn't hev tew much of Uncle Lisher, an' begun to hanker arter him the minute he was out of sight."

The russet of the wrinkled cheeks was tinged with a faint blush, that kindled a responsive glow in Huldah's conscious face, and both laughed an acknowledgment of the touch of nature that makes youth and age akin.

"I haint denyin' young folks's foolishness, but that don't signify. What I du say is, 'at when folks gets settled daown tu the tussle o' livin' there be times when it's restin' tu hev men folks aouten the way. Women wants a chance tu talk about consarns, an' argy their own way. Somehaow men can't argy, but keep a-givin' their reasons an' their whys an' wherefores. Women know a thing is so, an' jest steck tu it, an' thet's argyin' 'at gin'allly fetches men around er shets 'em up, which answers the puppus."

"Yes," Huldah concluded, as she trotted her boy at arm's length and looked at him in absorbed admiration, "I s'pose the common run o' men folks is sot an' onreasonable, but it doesn't seem 's'ough Sam was, on'y meebby a leetle grain 'baout goin' huntin' an' sech."

"Wal, I can't say 'at father is nuther, not in a gin'ral way, ner yet yer father Lovel. Semantha argyed him aouten that. But all men folks ain't like aourn, an' I like tu get shet of even them onct in a while, an' have a raal ri' daown women's talk. I do know as I enjy'd it much wi' George's wife, 'cause she was everlastingly blamin' George, which went again my gizzard; for if there ever was a commerdatin', clever man, George is, if he is my son, an' she'd orter know it. But with you, Huldah, I enj'y talkin'." So they fell into comforting discourse, which continued till Huldah became aware that the fire was burning low, and a glance at the clock apprised her that it was drawing toward noon.

"My sakes," she cried, hastily setting the baby on the floor and rising with the same movement, "ef it haint jest warnin' fer 'leven an' I haint done a stroke 'baout dinner."

"Wal, Huldah, it don't signify. Le's don't git a reg'lar dinner, but jest make us a cup o' tea an' hev a col' bite; thet's haint no men folks tu be p'tic'lar."

"I tell ye what," said Huldah, moved with a sudden inspiration, "le's hev some hasty puddin'." I ben hankerin' arter some this ever so long, but Sam says it's dog-robbin' an' father Lovel he don't like it. You like it, don't you?"

"Good land, I guess I du. Thet's haint no hulsomer ner cleaner-tasted victuals, ner cheaper ner easier got. Lisher likes it, tu, but he says it don't stay by him none, an' ef he's goin' tu eat puddin' an' milk fer supper he wants tu ondress him fust an' sit on the aidge o' the bed an' swaller as quick as he can an' then tumble in and go tu sleep afore he gets hungry. My land, these ere apples is a dryin' complete," as she ran her hand along the tawny festoons and critically pinched some of the lower quarters, "they feel real luthery a'ready. Be you goin' tu sell 'em tu Clapham er trade 'em off tu peddlers? I s'pose you can't git cash nary way."

"They say they pay cash for 'em tu V'gennes an' I'm goin' tu coax Sam tu take 'em down there when he sells his fur," Huldah said, amid the clatter of setting the kettle of wa'er on the stove.

"Wal, so I would, thet's haint no sense in lettin' Clapham er peddlers makin' tew profits on sech barter. Du you wet up your meal in col' water fust er stir it right in when the water biles?"

"Oh, I stir it right int' the kettle as soon as it biles," said Huldah, bringing the pudding stick and the basin of meal, "an' I salt it well when it's about as thick as gruel."

"So du I," and the old woman nodded emphatic approval of the dry meal method. "It's more partic'lar work and there's more danger of it's bein' lumpy; but it needn't be if you're keerful tu sprinkle in slow an' keep a-stirrin' the same way all the time. I think it's tastier made so. Old ways is best ways as a gin'ral thing. But law sakes, I du despise lumpy puddin'." Crumbles o' dry meal breakin' up in your maouth an' chokin' you when you're expectin' nourishment!"

She critically watched Huldah as she sifted the meal into the seething kettle with one hand and stirred it with rapid turns of the other, while the wholesome fragrance of the boiled meal and the parching of the few grains scattered on the stove began to diffuse itself through the room. Then when the stick was lifted and dripped its burden in an even stream, her face relaxed to an expression of satisfaction.

"It's as smooth as 'lasses, Huldah. Naow be you goin' tu make a lawful puddin'?"

"I never heard about no law fer puddin'."

"Wal, there was in Connect'cut in an airly day. Yesee most ev'rybody 'at was anyways forehanded, useter hev printice boys an' gals bound tu 'em till they come of age, an' some on 'em useter keep thet printices on hasty puddin', an' made it so thin 'at it wan't much more 'n gruel

an' starved the poor creatures so 't they wouldn't sca'ce'ly make a shadder; an' so the Leegislatur passed a law 'at they got tu make hasty puddin' so thick 'at the puddin' stick 'ould stan' right up in the middle of the kittle. But I'd rather not have it quite so thick fer me tu eat bein' 'at I haint a printice gal. You've got it thick 'nough. Naow set it on the back o' the stove an' let it blubber a spell. Oh, hum suzzy day! Heow that blubberin' kittle o' b'ilin' hot puddin' does kerry me back tu ol' times, when the bear come right int' the haouse an' tipped over aour kettle o' puddin'. Didn't I ever tell ye on't? Wal, 'twas when I was a gal an' we lived in a lawg haouse, an' father an' mother 'd gone off tu see a sick neighbor an' left us younguns tu keep haouse. But we let the haouse keep itself pooty much, an' hed high jinks till it got tu be 'long in the arternoon, an' the children begin tu git hungry, an' I sot tu an' made a kittle o' puddin' fer 'em. Wal, I'd took it off 'n the trammel an' sot it on the hairth tu cool, an' the children was stan'in' around wi' th' maouths a-waterin' an' the wooden bowls an' pewter spoons in the hands when I ketched a glimpse of a shadder tu the open door, an' lookin' round what did I see but a gret, monst'ous bear a-lookin' in at us. My, if I didn't hustle them younguns up the ladder int' the chamber an' I up arter 'em an' pulled the ladder up arter, quicker'n scat. We c'ld hear the critter's claws clicken' along the floor towards the fireplace, an' when we got over bein' scairt a leetle, we peeked daown through the cracks an' seen him go up tu the kittle an' smell on't. Then he poked his nose in an' lapped a mou'ful, an' he kinder squealed aout an' lapped his chops. He made at it agin an' got burnt agin, an' that made him mad an' he hit the kittle a whack 'at sent it clean across the floor an' sent the puddin' flyin' fer it wan't lawful puddin' an' he got some on'tu his feet, an' of course, it scalt him, an' you'd orter seen that creetur dance around an' whine an' suck his paws, julluk a boy wi' his finger pinched, an' we lay there an' snickered. He got a taste o' the puddin' an' took a sensible view o' the case, an' sot tu an' eat up ev'y smitch on 't an' arter awhile went a-shoolin' off. We lost aour puddin' but we callated we hed fun 'nough tu pay for't. Ho, hum! Folks was thankful tu git hasty puddin' an' samp them times. Father an' mother come here jest afore the 'Sca'ce Year' when lots o' folks hed tu bile beech an' basswood leaves tu live on. Aour folks hed one caow 'at they fed on browse 'nough tu keep her givin' a leetle mess o' milk, an' father 'd ketch traout an' minnies an' mother 'd kinder stew 'em in the milk an' they kep' soul an' body together on sech livin' till things took a turn. More'n onct next winter father went forty miled on his snowshoes tu git a bushel o' Injin meal an' left mother an' my oldest brother, not so of as bubbly here, wi' the wolves a haowlin' all around the lawg haouse. I wonder 'f aour men folks will git that aire wolf. Haow Gran'ther Hill will tew 'cause he can't go. Course they won't let him, but I don't wante be in M'rier's shoes this day. In course I'll draw up," and Aunt Jerusha hitched her rocking chair to the table and tasted her first mouthful of pudding and maple sugar, and still continued to discourse of the old pioneer days.

"Folks was glad an' thankful tu git hasty puddin' an' milk an' johnny cake in them times, er even no-cake. You never hearn o' no-cake? Wal, that was parched corn paounded up in a mortar an' eat wi' milk ef they hed it, an' ef they hedn't, jest mixed up wi' water. They larnt that of the Injins, an' they loved it 'ould stan' by a man longer 'n any other Injin corn fixin's. Then they uster make samp in the Plumpin' mill, big mortars they was, 'at went wi' a spring pole, an' they'd change off ontu samp when they got sick o' no-cake. Hasty puddin' an' johnny cake they couldn't hev, 'thout gittin' the corn graound tu a reg'lar mill, an' them was meebby forty miled off. Bimeby they got tu raisin' wheat, an' then some folks begin tu stick up thet noses at Injin. But aour folks didn't 'cause they come f'm Rho' Dislan' an' allers sot gret store by all sorts o' Injin victuals. Father allers would hev his johnny cake fer breakfus' an' hev it baked on a board, long arter they hed 'em a stove. You never eat a johnny cake baked on a board? You don't say. Wal, then, you do know what johnny cake is, Huldah. Haow did they make 'em? Wal, jest stirred up the meal wi' b'ilin' water an' salt not tew thick ner tew thin, an' then spread it ontu a oak board 'at was made a puppus an' sot it up afore the fire, tilted a leetle mite at fust agin a flat iron, an' kep' a-settin' it up stretter an' stretter till that side was done an' then turn it over an' bake t'other side an' all the time keep a-bastin' on 't wi' sweet cream an' then eat it an' be thankful 't the Lord made Injin corn tu grow an' give his creeturs the knowledge tu use it proper. But as I was sayin', thet's was folks 'at got 'shamed o' eatin' Injin, 'cause onct they'd ben obleeged tu, an' they just turned thet backs on thet o' friend, they was so much beholden tu jest as folks allers has, an' will. Thet's folks here now 'at won't tech Injin. They say Cap'n Peck hes got some three-pronged forks, an' they're jest a-starvin' 'emselves tryin' tu eat their victuals wi' 'em, but I d' know. Haow father did uster laugh," she continued meditatively, stirring the maple syrup into her saucer of pudding, "a-tellin' 'baout onct when he went intu a neighbor's, an' they sot tu the table eatin' breakfus', an' he seen the wome'n ketch up suthin' an' hide it under her apron. Of course they ast him tu set by, an' he did, for all he'd jest eat, an' fust thing arter he'd set daown, he says, 'Molly Hackstaff, take that aire johnny cake outen your apron, fer I want some,' an' she did. Most o' folks hes got over sech foolishness, but there's some 'at haint an' denies 'emselves good hulsome victuals outen pride. But my land sakes, Bubby haint a-goin' tu, du jest see that chil' reachin' fer the spoon faster 'n you give it tu him," and she looked intense approval of the baby's assaults upon the pudding, "an' his cheeks is all daubed wi' 'lasses, but it can't make 'em no sweeter, no, it can't. No, thank ye, I can't eat another maou'ful."

"Then, I guess," said Huldah, beginning hurriedly to clear away the few dishes, "I'll get the things washed up an' the puddin' kettle aout o' sight fore—"

"Why, Huldah Lovel," Aunt Jerusha laughed, "I du b'lieve you're feareded the men folks 'll come hum an' find aout we ben hev'in' hasty puddin'. Why, there's puddin' 'nough left for Drive's supper, ef you don't fry it fer breakfus, an' it is proper good fried."

The men did not return from the village till the evening chores called them. Huldah could scarcely share her husband's satisfaction in the achievement of Gran'ther Hill, for it seemed to her that the honor should rightfully have fallen to the mightiest hunter of Danvis. The

supper table talk and the later conversation around the glowing fire were all of the day's events, nor was the subject exhausted when some of the tired hunters, frequenters of the shop, began to drop in.

ROWLAND E. ROBINSON.

#### A DISCIPLE OF OLD PY.

My vacation has come and gone. The annual outing week of my chum and myself is a memory. Only a week can we spare, for we are very busy men, but that week is like an oasis in the desert, a rift in the clouds, a let up from the toothache, a zephyr from Araby, one balm from Gilead or the 1st of September when your wife's relatives go back to town. We need all of this, for the mental worry of a whole year after we return as to where we shall go next time is wearing in the extreme.

I won't bother you with the minutia of the trip. You can get these most anywhere and how. There is only one artist in this line and that's "Kingfisher," and I am not going to try to imitate him. I'll just give you the principal incidents, "boil it down," and let your imagination supply the rest.

Monday—Started early, but not before breakfast, please don't forget that. A royal breakfast it was, fit to set a man at peace with all the world and his neighbor's hens. Ben, my chum, (he's a bach,) came over and helped me get away with it. Well! You ought to have been there and seen us. I remember Monday chiefly on account of that breakfast. There's a halo all over it. Broke away at last. Duffle, duds and bric-a-brac to the train. All day ride. Lunch at noon from the basket filled with wife's goodies fit for epicures. We lingered fondly just thirty miles or one hour over that assortment, and when we finally abandoned it there was ample reason, there was no assortment left. And my wife said as she put it up, "There, that'll do for supper too, for you'll be tired when you get there, and won't want to cook anything."

Welasco, our railroad destination; was there at half-past 5—also Tim Holitt, the man with the team. Bundled in. Off through the odoriferous pine woods. After five or six miles Lake Wawkasum. "A gem of purest ray serene," set in a wreath of darker green. I drop off that way sometimes. Unloaded. Tim turns his back on us and disappears in the darkness. Tents up on a little knoll. Trees around. Lake in front. Unpacked. Fire. Then supper. Ben was cook and I was rustler or wrestler, rustling for wood and water and wrestling with the dishes after meals, though I could boil a pot of water on a pinch first-rate, or cook the nose or handle off a coffee-pot. It didn't take long to get that supper. Just a pot of tea to boil, the rest cold. Luncheon beef, sliced ham, jellies, light rolls, Saratoga chips and cake did very well to begin camp life on; and as the shadows came down and the moon came up, the fire flickered and the katydids did, we lolled on our blankets, poured down the fragrant decoction, sampled the savory supper, talked, ate, drank and planned for the morrow, until cloyed nature, replete to repletion, would no more. Then we pulled the pipes, and for an hour the smoke arose in a voluptuous swell and puckered lips sucked smoke through lips that puffed again. Then the cots were unfolded, blankets spread, and as the lonesome loon awoke hysterics from the sleeping lake and a derisive owl sent cold shivers down the back of a blasted pine, we slept.

Next morning we were out early, and after a delicious plunge in the wash basin, I evoked caloric from the material thereto collected and Ben laid himself out on breakfast while I made suggestions, and between us there was as fine a spread as heart could wish. Ah! The aroma of that Mocha. It lingers around my nostrils now. It mingles its odor with the perfumes of the morning, floating far and wide upon the dewy air, until the twittering birds flitting from bough to bough, gather expectant. Long we lingered, tickling the palate with the savory food until the rising sun warned us to "cut it short." Next thing we put the Osgood together, and with trolling lines out pulled along shore a mile or two without a strike. Came to a creek; beached the boat, caught some minnows and frogs; off again. Fished up and down and across and went back to camp with two bass and a small muscalonge. Dressed them and set about dinner. Fish fried brown. Ah! There is nothing like fish right out of the water and into the pan and out of it into you—or me. Firm, white and toothsome, with a dash of sauce, it hits the spot. No week-old occupant of a refrigerator, this, limp and flabby, served with an apology, gingerly tasted and put by; but picked to the last glistening bone before we leave it, wishing for more, it sends a soul-satisfying swash of bliss from center to circumference, and soothes to rest. Pigs in clover! Cows in the cornfield! Indians at a beef issue! Bears in a bee tree! How we did eat! Grim havoc cut loose and red-handed destruction got there with both feet. But there is a limit to some things, more's the pity, and acknowledging defeat, reluctantly we drew off in some disorder, and leaning up against a friendly tree with pipes aglow we sent the fragrant smoke in circling wreaths aloft.

When we were well rested we took the canvas again, and rowing over to a little bay in the lower end of the lake, where the grass in some five feet of water gave promise of lurking bass or pike, we stopped outside within good casting distance, and by sundown, moving easily from place to place, had a nice string of small-mouths playing gracefully on the string at the boat side. Then easily campward we went in the light canoe that scarce touched, and ere the gloaming gloamed one single gloam, Ben had outdone himself again, and we fell to. Shades of your grandmother! Hot light biscuit right from the Dutch oven, and maple syrup! I was a boy again in Vermont, trudging over the snow crust across the fields to my uncle's sugar camp, and in the evening at the supper table feasting on hot biscuit and syrup.

"Ben," said I, "you're a trump, two trumps, a whole handful. Let us to the fray."

And we went, company front, double quick, ch-a-r-r-g-e! Um-m-m! What a supper. Tea that titillated the utmost nerve in the system, flushing the entire being with a carmine flush that was a revelation of Nirvana; chipped beef, tender, transparent and tasteful; cheese that furnished a taste of dissolution as sudden as it was easy and brief. But what's the use? No description furnishes any idea of that spread and its disappearance. We never could have had such appetites anywhere else. That's what we came for. Once a year it's good to feel "wolfish!"

and "ravenous," and to tell about it. But why wasn't a man's palate given twice the power and the duration of sensation quadrupled? We cleared away the debris after a while, smoked, discussed to-morrow, listened to the frogs and crickets and nature's lullaby, and by and by went to bed.

We had agreed to go away up the lake several miles the following day. So we rose early, or I did, and built the fire, brought the water, got some fish from the fish box and dressed them, put the coffee on and woke Ben, who jumped into his clothes and to business, and the way raw material was worked up into attractive and useful goods was pleasant for to see. The coffee pushed the lid off it was so impatient. The fish, done brown, peeped over the edge of the pan imploringly. Crisp fried potatoes leered at us, while flapjacks flipped into the air and turned somersaults kersmack! The scene was tumultuously suggestive and inspiring. Resultant incapacity, expansion and regret. We tore ourselves loose in time, and with a nice lunch crept aboard the canoe and sailed away into unknown seas.

But fortune frowned upon us, when she didn't grin, and the fish that came to hand were small and seldom. The only entirely satisfactory event of the day was the landing at noon in a little cove where shade and a bubbling spring enticed to rest, and there contributing with alacrity to the pleasure of our palates. 'Tis not all of fishing to fish. There's a good deal in the lunch basket. We lay there an hour or so idly enjoying life, while the fleecy clouds drifted lazily aloft, a sleepy sigh from *Aëolus* gently crinkled the surface of the lake and curious pismires explored our trousers legs as we burned Lone Jack without a stake and wished there were nevermore trial balances with an odd cent or two which refused to show up. We knew the way back without a guide, and without undue exertion the buoyant Osgood bore us safely to the landing.

I had thought in the morning that my appetite had gone glimmering, galley west, all to pieces, was knocked out beyond resuscitation; but a few hours at the oars brought it back as clamorous as ever, and after a deft manipulation of pots, pans and contents we struck our gait once more and thought of many a poor fellow in town who hadn't any. Ben is a phenomenon. He can get more tempting dishes out of a grub box than any man you ever saw. I'd as soon think of going to the Columbian Exhibition without a penny as on an outing without Ben. I love to fish, of course, but there are other enjoyments too. The food went in and the stars came out. A great big full-grown hush settled down silently and stifled noise; even the derisive loon forgot to laugh and the owl to hoot, and under the spell of a 480-grain peace we softly stole to bed.

Next morning was on time to a dot—not so we. My hands were sore and some of my bones ached. The sun had kissed the drowsy pines several times and the proverbial squirrel was skipping around the dooryard ere we rolled out.

"The dew lay glittering on the grass,  
The mist lay over the brook"

Some time ere the fishers their buxks forsook. We didn't have 140 bass and half of them dead, in the fish box, but we had enough for breakfast, and preparations began and leisurely proceeded. Appetite waited on them and grew impatient and complained. But the bugle sounded at last, and we moved to the attack with no doubt as to the victory. There was the ever satisfying coffee with Highland cream; spuds with bursted jackets, grinning with their mealy mouths; hot cakes, light and fluffy, with maple syrup; golden butter, hard and cool from the lake, where we had anchored it; fish fried with one soupçon of salt pork and several of excellent judgment. It was lovely. You have no doubt heard of zest. Lusty, gusty zest. It was there. It burst from the bushes with a skip and a hop and proceeded to work things. It hovered o'er the board. It pulled in the lead. It got behind and pushed. It lent a hand at the bow oar, starboard and stroke, and acted as coxswain. It stimulated the elbows and fingers. Likewise the salivary apparatus. It was chief factotum at the feast, whooping in its glee and raising a very revel of a row, until tired out with its antics and labors it glid off on a fainting zephyr to recuperate in the solitude of sylvan shades, while we lay back exhausted.

Subsequently we took the canoe, put out the spoons and cruised along shore to the creek for bait. Had a strike near the creek mouth. Big fish. Battle royal. Got him nearly in. Flap, swish, splash—gone! "Put out again, quick," quoth Ben. "No," said I. "We won't get back in time for dinner," for we had to catch bait, and one of us had agreed to go up to a farmhouse on the hill and see if we couldn't augment the commissary department. So we landed and I went for bait, while Ben betook himself to the house where the day before he had seen what appeared to be a young and comely woman on the porch. By the time I had got some minnows and a few frogs he returned with a couple of dozen of eggs, some buttermilk, sweet ditto, and some luscious early harvest apples. Well! If I didn't split the welkin at sight of this reinforcement. I fractured it. Ben said he'd have brought a chicken or two but he only had two hands. However, as he would have to return the basket and pails he'd get them next time. Fish didn't get a chance to bite much going back. What do you s'pose Ben did with the apples? Built up some of the most mouth-watering dumplings that ever pursed up their lips at you, sweetened with sauce flecked with nutmeg. The eggs were boiled soft. Hot biscuit again. Milk to drink. Tapped a jar of honey to keep the biscuit from being lonesome. Ah—h! What an array! Biscuit and bliss, eggs and eggstacy, dumplings and delights, honey and happiness, praties and pleasure, gravy, glory and gratitude. The "creaking board," laden with the "delicious viands," groaned with the weight thereof, and so did we later, when satiety, having seen the load completed, jumped on top and tramped it down. As I lay back so that the burden might adjust itself easier, I said as I dozed off: "Ben, lez go fishin'"—and Ben replied faintly, "Lemme lone."

The sun was about 45° high when we "came to," and quoth Ben:  
"I have an idea."  
"Ventilate it."  
"We'll go up where we saw those big batrachians yesterday and catch some for supper."

"Bless your dear heart," I murmured, "what a treasure you are!"

So we sallied and frogged and came back in the gloaming.

Did you ever eat frogs' legs by moonlight, with a dash of Worcestershire and crisp fried potatoes, and currant jelly and flaky biscuits so light you had to put something on top of 'em to keep 'em down, and a cup of tea so cheerful it set the loon a-laughing? If not you've got a heap to learn. We didn't wash any dishes that night. We just went to bed.

We had breakfast next morning just the same, and how we did enjoy the good things, over which we lingered long and lovingly, rolling the delicious morsels upon our tongues or discoursing the while on the delights of camp life. Ben had to take the basket and pails to the farmhouse, so we took the canvas and started. I handled the oars and Ben put out a spoon, and before we got half-way he hooked a whopper, a perfect monster, that towed that canoe as a healthy dog would tow a tin can. How he yanked and cavorted and tore up the vasty deep! I set the oars and so checked somewhat his rushes; if I hadn't, I believe he'd have spilled us. As it was we had to trim ship pretty lively now and then. But a muscallonge can't last forever, and after awhile he began to lead, coming after a break away or two quietly alongside, when with a desperate surge and sweep of his tail he tore the hooks out, threw a shower of water all over us and went.

Great Scott! What a fish and what a pity! You ought to have seen Ben's face. It lengthened so that it came near pushing the rest of him overboard. It took the heart clean out of him so that he took it up to the farm house with the basket and pails soon afterward. When he returned in the course of time I had two or three bass and he had two as nice plump chickens as ever went to roost. Pure young things they were, just in the morning of life, in the heyday of youth, uncontaminated as yet by the viles of the tempter and the seductions of a gay world, just budding into usefulness with two buds and with a lovely look of trustfulness into their liquid hazel eyes. Then we went to camp. Ben had a half dozen cucumbers and some weak onions, too. How do you cook your chickens generally? We didn't cook ours that way. We stewed the rawness out of them and then put them into a mighty hot skillet with some butter, and when they came out they had not only budded but bloomed, now I tell you. Talk about Lucullus and nightingale's livers and those things, they weren't in it. Didn't seem as though we could fill up. Worse than guinea pigs, but maybe you don't know about them. Can't fill 'em up. Just try it once. Well, we had it all over again. Zest was there again renewed and exuberant. And there was the usual "rich effluvia," and "reeking fumes," and "redolence," and "sumptuousness," and "festal board," and "libations," and "wolfish appetites," and "luscious viands," and "steaming Mocha," and "buzz-saw appetites" that you've read about so often.

I won't enumerate further. It ran along about this way until Saturday morning when we packed up. Tim came for us and away we went. We had had a royal time. We are no pot-hunters or bass hogs but we do love to eat.

Pythagoras said once that "we eat to live, not live to eat." I agree with Old Py on that, and as the highest sort of life should be our ambition, we have got to eat correspondingly—stands to reason. I notice that many of your correspondents are on the same side the fence, so I thought I'd add my voice to the general sentiment.  
O. O. S.

#### "PODGERS'S" COMMENTARIES.

SAN FRANCISCO, Cal., July 24.—I am in receipt of an advance copy of your reproduction of the small boy and big fish I sent you. In your personal criticism of the photo, you insinuate that both boy and fish have a very much blown up or stuffed appearance. As to the fish, he is or was, *au naturel*. The boy, I grant you, is swelling with impatience, and so you would have "swelled" to have had at this time of life the handling of a fish of such dimensions. He was a very proud boy; and add to that the dignity of having arrived at the pipe stage, a step probably in advance of all the other boys. No wonder he was fairly bursting with impatience.

Speaking of the fish in question, "reminds me" that the same gentleman who caught that one has just returned from a camping expedition to the same river with two or three friends; and had even better luck than on the last occasion. Their fishing was simply superb; they landed many large fish, one nine and one ten-pounder. All were caught with the fly and light tackle. Now, a 10lbs. brook trout is something of a fish, considering that we seldom hear of one being caught with fly weighing over 5 or 6lbs. But of course that is in the East, where things are on a small scale (except stories). California, you know, does things on a more liberal standard. Such fish as I am writing of, are not within close reach; to get them, involves a three days' journey into the wilds outside of ordinary civilization and going into camp.

I am glad to see that FOREST AND STREAM is making fishing news a feature of the paper; being a wool-dyed lover of the sport, I read all that is to be found on that head with great interest. I am willing to surrender my interest in bear stories in favor of fishing yarns. There is not so much of the hair standing straight up feature in fish stories, and more or fewer hair-breadth escapes. By the way, did it ever occur to you that the breadth of a hair is very limited, and makes a very close call as a margin for an escape? What a lot of impossibilities we weave into our expressions and similes in our descriptions of things and occurrences! "Miraculous" will do in speaking of an escape, but the hair-breadth business is getting down very fine—very. Exaggeration and imagination give color and point to the subject, season it, as it were, to interest the reader or listener, but is this not taking liberties with truth and veracity? I admit a plain, unvarnished tale is like a piece of furniture—a good deal better for the varnishing. This is not a prelude to any "plain tail from the Hills" that I am going to tell, for I have no designs on you. I am innocent of guile on this occasion. I had nothing to write when I sat down and I have written it.

I was much interested in reading in the last number of FOREST AND STREAM the account by Mr. Clarence Bloomfield Moore of his trip over the Andes, having made the

same trip myself and recognizing much of what he describes. His reference to the monkey and banana market at Guayaquil I can indorse, for I was rash enough to invest a dollar in the stock and trade of an old lady with a trading establishment under a tree, giving an open order as it were for the money's worth to be sent aboard the ship, and was seriously embarrassed, when, as the ship was getting under way, the old lady came alongside and dumped my purchases on deck, consisting of a monkey, a parrot, a bushel of oranges and half a dozen bunches of bananas. All were loose and rolling around deck, and a soft banana gave the first officer a fall, which brought forth such a torrent of profanity and fierce inquiry for the owner of the garden sass and menagerie as to lead me to join the other passengers in a general disclaimer of all ownership. I never bought so much nor such an assortment of worldly goods for a dollar before in my life—nor since. Things are cheap in Guayaquil, and I imagine the old lady never had such an unlimited order or made any one transaction of that magnitude during her life experience in the fruit, monkey and parrot line.

While on the subject of fishing I forgot to tell you about the salmon fishing at Santa Cruz, a fashionable seaside resort on the coast, a matter of 50 miles from town. Even the ladies are enjoying the sport, and go off early in the morning in the Italian fishing boats in front of town and troll with feathered spoon and hand lines. During the last week the run of salmon has been large, and parties have taken as many as a dozen before breakfast, some of them very large, running up to 30 or 40lbs. Two gentlemen, a day or two since, took over 250lbs. in one morning's fishing with rod and reel. The fishing is broad out on the ocean a mile from shore and in the bay, almost within hail of the hotel piazzas. It is a feature of salmon fishing heretofore unknown, I think. I have never heard of a similar instance, at least, of salmon taking the hook at sea; but California salmon partake of the characteristics of the country and strike out original methods for themselves and scorn to be imitators.

California is not what it once was for fish and game. Too much civilization, which means law breaking, pot-hunting and indiscriminating slaughter. But it does pretty well considering. You can't turn out many Eastern States where there is such a variety of game and fish, especially trout and salmon, of the size referred to. I do not remember ever to have known of a 10lb. brook trout being caught with fly in any Eastern waters. Have you? Let us hear from the cow counties on that question.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

#### PEARLS IN THE UNITED STATES.

A paper read by George Frederic Kunz before the American Fisheries Society, Chicago, 1893.

PEARLS are lustrous concretions; consisting essentially of carbonate of lime interlaminated with animal matter, found in the shells of certain mollusks. They are evidently a result of an abnormal secretory process caused by an irritation of the mantle of the mollusk consequent on the intrusion into the shell of some foreign body, as a grain of sand, an egg of the mollusk itself, or perhaps a cercarian parasite. It has also been suggested that an excess of carbonate of lime in the water may cause the development of the pearl. Accepting the former theory as the more probable one, it is easy to understand how a foreign body, which the mollusk is unable to expel, becomes encysted or covered as by a capsule, which gradually thickens and assumes various forms—round, elongated, mallet-shaped, and sometimes as regular as though it had been turned in a lathe. It is suggested that the mollusk continually revolves the inclosed particle in its efforts to rid itself of the irritation, or possibly that its formation is due to natural motion, which is accelerated by the intruding body.

In regard to the formation of pearls the following general statements may be made: Whatever may be the cause or the process of their production, these interior concretions may occur in almost any molluscan shells, though they are confined to certain groups, and their color and lustre depend upon those of the shell interior, adjacent to which they are formed. Thus the pink conch of the West Indies yields beautiful rose-colored pearl shells consisting of three strata: first, the outer yellow or brown conchioline (cuticula or epidermis); second, the prism stratum, consisting of layers formed of minute prisms arranged vertically to the layers and the shell surface; and third, the interior nacreous layer, composed of finely folded leaves parallel to the surface of the shell. The last two strata consist chiefly of carbonate of lime. These formations were illustrated by transverse cuttings and microscopic sections. When a wound has been received by the animal in any soft part the tissues become moistened with a lime-like material and especially with the nacre substance. This often happens in the muscles which serve to close the shell, and the irregular concretions thus formed are called "sand pearls." When the growth of the pearl is abnormally strong the pressure which it exerts on the outer wall of this tissue pocket becomes so powerful that the pocket is absorbed on the side toward the shell, bringing the hard pearl directly against the latter. It then becomes impossible for the pearl to grow any more at the point of contact, for there is no tissue to secrete the lime substance; but it grows on the rest of the surface, and the thickening layers, as they are formed, pass directly into the nacre layers on the inside of the shell, and thicken the shell itself. Through these over-layers the pearl is connected with the shell as though by a succession of covering-clothes. At first it clings to the shell at one point only, afterward enlarging the area of its adhesion. In this manner twin or united pearls are formed. Whatever be the method of their formation, it would seem that pearls can be formed only at the expense of the shell, for every substance necessary to their growth is drawn from sources which normally secrete the shell. Normal appear-

ing shells rarely contain pearls, while on the other hand those that are deformed often contain pearls of great beauty. There are three indications on which pearl fishers rely for detecting from the outer aspect of the shell the presence of pearls. These are, first, the thread, that is, the recess of elevation extending from the vertex to the edge; second, the kidney-shape of the shell, that is, an indentation on the ventral side; and third, the contortion of both shells toward the middle plane of the animal.

The families with iridescent interior layers are the following: Among cephalopods, the Nautilus and Ammonite groups, the latter wholly fossil, and among gastropods, the Turbo and Haliotis families. In all these forms, the removal of the outer layers of the shell reveals the splendid pearly surface beneath. Such shells, thus "cleaned" with dilute acid, are familiar as ornamental objects, while those of the common oyster and clam are dead white or dark purple, according to their proximity to the part of the mantle which secretes the white or the dark material of the shell. The true pearly or nacreous (iridescent) interior belongs to only a few families of mollusks, and in these alone can pearls proper be formed at all; while in point of fact they are obtained only from a very few genera of shells.

None of the air-breathing mollusks (the land snails) produce a nacreous shell; and among fresh-water mollusks none are pearl-bearers except certain of the bivalves, notably those belonging to the group appropriately called the Naiades, of which the common river mussel (Unio) is a typical example. The soft internal parts of these mollusks are covered by a thin, delicate membrane called the mantle, from the surface of which and particularly from its outer edge, material is excreted to form the inner layers of the shell. The shell consists of two parts, the epidermis and the shell proper, the latter composed of numerous layers. The epidermis, which resembles horn, is chiefly composed of a substance called "conchioline" and is soluble in caustic alkalis.

The pearls of commerce, however, are almost wholly obtained from bivalve (lamellibranch) shells, of which the following families have a nacreous lining: Aviculidae, Mytilidae and Unionidae, the latter being wholly fresh-water shells, also known as the Naiades. A few families of other genera are also brilliantly pearly, but need not be here discussed. The true pearl oyster (Meleagrina) of the Pacific and Indian oceans belongs to the first of these groups, and has from time immemorial yielded the bulk of commercial pearls, while its large and thick shell furnishes the mother-of-pearl for countless ornamental purposes.

The Naiades are of particular interest in this country, as it is in North America that this group is the most abundant, and it is only of the occurrence of pearls, and the preservation of the fisheries of the United States that my paper will treat. Many hundred species of Unio, Anodon, etc., have been found in our great rivers and lakes; the Mississippi basin teems with them; for the most part in forms quite distinct from those of the Atlantic watershed and of the Old World. The Unios, while all iridescent, vary greatly in tint, exhibiting all the delicate shades of pink, brown, purple, etc., as well as white. The rivers of Europe, of Mesopotamia, and of China also yield large numbers of Unios; while the allied genera Hyria and Castalia are found in the rivers of South America.

The same causes and operations that result in the production of pearls or free nacreous concretions in the soft animal substance of the pearl oysters or mother-of-pearl shells, also produce in a modified way the tuberculous or knobbly protuberances and irregularities of surface that are frequently seen on the pearly inner surface of the valves and projecting therefrom. The flatter or less pronounced forms of these nacreous excrescences are often called "blister pearls," because of their resemblance to vesicular eruptions, or water blister caused by burns.

Fresh-water pearls are found, as before stated, in various species of Unios, more frequently, according to Dr. Isaac Lea, in the Unio complanatus, but also in the following: U. blandianus, U. buddianus, U. costatus, U. ellioti, U. fragilis, U. globulus, U. gracilis, U. mortoni, U. nodosus, U. orbiculatus, U. ovatus, U. torsus, U. undulatus and U. virginianus. Not one pearl in a hundred from the Unios is of good shape, and probably not more than one in a hundred is really fine; therefore, as the worth of a pearl depends on lustre and form, the greater number obtained from this source are of slight value.

A hundred pearls have been found in a single shell; but as a rule, these have little or no value. Very curious nacreous groups made of many small pieces are at times found attached to the hinge, but these are generally without sufficient lustre to be of value, and are rarely collected. These groups are caused by the aggregation of many small ones cemented by a deposit of nacre, and are often half an inch across.

In color, the Unio pearl presents an extended series of shades, from dead opaque white, having but little value, through various tints of pink, yellow and salmon, passing through a more decided form of these colors, or a faint purple, into a bright red, so closely resembling a drop of molten copper as almost to deceive the eye. Some are very light green and brown, others rose color, and still others are pale steel blue or russet and purplish brown. The white and the pink pearls are exceedingly beautiful, and the finest, owing to their delicate sheen or layers, are at times more lustrous than even the best Oriental pearls. This lustre is increased by their greater transparency, and a really fine white, pink, yellow or iridescent pearl is often found quite translucent. In addition to their color and lustre they are beautifully iridescent. They are found in many odd and remarkable shapes.

Elongated fishlike forms, formed and found near the hinge of the shell, and called hinge baroque pearls, are abundant. Others, with but a slight addition of gold and enamel, seem to represent human and animal heads, bat and bird wings, and similar objects. Mallet-shaped pearls are found with fine color and lustre at each end, but generally with opaque sides; also grouped or bunched masses of pearly nacre, made up of from one to over one hundred distinct pearls in fanciful shapes, are of occasional occurrence. Featherlike forms, with curiously raised points, and an odd, rounded variety, with raised, pitted markings, are quite abundant. A pearl was mounted in this country that strikingly resembles the bust of Michael Angelo, and a number of unique designs have been made of baroque, similar to those mounted by Dinglinger and exhibited in the Green Vaults at Dresden. Although the pearls used here have not been as large as those shown in

Dresden, greater taste has been employed in mounting them. The variety of the forms being so great, an artist has a wide field for imagination. The pearls, however, have but slight value unless they are beautiful and lustrous.

Frequently pearls have an opaque appearance and seem to be worthless, but upon the removal of their outer layer are found to be clear and iridescent. This outer layer may be removed by dipping them in a weak solution of acid, which dissolves the opaque coating, or it may be peeled with a knife, although sometimes the pearl is not of the same material throughout and cannot be.

That conchologists make so few references to pearls is probably accounted for by the fact that the pearls are contained in old, distorted and diseased shells, which are not so desirable for collections as the finer specimens. Collectors who have opened many thousands of Unios have never observed a pearl of value.

Large and valuable Unio pearls have been obtained in New Jersey. In 1857 a pearl of fine lustre, weighing 93 grains, was found at Notch Brook, near Paterson. It became known as the "Queen Pearl," and was sold by Tiffany & Co. to the Empress Eugenie of France for \$2,500. It is to-day worth more than four times that amount, and is finer than any pearl shown at the 1893 World's Columbian Exposition. The news of this sale created the first great pearl excitement that led to the search for pearls which spread westward throughout the country. The Unios at Notch Brook and elsewhere were gathered by millions and destroyed, often with little or no result. A large round pearl weighing 400 grains, which would doubtless have been the finest pearl of modern times, was ruined by boiling open the shell.

Within one year pearls were sent to the New York market from nearly every State. In 1857 fully \$15,000 worth, in 1858 about \$2,000, in 1859 about \$2,000, in 1860 about \$1,500, in 1868, when there was a slight revival of interest, and since then many Little Miami River pearls have been found. Since 1860 pearls have come from a comparatively new district, the supply from which is apparently on the increase. At first few were found, or rather, few were looked for, west of Ohio, but gradually the line has extended to Kentucky, Tennessee and Texas, and now Wisconsin is the principal pearl-producing State, while some pearls are sent from Florida, Nebraska and Washington State.

Some of the earliest American pearls that were found came from near Waynesville, O., \$3,000 worth having been collected in that vicinity during the pearl excitement of 1878. At that time Israel H. Harris, of Waynesville, began what has since become one of the finest and best known collections of Unio pearls in this country, purchasing, during many years, every specimen of value that he could find in that part of the State. Among his pearls was one button-shaped on the back and weighing 38grs., also several almost transparent pink ones, and an interesting specimen showing where a pearl had grown almost entirely through the Unio shell. His collection contained more than 2,000 pearls, weighing over 2,000grs., and is in all probability the last collection that will be made from that district. It was exhibited in the jewelry department at the World's Fair in Paris in 1889.

A pearl from Montpelier, Vt., was sold for \$300; one from Waynesville, O., valued at \$200; one from Boston, Tex., valued at \$250; one pink pearl, 19grs., from Murfreesborough, Tenn., valued at \$80, another at \$150; one from Llano, Tex., valued at \$95, have been sold in New York.

The production during recent years has been as follows:

September, 1881 to 1882.....	210 lots worth \$7,500
September, 1882 to 1883.....	72 lots worth \$5,000
September, 1883 to August, 1884.....	71 lots worth \$5,000

American pearls until within the past few years were generally sold at a figure below their real value, and the values of the above to-day would be fully two or three times those amounts, and at present the local value is often exaggerated several times above their true value.

Since 1889 pearl fishing in Wisconsin has been extensively carried on along the Pecatonica River and the creeks emptying into it, principally between Darlington and Argyle, Lafayette county, as well as on Apple River. Many fine pearls, remarkable for brilliancy and lustre, have been obtained, among them some of the finest copper-colored, russet, purple and rich pink tints ever found. Some simple pearls weigh over 50 grains, and the finest ones command from \$500 to over \$1,000 each. It has been estimated that over \$300,000 worth of pearls have been found in the course of the past few years; the pearls frequently commanding higher prices here than the Oriental pearls, and as a result, pearls sent abroad were returned, the prices being abnormally higher than the foreign markets would pay.

Some of the finest pieces of jewelry shown at the World's Columbian Exposition were made of American pearls and American precious stones. A fine collection was on exhibition in the Wisconsin Exhibit of the Mines and Mining Building, World's Columbian Exposition; the value of this collection was estimated at over \$100,000, but the prices were somewhat fancy ones induced by local demand. During the summer of 1890 the pearl excitement extended to Manitowoc county, Wisconsin, and numerous small lakes that lie in Calumet county. From one to fifty pearls have been found in a single Unio. When numerous, they were usually hinge pearls. As in the former times of excitement, hundreds of men, women and children made trips to these creeks, the men and boys removing the shells from the river while the women and girls opened them.

In the same year the pearl-hunting fever extended along the Mackinaw River and the creeks running into it in McLean, Tazewell and Woodford counties, Illinois. Pearls have also been found in the vicinity of Traer and Geneseo, on Wolf Creek, Iowa. A fine pink pearl was found near Walla Walla, Washington State, and a number have been sold at Seattle, Wash.

One of the most singular circumstances connected with the New Jersey "pearl fever" of 1856 was the discovery of several shells which proved that the local savants had experimented on the pearl-bearing Unios by dropping mother-of-pearl buttons inside the shell, hoping that the mussel would cover them with its secretions. The specimens found had apparently been experimented on over 30 years before, at a time when European scientists were interested in shells received from China, containing small images of Buddha. These images were moulded in tin and placed between the mantle and the shell. The mussels were then returned to their natural environment, and after several

months the layer of mother-of-pearl became of sufficient thickness, and the images were removed.

In a shell of the Lea Collection of Unionidae, which has lately been presented to the United States National Museum, an oval piece of white wax, flat on the lower side and rounded on the upper, which had been inserted in the valve near the hinge, is entirely coated with a pink nacre. It has been broken out of the shell, the pearly nacre of the lower or flat side remaining in the shell, whereas the dome-shaped piece is covered with this material.

The writer knew a New York lady who purchased a button-shaped Unio pearl that had a black, diseased appearance on one side. It was so set that the imperfection was all below the mounting. When applauding at the opera one evening the pearl was broken, and upon examination it was found to consist of a very thin nacreous layer, inside of which was nothing but a hard, white, greasy clay.

[TO BE CONCLUDED.]

#### Another Infant Caribou.

I too have seen a domesticated caribou baby. Last September, while being towed in a canoe up the St. Maurice River, in the Province of Quebec (alas, that I cannot repeat the trip this year!) one of our guides suggested that if we cared to see "a leetle caribou—toute petite—in a barn," we might do so by pausing at a farm house on the bank of the river. We did so and found the little fellow apparently enjoying himself in the company of one or two calves. He was fairly tame, and greeted us with a peculiar note of welcome, sounding like a combination of a snort and a cough. The owner was absent, so we could obtain no particulars as to his capture.

TRUTHFUL JAMES.

### Game Bag and Gun.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

#### A CLOSE CALL.

BETHEL, Me.—A pond about one mile long and one-half mile wide in the town of Hanover, adjoining Bethel, has always been a noted place for brook trout and bears. A cottage camp near its shores is named "Camp Bruin," suggested by the number of bears that are yearly trapped and otherwise captured in that vicinity. The pond is named Howard's Pond.

About two months ago a party from the town of Norway, on a fishing trip, occupied Camp Bruin for a week's outing. In this party was an energetic young fellow, Fred H. Cummings, whose father has a small menagerie of wild and domestic animals. Fred took his dog Hercules along with the party. Hercules is a very brave dog for his size, for he weighs less than eight pounds and is nicknamed by his neighbors "Slim Jim," he has such an inferior look; but he is a very courageous little cur, as the people of Oxford county will testify, for at the races in Riverside Trotting Park in Bethel, Hercules made much sport by persistently sticking to the track, even when many horses were doing their best to win the race on the Fourth.

One pleasant day Fred, with Hercules, went about a mile to an old pasture in the woods to pick some strawberries; and after filling his dish, started for the camp. He had not gone far when he saw three cub bears just starting to climb a tree. Fred took in the situation at once—if he could only capture one of those cubs for his father's menagerie—and acting on the impulse seized one. Although the cub screamed, scratched and bit, yet he got him under his arm, back toward him, and started for camp on a double quick, still holding on to his dish of strawberries.

After getting on the last half of the distance to the camp he heard, as he thought, one of his party coming behind him in the woods, and he called to him, but receiving no reply he looked around, when, to his horror, there within a short distance, and making fearful leaps, was the old mother bear, with open mouth and blood in her eyes. Young Cummings very well knew he could not carry that cub and escape the ravening beast, which was gaining on him at every leap, so he dropped the cub and called to Hercules.

As he looked behind to see if the dog was coming, still keeping up his race, nip and tuck with the bear, he saw that the old mother bear took no notice of the cub he had dropped, but was rapidly gaining on him. Again he called to his dog with a loud voice, and had the satisfaction of hearing him yip very near. The bear was now so near that he imagined he could feel her hot breath on his back, and the dog, bear and young man were then all doing their best in the free-for-all race.

Now comes in the interesting ending of this singular race for life. Hercules nipped the bear's hind legs and detained her, while Cummings made the most of it and arrived at camp out of breath but still holding on to his strawberries.

Bears are very plenty in the vicinity of Bethel. There is no better place on earth for hunting bears than Bethel.

We have four passenger trains each way, east and west, on the Grand Trunk R. R. of Canada, and the officers of this road are very obliging to sportsmen. Bethel is within five hours' travel of the foot of the Rangeley Lakes, the Paradise of big game hunting.

J. G. RICH,

#### Mongolian Pheasants on Long Island.

The Wyandanch Club, whose headquarters are at Smithtown, and who control the shooting privileges of a very large tract of land in the towns of Huntington and Smithtown, have recently liberated on their grounds about 200 Mongolian pheasants. The club officers imported four pairs of the birds, and hatched out 200 young ones under chickens. Now the young pheasants have been turned loose, and will, it is presumed, increase largely each year.

THE FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

# THE GAME OF VENTURA.

VENTURA, Cal.—*Editor Forest and Stream:* Possibly very few of your readers have ever heard of this county, situated in one corner of California, and off from the great lines of travel, still it is one of the most fertile and productive counties in the State, and an important factor in the economy of this great commonwealth. The county has a great future before it, with a variety of climate and resources unequalled in this or any other State. It far exceeds any other county in the amount of beans produced, raises oranges in some portions that rival the famous fruit of Riverside; the apricot crop each year amounts to thousands of tons; four different dryers are required to cure the immense yield, and fortunes are made every year by the fortunate owners of orchards. The honey crop represents thousands of dollars. Not least among its resources are the minerals contained within its hills; its quarries of red sandstone are equal to any in the State, it has mines of gold and silver, and most important of all is its oil, for this is the leading oil-producing county of the West, more oil being produced here than in any county west of Pittsburgh; the California Oil Co., at Santa Paula, is one of the great institutions of the State. With over fifty miles of sea coast on the west and the great coast range on the eastern portion, any climate desirable may be obtained in a few hours' travel, from the hot summers and moderately sharp, cool winters of the foothills to the even, unvariable and pleasant climate of the coast.

In times past Ventura county has been the sportsman's paradise, all kinds of game could be found here, grizzly bear (it was in this county that the San Francisco *Examiner* captured the grizzly now on exhibition at Golden Gate Park), deer, rabbits, quail, squirrels, doves, wild ducks, geese and cranes. The ponds and sloughs along the coast were filled with thousands of ducks and geese, and a wagon load as the result of a day's hunt was not considered an extraordinary large return. Along the eastern portion of the county is the Simi country, a stretch of rolling valley land and low foothills, covered with short sage brush not much higher than the knees; here were thousands of quail, in bands of hundreds, where capital fine sport could be had with a good dog. Then came the boom of '87; the great ranches were bought by syndicates, and subdivided into small tracts; settlers flocked in; stretches of wild land that had been filled with quail and rabbits, were transformed into orchards and wheat fields, the country became more settled, and the territory in which game could find room and shelter grew more restricted; Los Angeles in the meantime became a large city, and then the market-hunter appeared upon the scene, the hotels and restaurants wanted game; here was his opportunity, he availed himself of it, and after exterminating the game of Los Angeles county, he turned his attention to this county, with the result that he has almost done for us what he has done for other counties and other States—nearly wiped the game from off the face of the earth. Where once quail and ducks could be found in almost unnumbered thousands, now only a few lone stragglers can occasionally be met with, awaiting the day of doom. But there are still portions of the county remote from the railroad, and distant from the centers of population where game is as plentiful as ever, and it is with the purpose of preserving what game we have left and of again restocking other portions of the county, that the sportsmen's club of this place have induced the board of supervisors to pass the following ordinance:

*Ordinance No. 71.—SECTION 2.* Any person hunting quail, partridge, wild duck, or doves, in the county of Ventura, for market, shall be guilty of a misdemeanor; hunting for market as used in this section, is the taking or killing of game at any time, with the intent to sell or ship the same; provided, however, that the sale or shipment of less than two dozen quail, partridge, wild duck, or doves, in any one week, shall not be a violation of this section.

*SECTION 4.* Any person found guilty of a violation of any of the provisions of this ordinance shall be fined in a sum not less than twenty dollars nor more than two hundred dollars, or be imprisoned in the county jail for not less than five nor more than thirty days, or be punished by both such fine and imprisonment.

If we had a State law of similar import, the wholesale and wanton slaughter of game would cease, and the game would be preserved for those who hunt for sport, recreation and amusement.

The game law of the State is at present in a very unsatisfactory condition, having been "monkeyed with" by the last Legislature, apparently in the interests of the game dealers. A bill was presented at the last session, which, while it contained some very excellent provisions, was at the same time weighted down with two very obnoxious clauses, especially to the San Francisco sportsmen, who claimed that it was gotten up in the interests of the wealthy clubs. The clauses referred to was one compelling non-resident sportsmen to procure either a written invitation or a county license costing \$25, and the other was a clause with regard to notices posted on uninclosed land. The sportsmen of San Francisco sent a couple of gentlemen to Sacramento to lobby against the bill, who, while they might have been splendid lawyers or have understood the requirements of the hat trade, and may have been a howling success as lobbyists, were certainly ignorant of the requirements of a law for the protection of game, even in counties adjacent to San Francisco, not to mention the more distant counties. For illustration, they placed the open season for quail on Sept. 1, when any one at all posted with regard to the habits of quail well knows that in most all the northern and central counties the quail are not more than half-grown by Sept. 1, and besides the month of September is too hot in this State to work a dog on quail. They ex-

tended the season for doves to Aug. 1, which is from one month to six weeks too late all over the State, as in a great many counties the doves begin to leave by the middle of July. The deer law they placed at Sept. 1, a time when the deer are running and not fit to eat. The result has been that the boards of supervisors of the different counties have been compelled to pass county ordinances to suit the climatic conditions, and the gentlemen who mutilated and butchered the Emeric bill have come in for no small share of censure.

If we had a State law to suppress market-hunting, possibly we would have game in California in greater or less quantity for all time, as the conditions here are favorable for the preservation and even increase of game, for we have no severe winters, and in southern California it is almost perpetual summer as compared with Eastern winters, and the game has merely its natural enemies to contend with.

Whether or not, in obedience to the law of the survival of the fittest, the game of the world is doomed, whether man can by artificial propagation and stringent laws repair the ravages that he has wrought and maintain the balance of nature, or whether all our other game will share the fate of the buffalo, the wild pigeon and the great auk, and eventually disappear, is an open question. But effort ought to be made by carefully framed laws to postpone the evil day and protect the game that in every State is getting too scarce.

A. P.

## AN AMERICAN PROOF HOUSE.

*Editor Forest and Stream:*

I herewith beg leave to submit to the readers of your esteemed paper the following prospectus for the establishment of an American Proof House for systematically testing firearms and ammunition. In several European

general. No matter how much time and pains may be devoted to them, they can rarely, if ever, be brought to a satisfactory issue for the simple reason that they lack a uniform method of comparing the results and because the latter, in the absence of the requisite scientific instruments, are frequently misleading.

To conduct such trials, experience and practical knowledge must co-operate with the agents of science, namely, the necessary instruments and apparatuses.

As the result of experiments carried out systematically, it has been proved in Europe that often a gun is blamed, when, in fact, the cause for an unsatisfactory pattern or penetration, or both, really rests with the inferior quality of the powder. Again, the powder is often pronounced wanting in ballistic merits, when the real source of the trouble is to be sought in the wadding, the method of crimping or the primer. In a similar manner mistakes will occur in determining the cause for damages apparently done by the powder to the gun.

These institutions have achieved a gratifying result in another direction: Exhaustive tests have shown that the shooting quality of a gun is governed largely by a proper relation between the powder and shot charges, and to some extent by the diameter of the wad, and that these relations must be established for every kind of powder.

One of the objects of such an institution is to ascertain for every gun the most advantageous method of loading the shell, for which a standard rule cannot be established as long as the boring of gun barrels is not uniform; as long as they are made of different material and the expansive conditions vary; as long as the cartridge chambers in gun barrels are of different length and the taper of the barrel from the cartridge chamber to the bore proper vary in shape and sizes; and as long as the combustion and the development of the gases of one powder charge takes place under different conditions from that of another charge from a different propulsive compound.

The gunner can further be taught by such an institution to what an extent a particular powder is affected by heat, cold or dampness, and how these detrimental effects can be neutralized. In short, the working sphere of such an institution is manifold and broad and of constant and lasting benefit to the intelligent gunner and manufacturer.

A few of the aims of the proof house may be specified as follows:

1. To ascertain the merits and ballistic qualities of American-made sporting arms, powder, ammunition, shot, etc., as compared with similar products of foreign origin, and to distinguish between foreign rubbish and meritorious goods.

2. To enlighten the shooting fraternity of this country on the real value and merits of all new improvements pertaining to sporting arms and on the ballistic qualities of all powders offered in the market.

3. By publishing and publicly discussing the results of all tests involving a general interest to advance among American sportsmen a better and broader understanding and knowledge on all points pertaining to gunnery or of a ballistic nature as far as hand firearms are concerned. No decision has, of course, so far been arrived at as to where the contemplated American proof house should be located.

In view of the large territory of this country, it will most likely be found expedient to establish and maintain at least two places where gunners can send their guns and ammunition for trial, one in the East and one in the West, both, of course to be conducted on precisely similar principles, and serving the same end.

These proof houses are to be established with the aid and for the benefit of American gunners and manufacturers and are to serve alike the gunners at large and the interested trade. For this purpose an American Proof House Association is to be formed, of which every person of reputable character can become a member. The members of the association are to be divided in two classes, ordinary and life members. The annual fee for the ordinary member is intended to be fixed at \$5. Life membership can be secured by those contributing \$25 and upward at one and the same time to the association fund.

Membership in the association will entitle the sportsman to have his gun or guns tested at the proof house for the purpose of establishing its shooting qualities and for determining the most advantageous loading of the cartridge to obtain the best results for each particular gun. The only charge for such tests would be the cost of the ammunition consumed. The charge for non-members to be fixed hereafter by the board of directors, will be governed by the nature of the test desired and the amount of time involved.

Each member shall be entitled to one vote only in all meetings of the association, and this vote can be exercised by proxy.

All gunners favoring the object herein set forth are herewith invited to have their names enrolled on the membership list of the association.

The organization of the association will be effected as soon as the membership list numbers 100 names, or when \$1,000 have been subscribed to the association's fund. Notice will be served on all persons applying for membership as to the place and date of the first general meeting called to frame and adopt a constitution and by-laws and to elect a board of directors.

Unless and until the board of directors decide otherwise, the technical management of the proof house will rest in the hands of Mr. Armin Tenner, an American citizen and late manager of the German Shooting Association at Berlin, Germany, and for several years past superintendent of the above named association's department for testing firearms and ammunition. Mr.

CAMP ON CHIPPEWA POINT.

From an amateur photo by Mr. Anthony.

See issue of July 23, page 80.

countries every sporting gun, rifle, etc., prior to its being offered for sale, passes the proof house once or twice for the purpose of being tested as to strength of its barrels and its action.

The management of these proof houses rests in some cases directly in the hands of the State authorities or in the hands of private corporations, organized and operated under the rules and regulations established by statute.

Independently of, and in addition to these proof houses, a number of European States have also established institutions for the purpose of testing the shooting qualities and determining the ballistic merits of sporting arms, gunpowder and ammunition.

The work of these institutions is conducted on a thoroughly scientific principle, and with the aid of various instruments and apparatuses. Their main object consists in serving the gunners at large, as well as the manufacturers of and dealers in the class of goods in question, and it is now generally admitted that the object sought in establishing these institutions has been fully realized.

They are, without exception, purely private enterprises founded and maintained with the aid of the shooting fraternities of the various States.

In spite of the fact that the shooting sport in America is followed by a much greater number of men than in any other country on the globe, and that as a class the American gunners watch and are anxious to avail themselves of every progressive step made in the production of sporting arms and ammunition, our country still is without either of the above sources of information and guidance. We are in both respects dependent upon Europe, and this fact is certainly not agreeable to our national pride, nor in accordance with the highly developed state of our home industry.

While the question whether we are in need of a law governing the strength and trials of gun barrels, and whether all our home-made guns should be tested and stamped before going into the market, may still be regarded as one open for discussion, there can on the other hand be no doubt that an institution devoted to a systematic and impartial testing of sporting arms and ammunition from a gunner's point of view, and for the benefit of both the sportsman and manufacturer, is not only a matter of desire, but of extreme necessity.

Experiments made by single individuals have, as a rule, only a very limited beneficial effect for the gunners in

Tenner, who came to this country upon the solicitation of a number of his American friends and fellow-sportsmen, not only possesses the necessary experience for such an office, but he also brought over with him a full set of instruments of the most improved and approved construction, among them an apparatus for ascertaining the gas pressure or bursting strain in gun barrels as produced by the various powders, a new force gauge for determining the penetrative force of the pellets, two chronographs le Boulengé for measuring the velocities of shot and bullets, etc.

All sportsmen desirous of placing America on a level with the European States as regards a better knowledge on all questions pertaining to gunnery, gun powder and sporting ammunition, are invited to communicate with the undersigned temporary secretary of the American Proof House Association.

It should be borne in mind that a proof house will not only serve as a source of valuable information, but it should, and unquestionably will, also prove a beneficial agent to the manufacturer who frequently is too much pressed for time by his regular business engagement as to allow of his devoting the necessary attention to all the details of ballistic laws.

ALBERT STETSON.

50 BROADWAY, Tower Building, New York city.

#### Another Camp Material.

ESSEX, N. Y., Aug. 4.—In current issue I notice a suggestion by "L. S. S." for sheathing paper for covering camps. What is in my opinion far better than sheathing paper is Neponset red-rope roofing paper. It is practically indestructible, not being affected by cold, heat, rain, or snow, is tough, and unlike sheathing paper, which when wet is easily punched through by falling limbs. It is cheap, being 1c. per sq. ft., easily transported and easily applied, and with a small supply of perforated tin or zinc caps, which may be home-made (I cut out mine) a roof may be put on a camp in half an hour that will last at least two years unpainted, and if put on a good smooth roof and painted will last years. The tin caps should be nailed on the lap of the joints and scattered through body of roof. The Neponset red-rope roofing paper is manufactured by F. W. Bird & Sons, East Walpole, Mass., and sold also by Williams & Monogue, Troy.

KIN.

#### Mississippi Game.

PELAHATCHEE, Miss., July 31.—The wet weather has not affected the production and rearing of quail in this section of Mississippi, judging from the large coveys of well grown birds that may be seen along the line of the A. & V. R. R. Turkeys growing scarce, owing to "baiting" and shooting from blinds; and deer owing to the hounding in and out of season. If these nefarious practices were stopped, this country would soon fill up with all kinds of game, for the reason that most of the negroes having left here, the country is growing up in timber, affording better cover for game than before clearing and better resource for food; but as the old school sportsmen fade away, the imitation has little sentiment about selfish greed, and less esteem for the public interest, hence their progeny will in two decades not know a turkey from a vulture or a deer from a cane hare.

CHAS. L. JORDAN.

#### The Adirondack Deer Season.

SARANAC LAKE, N. Y., Aug. 1.—*Editor Forest and Stream:* The opinions of Mr. Burnham respecting the Adirondack deer season, as set forth in your issue of July 22, are those held by us here. We would like to see the proposed change to later dates.

### Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant

#### SALMON IN SALT WATER.

IN continuation of my article in *FOREST AND STREAM* of July 29, relative to features which I have observed of the salmon in salt water, I make some additions, which, although uninteresting to some, will I am sure be attractive to others, who like myself have pursued the pastime of fly-fishing for the noble fish in fresh water. To myself, the spectacle of the salmon in the salt water in the normal condition, feeding upon its accustomed food, with its methods of taking, pursuit, action and habits, so far as I have been able to observe, has been of most absorbing interest. At the present time the salmon are stretched over an extent of about 27 miles along the coast, commencing 11 miles south of Monterey Bay and extending north of the bay toward San Francisco for 17 or 18 miles more, to the watering place of Santa Cruz, where the salmon seem to be as plentiful as about Monterey. I have not gone north of Monterey Bay, although I have fished over the 11 miles south, which comprises an open sea of exposure, without the protection which is given inside the bay. Out from the land as far as three miles I have found the salmon in quantity, and in water of over a hundred fathoms depth, although the average of fishing water is comparatively shoal, and I have caught the salmon in not over 15ft. of water.

It is probable that salmon have frequented the coast as now witnessed from an ancient period, although the attention of fishermen was not attracted until late years, first of the market-fishermen some twenty-five years ago. I learned of the fishing a decade ago, from my friend, and that all-around accomplished sportsman Mr. Austin C. Tubbs, of San Francisco, who at my fishing home on the Rangeley Lakes in Maine, told me of his rod trolling experiences with the salmon in Monterey Bay in the year 1890, when he with a few friends engaged in the sport, and captured over fifty salmon.

This I believe was the first attention given by sportsmen to the capturing of the salmon on the coast by a proper and artistic method. The hand line as used by the market-men is a base and plebeian method, excusable among those who fish for a livelihood, but unworthy of a sportsman who can avail himself of a higher and more skillful appliance.

The King salmon of the Pacific coast, the Quinnot or Chinook, which is the salmon of Monterey Bay, has a red or orange colored flesh, and for delicious flavor at this season is unsurpassed by any. It is an extremely full-blooded fish, and at times from the gaff cut will bleed profusely. It is not uncommon when fresh cut, to see a stream of the red fluid spurt up to the height of four inches, and to the extent of a teacupful. I have looked in vain for one of those hooked bill males of large size, which are so familiar to the fresh-water fisherman, but have not seen one, or any approach toward that peculiarity, which leads me to believe that none of the fish which I have taken or seen, have ever ascended the fresh-water streams.

In fact I am led to believe that the opinion of Professor Jordan of the Leland Stanford University Junior, to whom I am indebted for information regarding the Pacific salmon, is correct. That few if any of the salmon which ascend the fresh-water streams of the Pacific coast ever survive to return to the sea. In fact none do which ascend to the higher tributaries. They all perish ignobly, at least the latter, the milters as well as the spawners, and if any do return it may be questionable if they are in a condition to survive the hardships they have undergone. Those of the autumnal run, or some who do not ascend far may perhaps return and put on a vigorous aspect again, and make the phenomenally large fish which are sometimes caught.

The ascent of the Pacific coast salmon extends in some streams for several hundred miles, distances which require several months to complete, more than six months in some instances, and the sadly worn out condition of the fish at the upper waters makes it an easy prey to the prowling animals, and millions annually are left to die by the retreating waters. I have personally witnessed the dying condition of thousands, huddled up, whipped out, worn out and exhausted, and half blind, struggling vainly in confined pools, where the shores were white with their bones and skins, left by wild animals which had dragged the salmon to shore.

None of the Pacific coast salmon take the fly, this is unusual and unfortunate. There may be isolated cases of their taking the fly, but few and far between. Grilse are taken readily in San Francisco Bay with shrimp and other bait, and a few salmon are taken with roe bait in the rivers, and the fly-fisherman's labor is lost with the salmon of the Pacific, but the sea is open to their taking when the salmon is in a higher condition than he is ever found in the fresh-water streams, and when his game qualities are at the best.

The best fishing I have had has been at the Bay of Carmelo, eleven miles south, where there has been but little fishing, and where no accommodations exist for getting boats or fish bait or putting up over night, which has compelled me to send down my boat and two men the night before. After the first trip down and back I sent down the boat again and kept it there for two days, going down myself by the road early in the morning, starting as early by team as half past three, which brought me to the fishing grounds as early as five o'clock. In fact the early fishing is far better than that of any other part of the day, unless it be that of the late evening, and upon all the excursions I have now made, about a score, I have not in any instance commenced fishing later than five o'clock, and almost always have quit at half past ten, although in two instances I have fished straight through the day, having been encouraged by the holding on of the fish. Upon these two occasions I made notable catches. How distinctly the salmon in the sea is a nocturnal feeder I cannot say, but from what I have seen from its food-seeking before night, and what I have learned from the experience of the market-fishermen as regards the success they have sometimes had far into the twilight, I am led to believe that, like the trout, the salmon is a nocturnal prowler and feeder. An hour before sunrise is better than any two after, and the salmon commence feeding earlier than I have been able to get after them, and I have several times commenced fishing when daylight had hardly commenced.

On my last trip to Carmelo Bay I witnessed a condition which I had heard of from the market men, and was fortunate enough to see. It was scarcely dawn after my drive of ten miles in the dark from the Del Monte Hotel to my boat, where my men were waiting. The morning was warm and breezeless, and the glassy sea was without a ripple. The long green waves in their weary passage from the Asiatic coast were about to feel their first check on the California shore, and in those moderate swells were thousands upon thousands of salmon, full of lusty strength and silvery glistening, eagerly pursuing an immense mass of anchovies, which, scattered and demoralized, were vainly seeking escape. A few pulls at the oars brought the boat from its rough sheltering rocky wharf into the midst of active life. The water was clear and attractive in its bluish green hue. Down many feet could be seen the silvery anchovies scattered here and there, and easily followed by their slight but flashing brightness. Among the anchovies were the salmon seeming at play, but with a play as wanton as that of the tiger with its victim well in the thorny clasp. Within an area of a few acres were half a dozen breaks and swirls at the instant, and this continued for the space of half an hour or more, until the anchovies had passed away from the immediate vicinity of the boat, chased on toward the combing waves of the beach to the right. Blue flashing streaks occasionally passed near the boat a few feet below the surface, which were salmon in passage, and now and then a salmon broke fairly out of water, not with the playful leap as seen in the fresh-water salmon pools, but as the trout breaks from one wave to another in headlong pursuing flight. Only once did I see a salmon come up vertically, head on, and that occurred within two feet of the boat. It was bold and vigorous. He came up with a rush from below, undoubtedly for anchovies above. It was an exciting moment, for I had a salmon on at the time, which was wild with fight, and it seems to me that the leaping salmon would come into the boat. As I fought my salmon to gaff, which had struck my bait as I was bending on my sinker line 40ft. from the hook, which, however, was fully completed, and which carried out my line fully 300ft. on the first rush, but which I brought around in ten or twelve minutes, my sinker was caught by another salmon as I was lifting it clear from the water to detach as usual from the boat side, and carried it off. This was within 6ft. of the boat, and I plainly saw the rush, the open mouth, the strike and the tear away. The sinker

line fortunately broke, leaving my half exhausted salmon on my hook line, which I safely after brought in. Striking at the sinker is by no means rare with the salmon, this being the third I have had carried away, and I have several times seen the salmon strike the sinker within 6 or 10ft. of the boat and strike at it several times in rapid succession, and am quite sure that with a hook bent on the sinker end I would occasionally hold a salmon, but the rush of fishing has been on so strong that I have had little time to experiment, and I have been quite satisfied to hold a single salmon with its vigorous life and game fight. I am confident I could get doublets and even triplets if I chose, but when the salmon are as plentiful as I found them on the occasion I am referring to at Carmelo Bay, I am sure that by having my leading line sufficiently strong with its hooks to play the salmon off against each other until exhaustion occurred, that I would be enabled to bring them to gaff. I am sure they could not run as far as a single salmon, and it would, with proper care, but a question of time in fetching them up to the surface and boat. I am sure also they could be brought around with the light steel rod of 10½oz. which I am using, slowly but surely, by right management of the boat, and when I get toned down to the normal condition and over the stirring excitement which the catching of over six score of salmon has not yet abated, and have the time and the proper occasion, I shall experiment with it. Upon the occasion referred to, I dispensed with my sinker after the first fish, and had my bait of fresh sardine taken about as fast as I could get it out. I have always considered the playing of the salmon as a period of great satisfaction, but this time with the salmon so plentiful about, I could not but begrudge the enduring vitality of my fish. I saw what I had heard the market-fishermen speak about, the following in the clear water of several salmon at a time after the bait, when the envious and successful striker-left his comrades to seek other and less dangerous lures. There was no difficulty in following the school, although the ruffled water made the surface breaks less conspicuous, for the friendly shags, muirs and gulls came in for the harvest also, following up the salmon breaks for the demoralized anchovies, which, driven to the surface, fell readily to the bills of the birds.

So on to the combing beach went the anchovies, the salmon and the birds, and less slowly my boat, impeded by the necessity of fighting hooked salmon. But we followed on, finally into the jaws of the ground swell, where for half a mile in length, on the shore, the salmon held the anchovies for at least two hours. Back probably from the advancing file of pursuers, were other contingents of breakfasting salmon, and no cessation of quick biting occurred until the sun was an hour high. Then the salmon fell back into deeper water, but in fact large numbers had been there all the time, and by noon I had seventeen salmon in the boat. For an hour or two after eleven, I tolled with but little success, getting quiet strikes and bait strippers, and losing several good fish. At one o'clock more vigorous striking commenced, and by five I had twelve more salmon in the boat, making a total catch of twenty-seven, which after weighing, I found to be 482 pounds. I was satisfied and had my glut, and a carnival of fishing I am sure I shall not soon see again.

My largest fish of the day was 38lbs. and the smallest 13lbs., and the average 17½lbs.; somewhat larger than the usual average of my whole fishing, of which the average weight has been about 17lbs. The salmon came in about June 10, and my fishing has been from the 20th of June to the 25th of July, during which period I have been out sixteen times, taking 120 salmon, weighing a total of 2,338lbs. My largest salmon was one of 41lbs., which required 20 minutes to bring to gaff. One of 54lbs. has been taken by the market-fishermen, and several of from 40 to 48lbs. On the day of the large catch, I lost twelve fish which had been hooked and played from five to fifteen minutes. Ten I lost from the hook; one, and the only instance I have had occur, ran all of my line and parted it, despite all my greatest exertion, and another sprang out of the boat, a 30-pounder, after being gaffed and brought in, before receiving the usual quietus of a blow on the head.

A singular result occurred twice on that day, that of fetching in two salmon with broken hooks. In each instance the hook had first entered the inside of the mouth, coming out at the eye hole, a firm hold, the hook and two links of the brass wire had followed to the outside of the head, and the two links had thrown over the first and remaining link, there being a large brass swivel between each link, and there locked, leaving the hook dangling, and in each instance broken at the hook bend. I have puzzled myself to account for the occurrence happening twice exactly alike, and I cannot arrive at any other conclusion than that the dangling hooks were broken by the powerful mouths of the fish.

All salmon fishermen have observed the powerful head-shaking force of the fish, of which a common illustration is given in the black bass, which terrier-dog-like motion shakes out the hook. It has seemed to me that this force is intensified by the salmon in the sea over that exhibited in fresh water. In the fresh water the first exertions of the salmon are indicated by a run; in the salt water, after the first hook set, the characteristic and almost invariable action is the violent vibration resulting from head shaking, which indicates the strike as that of a salmon as against another fish. Its runs do not generally occur until the fish approaches the surface. After the first shaking it almost invariably works down, sometimes over 150 and sometimes 200ft. As the strain continues it allows itself to be gradually brought up, when the sinker can almost always be taken off without difficulty, attached as it is by the slip bow 40 to 60ft. from the hook. When within 15 or 20ft. of the surface it starts off, but with nothing like the rush it does when it gets to the top. There, unimpeded by the dragging line and sinker, it goes off with a flash which gives warning against allowing an overrunning of the line, or a handle catch. It may be one hundred, it may be three hundred feet without a stop, it may be more, but generally not over two hundred feet. At the stop, the violent head shaking occurs, and that is the great moment of anxiety, and the spells of head shaking seldom cease until the white belly turns. I have watched this head shaking close at the boat before exhaustion had occurred, when no run of consequence had happened, and of all the wild fierce working of a fish in its flurry, never saw it equalled.

Time and time again have I seen the hook seemingly well set in the salmon's head, at and above the water

surface, thrown out with its links twenty or thirty feet, and brought in before the salmon, yet conscious of its liberation, quit its head shaking. So I account for the singular situation of my links in the cases referred to, as resulting from the lack of strong flesh hold in the eye, although it could not retrograde, and of its being thrown through with the following links during the head shaking, and so locking together, while the hook dangling was crossed by the powerful jaws of the fish, resulting in the snapping of the hooks at the bottom of the bends.

I have observed at times large masses of shrimps in the water which are probably much more plentiful on the Pacific coast than elsewhere, and I have seen the salmon with open mouth passing through them, and have in the examination which I have made of the stomachs of the fish, found them at times full of shrimps. I have found in the stomachs a great variety of small fish, more squid than anything else, next sardines and anchovies, with smelts, tomcods, shad, and varieties of small rock fish, and my opinion is that the salmon is an indiscriminate feeder on any small fish which he can swallow without mastication. That in the salt water it is a bold, fearless and active feeder, full of life and affording a sport unequalled in any other fish.

New runs seem to be continually coming in, and undoubtedly a large number have started on the way to Sacramento, as I have lately observed a rapid growth in the roe, which a month ago was scarcely larger than mustard seed shot, but which now in some is as large as goose shot, and even larger. From what I can learn, I believe the salmon more or less will remain about for a month or even longer. Following them will come the bonita, the barracuda, the yellowtails, and the sea bass, the latter running up to sixty pounds in weight, all after the swarms of small fish which come along the coast.

J. PARKER WHITNEY.

MONTEREY, Cal., July 30.

## LAKE WENTWORTH BASS.

MANCHESTER, N. H., July 28. — *Editor Forest and Stream:* Before a man can enjoy an outing there are three essential points to be met—expense, and when and where to go. There are plenty other matters of detail to arrange, but when these three are overcome all else is easy, and the outing is assured. Mr. Arthur P. Spiller and myself met the trio of difficulties satisfactorily, and Wednesday morning, the 19th, found us on our way to Wentworth Lake for a few days' bass fishing.

The lake is situated in the town of Wolfeborough and was formerly called Smith's pond, the present name being given it in honor of Gov. John Wentworth, who was appointed to the office by King George III. in 1766, and served till the Revolution, when, attaching himself to British interests, he was obliged to leave the Province. He once lived on the shores of that lake, and the location of his once magnificent house and fertile acres, and also a large boulder in the water near by that is named for him are pointed out to visitors as matters of interest. We reached our destination by way of Weirs' Landing, across Lake Winnepesaukee, a name of Indian origin given to a beautiful sheet of water, and meaning "the Smile of the Great Spirit." I heartily concur with what Edward Everett once said of it, "My eye has yet to rest on a lovelier scene than that which smiles around you as you sail from Weirs' Landing," and what will apply to that particular spot will also properly describe a large part of the lake. The shores are not as abrupt as on some of our lakes, but in the background many grand views of mountains can be seen, notably those of Sandwich, Ossipee, Whiteface, Chocoma, and the White Mountains. I also noticed the white tents of the boys from the Rindge, Mass., Manual Training School, on a very pleasant and elevated field near the lake, and the large, elegant, castle-shaped residence of Dr. Greene, of "Nervura" fame, on Long Island, where he has a very large farm.

Our 20 miles' ride on the steamer Lady of the Lake was thoroughly enjoyed, heightened by the courtesies shown us by her able captain, J. S. Wadleigh, and his obliging clerk, Porter Hughes, who is a wide-awake, good-natured encyclopedia of lake lore, answering questions continually, silly and sensible, with the same genial smile. Arriving at Wolfeborough Falls, one mile from the steamer landing, we found quarters at the substantial and roomy house of Mr. Dearborn Hersey, who has at times entertained 35 boarders and whose wife knows how to make things comfortable and home-like for strangers, as well as to also serve meals that cannot be excelled. Our guide had been arranged for in advance, Mr. John H. Lowd, a relative of Mr. Spiller, a veteran of the war, jovial, whole-souled, accommodating, and withal an excellent fisherman, who knows the 20 square miles of Lake Wentworth and its numberless ledges, both above and below the surface, and its 15 small islands thoroughly, and also owns a good, safe rowboat.

Supper over, 6:50 o'clock that evening found us with artificial bait trolling on Crooked Pond, situated near the lake and connected with a small stream. It was also close to our boarding house. Before dark we had taken 7 nice bass and retired that night with visions of other and larger fish we were to conquer in the lake that day.

With our guide, lunch baskets, and a variety of bait, an early hour the next morning found us on our way to the lake, a first glimpse of which was anxiously awaited. The morning was a glorious one—sun shining bright, air clear and pure, and a gentle ripple on the surface of the water presaged a perfect day for our sport with comfort and safety. We had heard of the strings of two, three, four and five-pounders previously taken there, and like most castles built in the air, our anticipations had been gauged at an excessively high pitch and were doomed to disappointment at the start, and as it proved, revived afterward. Mr. Spiller caught the first bass, a small one, using a helgramite for bait, and nothing further broke the monotony, except our persevering guide's labors in handling the anchor and oars as we changed from ledge to ledge, till noon, when we put in to a small island and ate lunch. During the whole afternoon our work continued, all being resigned to the eccentricities of the species of fish we were after, and the result was twenty-one that we had kept, ranging in weight from  $\frac{1}{2}$  lb. to 1  $\frac{1}{2}$  lbs. each.

The second day was practically a repetition of the first, except that the wind was more brisk and the fish numbered twenty-three.

Saturday, the day of the gale, was one to be remembered. We had watched the rising clouds, noted their brassy and threatening appearance, and guided our ac-

tions accordingly. A few minutes before the storm burst we landed on Loon Island, about one-fourth acre in extent, two miles from the main land, composed of rock, with sufficient soil on its top to support few pine and oak trees, small but sturdy specimens, also a small house occupied the lee side of the rocks, built there six years ago by Mr. John Estes, for the use and entertainment of sportsmen and boarders. A few moments after we landed the storm burst with tremendous fury, sweeping everything movable before it. The water from the lake and rain seemed to go in sheets about ten feet high across the lake at a frightful pace, and we fully expected to see our place of refuge accompanying those sheets, particularly an unfinished addition Mr. Estes is erecting. The building rocked and swayed, boards, shingles, etc., took their departure, but we "held the fort," and within an hour were out sailing again, soon to return a second time to wait till there was less breeze and a pleasant moon to light us toward the shore. After the cyclonic disturbance of the water the current past Loon Island was very strong, caused by its return to a normal state of rest. Other fishermen were less fortunate than ourselves. One boat with a Dover party of four men was abandoned as it came on the rocks near shore. Another was overturned and three men thrown into the water, afterward being rescued. Many trees, some a foot in diameter, were broken off or torn out by the roots, on the main land, near us. Mr. Estes's place, when completed, will contain office, kitchen, dining room and thirteen sleeping rooms, besides a well-filled ice house, making an ideal place for a party to spend a few days bass fishing, being right on the grounds, hence doing away with the long pulls and waste of time incident to boarding at the village.

The last day we spent at the lake did not produce any tornadoes, but the wind blew nearly a gale the entire day. Our guide induced his brother, Charles Lowd, to accompany us. He is spoken of by all his many village acquaintances whom I met as the best bass fisherman of that locality. It was my good fortune to occupy a seat in the boat with him; Mr. Spiller and our "old reliable" guide using another boat. We worked near together during the forenoon, the rivalry between the two crews being intense; but Charles and I soon took the lead of our adversaries, and at 11:30, when camped under our boat to escape a ducking from a shower, we could show nearly two to their one. After disposing of our lunch and starting for the afternoon's and final effort, the wind steadily increasing in force, our companions suddenly weakened and started for an island to avoid it. But with the peculiar, distinctive qualities of a successful fisherman, my partner decided to take his chances with the elements, and I was no ways averse to the decision if the chances were even for landing more bass. Accordingly the boat's bow was headed down the lake for a place one and one-half miles away.

By the time we reached our ledge it required extreme care to prevent the water from breaking into the boat continually, and we shipped a large quantity directly over the bow despite our efforts. "If bass like rough water they ought to bite now," said Charles, and I was agreed. It was wild work for a land lubber like myself, but as long as my partner seemed at ease, and continued to bait his hook, I would not show timidity, by following his example. I kept drowning the worms, which our experience of the week had taught us was the most killing bait, and taking in each unfortunate that molested them. The sun at last nearing the horizon, and the breeze dying down, the anchor was put in the boat for the last time, and our boat headed for the boarding house, which we reached at 9:30, cold, wet and hungry. On counting up we found we had brought in forty-seven and the other boat thirty-one, making the day's catch seventy-eight bass, ranging in weight from  $\frac{1}{2}$  to 1  $\frac{1}{2}$  lbs. each.

Regretfully bidding our friends good-by, we started for home much pleased with our friends throughout, and the Wolfeborough people in particular, Mr. Spiller declaring that he was going to bring fish enough to back up some of the stories he should tell—and he did, barely. PAYSON.

## ANGLING NOTES.

### Black Bass and Trout in Conjunction.

I THINK it is fair to say that it is within twenty years last past that the black bass has become famous as a game fish. By this I do not mean to be understood that the fish was previously unknown, or that its game qualities were not recognized and valued in local waters, but its history had not been written and published; its fame had not become national, and it had not been recognized in the countries of the Old World, and the fish itself introduced into their waters. There was good reason for this in the fact that the angling literature of this country, the home of the black bass, was young and apparently not of the sturdiest growth, and gave no promise of the luxuriant fruitage of the present day. With the growth of angling literature the fame of the black bass and the fish itself spread from one end of the land to the other, and across the sea. FOREST AND STREAM played an active part in diffusing accurate knowledge concerning the fish, for the first important articles regarding species, habits, etc., were printed in its columns more than seventeen years ago, and gave an impetus to black bass fishing, black bass transplanting, etc., that has been continued to this day. With all the valuable information that has been given there has crept into print other information, misleading and valueless, in consequence of which the black bass has received a very bad name as a fish destructive of nearly all other species of fresh-water fishes. This comes largely, I think, from planting black bass injudiciously in waters unfitted for them, and because they do destroy other fish in a small, shallow pond, it is given out that they will destroy other fish in a large lake or stream. This is not the natural sequence, as there is ample evidence to prove. Black bass have even been charged with killing fish, not for food, but for the love of killing, but no satisfactory evidence pointing in this direction has been produced. The black bass is a fighter, an aggressive fighter when its stomach is to be filled, but I have often had cause to wonder if, after all, the black bass is more destructive, the conditions being equal, than the brook trout so long idealized and glorified by the artist's brush, the poet's pen and the angling writer's pocket pencil. This matter was brought freshly to my mind by what my friend Von W. says in last issue of FOREST AND STREAM, that he is not fully satisfied of the advisability of putting black bass in

waters inhabited by trout and salmon. It certainly is not advisable to put them in all waters so inhabited, but he refers specially to Sunapee Lake, N. H. During several visits to Sunapee Lake I have made diligent inquiry among the fishermen to find if black bass were ever caught that had any of the salmon family, excluding smelts, in their stomachs. So far I have not found a single instance of this sort; but only this summer I did find a man who in the spring caught a 2  $\frac{1}{2}$  lbs. brook trout while fishing from the Newbury dock at the south end of the lake, that had in its stomach seven black bass from two to three inches long each. Another fisherman caught a landlocked salmon with two small black bass in its stomach. Last year when it was proposed to introduce black bass into an Adirondack lake to destroy the pike that had found their way into the water inhabited chiefly by lake trout, it came out that a lake trout had been taken with a whole brood of small pike that it had safely pouched. Herr Von dem Borne wrote me from Germany that the young black bass in one of his ponds were nearly all destroyed by a few pike of the same age that had found their way into the pond, and that a German prince who had stocked his waters extensively with black bass had lost them all in the maws of his pike. So there are two sides to this question, and conditions that obtain in our case may fail utterly in another.

### From a Veteran Salmon Angler.

Mr. John Mowat of Campbellton, New Brunswick, who for fifty-five years has been intimately associated with salmon fishing in Canada, and who was selected years ago by the Dominion Government to accompany H. R. H. the Princess Louise as an expert angler on her salmon fishing expeditions, and also to accompany the American commissioners sent to settle our fishing complications when the Dominion wished to entertain them with salmon fishing, has read about fishing for salmon in the Hudson with pork bait, and in a personal letter refers to it, although he did not at the time understand that the pork bait was simply a blind for jigging the salmon. He says: "Salt pork bait might be taken by a spent fish on its way down to sea, but my experience is entirely at fault when it comes to a fresh-run salmon in this country touching anything but a fly. True, a fish may go so near a spinner out of curiosity as to get caught, but never in the mouth."

Mr. Mowat gives a poor account of the salmon fishing in Canada this year except in rare instances, because of low water and lack of rain. This state of affairs applies particularly to the early run of fish, for a later run of salmon has given some good fishing in the upper pools of some of the rivers. A few days ago, I had a talk with an old friend, Mr. Edson Fitch of Quebec, who leases a river on the north shore, and he gave me an account of the North Shore rivers similar to that related by Mr. Mowat of the New Brunswick streams. Mr. Fitch told me, however, that he was fortunate enough to kill thirty-three bright fish in his own river. For a number of years I have been trying to get specimens of trout from the lower St. Lawrence, about which there seems to be a mystery. Twice it seemed as though I had their fish in hand, but they evaded me and I began to think there were no such fish. While talking with Mr. Fitch he said: "We have a fish in our river that I would like you to see, and I do not believe that any one knows positively what they are, for there are various opinions held by anglers about them." Then followed the description of the mysterious fish which I have heretofore chased unsuccessfully, but which I now have a good prospect of getting my hands on. Among other things that Mr. Fitch said to me was that in buying some article of a fishing tackle dealer in the United States, the dealer to make change sent him a silver-doctor salmon fly. As he was accustomed to use Scotch salmon flies he put the silver-doctor in his fly-book, rather than on his leader, but one day he was obliged to use it, and in one day he killed eleven salmon on it, and the fly was then good for other fish.

### Salmon at Thomson's Mills.

Since the salmon in the Hudson River left the pool at Mechanicville and went up through the fishway on the freshet, which only lasted a few days, I have not been able to hear anything about them except that they were seen jumping at one or two places above the Mechanicville dam. Mr. F. H. Parks, vice-president and general manager of the Glens Falls Paper Company, has instructed the men at the Fort Edward mill to watch for the appearance of the fish at that place, but at noon to-day Aug. 5, he told me not a fish had been seen, and that the water was very low, and clear, and if the fish were there they would make their presence known. This evening I saw Mr. John A. Dix, of Thomson & Dix, who own the mill at Thomson's Mills (Fort Miller), and he tells me that three salmon were killed in the river below the mill by one man yesterday, Aug. 4. Mr. Dix also informs me that the fishway in his dam is repaired and in working order, as I have surmised in FOREST AND STREAM that it would be, but that the water is so extremely low that no fish can pass it. The freshet that brought the salmon over the Mechanicville dam came chiefly from the Hoosick River, and the Thomson Mills fishway did not get the benefit of it. A. N. CHENEY.

### Greenwood Lake.

THE bass fishing in this lake is better this summer than in any time during the last ten years. Guests at the Brandon House have had good sport with Geo. W. Garrison as guide. Monday last Mr. Oakley caught twenty-four, and on Thursday thirteen, running from 1 lb. to over 2 lbs. Still-fishing with minnow and helgramite is the game just now. L.

### A Striped Bass Haul.

A GREAT school of striped bass made its appearance at Carpenter's Point, near Havre de Grace, Md., on July 25. Perry K. Barnes caught nine tons at one haul of his seine. The number of fish taken must have been fully 4,000. What an opportunity this school would have furnished to anglers!

### The Anti-Pound Association.

THE officers of the Amateur Anglers' Association of Monmouth County, of Asbury Park, N. J., are as follows: President, Mayor Frank L. Tenbroeck; Vice-President, Leonard Hult; Treasurer, John L. Schneider; Secretary, William E. Bedell.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Wildwoods Extortion.

MUKWONAGO, Wis., July 8.—It is often matter of wonder to the man of average honesty of purpose why it is that, when a human being has established an inn for his fellow being's comfort in the wilderness, he so generally by that same token takes leave of all conscientiousness, of all charitableness of purpose and of all those kinship touches which should bind the body general of humanity into one harmonious whole whose sole thought should be a gradual and concerted progress toward the stars. The wildwoods hotel man bethinks him not of the stars. He remembers only that his season is scant three months, and he governs himself accordingly. He is never behind the door when the time comes to charge for things. He values not the stars, but to him unstreaked pork, sad beans and shameless coffee are pearls of great price.

Long acquaintance with sportsmen has taught me to believe that as a class they are free with their money, good wanters and good buyers. Still more liberal than usual are they, and still more liberal also is even the man not to be called a sportsman, when the time comes to meet the expenses of an outing trip. The most penurious man becomes careless of cost when the vacation fever has assailed him. The smell of the woods is in his nostril, the music of the trees sings in advance upon his ear, and while this is so he cares not whether breakfast bacon be 18 or 19cts. a pound. He is eager only that the market man shall pack these things in his bag, and get them down to the depot quickly. He asks for no prices and for no bill until all is piled in a heap upon the counter, and when the grocer asks what sort of coffee it shall be he conditions only that it shall be the best. A trifle close with his own family this same man may be at home in the humdrum, but now that the day of liberty has come he is liberal, even though his family be going with him to the woods.

This liberality of the buying sportsman is one great reason why FOREST AND STREAM is, thousand for thousand, so much more valuable than the ordinary journal to its advertisers. Without doubt this journal sells more goods for its customers than could a daily paper of ten times higher rates and many times the circulation. The latter goes to a mixed class. The class of sportsmen is not a mixed one, and there is no other like it to be reached in any line of trade. It is a class by reason of the personal characteristics of the men who make it up. The sporting journal sorts out of all humanity the liberal minded men. It has its sifting done when it offers its columns to a customer.

The truth of the latter statement being well fixed in my mind, a connected idea occurred to me not long ago. In view of the fact that a great many men go on camping trips each year, and hence must necessarily use a large amount of provisions, it seemed to me strange that no firm in this entire country had ever gone in for that line of sportsmen's outfitting which has to do with the purely culinary side of camp life. Thousands of dollars are for instance spent in Chicago every summer for camp supplies. This score is scattered among grocers, butchers, bakers or candlestickmakers, any one of whom might, by reaching out his hand through FOREST AND STREAM, centralize a large position of the trade and make a good thing of it—far better than he could of a non-vacation, household, dollar for dollar trade. It would be a great comfort to many a tent dweller if he knew of some place where he could give his order for everything he needed for his trip, where he could get bacon, eggs, bread, coffee in canisters for safe keeping, sugar in tins, canned goods, preserves, fruits, and all those things which the camper of the usual sort is bound to take with him. It would be a great convenience to the camper say, in Wisconsin, if he could wire down the outfit man to send him up a fresh supply of any article which had run short, resting sure that it would come promptly as ordered, and sent by one understanding the needs of the customer. To the dweller in a small town this would seem a needless attempt at differentiation in the grocery trade, but to the man who has outfitted in a big city and spent a day in getting together the stuff he needed for a week's trip, these will seem words of wisdom.

I was tradesman enough to see an opportunity in this, and an opportunity not yet embraced by any one in Chicago or any other city, and not having any shop of my own, I resolved to let another man into the idea. I went to the shrewd young man who manages a market where they sell fish, beef, bacon, young radishes, sugar, tea and all sorts of things good and bad to eat, tinned, in bulk, in big or little, and I told him that, if he cared to work for it by means of FOREST AND STREAM, he could develop a line of trade unique and valuable. The shrewd young man, not knowing what the sportsmanship of even one city signifies in these days, said ha! ha! and laughed me to scorn. Him I rebuked by spending some doubloons for sundry goods (which he delivered a day too late, after the fashion of his kind), and him I shall some day further rebuke by sending him the doubloons of some of my friends, for his bacon, albeit tardy, was exceedingly good.

## The Gist of It.

This is apparently to wander from the original idea, about the extortion of wilderness and summer resort hotels, but really the idea has only ramified and is lost. What I wished to say is first, that the sportsman on his pleasure trip is careless of money and does not mind paying the bill of the resort keeper provided that the robbery be not too flagrant; second, that this robbery often is so flagrant that the sportsman should not submit to it. As corollary to this I submit that sportsmen rather than be robbed by inn keepers of the unscrupulous class should become their own inn-keepers and camp out.

## An Instance of Extortion.

FOREST AND STREAM carries the largest assortment of advertisements of sportsmen's resorts probably ever collected in any one journal. These stopping places are run by reputable men, and deserve the patronage of sportsmen. Should that patronage prove to be abused by the owner of any resort advertised, it is hardly likely that particular advertisement would have a very long life. But these men are business men and follow business methods. They expect to be in business at the same place next year, and they are not so crowded for money that they feel disposed to treat a man as though they neither hoped nor wished to see him again. Such resorts, there-

fore, do not come within the scope of what I am saying, and are not, indeed, what I mean when I speak of the wildwood inn.

I mean the one-armed country hotel, with no conveniences and no cuisine, with no cleanliness and no godliness, with no excuse, indeed, for being, except the accident of situation in some sporting locality, where a lazy and unwholesome "landlord" presides, unwilling to do a favor to any one outside his own community, and eager to bleed to the last penny the stranger from the city whom chance has brought within his gates. A city man is the prized prey of such a "landlord," and a city man is his own true delight. For this sort of landlord, and this sort of inn, I have got it in, now, to-morrow and forevermore.

There are many "hotels" of this sort in our northwoods country here which has, indeed, hardly a single sportsman's resort worthy of the name—but I have in mind one which will do as the type for the class. It is now some weeks since I saw the letters, painted in red paint on the rough pine boards, which indicated that the shanty on the right of the railroad track at Basswood, north peninsula of Michigan, was John Son's hotel; yet the game put up by the said Johnson at the said hotel was such as to linger long in my mind, and indeed to form the reason and impelling cause for the remarks above on wildwood hotel rates.

There were in our little trouting party who visited the Brule and the Paint Rivers on that trip five members: Messrs. C. W. Norris, C. E. Corrigan, A. L. Hough and Ole Petersen, of Florence, Mich. We had with us abundant supplies for camping, but concluded to put up in town. The lower-case Mr. Johnson lodged us in a shed across the railway track, five in a room, and a small room too. We gave him the only meal we had served us, also butter, bread and other supplies to the value of far more than our hotel bill. This was fortunate, else we had had little to eat, for Mr. Johnson was not always successful in the trout fishing, which seemed to form the main pursuit of his life, his wife, a very pleasant and obliging young woman, being apparently the mainstay of the family. In view of our own supplies being in use we got along very well as to life in a dollar-and-a-half hotel, for such the local men informed us was the rate. We were catching plenty of trout and having a good time, and thinking not at all of finances. When we came to depart, however, we discovered the true function of the lower-case Johnson. It was to do the charging. He charged us just \$2 a day straight, and 50cts. for cleaning one lot of trout. This he did in an easy, off-hand way, which showed no twinge of conscience, whatever.

"You only charge \$1.50 a day as a usual thing, don't you, Mr. Johnson?" we asked. "Yes," he replied, naively, "I can't charge these here lumbermen no more'n a dollar'n half. They wouldn't pay it."

We paid it, but we didn't like it. We paid him \$20 and gave him \$20 of provisions for two days "entertainment," in which he gave us the use of a board shed and little else. Not one of us would have objected to paying \$5 a day for the sport we had, but we all knew thoroughly that the charge was extortion and imposition, and we felt the resentment any man feels when he knows he has been imposed upon deliberately. Decent treatment would have made us disposed to send our friends to Basswood and to Mr. Johnson. As it is now, what could we say, except to advise all sportsmen to give the place a wide berth unless they go prepared to camp out?

This is what I call wildwood extortion. If my friends know of other "landlords" who raise their rates for city sportsmen, I should be glad to give those gentlemen a bit of advertising which shall not cost them a cent.

## Larger Trout Than Ever.

There have been more large trout taken on Castalia Cold Creek stream (that of the so-called "upper club") this year than ever before, most of the fish being brown trout. On May 9 Andrew Englert, the club keeper, took a 5½lbs. fish, a fine specimen, in the inlet of the meadow stream. This fish was intended for display at the World's Fair, alive, but unfortunately it got out of the live box one day when the lid had been left open. The old fellow has been seen since, but has gained wisdom.

On June 20 Mr. H. L. Cross took a 2½lbs. 5oz. brown trout. On July 4 Mr. G. W. Oswald, of Toledo, took one which weighed 3½lbs., together with a splendid lot of others. On July 19 Andrew Englert, the keeper, was again fortunate, and in "Robinson's Curve," at 9 P. M., raised and killed a brown trout scaling 5½lbs. 4oz. This was on a Jock-Scott No. 4 fly. On July 18, not counting in this last fish, the total record for the season to date was 2,725 trout, weighing 1,094½lbs. There was not the least apparent diminution in the abundance of fish.

## The King of Castalia.

But I have kept to the last the mention of the fish which has made the club prouder than anything else—the largest trout taken in sport out of any preserved water of the country so far as is known. This fish was a monster brown trout, taken by Andrew Englert at 9 P. M. of June 16. It weighed 7½lbs. 6oz., and received the title "King of Castalia," being the largest fish ever taken in the stream to date by either club.

Andrew took this fish on an imitation Jock-Scott fly, No. 4 hook, in the big pool between the railroad bridges, a deep water about 60x100ft. in extent. He was alone when the fish struck, and had no landing net. He did not at first know he had on so large a fish, but left the bridge and went to the bank, where he had to fight the old fellow for over an hour. The fish never broke water once during the whole fight, but just lugged down. There are some more old lunkers in that pool, and the members wish they were out of the pool and out of the stream, for they have driven all its brook trout from their habitat, or have eaten them up.

## Where to See the King.

Fit end for so royal a fish, the King of Castalia has gone direct to the place of all others, which the anglers of the country would name for him—to wit, the FOREST AND STREAM exhibit at the World's Fair. For this courtesy of the members of the Cold Creek Sporting Club the thanks of FOREST AND STREAM, as well as those of the anglers who visit the Fair, are certainly due. The fish has been handsomely mounted under the supervision of Mr. J. W. Oswald, of Toledo, who made excellent life-size photographs of it. There is no more prized feature of the FOREST AND STREAM installation, and it will give pleasure to very many who

have read with the greatest interest of the wonderful Castalia stream. This is the best the stream has ever done—the King of Castalia. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## TROUT FISHING IN THE SKAGIT.

MOUNT VERNON, Wash., July 15.—The Skagit, a noble river, flowing majestically from near the British line in a southwesterly curve for a distance of about two hundred miles, springs into life at the foot of one of the great glaciers of the Cascades, and fed by innumerable mountain streams and other rivers, empties into Puget Sound about twelve miles below Mount Vernon, the county seat of Skagit county, and a cheerful, bustling town, with a host of good fellows in it.

When the river passes there it is a little turbid, but cold as ice, and abounding in three varieties of trout, with plenty of salmon at different times of the year. The salmon you can catch only occasionally with hook and line, and it is not often that the water is clear enough to make a fly available for trout; but with bait you may take the rainbow, cut-throat and Dolly Varden to your heart's content. Fishing with salmon eggs is not artistic, but when the salmon are running the trout scorn every other food, and if you care to hear an experience with that sticky stuff I will tell it in my blundering way.

One afternoon in the early part of this week four ardent anglers strung themselves along a log that juts out into the river, a few minutes' walk above the town, armed only with the lightest tackle, with no gaff or landing net, and not at all prepared for the difficulties that followed. The fishermen were John Munch, who knows all about chemistry; Dr. Henderson, whose surgical instincts are so strong, he thinks the way to remove a fish hook from your finger is to amputate your arm and then cut out the barb; Key Pittman and your relator, lawyers in name, who show their professional traits by their unwillingness to throw away even the infernal bullhead.

Well, these fellows were out as much to doze on a log in a shady place as anything, but they had hardly swung their legs over the water before M.'s reel went off like an alarm clock and scared him so he couldn't move. We scrambled to our feet and gave him all the room we could—he was on the inside and there was no way to get off. The way that fish tore up and down, round and round, made our hair stand on end. The rod was a light steel one, and it stayed doubled up just for one hour, while M. chased us up and down the log. It was the same old story but ever new to the actor. Nearer and nearer he came to the surface; more and more he fell under control of the rod. At the end of an hour and five minutes a man paddled up to the log in an Indian dugout, and into it carefully climbed M. and the Doctor; skillfully they guided the big fish up to the sloping bank and into a little channel; he was played out; four hands grabbed him and bore him in triumph out on to the grass. He was a Dolly Varden and weighed six pounds and four ounces.

While this was going on and B. was watching the performance in the canoe, his rod was nearly jerked out of his hand, and the line sped out at a Stamboul gait; it was red hot for about ten minutes—too hot—at the end of that time the tip of the rod flew up with a broken hook at the end of the leader. The log trembled with rage in sympathy, and B. wept scalding tears. Then P. hooked one just as M. and the Doctor were getting back on the log and his rod made a complete loop, but it was managed in good shape; then the Doctor gave M. his rod to hold while he went into the canoe business again; immediately M. gave an Indian yell for some one to take his rod; another whale had seized the Doctor's hook. That did settle it. How in the mischief were we to keep those fish apart? It was settled in this wise; M.'s fish made a break while he was trying to get as far away as possible; the rod and tackle got into that straight line that gives the fish a dead pull and off went the trout with part of the leader. But P. exhausted his fish, and getting into the canoe, the captive was piloted ashore. B. hooked another and hooked him fast, and in due time he lay alongside of the others. Then the Doctor had his turn and braced himself for the struggle, which resulted in bringing up a quarter pound rainbow trout caught in the belly, at which the Doctor was disgusted. P.'s hook was swallowed by one that belonged to the 400 and he was rescued. B. thought he had one, but he only stayed a moment and then we saw him skipping out toward the middle of the river. The Doctor fastened himself to another of high lineage and after a desperate struggle conquered him.

By that time we were getting exhausted. Suddenly the Doctor's line shot up stream; the reel sang like a knot saw, but the fish was too swift; he got a straight line and away he went with hook and leader, and the Doctor nearly fell overboard; we all assisted with expressions forcible and appropriate to the occasion. We concluded we had had enough. The sawmill whistles proclaimed the supper hour, but the proclamation wasn't needed. We hung 28½lbs. of trout to a pole and there were only seven of them. The photograph is not a very good one but will show you how they looked. The five we lost must have weighed twice as much; they always do.

Later in the summer we will go up the river about forty miles, where we will find lakes and streams in every direction; where silver and rainbow trout lie with their heads out of the water waiting for us. We will fish for them with flies, and they know their business; they'll give us all the sport we want. No mosquitoes, gnats, moose flies or anything else that is objectionable, except that the underbrush is a little too thick for a good cast sometimes. Snow-capped mountains will tower above us, and a solemn stillness fill the woods that are too dense to harbor feathered songsters. Still, if we want music very much, the Doctor will cheerfully break out; but up to this time we have never wanted it enough for that.

C. K. BONESTILL.

## A Fish Parasite.

An infusorian parasite made its appearance in the freshwater aquaria at the World's Fair, and during the month of July caused the death of many fish. The catfish were first affected and afterward the grayling and trout. The afflicted fish were covered with minute white specks, and as soon as their gills were attacked death resulted. The only practicable remedy was found to be salt, but this killed only the adult parasites, and not the free-swimming young stages.

WHAT ANGLERS IN CANADA ARE DOING.

It takes some little time now to ascertain what anglers are doing in Canada, for many of them are traveling such distances back from civilization in search of new fishing grounds, that it is often only after they have finished their outings and returned to Lake St. John or Quebec, that the outer world knows what they have been doing. Messrs. E. J. Myers and H. O. Wilbur, of New York, have returned home after a stay of nearly three weeks in the Lake St. John country. After fishing for some weeks for salmon last month in Newfoundland and then renewing his acquaintance with the ouananiche, Mr. Myers declares that salmon and ouananiche are his favorite game fishes. Up the Mistassini Messrs. Myers and Wilbur found the water much lower than it was last year, and the fish were not taken at first so plentifully in the same pools in which they were found last year. But when their habitat for the time being was finally discovered, war was carried on in vigorous style, and there were struggles to the death in both air and water. Many doughty finny warriors were laid low beside the famous pools of the Fifth Falls. After fishing the Mistassini Mr. and Mrs. Myers and Mr. Wilbur enjoyed very fair sport at Isle Maleine in the Grande Discharge, where they camped for a day or two. The water was rather low for heavy fish at the time, but about a week previously excellent sport was enjoyed there by Mr. R. M. Stocking, of Quebec, and myself; and Paul Savard, one of the guides, who had taken up my rod while I was resting, hooked and lost a magnificent specimen that certainly measured 30 in. in length, and must have weighed 8 or 10 lbs., and treated us to a couple of beautiful somersaults before saying his final adieu. We ran all the navigable waters of the Grande Discharge between Lake St. John and Chicoutimi, and it is one of the most magnificent canoe trips imaginable, with just enough of the perilous to make it sensational, while it is well worth the trouble of the entire journey to enjoy the visual contemplation of either the rapids of Vache Caille or of Gervais, or the whirlpool and rapids of Isle Maleine. But on no account should the tourist permit himself to be cajoled by the guides into taking the easier and less exciting descent by way of the Little Discharge.

Mr. Myers purposes returning here next season to make an extended tour through a number of rivers and lakes in the wild country north of Lake St. John.

Mr. Brewer, president of the Amabash Fish and Game Club, has followed Mr. Merriam, of Springfield, home. Both gentlemen had splendid sport on the club waters in the lower Metabetchouan.

The Quiatchouan River, above the falls, has afforded splendid trout fishing within the last ten days to a number of Quebec anglers.

Mr. Eugene McCarthy of Syracuse passed through here on Saturday on his way home from his angling excursion to Lake St. John. In a letter I received from him some days before his return he said: "I never had a better time. The fishing is improving each year, I believe, and I think more of the Lake St. John country each year that I come. It can never be fished out. I believe that I know less about ouananiche each year. They are the finest fighting fish extant and never alike." In ten hours' fishing on the Trilon tract, Mr. McCarthy, with his friends, Messrs. Curtis and Dean, took 282 trout. After Mr. Dean's return home Messrs. Curtis and McCarthy put in a week at Lac de Belle Riviere, southeast of Lake St. John, and took 102 and 123 fish respectively, the first catch weighing 63 lbs. and the second 52 lbs. They only fished for three days, and then for but two hours, two and one-half hours and six hours respectively. Then they put in a week at the Fifth Falls of the Mistassini, where in two and a half days' fishing their catch was 72 ouananiche with an average weight of over 3 lbs. each, and here some of their finest rods were broken and leaders and flies innumerable smashed. Mr. McCarthy has with him photographs of each day's catch, right through.

A Boston angler who was recently fishing in the Grande Discharge reports that a 2 lbs. ouananiche in one of its leaps to endeavor to clear himself of the hook, landed safely into his canoe.

Mr. Byrd and his family, of Brooklyn, returned from Lake St. John on Saturday with Mr. McCarthy, and on the same day Chief Justice Andrews of the New York State Court of Appeals left, with a couple of members of his family, for Roberval with Attorney-General and Mrs. Casgrain of Quebec. E. T. D. CHAMBERS.

QUEBEC, July 31.

FISHING ABOUT CAPE MAY PENINSULA

THE season for fishing about Cape May county, New Jersey, in the ocean and in the Delaware Bay, begins the latter part of May, and ends early in November. First come the black drum from May to July, then weakfish and the other small fish of the region; in August the rock or striped bass, and in September the channel bass or red drum. Sheephead have been so rare within the past three years as to be inconsiderable. Bluefish have been uncertain, but there are some to be taken, and croakers are erratic.

My experience up to this time has been peculiar. Everywhere the complaint is made of no fish. The crabs were largely destroyed the past winter by extraordinary cold, and to this is ascribed their present scarcity. No crabs, few fish. Shrimp also have suffered. Razor clams and mannoies are almost extinct.

Drumfish have been abundant in the surf. I despise this fishing, with the constant undermining of the surge retreating over the loose sand, and giving the fisherman the supposed sensation of a horse on a threshing machine. It is wearisome work, and after the fish is fastened, or "snagged," as the natives have it, there is no play in the shallow water, but a steady pull, as of a piece of driftwood, into the breakers. Within the past month large numbers of surface drum (which never bite) were taken at Atlantic City by dragging gangs of hooks swiftly through the surf. One man took twenty-five in one day in this fashion.

Decoration Day, with three companions, I took my annual, and this year only, drum trip. We four fished from 8 A. M. until 5 P. M. at Pierce's Point, on the Delaware Bay, before there was a single strike, which happened to fall to me and brought a drum of 65 lbs. Last year two of us, on the same day, took 15, the largest weighing 104 lbs.

Weakfishing has been also discouraging. Last year the run was very fine and of extraordinary fish as to size.

The few fish taken this year have been large; but with the exception of a very few days, numbers have been small. I fished with five companions three days at Crosse Ledge and Ship John Lights, and the party took four weakfish and one rock. The largest weakfish, however, weighed 8 lbs. One of my companions—Norris—returned and took 52 at the Ledge; all large fish. Ten of them weighed 90 lbs. But this day was exceptional. The fishing has been very bad, even with the very best of bait.

The only redeeming feature of the season is the return of the bluefish, off Cape May, within the last three weeks. There has been a very good run off Cape May and Anglesea, and the Swedes at the latter place are reaping a rich harvest. Also, the non-professionals are obtaining belated sport.

From the abundance of drum and of bluefish, I infer that my favorite, the channel bass or red drum, will answer to his name the latter part of August or first of September, when, if any of your readers enjoy pursuit of him, it will be well for them to engage quarters and boatman at Anglesea.

The best plan is to engage a sloop or schooner suitable for fishing in the ocean for one's exclusive use, and take what companions he likes, resolutely declining all requests of the skipper to allow other persons to go along. This merely means that the boatman gets a dollar or more a head for the extras, who are sometimes good fellows, but almost invariably clumsy fishermen, and occasionally disagreeably in the way. Let the employer harden his heart and keep his monopoly. The cost of the boat and bait is \$10 per diem.

The fishing is usually very fine. There is reasonable assurance of one or more large channel bass, and processions of large weakfish, croakers and bluefish from which toll can be taken. Abundance of fowl fish, sharks, robins, skates and stingrays. An occasional flounder of large size. At the same season, directly across the Cape from Anglesea, in the Delaware Bay, the channel bass are equally abundant, and, I think, of larger size. The only variant is the shark, of great size, and abundant and annoying. Board can be obtained—very comfortable—with Nathaniel Holmes, Dias Creek, railroad station Cape May Court House, at \$1 per day, and boat and bait, with boatman's services cost \$3 more. Two persons; therefore, can fish at Holmes' for \$2.50 per diem, and they will find their stay in the old Holmes farm house very agreeable.

The Cape May coast fishing is no limited trout brook or bass lake to be exhausted upon publicity being given to its location. There is room for every fisherman in the land, without sensible depletion of the splendid horde which swarms along the shore at the beginning of autumn. F. S. J. C.

BOSTON NOTES.

THERE seems to be less interest among Boston gunners than usual this season in shore bird shooting. The weather has been hot and dry, till of late, and that may account, in part, for the few that have taken to the shore after summer yellowleg and other early shore birds. But the abundant rain of Saturday will doubtless bring in some flights of birds, and then there will be more interest among the gunners. A couple of hunters went down to Chatham the other day, but decided not to stop, finding that there were already some 15 gunners there and part stopping at the hotel. These gunners were getting some birds, the report being that they had been taking some 60 or 70 a day to a gun, though the number was made up too largely of peep to please the two gunners mentioned.

It is only a little over three weeks to the opening day on ruffed grouse in Maine, Sept. 1st, but if reports of birds continue as discouraging as they have so far, the opening will amount to little. Rod and line sportsmen, who have returned from the Maine woods, report no partridges seen of any account, and I am led to believe that there are not three birds where there should be dozens. The season of 1892 was a very hard one for ruffed grouse, though the winter, last winter, was not especially hard. Ticks, foxes or bad weather, killed off the broods, and the result was that there was little breeding stock left at the opening of 1893. Again the mistaken Maine law that permits of shooting ruffed grouse on and after Sept. 1 is surely destroying that noble game. The broods are together till far into September, the chicks not having grown, and it is an easy matter for any country boy to pick off every one of a flock. Then the increased and increasing influx of sportsmen into that State, each eager to shoot, reduces the ruffed grouse each season to not enough for breeding. This is a common complaint from many localities, where formerly partridge shooting was excellent.

The Bangor (Me.) gunners are reported to be discouraged about upland plover this year. Some of them have been out as usual, but getting no birds they have come to the conclusion that the broods are not yet reared, or else the game is remarkably scarce. It is understood that the upland plover seek the open fields as soon as the young are able to fly well, and there they flock together, feeding upon grasshoppers and crickets till nearly time for the frosts to cut off these insects. The big hayfields of Brewer

CHAINED TO BUSINESS?  
Can't go fishing? Do the next best thing. Read about it in the "Forest and Stream."

have been visited by a number of Bangor gunners, with the result of few birds or none. They have not even heard piping as usual.

Mr. W. B. Garfield, watchmaker, with Kettel & Blake of Boston, is going to Umbagog Lake, in Maine, where he will camp, fish and hunt for a couple of months. He is well known in Waltham as a great lover of the rod and line and the shotgun. Several of his friends wish they were to be with him. They count him as an adept at matters pertaining to camping and one of the most genial men.

Salt-water fishing is more in vogue at the Massachusetts seashore resorts than ever this season. At Nantasket it is understood that the guests who own or can hire boats and yachts, spend nearly every pleasant afternoon in fishing for cod, perch, etc. Among the devotees of the sport are Mr. Michael J. Moore, a School street lawyer; Mr. Frank C. Marshall, of Sagamore Terrace; Mr. W. F. Taylor and Mr. O. W. Bradbury, of Atlantic avenue; Mr. Geo. F. Hall, Nantasket avenue; Messrs. C. S. Jeffries, S. F. Moore, W. M. Draper, J. J. Brownlow and Edward F. Anderson, of Nantasket avenue. The above are all lovers of codfishing and they have already brought in many a good haul, the fish being distributed among their friends. Mr. Lewis E. Hubbard and his son Lewis, Stephen Porter, Jr. and E. E. Angell are lovers of mackerel fishing, and they have had some good sport of late. Mr. J. H. Edwards, of the Wentworth, Mr. A. B. French, Miss French and Mr. J. B. Cook are ardent lovers of perch fishing. There might also be added to this list of perch fishermen Messrs. W. F. Worthen, J. W. Huntress and Fred Wilson. Mr. Frank Bennett, the rifle and revolver expert, is also mentioned as very fond of fishing. Among the Stony Beach fishermen are Mr. Geo. Barnard, Lawyer Coogan, W. W. Leach, Wm. T. Brown and Bartlett Holmes. They spend all the time they can afford on the fishing grounds when the weather is suitable.

A party from Brockton, consisting of Messrs. E. E. Dunbar, F. S. Osborne, E. J. Edgar, John S. Holmes, F. W. Keith, Charles W. Douglass, Henry D. Wade and S. W. Caldwell, was out after cod the other day. They took over forty fish of good size. These they divided liberally among their friends. A well known Weymouth party is also frequently out fishing in a staunch little yacht. In the party are seen Messrs. A. M. Bachelder, E. T. Jordan, C. D. Harlow, F. H. Mason, W. H. Cunningham, with Capt. Freeman Whitmarsh, the owner of the yacht, the Nettie. Several Atlantic Hill people are frequently seen fishing. Among these may be mentioned Messrs. Thomas Grimes, J. H. Williams, George O. Baker, Henry T. Clapp, Alfred S. Thompson, Charles F. Warren, J. S. Abercrombie, George B. Judson and Lee Hammond. They are all lovers of any kind of fishing almost, and their catches are often the wonder of their friends. They are noted for fishing and "sticking to it," and that is the way they get the fish.

Almost weekly trips to the beach are made by several Whitman lovers of salt-water angling. Among these gentlemen may be mentioned M. W. Foster, John H. Fenton, L. S. Benedict, Henry Marks, S. J. Parmalee, M. F. Tobias and James S. Foster. They make good fares frequently, and their friends are generously remembered. SPECIAL.

"FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

CLAYTON, Thousand Islands, Aug. 2.—Dr. J. Livingston Reese and nephew, Mr. T. Irving Reese, both of New York city, yesterday landed 125 fine black bass in less than four hours, at Reed's Bay, above Clayton. Fishing here is exceedingly good just now, a large number of good catches being made daily. Mr. Frank W. Emery, of New York, last Monday landed a 25 lbs. muskallonge off Clayton on an 8 oz. rod. Besides this beauty, Mr. Emery's catch for the day included 21 black bass, weighing together 294 lbs., and one wall-eyed pike of 64 lbs.

CAYUGA LAKE, July 31.—Union Springs, famous for perch and pickerel fishing, is not giving a very good showing at present. Myriads of grasshoppers cover the lake, which accounts for the black bass not taking the fly as they have heretofore. D. D. W.

CUTCHOGUE, L. I., Aug. 1.—Young Anglers' Club scores for past week, on Long Island Sound, for black fish: T. Sheil 7, weight 6 lbs.; J. O'Neil 12, 18 lbs.; Robt. Lang 9, 84 lbs.; J. Carr 10, 16 lbs.; J. Smith 41, 32 lbs. Largest caught by Mr. Carr weighed 7 lbs. 9 oz. All fishermen are residents of Brooklyn. Fishing for coming week is expected to be about the same. LITTLE JIM.

KEENE VALLEY, N. Y., Aug. 8.—Mr. Oliver Hewitt, of Burlington, N. J., caught three nice trout in the Au Sable River, near St. Hubert's Inn, last week, one of which weighed 24 lbs. An unusually large number of big trout have been caught in the Au Sable River recently owing to the careful stocking of its upper waters by the Adirondack Reserve. J. B. B.

PLAINWELL, Mich., Aug. 5.—Wm. Crispe took four trout of 1 lb. apiece from the Chart Creek yesterday; this is the same creek that he got the prize winner from last year. J. H. M.

Aug. 4.—Mr. T. D. Jordan, of New York city, who is staying at the Hubbard House, landed 79 black bass yesterday. Their average weight was 14 lbs. Though rather above the average catch for one rod this is not considered an extraordinary lot.

STATEN ISLAND, N. Y.—Tottenville, N. Y., Aug. 7.—During the last seven days weakfish have been plenty on last hour of flood and first hour of ebb; 1 to 3 lbs. fish; crab not so eagerly taken as in former seasons; fish seemed to have been feeding on small fry. JOHN T. HAWKINS.

Where to Go.

ANYBODY desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers

### Anglers' Association of the St. Lawrence.

THE ninth annual convention of the Anglers' Association of the St. Lawrence River was held at Alexandria Bay last Thursday. Thirty-five members were present.

In the absence of President H. H. Warner, whose regrets were presented by Secretary Thompson, the first vice-president, W. C. Browning, took the chair. Supervisor Holmes of Redwood was chosen secretary pro tem. The minutes of the last session were read and approved, followed by a list of applications for membership, all of whom were approved and duly elected members of the association. The treasurer's report was then audited and approved, and as it ever has been, found strictly correct. Treasurer Grant is a model.

Letters were read from various parties regretting that they could not attend the meeting, notably one from Gen. Bruce of Syracuse, and a telegram from the editor of the *FOREST AND STREAM*, both complimentary and encouraging.

Secretary W. H. Thompson broached the question of frost fish, a species of ciscoe which infests Mill Site Lake to the detriment of the salmon trout.

The discussion was to devise some means by which authority could be had to net the ciscoes and preserve the trout. A beautiful specimen of salmon trout was shown, and it is claimed that if the ciscoes can be kept out, salmon trout to the weight even of 30 lbs. will be the result. The secretary was instructed to correspond with the Fish Commissioners to the end that some plan may be devised.

A brief report was made by Game Protector Northrup, showing conclusively that while thousands of dollars in value of illegal fishing appliances have been destroyed in the last two years, that the amount has this year materially decreased, and that public sentiment has undergone a great change. His report was very interesting and brought a hearty vote of thanks, together with a resolution that the substances of his report be sent to the members of the association and to all interested as convincing proof that the efforts of the Anglers' Association toward the protection of game fish had not been without their legitimate fruits for good.

Major Durham, of Cape Vincent, introduced the question of the exempt-waters of Lake Ontario, as embraced in the towns of Lyme and Bowenville, and a brief speech outlined the situation, exposing the fact that the netters had tried through the efforts of a Watertown lawyer to get even the waters of Cape Vincent exempted from the action of the law. On motion of Mr. Grant, it was left to the executive committee to appoint a sub-committee who should look after this matter at the proper time, and also to the size and weight of fish, which should be the limit.

A hearty vote of thanks was accorded to Manager Esseltyn, of the Walton House, for his courtesy to the members of the Association. The election of officers resulted as follows: President, H. H. Warner; First Vice-President, W. C. Browning; Second Vice-President, H. R. Heath; Secretary, W. H. Thomson; Treasurer, R. P. Grant; Executive Committee: Chairman, A. C. Cornwall; J. H. Quimby, G. H. Strough, James T. Story, O. T. Mackay.

The attendance was larger than that of last year, and the meeting was not only an interesting but instructive one. After the adjournment the members were invited to board Mr. Browning's beautiful yacht *Indienne* for a ride to Alex Bay, and on the way a hearty and enthusiastic vote of thanks was accorded the generous owner.—*On the St. Lawrence.*

### A Dark Colored Fluke.

NARRAGANSETT PIER, R. I., July 31.—I have just sent you (per Adams Express) a flounder which I caught while bass fishing this morning. It is peculiar on account of being black on both sides with a white head. All the men to whom I have shown it say that they never saw one like it before, and Mr. R. G. Dun, who was fishing on the adjoining stand said that it was the first one he had ever seen and advised me to send it to you. As far as I know it may be very common, but if it is worth preserving, I should be glad to give it to "our paper." I have had very good fishing of all kinds, both in fresh and salt water, and hope soon to open up with the gun.

### THÉAKSTON DE COPPET.

[This fish (which is the common fluke, a variety of the flounder or *Pleuronectida* family) exhibits a freak of having both sides colored, instead of one side being dark brown and the other white. Mr. E. G. Blackford tells us that such idiosyncrasies of coloring are often found.]

### A Blind Hybrid Salmon.

SOME years ago, at Clackamas, Oregon, Mr. Waldo F. Hubbard fertilized some eggs of the blueback salmon (*O. nerka*) with milt of the quinnat (*O. choutcha*). The eggs hatched in about the same time as those of the quinnat salmon and the fry lived until the sac was absorbed, but none of them had a trace of an eye.

Mr. Hubbard has crossed silversides (*O. kisutch*) with the quinnat both ways. The eggs hatched and the fry appeared to be as healthy as young quinnat.

The blueback salmon, according to Mr. Hubbard, does not run into the Clackamas River; the female which he found there and crossed with the quinnat was the only one he has seen in the stream. It was a small fish and very red. Dog salmon and humpbacks are absent also from the river.

### The Bass Run Small.

ATHENIAN CLUB, Oakland, Cal., July 24.—A shooting and fishing club of which I am a member has a lake of ten or twelve acres preserved. It was made by damming a cañon and is very deep at the lower end, gradually shoaling to its inlet at the upper end. A small stream supplies it and the water is used to supply this city. Some ten years since it was stocked with black bass, and on favorable afternoons a catch of 50 or 60 may easily be taken with the fly; but they are all small, running about 6 in. long. One 8 in. long is a rarity. Can you inform us how to improve their condition, or what the reason is they do not grow larger? Two years since one weighing 2½ lbs. was taken with a spoon—but only one. If you can assist us in this matter, you will confer a great favor on a number of sportsmen here, and especially C. B. G.

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

### A Few Visitors.

There are now some thousands of names on the *FOREST AND STREAM* register at the Fair, and among these thousands are very many whom one would be glad to meet face to face. Many write their names and pass on, some leave cards, and some appear in proper person. That one can not see every one of these friends is a matter for sincere regret. Out of an envelope full of cards I take a handful.

### All Sorts.

They are all sorts, and I imagine that if you rounded them all up together and shot into the flock you would get some pretty decent people.

Mr. Roger D. Williams, of Lexington, Ky., leaves two cards. He would have been twice and thrice welcome, no one more so, and I am sorry he got back to his blue grass home without his path crossing ours in the mazy ways of business and pleasure. No one ought to come to the Fair for less than a two weeks' stay, and three or four days makes a preposterous limit.

Mr. Townsend Whelen is another who came in the darkness and we saw him not. Encore, please.

Sakaye Sawatsri, Commissioner of Japanese Fisheries Society to the World's Columbian Exposition, called and left his card. He had heard of *FOREST AND STREAM* in Japan, and wanted some copies to post himself up a little in regard to the habits of American fishes. He is a very courteous and pleasant gentleman.

Mr. Robert J. Mix, of New York city, is a gentleman of great ability, critical judgment and rare good taste, not to mention acute perception and plenty of sense. Mr. Mix ought not to be kept back, and I hope to see him President of the United States. On the back of his card he says: "One of the chief objects I had in mind in visiting Chicago was to meet Mr. Hough, whose writings I

after material for some stories. He writes on his card here, "The Fair loses all its anticipated charm in the absence of the hero of Kekoskee. I have made a daily call on you during the past week and been as often disappointed." In view of the great scarcity of gentlemen of intellectual scope and profound insight into human nature like this, I am a good deal disappointed that Mr. Munroe is that I did not see him. I have been cautioned by the authorities about endangering the Fair by a careless absence out of town, and will henceforth try to do better. As it is, I am always away at just the wrong time. There may be another Fair. There can not be another O. K. Chobee.

And now comes "Amphibian," the same being Mr. Wm. Manatt, Jr., of Poughkeepsie, N. Y., and avers that he tried to see the Western end of *FOREST AND STREAM*, and could not. Dear Sir, the Western end of *FOREST AND STREAM* sticks far, far out over the Pacific Ocean, and you would catch it quicker if you went round the other way. Rival journalists have tried to see it and couldn't, and as for raising it—nay, nay.

Mr. Jas. Crow, of Crystal Lake, Ill., leaves the word that he was one of the very first of the *FOREST AND STREAM* subscribers. I wish I could have seen him, and I wish that, since this could not be, Mr. Crow would tell the paper what he remembers of those early days, and what he thinks of the paper as it is to-day, *World's Fair* and all. The change in the twenty years must have impressed a reader who has had the paper before him all that time.

And so I could go on, for these are but a few cards out of very many, and taken almost at random. But I save the best till the last. I found two boys in the *FOREST AND STREAM* space the other day, and they were such bright, manly little fellows, so interested in what there was to be seen, that I fell to talking with them. "I will not register my own name," said the elder, as I came while he was writing, "I'm not a man yet, but I'll sign my uncle's name. He reads *FOREST AND STREAM*, and I've read it for a good while myself." So he signed first the name of H. S. Lang, Hornellsville, N. Y. I asked him for his own name, and he said it was Harold E. Rose, stated that he was 12 years old, and remarked that he was going to the Adirondacks with his uncle in the fall. He liked to read books about camping out, he said, and he thought the "little boat" (the Sairey Gamp) was pretty small. "What do you want to know all about this for?" he asked, curiously, as he saw me writing. Bless the boy! it was because I liked this more than anything I have seen about the *FOREST AND STREAM* place. I wish him and his young friend a pleasant trip and many after it. They are going the right way to stay young a long while, and to know some of the keenest and purest pleasures life will hold for them. It's clean out of doors. If these boys grow to be old in years I want them to remember their visit to *FOREST AND STREAM*, for somehow, out of all the thousands I have seen go by or stop there, I believe these fresh young faces, with only eagerness and joy reflected in them, remain more distinct than any others. E. HOUGH.

### Milwaukee Tack and Nail Co.'s Exhibit.

The exhibit of this company is in Section O, Block 3, No. 34. One, however, might look for it long and fruitlessly, for over it is not the firm title as given above, but the sign Buzzacott's Standard Army Field Ovens. Those in search of the exhibit under consideration should bear this information in mind. The exhibit comprises a lot of camp cookers for outdoor cooking only. They are made in sizes to meet the wants of from two to fifty men. They are very compact, and it is claimed for them that they can be heated or cooled in a few moments' time, a most important consideration when time is precious. They contain every utensil needed in cooking. This company also has an exhibit in the Government Building.

### E. & H. T. Anthony & Co.'s Exhibit.

This is in the North Gallery of the Manufactures Building, E, Q, 103. The exhibit is most neatly and artistically arranged for effective and pleasing display in a space 26 ft. front by 20 ft. in depth. In the center of the rear is a pyramid of cameras of various sizes, from a 4x5 to a 25x30, all fine in workmanship. In the front are cases containing different sizes and kinds of lenses, and shutters in great variety. In short, there is a complete line of photographic material, chemical and mechanical. The inner walls are covered with beautiful American "Aristo" photographs, the "Aristo" being a new collodion paper. The photographs are wonderfully good. Much merit is claimed for the Aristo paper. In the rear is a dark room devoted to the use of amateurs free of cost. The front has a couple of bronze statuettes, and a bit of coarse grasses and foliage in the upper corners of the walls give a most pleasing effect. There is a delightfully pleasant, bright air pervading that photographic bower. It is in charge of Mr. Fenton M. Armstrong, a most polite and attentive gentleman. No one can converse with him on photography without being a gainer in knowledge, knowledge most graciously imparted.

August 1.—The popular corner of the Exposition which holds the American gun exhibits has been brightened by the addition to its ranks of the stable figure and pleasant countenance of Colonel A. G. Courtney, in charge of the Lefever Arms Co. Colonel Courtney has an arm chair and a fan in active service these days, and fans with one hand while he sells ejector Lefevers with the other. "The only American ejector shown at the Fair," says he, and he hangs on a gun another card with "Sold" written on it in large letters. Spain, India, Russia and other foreign lands are going to have Lefevers after the Fair is over. The Lefever exhibit, however, will not be broken, nor any guns delivered from it. The many visiting shooters who have looked with interest at the fine cases of the Lefever goods will get a double run for their money now that Colonel Courtney has come. It is quite a lively group of gun men, this now assembled over in the "American corner" of the Manufactures Building and they dwell together in peace, harmony and jollity. B. WATERS.

FOREST AND STREAM'S LOCATION IN ANGLING PAVILION.

have so much admired." I wish there were more men in the world like Mr. Mix.

Mr. Claude King, editor of *Sports Afield*, Denver, was looking for some one, but not with a gun or razor. Mr. King is a clean editor and has a clean publication. All such are in easy touch with *FOREST AND STREAM*.

Mr. J. Vom Hofe, of New York, who has made so many reels that he might well be expected to have wheels in his head, but who has not, has tarried here a moment, so says his card.

Mr. H. W. DeLong, of Dansville, N. Y., who once upon a time took second prize in the "Camp-Fire Flickerings" in *FOREST AND STREAM*, flickered in and blew out, and we saw him not.

Mr. E. L. Carney, of Leavenworth, Kan., came in on the other road, and him I later caught, causing him to stand and deliver many reminiscences of the country of large hoppers.

Mr. A. Allison, representing Missouri at the Fair, strayed over and swung on the *FOREST AND STREAM* gate a while, I know it by his card.

Mr. L. W. Feighner, of the *News*, Nashville, Mich., has lately been hollering down the *FOREST AND STREAM* rain barrel. I know it by his card.

Mr. Eugene Lahee, an enthusiastic rifleman of Alton, Ill., tarried here all too briefly, and left before the Western end of *FOREST AND STREAM* could arrange a team to beat him shooting.

### The Army Also.

Lieutenant H. L. Scott, Seventh Cavalry, now at Ft. Sill, registers and vanishes all too soon. I always like the army men. So does everybody else.

Lieutenant W. C. Brown, First Cavalry, temporarily in Chicago, also leaves brief word, but not the wanted address.

James Huber, in charge of the Maxim-Nordenfeldt gun, British section, leaves an invitation to call around and see the thing work. It is tried on a dog at 3 P. M., Thursdays.

### Authors, Too.

I have just said some nice things about Mr. Robert J. Mix, because I thought he deserved it, but maybe I ought to divide some of this with Mr. Kirk Munroe, a popular writer and one known even more widely than the circle reached by *FOREST AND STREAM*, in which he writes as "O. K. Chobee." Mr. Munroe is on his way to Alaska

Fishculture.

Trout and Trout Waters.

OWEN SOUND, Ont., *Editor Forest and Stream*: A few months ago I purchased 10,000 trout fry with the intention of feeding them in a large tank until they are twelve months old and then placing them in a larger body of water which I will endeavor to preserve. I have my choice of two different places, but neither of them is quite free from objections, and perhaps you or some of your readers will be kind enough to give me your opinion and advice on the subject.

The first piece of water is a mill-dam which was well stocked with trout at one time and still contains a few, but has been fished out. The trout cannot leave the dam at the upper end as it is just below another dam, but at the lower end the water falls a distance of 10 feet, and the ice and flood in spring would prevent the use of a screen. The question in this case is: would the trout be able to leave the dam in any considerable numbers by going over the falls, and would you consider this a safe place in which to deposit the young trout.

The other place I refer to is a lake once famous for its large trout, but which was almost cleared out by netting, and to make matters worse, perch was introduced, which have multiplied enormously, and have taken possession of the lake. So far as I have been able to ascertain, not a single trout has been seen in it for years. The lake is about 500 yds. long by 100 yds. wide; a strong spring of ice cold water enters one end, which is gravelly for perhaps 50 yds.; the remainder is mud bottom with several large springs at various other parts of the lake.

The questions I wish to ask with regard to this are: (1) Do you know of any means of exterminating the perch? (2) Will perch kill a trout, say 6 in. in length? (3) Would it be safe after I have kept the 10,000 fry I mention for twelve months to put them in this lake?

One theory held here about the extermination of the trout in this lake is that the large trout have swallowed young perch and that the spines in the back of the perch kill the trout. Is this correct? By answering the above questions you will much oblige.

A CONSTANT READER  
[The mill dam appears to offer the more favorable conditions for your trout, which are assumed to be speckled trout. There is no practicable method of exterminating yellow perch except by the use of nets, explosives and fish narcotics and the removal of their ribbons of eggs from the spawning grounds. The introduction of black bass for the destruction of the perch would not help matter, since the bass in a small lake would soon kill all the brook trout you may plant. The perch will probably not kill 6-inch trout, but they are very destructive to eggs and fry. The spines of young perch may sometimes cause inflammation of the stomach of brook trout, but this can scarcely cut much of a figure. Lake trout feed ravenously on yellow perch and thrive on such diet. The cod frequently has its stomach walls pierced by the sharp bony spines of flounders and suffers no apparent inconvenience from the injury. You will observe that the spines of a perch after death are folded down close to the back, and that trout as well as bass take their prey head first. Thus the spines are depressed before swallowing is completed. The trout's intestine is short and straight, and its digestion is rapid, thereby making the removal of waste matter prompt and easy. The fact that the mill dam was well stocked with trout at one time appears to show that spring freshets do not sweep out many of the fish. Perhaps netting had most to do with the disappearance of the trout.]

The Kennel.

FIXTURES.

DOG SHOWS.

Aug. 20 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 5 to 8.—Kingston (Ont.) K. C. at Kingston. H. C. Bates, Sec'y.  
Sept. 11 to 15.—Toronto, Canada, at C. A. Stone, Sec'y.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park. D. C. Collins, Sec'y.  
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept of Agriculture.  
Sept. 20 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C. at Minneapolis. H. T. Van Duster, Sec.  
Nov. 21 to 24.—New Jersey K. L. at Newark. Dr. W. F. Seider, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 7.—Manitoba Field Trials Club's Trials, Souris, Manitoba. E. D. Adams, Sec'y, Winnipeg.  
Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 6.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.

Nov. 15.—American Field Trial Club Trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

The McLin Matter.

IN a letter dated July 31, Mr. J. M. Freeman, Bicknell, Ind., gives me the following information:

"McLin waived examination and was bound over in the sum of \$500 to appear in court. He can not give bail, and will have to await the action of the grand jury in September. His trial will very likely occur about November. Mr. Perry attended the trial and says that he intends to stay with the case. We have had subscriptions as follows to date: P. T. Madison, \$5; D. C. Bergundthal, \$10; J. A. Balmer, \$5; W. A. Thompson, \$5; L. Rousch, St. Louis, \$5; Geo. H. Kunkle, Mexico, Mo., \$2; Gail W. Hamilton, Centreville, Kan., \$10; S. E. Corbett, of Wychoff, N. J., \$2. This is not enough to properly prosecute the case, as we will have to see that some of the witnesses are gotten before the grand jury. Some of them can not afford to pay car fare and board."

Contributions can be sent to Mr. Freeman. Every dollar contributed will add just so much to the resources of the prosecution. The sportsmen at a distance can manifest their support and good will by sending a dollar, more or less, to the prosecution fund, and thus give the necessary means to those who are so actively giving the matter their personal attention. Ordinary wrong doing is entitled to the greatest leniency and charity, but this particular case is marked by such gross inhumanity, covering a period of many weeks, ending in the cold-blooded burning of the entire kennel of dogs dead and alive, and the whole rounded out with such reckless perjury that leniency has no place in con-

sidering the matter. The case will be most earnestly prosecuted to a finish. Every lover of a setter or pointer, every dog fancier, and every one who believes in humanity, should contribute something to help the case along.

Mr. Thomas Johnson writes me, under date of Aug. 1, that Mr. Hallam, who is in charge of Mr. Heywood-Lonsdale's dogs, was expected to arrive on the 2d inst.

Also, that Mr. Arent had arrived in Manitoba with a string of dogs to train. Rev. Mr. Spence and Mr. John Davidson have accepted the invitation to judge the club's trials.

While walking along Jackson street, near the postoffice, a few days since, I saw a man, plainly dressed, leaning against a building at the corner of an alley. At his feet was a basket of puppies which were about five or six weeks old, jet black in color and healthy and bright in looks. They were quite contented and did not mind the constant handling to which they were subject. There were always a few people looking at them and asking questions. I stopped and asked the man if the puppies were for sale. He said, "Them pups is for sale. They be worth \$25 apiece, but I asks only \$5. They know more than a man. Look at their coats—fine as silk. Genuine cocker spaniels, and only \$5." No person need be without man's best friend, at \$5 per friend, delivered at the door, express paid, to fill a long-felt want.

A constant source of gratification is the common public sentiment in favor of FOREST AND STREAM. Out here we hear it constantly. The praise is so uniform and spontaneous that there is no doubt of its sincerity. Its high literary grade, its dignity, fearlessness and freedom from vulgar controversies, and the wonderful scope and variety of matter in every issue justly excite praise and admiration. It is, therefore, not to be wondered at that FOREST AND STREAM is uniformly and steadily growing on its merits in every section of this broad land.

B. WATERS.

Appointment of Substitute Judges.

*Editor Forest and Stream*:

Such a number of the proposed amendments recommended by Dr. Perry are, in my judgment, not only for the best interests of the dog men, but absolutely necessary for the life of the A. K. C. that it is with reluctance I object to any one, but the rule allowing exhibitors to select by a vote their own judge, in the absence of the regularly appointed one will, I fear, cause as much ill feeling, as much wire pulling and as many undesirable effects among exhibitors as anything we now have.

More than this, how is the judge to be elected? What is his majority to be, and might we not find a case of "deadlock" whereby no judge would be elected?

Would not the avenue for professional wire pullers be opened wide?

Would there not be a chance for owners who feared their dogs would be beaten to head off the election by a "deadlock?"

I fear such might be the case. I consider it bad policy on the part of the management of any competition to allow exhibitors to have a direct or indirect "say" on the judges.

CHAS. E. BUNN.

PEORIA, Ill.

*Editor Forest and Stream*:

In Europe every jockey or kennel club has the right to substitute judges, and I dare say that this is the correct thing, for if I or anybody has a really good horse or dog, we need not fear the judge.

COUNT R. PALFREY.

MARWAT, N. J.

*Editor Forest and Stream*:

I most heartily concur in Dr. Perry's idea of changing the A. K. C. rule so that exhibitors may choose their own judges in case the regularly appointed judge is absent instead of having the appointment left entirely in the hand of the show committee. During my experience as an exhibitor, such an event has occurred but once in my classes, and at that show the matter was very pleasantly arranged between committee and exhibitors. Still I can easily imagine several show committees who would not be as agreeable about such matters.

C. S. WIXOM.

COVERT, N. Y., July 31.

*Editor Forest and Stream*:

I do not altogether agree with Dr. Perry in his proposed resolution regarding substitute judges. I think the committee should appoint the substitute but at the same time notify all the exhibitors by wire or otherwise of the fact, allowing them to withdraw entries if the judge selected is not agreeable to them, and in that case to also have their entry fee returned.

L. C. WHITON.

NEW YORK CITY, Aug. 7.

Canine Incongruities.

*Editor Forest and Stream*:

The peculiarities of beasts are not less interesting and inexplicable than those of men. I owned a Skye terrier of undoubted courage, for he would run from no dog, big or little, and would fight with wonderful pugnacity, though I never knew him to take the aggressive. He was peaceful, but if he had been labeled with the inscription that ornamented the flag of Paul Jones, "Don't tread on me," no one could say the motto would have been misapplied. But that dog had a mortal dread of thunder. The least rumble along the horizon sent him scratching for ingress at the door, and the bed became his hiding place.

I had a pointer named Mack whose courage no one could dispute when it came face to face with dogs of the largest size, but this very dog was one day thoroughly discomfited by a turkey hen that must have had a nest in the field where I was hunting. She flew at the dog and pounded him right and left, drove him to the fence and through an opening. As he got through the hen made a final charge against the fence, but missed the opening. The dog made not one effort at self-defense.

I once owned a fine bull-terrier of great courage, yet I never knew him to assume the aggressive but was as gentle as a lamb toward his fellows and man. I never knew him to growl or bark at or show any signs of menace toward persons coming into the yard.

N. D. ELTING.

Toronto Show.

TORONTO, Ont., Aug. 3.—The following extra classes have been added to the premium list of the Toronto Industrial Exhibition Association's bench show of dogs, to be held at Toronto, Canada, Sept. 11 to 15: Russian wolf-hounds, class 26½, challenge dogs and bitches, \$10 and diploma; class 28½, novice dogs and bitches, \$7, \$3 and diploma. Dr. Perry has kindly donated the Ashmont trophy to be competed for at our coming show, the same being for the best dog in the show and to be judged by Mr. C. H. Mason. The *Fanciers' Journal* donates twelve subscriptions to be competed for in the puppy classes, and Mr. W. Wade, of Hulton, Pa., donates \$10 cash for best specimen of American foxhound. Exhibitors will kindly remember that entries close Thursday, Aug. 21. C. A. STONE, Sec'y and Supt.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Flaps from the Beaver's Tail.

TORONTO, Canada.—A recent paragraph in the *Toronto Globe* is misleading, and as it may be copied by the kennel press I may say that as yet the vacancy caused by the resignation of Mr. Stewart as superintendent for Canada at the World's Fair Dog Show has not been filled. The appointment lies in the hands of the Minister of Agriculture for the Dominion, and the C. K. C. merely have the privilege of recommending a nominee. Mr. Geddes having received a majority of one of the executive he of course will receive this recommendation and will doubtless be appointed to the position. It is as well to be clear on these points.

Mr. R. M. Wanless, Sarnia, has had the misfortune to lose by poison (laid for rats) his imported Dandie Dinmont dog Rodger, third at the last Toronto show. Mr. Wanless has sent a good puppy with this dog out of Kirsly to Mr. J. D. McColl, St. Louis.

The Mount Royal Kennels have a litter of promising Bedlington terriers out of their bitch Tibbie, a winner at Toronto, sired by the well-known champion, Tick Tack, owned by Mr. W. H. Russell of New York. One of this litter was kindly donated by Dr. Wesley Mills to the Hamilton Kennel Club for its drawing, and was won by a local man and who, by the way, by rare good fortune happens to be an old breeder of this variety.

Fascination was not poisoned, as was at first suspected. This was plainly proved by an examination of the stomach by Dr. Pyne, the official analyst.

Local breeders of the merry and useful beagle are endeavoring to form a club devoted to the interests of the breed in Canada, and something on the lines of the National Beagle Club. It is proposed to hold an inaugural meeting in about two weeks, and in the meantime Mr. John Smillie, Queen street, West, Toronto, will be glad to receive names and suggestions.

I had the pleasure of taking part in the most successful drawing of the Hamilton Kennel Club held last Friday night. Some four hundred tickets were disposed of and in consequence the old debt of the club will be decreased by some three hundred dollars, quite a nice little sum to receive from such a source. The drawing was conducted by Dr. H. S. Griffin, the genial president of the club, Mr. W. P. Fraser, of Toronto, and myself, Mr. Laidlaw being unable to be present. The details were carried out most systematically and correctly, and everything was strictly impartial in every sense. Among other dog men present I noticed Messrs. Tinsley, Close (Treasurer, with a big "wad"), Talk (Secretary), Palmer Tocher, Harris, who drew the "plum" Tocate, in whelp to imported Darkey, Murdock, Hood, Maybee, Toronto, and many others. The following gives the details of the drawing: Cocker Canada Triss, G. P. Tinsley, Toronto, ticket 351. Dachshund Vixen, E. Collins, Dundas, Collie Marionette, Spratts Patent, New York, ticket No. 1. Fox-terrier Tocate, J. Hood, Hamilton, ticket 898. St. Bernard Noble Regent, H. P. Mullen, Cobourg, ticket 81. Bull-terrier Wentworth Thora, Miss Hendrie, Hamilton, ticket 772. Pointer Bright Light, R. Hobson, Hamilton, ticket 770. Cocker Bene Silk, J. A. McCloud, Guelph, ticket 839. Fox-terrier Miss Coronet, J. H. Herbertson, Detroit, ticket 401. Dachshund Combat, F. R. Close, Hamilton, ticket 88. Field spaniel Black Pete II., J. J. Biggs, London, ticket 51. Cocker Florence G., J. H. Herbertson, Detroit, ticket 410. Bedlington terrier puppy (not in catalogue), Alex. Watt, Hamilton, ticket 736.

While in Hamilton, the Toronto contingent were the guests of Dr. Griffin and are deeply in his debt for the many courtesies he extended. I had a brief visit to his range kennels, which, though not extensive, are neat and scrupulously clean. The floors are of brick, cemented over, as is also the exercising yard with small grass lawn adjacent. The doors are double, the inside one of iron bars, open night and day in warm weather, the outer of heavy wood work. Champion Principio was looking in grand fettle with skin beautifully clean and feeling as hard as can be. A young bitch out of Kathleen Mavourneen looks like making a winner. Dr. Griffin told me he feels nothing whatever but Spratts biscuits, dry to the old dogs and soaked for the puppies, and he considers them a standard feed.

H. B. DONOVAN.

The New A. K. C. Rules.

THE following letter sent by President Belmont to the secretary of the A. K. C. regarding the new rules appears in last month's *Kennel Gazette*:

NEW YORK, July 24, 1893.

Secretary American Kennel Club, No. 44 Broadway, City: Dear Sir—I beg to acknowledge receipt of your favor of June 28, advising me of the result of the vote upon the amended rules passed at the meeting of May 18, 1893, under Article XIV. of the Constitution.

The total number of clubs entitled to vote you state to be fifty-five; but this is after striking out all the clubs dropped for being in arrears for the annual dues of 1893; also the clubs elected at the meeting of May 18, 1893, and, in addition, the name of Mr. James L. Anthony, who resigned as an associate delegate at that meeting.

It would appear, therefore, that the thirty-seven votes you report as cast constitute the necessary two-thirds, ratifying the adoption of the rules.

However, as the matter is of serious import, and the provisions of the Constitution are not clear to me as to the right of new clubs to vote, I have decided to declare the rules not carried, pending the final decision of the American Kennel Club on the subject, at its September meeting, when you will please bring the matter to the attention of the club. I remain, Yours truly, (Signed) AUGUST BELMONT,

President A. K. C.

Tortoise-Pointing Dogs.

*Editor Forest and Stream*:

I suppose I am not the only shooter whose dogs have come to a point on the land tortoise. I had a yellow setter in New York that did so several times; but as soon as he got sight of it he turned from it at once. In West Virginia I had a pointer that would, on getting scent, steal up as cautiously toward a tortoise as toward a quail. The moment he saw it, however, he seemed to think, O, pshaw! and then turn away in disgust. How did he know that the tortoise, having the scent of game, would not fly as a bird or run as a rabbit, for both these dogs accepted rabbit as game?

N. D. ELTING.

Dogs and Express Companies.

HORNELLVILLE, N. Y., July 31.—*Editor Forest and Stream*: If the express companies should follow Mr. Winchell's suggestion and discharge messengers who are careless, then they would bounce the whole gang of United States Express messengers that had charge of my dogs from Providence, R. I., here. I bought all of Mr. H. S. Babcock's pointers. Flash of Hessen and Thanksgiving Roxie were shipped in one large crate; they should have come through in from 12 to 15 hours, but it took nearly 80 hours. When delivered to me both dogs were nearly dead. By careful nursing the bitch recovered, but the dog died yesterday.

J. OTIS FELLOWS.

## DOG CHAT.

### Description of a Fox-Terrier.

The third number of the *Fox-Terrier Chronicle*, since it made its appearance under new management, is the first we have seen, and is in many ways an improvement on the old go-as-you-please editions. The contest for a drawing of the new heading for the cover proved a triumph for Maud Earle, the noted English animal artist, and the decision that preferred her work to that of Mr. Moore is a just one, both are good, but Miss Earle's smacks a little more of the furze bushes and terrier life. The new management gave a prize of \$25 for the best description of a fox-terrier, and out of the many papers sent in Mr. E. Welburn's idea was considered the best. He is an old fox-terrier man, exhibitor, owner and breeder, and this is how he would like to see them turn out: "The fox-terriers are in two varieties, viz., smooth-coated and wire-coated, and with this exception, they are one and the same dog. The head should be long, with level, narrow skull; the under jaw deep, flat and of sufficient length, so that the teeth are level in the mouth; the eyes well set and of deep hazel color, with a keen determined expression; the face should be well filled in under the eyes, and carrying the strength fairly well to the muzzle end; ears small, V-shaped and of fair strength, set well on the head and dropping down forward, with the points in a direct line to the eye; the neck should be of fair length, clean under throat, gradually strengthening and gracefully set into the shoulders, which should be long and well laid back, finishing clean and fine on the top; the chest narrow and brisket deep, with elbows placed under; the forelegs should be absolutely straight, with good strong round bone carried right down to the foot which should be short with well raised toes; the back short with strong loin, the ribs should go well back, be deep and well sprung, the set on of stern should be rather high, and gaily carried, the full strength of the tail to be carried out from the set on, to the end, and not curl or come too much over the back; the hindquarters strong and muscular, free from droop; thighs long and of fair breadth, with stifles not too straight and hocks near the ground; the movement of the dog should be level and straight all round, and free from swinging on the elbows, or twirl of the hocks; the character of the dog greatly depending on his appearance, which must be smart and sprightly, full of determination, at the same time clean in finish with a workman and gentlemanly appearance combined; the coat of the smooth variety should be straight and flat, lying very close, dense and hard, while the wires should have one under coat and an overcoat of strong wiry hair which should handle like bristles; the weight of dogs should not exceed 18½ lbs. and bitches 16½ lbs.; the color most desirable being black and tan marked head, with white body, this color gives the dog a more hardy look than either tan or lemon markings." The fox-terrier men on the other side have evidently a strong journal behind them, and the existence and support of such a journal proves that the fox-terrier is the most popular breed extant.

### No Show for Kingston.

Sentiment is all very well in its way, but there are a good many stern business obstacles to overcome in connection with the successful conduct of a bench show, and these affairs cannot very well be run on the enthusiasm of a few local fanciers. The Kingston Kennel Club of Canada expected to hold a show this fall, and in the face of two signal failures the intention was a plucky one, and we so stated at the time of the announcement. Mr. H. C. Bates, however, writes us that owing to the inability of the club to raise the necessary funds to guarantee the successful holding of its fourth annual bench show, he regrets to say that there will consequently be no show held this year. Exhibitors will miss the pretty Kingston fixture—and the fishing.

### The Purchase of Signal.

Dr. Jarvis seems fully alive to the interests of Irish setters in this country and his importation of such a dog as Signal proves that the Doctor is as ready with his purse as his pen when the "reds" are concerned. The importation of such accomplished field dogs will go far to help the Irish setter trials along, of which, by the way, we hear very little these days. Of bench show dogs and "good lookers" we have a plenty, but trained stock to breed from for field work is in the minority. Spasmodic efforts and training a dog here and there will not effect any good permanent result, it is only by sustained effort as in the case of English setters and pointers that good results will accrue. Dr. Jarvis deserves every congratulation for his plucky venture and we trust that such signal efforts will meet with their reward.

### Yacht Races and Field Trials.

The yacht races now being sailed off the Isle of Wight should prove of more than passing interest to such land lubbers as our field trial men. Mr. Royal Phelps Carroll, the owner of the Navahoe, is a familiar name in the entry lists of the different field trial stakes. His friend, Mr. "Hermie" Duryea, though it is not generally known, sailed with Mr. Carroll in the Navahoe when she crossed the Atlantic. An Eastern field trial without Mr. Duryea as judge will seem an anomaly indeed.

### Canada's Exhibit.

Mr. Alfred Geddes, of Ottawa, Canada, has been chosen superintendent of the Canadian exhibit at the World's Fair Show. Mr. Geddes is well and favorably known to Canadian exhibitors and we have no doubt that the choice is a good one. Mr. Geddes will probably have an up-hill task in bringing things into shape again after the June postponement, but as most of the best Canadian dogs will probably appear at the Toronto show no extra preparation will be needed, as was the case before.

### Appointment of Substitute Judges.

The opinions of prominent exhibitors expressed in recent issues of the *FOREST AND STREAM* show that Dr. Perry's proposed alteration of the rule regarding the appointment of substitute judges does not meet with unqualified approval. We should like to hear from other dog men what they think of it, so that when the resolution is proposed in meeting the delegates may have some idea of the feeling of exhibitors in general on the subject.

### A Novel Match.

Mr. Freeman Lloyd is authority in the *Sporting Mirror*, for the statement that another sporting challenge is soon to be made. A certain well-known exhibitor will back six dogs from his kennel against any other half-dozen in England, to be drawn from any quarters. English exhibitors seem to be tiring of the endless round of shows judging by the paucity of entries and appealing whips of the different secretaries. Match making affords a novel distraction and this latest offer seems a very sportsmanlike idea but a difficult task for any judge.

A capital article entitled "Champion D'Orsay Interviewed," gives his life in his own "words." One bit is especially good, where D'Orsay tells about his brother and sister's, Russley Joker and Russley Nettle, return from their first show. D'Orsay, being the ugly duckling, is not thought

much of at that time, and consequently is a bit jealous. This is how he expresses his feelings: "The tales they told, too, how they met a great swell at the shows called Venio, and a beautiful sister of his called Vesuvienne, then how a villainous old gentleman called Digby something (Digby Grand) nearly got hold of Joker, and how two great American dogs had come over to win some of the prizes, how they were taken off their benches, led about on the chain and pulled up on their toes, how they heard people say they were 'Clarke type,' and many other remarks which none of us could then understand, they were so conceited that I really was not sorry when two or three days after their return they were both taken ill from the effects of their first outing."

### St. Bernard Emigrants.

Spratts Patent have shipped from England by s. s. Spain to this city the St. Bernard Erin-Go-Bragh for Mr. P. Scanlin, of St. Louis. The *British Fancier* also says that the St. Bernard Gay Lad is also coming, over on the s. s. France for some one in New York.

### New Jersey Kennel League.

A regular meeting of the executive committee will be held at the Molten Hotel, 146 Market street, Newark, N. J., Aug. 11, at 8:15 P. M. W. F. Seidler, M. D., is the secretary.

Mr. C. A. Sumner, the popular secretary of the Southern California Kennel Club, resorts to no half measures when he loses a dog. On July 18 his fox-terrier Bess was stolen and he now offers, through the chief of police, \$100 for the arrest and conviction of the thief and return of the dog, and a suitable reward for the return of the dog, should it be proved that the present possessor is an innocent person. A few incentives of this sort for the conviction of those who steal dogs would have a deterring effect in many quarters.

*FOREST AND STREAM* of June 29 publishes an instantaneous photograph of two pointers at work that is a real pleasure to contemplate.—*Stock-Keeper, England.*

We hear through Mr. Washington that the noted Irish setter matron Red Rose whelped last month one dog and one bitch to Kildare Beverley. This bitch is getting on in years now and this may be her last litter. Bella of Kildare has seven healthy reds and Swirlette has also increased the canine classes with ten by Kildare Beverley. Mr. Washington has repurchased champion Winnie II. from Mr. Bishop.

Mr. E. A. Manice, the well-known dachshund exhibitor, has decided to call his kennels "The Windrush Kennels," having decided to give his first champion, Windrush Rieter, the honor of having the kennel and stock farm named after him, and the dogs will henceforth be known under that name. By the way, Mr. Manice had given up all idea of buying Pterodactyl before the New York show. Windrush Rieter has defeated the classical dog three or four times, and his owner is quite content with those he has. Janet has just weaned three future tan "champions," by Jay, and Princess is nursing seven by the same dog, all liver and tans. Mr. Manice would like to meet Mr. Woodiwiss's dog at the World's Fair show.

### Foxhounds in the South.

LOUISVILLE, Ky., Aug. 1.—*Editor Forest and Stream:* In the last issue of *FOREST AND STREAM*, the Dog Chat writer in a small space compasses a large amount of misinformation about the foxhound. He says: "The English foxhound is the highest development of speed, strength and endurance." With the ardor of an Anglo-maniac he disparages the American hound. "Of course it is impossible to compare the carefully bred, well nurtured packing hound of the old country with the hounds which pick up a living in our mountainous fox hunting districts."

In selecting this animal as typical of the American foxhound the Dog Chat writer displays a woeful obliquity of vision. He should extend his horizon. In the South he will find fox hunting districts that are not mountainous, and hounds that do not pick up a living, but that are as carefully bred and as well nurtured as any that all England can boast. I know of some well bred, well kept packs in your own State of New York, notably Mr. Wordsworth's, of the Genesee Valley Hunt, but they are all of recent origin, are largely of English blood, and have no pretensions to the title of the American hound. The Southern foxhound is the typical American hound. Not one drop of English blood defiled his fountain source. He was of Irish origin. Now, for more than a century the Southern hounds have been bred pure and true, and all their training has been directed to produce dogs that could catch the cunning red fox. To face him in a fair fight, to beat him at his own game, to pit speed fairly against his speed—that has been the endeavor of the Southern fox hunter. The result is an animal pre-eminent in those qualities which make the perfect red fox dog. In England the reverse of these conditions prevails.

Fox hunting in England almost from its inception has been in the highly artificial state which characterizes it at present. There the constant endeavor is to preserve rather than kill the foxes, and to produce a pack of dogs that look pretty, give good tongue, run evenly and well together, and not too fast to follow. Before fox hunting was hare hunting; before the foxhound was his progenitor, the harrier. Hare hunting long antedated fox hunting, packs were kept and the chase followed just as fox hunting is now conducted. The decline of this sport was coeval with the advance of agriculture. The day of high farming came. Population increased and under its pressing needs the farm began to appear like a large garden. Then the visit of a pack of harriers was something to be dreaded. A day spent in running rings around the grounds with their horse and foot attendants meant disaster to the crops, and to-day the harrier has been banished to the countries where there is yet some wild land such as the moorlands around the ancient town of Penistone where the oldest pack of harriers in the kingdom is still preserved. Upon fox hunting the farmer looks with more favor.

The fixture only comes around to him a couple of times in the season, and then most likely they find and go away, the last "bit of pink" disappears in the distance, and in the course of a few minutes his men and maids and startled "Dobbins" have settled down to work again.

But there was a still more important reason for the decline of the harrier and the evolution of the foxhound. The hunter came to care less for hunting than for riding. A good straight burst was wanted. This the hare seldom furnished, the fox invariably. So the Englishman hunted to ride. A gallop was the desideratum. But if the Squire Westerns of old, those bluff four-bottle fellows, with their long coats and their stout bob-tailed horses, who sang,

"Before the sun rises away we fly,  
To sleep in the downy beds scoring,"

could only return, they would find their hours too early for the *fin de siècle* foxes of to-day. Their degenerate descendants go to the meet at ten, and there feed and gossip with milady before going out to hunt, which is really to take their after-breakfast gallop. At ten! Think of it, you American hunters of wild foxes!

Read the dull, verbose reports of the many meets in the English journals and you will ascertain, if you keep awake, that Lord Looney was there on a chestnut cob, and Lady Luncheon on a bay one, etc., *ad nauseam*, but never a word will you see about the dogs, what they were or what they did. It is as intensely interesting as reading a few pages out

of a city directory. As a matter of fact the performance of the dogs is a matter of supreme indifference so long as they follow the trail fast enough to keep out of the way of the horses' hoofs.

The American fox hunter finds his keenest delight in the work of the dogs. There is never a moment when in hearing that he cannot tell the position of each in the pack. In Kentucky the wonderful limestone soil, the climate or blue grass, or whatever it is that makes her horses the fastest and her women the handsomest, has had its potent effect upon the foxhound; and this State has produced the fastest and most enduring foxhounds that ever picked up a red fox. Transplanted to far distant climes their supremacy has been established in the field.

The Kentuckian may be selected as a typical American fox hunter. Every citizen of the Blue Grass State is *sui generis* a lover of that great product of the blue grass—the horse. But he is not engrossed in horse. He does not hunt to ride; he rides to be in the hunt. He does not regard fences as opportunities; he avoids them as obstacles. He simply draws the line between steeplechasing and hunting. He takes his sport like his liquor—straight. He does not believe in mixing drinks. His rule is to jump anything you must, but nothing that you can help.

The Dog Chat writer could with more justice have drawn his invidious comparison between the American fox who picks up a living and the "carefully bred, well nurtured" English fox. With his ample and luxurious fare, his board and lodging both provided, and an army of retainers to look after his welfare, I fear the fat, sleek, tame fox of England is too often, in racing parlance, "short of work." Under the conditions prevailing in America, just one week would suffice to wipe out the foxes of that little island. They would be as extinct as the dinotherm.

In America the fox survives solely through his superior fitness. A perpetual vendetta exists between him and the lord of the soil. To-day in the midst of our nineteenth century civilization from which has been banished his more powerful congener the wolf and every other animal inimical to man, he alone, the unmitigated enemy, the vulpine Ishmaelite fares gaily forth to levy his tribute upon the barnyard. He has circumvented every snare, met superior force with superior cunning, and to-day he is the last link which connects us with that primeval nature which our progenitors extirpated. It is a case of the survival of the fittest.

To you my brethren who stand without the pale of the fox-hunting fraternity, who have not learned the lore in the bitter school of experience, the anomalous fact of his existence amid his inimical surroundings, should convince you that the red fox is a foe worthy of our steel. For the ruthless methods of the skin-hunter, who lays in wait with a shotgun, the gentleman sportsman has but one designation, the most dastardly of crimes, assassination. But to breed and break a pack of hounds able to run faster than the fox and carry his trail too, to surpass his endurance, and to circumvent his wiles, that is the endeavor of the Southern fox hunter, and the Southern foxhound of to-day represents the culmination of a century of such endeavor. F. J. H.

### Advisory Committee Meeting.

In addition to the resolution of this meeting regarding the World's Fair show postponement, the following business was done at the meeting held July 6.

In the matter of Dr. Kenny vs. Rhode Island Poultry Association.

Resolved, That the Rhode Island Poultry Association was in error, as claimed by the plaintiff, and the winnings involved are hereby declared forfeited. It is further resolved that while the defendants were guilty, as charged, the fact that there was no precedent to guide them is considered extenuating, therefore no penalty is affixed.

Attention of associate members in arrears for dues is called to the following resolution:

Ordered, That the secretary be directed to notify all associates in arrears that their names have been posted in the club for non-payment of dues, and unless said dues are paid on or before Oct. 1, they will be dropped from membership.

The following resolution was offered by Dr. J. Frank Perry:

Whereas, After some three years' experience in the trial of cases of alleged misconduct, this committee has come to the conclusion and belief that the American Kennel Club should not consider and render judgment in cases of complaint based on monetary transaction unless fraud, deceit, trickery or the like is obvious, and that in complaints where legal redress is possible, and these elements do not appear, this club should not act; be it therefore

Resolved, That a resolution be presented at the next executive committee meeting for action by the American Kennel Club, as a body, defining its jurisdiction more specifically, in accordance with the above opinion.

There were present at the meeting, Messrs. August Belmont, W. C. Reick, J. Frank Perry, H. B. Cromwell, T. H. Terry, the latter for a short time.

### Signal Coming Over.

*Editor Forest and Stream:*

After a winter's sport over Blue Rock in South Carolina, I made up my mind that the more we have of such field stock in America the better, and have purchased his full brother Signal. This dog has won six field trial prizes and proven his ability to compete with the greatest field trial winning English setters and pointers in Europe, and withal, is said to be a good looking one.

His breeder, who has bred the winner of the Puppy Stakes for four years at the Irish trials, writes me: "I consider him one of the best of any breed living to-day. He is a bold ranger, carries a most beautiful head and has a good nose, he has great style and besides is in every sense of the word a show dog."

The London *Field* has said of him: "A big, good-looking dog, an untiring worker, his nose is good, he ranges freely, is well broken, and under very fair command. There have been few better red setters than Signal, and his performance at the Irish trials will long be remembered by those who saw him run there."

The report of American *Field* stated "A handsome, up-standing dog who will make a show winner. He goes a great pace, carries his head well, ranges well into the wind, and is altogether a grand dog."

Mr. Cooper, who owns so many Irish setter winners at the Irish and English trials, writes me: "Signal is a grand looking dog, up to show form and a clinker in the field, very clever and very fast."

With such impartial opinions in his favor Signal must be worthy of importation. MONT CLARE.

### Northwestern Field Trials.

*Editor Forest and Stream:*

Handlers or owners, in the States, who are bringing dogs to compete in our trials, will save themselves much annoyance by sending me particulars. That is, the number, sexes and colors of dogs, also date and route they are traveling by. If they do this a few days beforehand, I will give bonds for the free entry of the dogs at the port of entry. If they fail to do this, they will require to come on to Winnipeg, which means considerable delay, inconvenience and expense.

Birds are very numerous this year, but, having had more rain than usual this season, mosquitoes have in consequence been very troublesome, so much so in fact that I have never had a dog in the field since last fall.

THOS. JOHNSON,  
Hon. Sec. Treas. Northwestern F. T. C.  
WINNEPEG, Manitoba.

National Beagle Club.

TARRYTOWN, N. Y., Aug. 1.—The adjourned meeting of the National Beagle Club of America was held at the A. K. C. rooms, 44 Broadway, New York, N. Y., on July 31. Present were President Kreuder, Messrs. Schellhass, Laick, Bateman, Roberts, A. D. Lewis, Geo. W. Rogers.

Messrs. James T. Flannelly and O. W. Brookling offered their resignations from the club, which were accepted. Mr. W. H. Child offered his resignation and Mr. Schellhass was appointed a committee to ascertain the reason of his resignation.

The Blue Grass K. C. of Lexington, Ky., the Saratoga Poultry and Kennel Club and the Toronto Industrial Exposition K. C. asked the N. B. C. of America to donate special prizes to their respective shows, but as the N. B. C. of America will devote all its energy toward the coming field trials, the above asked for specials were not granted. Mr. Pottinger Dorsey stated in a letter to the club that the special prize won by Lee II. as absolute winner of 1892 had not been paid by last year's management of the club. It was voted that a suitable piece of silver plate be purchased by the committee appointed, the same to be presented to Mr. Pottinger Dorsey as a special won by Lee II. at 1892 field trials. Meeting adjourned at 4 P. M.

A meeting of the field trial committee was then held. Present: Kreuder, Laick, Bateman, Schellhass, A. D. Lewis, E. G. Roberts, H. W. Lacy, by proxy.

It was voted that A. D. Lewis be added to the field trial committee.

Voted that there be no absolute winner class. Voted that the classes be as follows:

Class A for dogs and bitches, all ages, 15in. and over 13in., that have not been placed first in any class at field trials held by N. B. C.

Open class B for dogs and bitches, all ages, 13in. and under, that have not been placed first in any class at field trials held by N. B. C.

Derby class C for dogs and bitches, 15in. and under, whelped on or after Jan. 1, 1892.

Champion class D for dogs and bitches, all ages, 15in. and over 13in., having been placed first in any class at field trials held by N. B. C.

Champion class D for dogs and bitches, all ages, 13in. and under, having been placed first in any class at field trials held by N. B. C.

CONDITIONS.

Class A—Entries close Oct. 5, 1893. Fee to start, \$10, of which \$3 forfeit must accompany entry and balance to be paid prior to starting the class. First prize, \$60; second prize, \$40; third prize, \$20.

Class B—Entries close Oct. 5, 1893. Fee to start, \$7, of which \$3 forfeit must accompany entry. First prize, \$30; second prize, \$20; third prize, \$10.

Class C—Entries close Oct. 5, 1893. Fee to start, \$5, of which \$2 forfeit must accompany entry and balance to be paid prior to starting in class. First prize, \$20; second prize, \$10.

Class D—Entries close Oct. 5, 1893. For dogs and bitches having been placed first at trials of 1890, 1891, 1892 and 1893, held by N. B. C. Fee to start, \$10, of which \$5 forfeit must accompany entry, balance to be paid before starting Class A. First prize winners of Classes A and C. Entries close during trials and before starting of class. Fee to start, \$10, which must be paid prior to starting class. First prize, 60 per cent.; second prize, 30 per cent.

Class E—Entries close Oct. 5, 1893. For dogs and bitches having been placed first at trials of 1890, 1891, 1892 and 1893, held by the N. B. C. Fee to start, \$10, of which \$5 forfeit must accompany entry, balance to be paid before starting Classes B and C.

First prize winners of Class B or C entries close during trials, fee to start, \$10, which must be paid before starting class. First prize 60 per cent., second 30 per cent.

Mr. Joe Lewis was selected to act as one of the field trial judges and to be asked to state his terms. Mr. William Tallman was also selected as one of the judges, provided his terms will be acceptable to the club.

Voted that we hold no bench show. Voted that a brace stake be made for dogs and bitches under 15in., fee to start \$10, which must be paid before starting class. First prize 60 per cent., second 30 per cent.

Voted that a pack stake be made for dogs and bitches under 15in., fee to start \$15. First prize, 60 per cent., second prize, 30 per cent.

Note: All dogs are eligible for brace and pack stake whether running in regular trials or not.

GEO. LAICK, Sec'y.

Coursing.

WINFIELD, Kan.—The Cowley County Coursing Association's open meeting will occur this year on Nov. 7 and succeeding days. Mr. E. H. Mulcaster has been invited to judge and Mr. J. R. Cochran will slip.

J. R. BALLARD, Sec'y.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Beau Noble. By Inwood Kennels, Providence, R. I., for black and tan Gordon setter dog, whelped April 27, 1893, by Count Noble (Ben-Belle) out of Fenmont (Beaumont—Belle Stephens).

BRED.

Prepared Blanks sent free on application.

Oky—Eberhart's Cashier. W. F. Harn's (Oklahoma City, O. T.) pug bitch Oky (champion Kash—Lady Clover) to Eberhart's Pug Kennels Eberhart's Cashier (champion Kash—Lady Thora), July 27.

Countess—Ebor Larchmont. W. L. Davidson's smooth fox-terrier bitch Countess to S. J. Rogers's Ebor Larchmont, July 29.

Miss V—Blenion Stipend. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Miss V. (Max—Beverwyck Rhoda) to Kempton Park's Blenion Stipend (Stipendary—Spinster), May 11.

Leinster Baby—Shelby New Forrest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Leinster Baby (Raby Jim—Hillside Rue) to their Shelby New Forrest (New Forrest—Holcombe Jill), July 21.

Wilton Leah—Shelby New Forrest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Wilton Leah (Regent Vox—Royal Dart) to their Shelby New Forrest (New Forrest—Holcombe Jill), July 19.

Shamrock—Shelby New Forrest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Shamrock (Beverwyck Trap—Tulip) to their Shelby New Forrest (New Forrest—Holcombe Jill), July 12.

Hurstbourne Vic—Shelby New Forrest. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Hurstbourne Vic (Luke—Oriole Vic) to their Shelby New Forrest (New Forrest—Holcombe Jill), July 5.

Tona Wanda—King of Lynn. F. H. Nash's (Great Falls, N. H.) pointer bitch Tona Wanda (Bang Bang—Underhill's Jane) to Robert Leslie's King of Lynn (Tempest—Nadjo of Naso), July 18.

WHELP.

Prepared Blanks sent free on application.

Miss V. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Miss V. (Max—Beverwyck Rhoda), July 11, four (one dog), by Kempton Park's Blenion Stipend (Stipendary—Spinster).

Bessie Girl. T. E. Roberts's (White Plains, N. Y.) pointer bitch Bessie Girl (Voltaire—Renie), July 16, severe (three dogs), by Bronx Valley Kennels' Axtel King Don (King Don—Meteor's Del).

Juliette. D. S. Bennett's (Wrentham, Mass.) Gordon setter bitch Juliette (Captain Dan—Mollie Pitcher), July 5, eight (four dogs), by Inwood Kennels' Count Noble (Ben—Belle).

Blossom. H. B. Murchie's (Galais, Me.) St. Bernard bitch Blossom (Albert Plinlimon—bitch by Victor Joseph), Aug. 3, eight (five dogs), by New York St. Bernard Kennels' Sir Bede.

Shamrock. Leinster Kennels' (New Orleans, La.) fox-terrier bitch

Shamrock (Beverwyck Trap—Tulip), Feb. 23, seven (one dog), by their Shelby New Forrest (New Forrest—Holcombe Jill).

Rosalind. C. J. Mischler's (New Orleans, La.) fox-terrier bitch Rosalind (Lythan Crack—Lythan Belle), Feb. 14, four (three dogs), by Leinster Kennels' Dixie Tartar (Raby Mixer—Hillside Rue).

Gipsy. W. W. Gang's (Baton Rouge, La.) fox-terrier bitch Gipsy (Sport—Gipsy), Feb. 1, seven (four dogs), by Leinster Kennels' Dixie Tartar (Raby Mixer—Hillside Rue).

Leinster Baby. Leinster Kennels' (New Orleans, La.) fox-terrier bitch Leinster Baby (Raby Jim—Hillside Rue), Feb. 23, three bitches, by their Shelby New Forrest (New Forrest—Holcombe Jill).

SALES.

Prepared Blanks sent free on application.

Kent II.—Countess Addie whelp. Black, white and ticked English setter dog, whelped Feb. 9, 1893, by A. D. Fiske, Worcester, Mass., to Frank Grant, Torrington, Conn.

Dixie Tartar—Gipsy whelp. White and black fox-terrier bitch, whelped Dec. 12, 1892, by Leinster Kennels, New Orleans, La., to W. G. Jones, Temple, Tex.

Don Noble. Black and tan Gordon setter dog, whelped April 29, 1893, by Count Noble out of Fenmont, by Inwood Kennels, Providence, R. I., to G. H. Lomas, Pawtucket, R. I.

Leinster Folly. Black, white and tan fox-terrier dog, whelped Jan. 29, 1893, by Raby Jim out of Hillside Rue, by Leinster Kennels, New Orleans, La., to W. E. Stauffer, same place.

Thasmo Sport. Liver and white pointer dog, whelped Sept. 3, 1891, by Frank Smith out of Bell Swift, by F. M. Thomas, Catskill, N. Y., to G. P. Matteson, Oswego, N. Y.

Thasmo Ned. Red Irish setter dog, whelped June 16, 1891, by Charles W. out of Lady Learnerd, by F. M. Thomas, Catskill, N. Y., to G. A. Kenken, New York city.

Sporty Thasmo. Black, white and tan beagle dog, whelped Sept. 10, 1891, by Athens out of Belle, by F. M. Thomas, Catskill, N. Y., to Jas. Porter, Davenport, Ia.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

H. B. N., Brooklyn, N. Y.—Could a dog be poisoned by eating the vomit of a man taken with a violent attack of colic? Ans. No, providing the colic in the man was not caused by a poison.

J. J. O., Detroit, Mich.—Will you kindly give the pedigree of the English setter No. 18,746? Ans. We cannot find an English setter with that number in the Stud Book. Can you give the name of the dog?

C. S. W. Covert, N. Y.—There is nothing in the game laws of New York in reference to using ferrets on rabbits in the open season.

Business.

RESULTS OF A SMALL "ADV."—Catskills, N. Y., Aug. 4.—The Forest and Stream Pub. Co. find inclosed three sales blanks which kindly insert under their head. They are the result of my adv. (small) in your July 22, 1893, number. The other dogs there advertised are now subject to many probable purchasers. F. M. THOMAS.

Yachting.

CONSIDERING the fleet gathered at Cowes for the week of the Royal Yacht Squadron, that great and august body began its racing with something very much akin to a farce. The race for the Queen's cup, the principal prize of the year, was in the first place made a handicap, thus robbing it of all interest. Handicaps are all very well in their way, but with five new racing craft sailing regularly under the Y. R. A. allowances, few yachtsmen would care to waste time over a handicap for such outbuilt craft as Thistle and Wendur, with the little Mohawk thrown in. In addition to being a handicap the race was limited to yachts enrolled in the Squadron, thus shutting out Satanita, Calluna and Navahoe, all new craft. What little interest attached to the race between Valkyrie and Britannia under such conditions disappeared entirely when it was learned that the former, after beating Britannia by a safe margin, and Meteor (Thistle) by a quarter of an hour, was disqualified for passing a mark on the wrong hand. By a fortunate chance Meteor was just within her handicap time of Britannia, and so won the cup, to the great gratification of her Imperial owner, who, as one dispatch says, was seriously disappointed last year when he was beaten by the 40-rater Corsair. It

is also stated that the captain and crew of Valkyrie, who doubtless worked hard enough to win, were disgusted and indignant at the final result. The race next day for the Meteor shield was a similar failure, only two yachts, Britannia and Satanita, starting. An open race for each of these trophies would have brought out the finest fleet that has started in England for many years, and night have helped yachting as much as these two absurd contests have retarded it.

LAST week the daily papers were full of a sensational story, originating in New York, to the effect that the new Paine fin-keel Jubilee had turned out a complete failure, and would not start in the trial races, some adding the important intelligence that General Paine was about to fit out the Volunteer. The only foundation for the story seems to be that General Paine has neglected to make a formal entry for the trial races before August 1, the date set by the committee. Jubilee is to all appearances doing fully as well as most new boats, and she will be in the races this week with the others of her class.

OPINIONS as to Navahoe have traversed the whole range, from highest to lowest, and the anxious yachtsman may, according to his sympathies, American or British, read with delight that she is far and away superior to the four new British yachts, or that she is unmanageable and has nearly capsized. The most reasonable supposition from the races sailed up to this time is that she met her best weather, in her first race, a good breeze, in which she could carry her large topsail easily; and that in heavier weather she is still lacking in power, and is likely to be defeated by the home boats. Considering the many disadvantages under which she labors as compared with the others, in strange waters, racing against a foreign fleet, and her first race virtually a trial trip, the result was remarkably good, in fact an agreeable surprise. That she has been beaten in strong winds is in no way surprising from what has been suspected from the first, of her lack of power, even with the outside lead. With a few more trials a marked improvement may be looked for, and it now seems likely that with moderate weather to aid her she will do no discredit to America, even though she should fail to bring back the three cups she has gone for.

THE comments of the English papers, the Times in particular, on Navahoe are very amusing, and quite on a par with similar expert opinions printed on this side. Among other comments the Times says: "The Navahoe's behavior during the week certainly supports British yachtsmen in the opinion that the centerboard yacht, as developed by American designers, is only fit for fine weather." Although Navahoe has a centerboard, she has absolutely nothing else in common with the national type of centerboard yacht, in fact she draws just about the same water as Genesta, Galatea and Thistle, with as low or lower ballast. The centerboard has suffered in the past from being found in very bad company, great beam, shoal draft and poor construction; but there is nothing in the board itself which makes a vessel unseaworthy apart from its model. There was a time when the centerboard was found only in vessels of a dangerous type; but that time has passed; the Times must be a long way astern if it has not heard of the sailing of Puritan and Thetis in hard weather, not to mention Volunteer and the many other modern centerboard cutters.

WE venture the prediction now, looking to the end of the season to justify it, that designers on both sides, and especially in America, have been hurried by circumstances into a size of hull which they do not yet know how to spar or canvas properly; and that the highest speeds of the new boats will not be reached until very marked advances have been made in spar making and sail making. It would seem that in the mast or boom of 100ft. the limit of strength of a single grown stick had been exceeded, and that to stand properly such spars must be in effect built trusses of wood or steel. It is doubtful as well whether the best of the new sails are strong enough to stand as sails have stood in the past, and whether stronger materials and new methods of roping are not necessary. In all the races of 1885-'86 and '87, we fail to recall a single accident to any of the big boats more serious than the carrying away of a topmast—not a mast or bowsprit was lost, or a lower sail torn. The record of the British racing this year shows one succession of new spars, and we look for the same experience in the still more powerful boats on this side.

Two reports have come this week by cable, one of a 90-footer for the Emperor of Germany, and one of a challenge for the America Cup next year in the event of Valkyrie's failure. It is rather soon yet to talk of a challenge from a real 90-footer, but in view of the mechanical difficulties yet unsolved in the new 85ft. boats, of the immense outlay involved, and of the probable after effects of the present financial depression, it would be an unfortunate thing if the Cup racing should be moved up to a still larger class. The question is worthy of consideration whether it is not desirable and at the same time possible for the two yachting nations to unite in establishing a limit of size for single stick yachts in international competition for such trophies as the America and Royal Victoria Cups. Such a course would prevent all outbuilding and would be manifestly to the advantage of both sides.

Chesapeake Bay Y. C. Special Open Race.

OWING to a difference of opinion as to the speed of the yachts in the annual open regatta of the club off Claiburn on July 6, it was arranged to hold a special open race to start from the harbor of St. Michaels on Tuesday, August 1. Owing to want of wind this race was postponed to 2d inst.

Wind moderate N., but very baffling. Course from line drawn from Tyler's Wharf, St. Michael's harbor, to judges' boat, thence to Wyetown buoy and back to a stake boat at mouth of harbor and repeat. Course of second class from same imaginary line to Wyetown buoy, thence to stake boat at mouth of harbor, thence to Long Point buoy and back to starting line. Distance for first class, thirteen and one-quarter (nautical) miles; second class, eleven and one-half (nautical) miles.

The champion class sailed without restrictions as to sails or ballast; this allows the use of outriggers which are always used unless specially restricted. In the second class outriggers were barred, and no shifting dead ballast allowed, and not more than six men in any boat. The gun for championship class was fired at 9:55 o'clock, and starting gun at 10 o'clock.

CHAMPIONSHIP CLASS—31 to 38ft.			
	Length.	Elapsed.	Corrected.
Island Belle.....	35.01	4 05 30	4 05 27
Island Bride.....	35.02	4 17 30	4 17 20
Golden Rod.....	35.05	4 20 30	4 20 30
Ma Belle.....	35.04	3 30 30	4 20 23
Harkaway.....	34.16	4 39 50	4 39 10
SECOND CLASS—24 to 31ft.			
Island Bird.....	27.00	3 45 10	3 43 15
Lucy Lee.....	29.10	4 10 03	4 10 03
Sam and Charley.....	28.11	4 10 30	4 09 54
Samuel H.....	28.05	4 17 20	4 15 45

The performance of Island Bird was a wonderful one, considering she sailed the race with only her three sails, mainsail, foresail and jib, while in the champion class immense light sails were used off the wind, and owing to the fact that outriggers were barred, the Island Bird only used a comparatively small suit of sails to windward, yet her time over the course, eleven and one-half nautical miles, was 3h. 45m. 10s., which compares well with that of the world beater, Island Belle, viz.: 4h. 5m. 30s. over a thirteen and one-quarter nautical mile course.

J. G. MORRIS, Sec.

The Stamford Y. C. has offered a silver cup costing \$300 for a special race for sloops, cutters and yawls between 36 and 43ft. racing length, to be sailed off Stamford on Saturday, Aug. 26.

## NEW YORK Y. C. CRUISE, 1893.

It is rather a strange turn of affairs that has gradually taken place of late years, the virtual opening of the racing season in August instead of June; but it is more and more apparent each year that the life has gone out of early racing, and that the real sport only begins with the New York Yacht Club's annual cruise. Important as this grand gathering of the fleet has become, there is much lost by the very late beginning of the season, especially when new yachts built for international races are to be tried and worked up; and it would be in every way better if the old-time June racing could be restored. With the racing fleet in readiness about the middle of June there would not only be several weeks of good racing, but the boats would be in better condition for the races of the cruise, and the latter would gain rather than lose.

This year the spring races are not worth considering, the results, such as they are, may be entirely disregarded; and the race of Tuesday last may be considered as the first of the season.

The programme this year is much the same as in 1891-2, the rendezvous being at Glen Cove, at the west end of Long Island Sound, and the regular squadron runs being made as follows: August 8, Glen Cove to Morris Cove (New Haven); 9, Morris Cove to New London; 10, New London to Newport; 12, Newport to Vineyard Haven; 14, Vineyard Haven to New Bedford; 15, New Bedford to Newport. This year there has been no talk of prolonging the cruise around the Cape, such a course beyond weeks of good racing, on account of the many races of the 65-footers which must be sailed.

The official programme of the cruise is as follows:

By invitation of the commodore, the regatta committee will make the cruise on the flagship. Yachts entered for any racing event will display their numbers and private signals, Rule X, Section 3. Numbers can be obtained at the club house, 67 Madison ave., or on board the May. Club to be sailed for on the day of rendezvous by yachts belonging to the club, in racing trim. Start, 11:30 A. M. Entries will be received at the club house up to 10 P. M., Aug. 5, and on board the May up to 10:30 A. M., Aug. 7. Course, triangular, from off Glen Cove to the eastward and return, 30 miles.

Newport, Aug. 11. The Commodore's Cup. For schooners of 35-400 cup. For cutters, sloops and yawls a 350 cup. Offered by Capt. Ogden Golet, N. Y. Y. C., and open to yachts belonging to the club that have not hauled out to clean since the commencement of the cruise. Capt. Golet reserves the privilege of inviting foreign yachts that may be in American waters, to enter the race. Start, 11:30 A. M. Entries will be received at the club house up to 10 P. M., Aug. 5, and on board the May up to 8 A. M., Aug. 11. Course No. 4 or No. 5 (By-Laws, Chap. X, L.) as may be.

On the squadron's return from the eastward—The Astor Cup—Capt. J. J. Astor, N. Y. Y. C., offers two \$600 cups to be sailed for off Newport by sloops, cutters and yawls belonging to the club. Capt. Astor reserves the right to admit foreign yachts in American waters. Time limit, 6 hours. Start, 11 A. M. Entries will be received at the club house up to 10 P. M., Aug. 5, and on the May up to 10 A. M., Aug. 10. Course, a triangle, 10 miles to a leg, the first leg to windward, if possible. The winner of the first day's race is to take one cup, and the winner, second and third and fourth boats shall compete in the second race for the other cup. In the event of the second cup being won by the boat which was second or third in the first day's race, there shall be a third race between these two boats, and the winner of the third race shall take both cups.

Squadron runs.—There will be the customary runs from port to port, in cruising trim. In each class there will be a prize for first if two, or more, start; and a prize for second if four, or more, start. When the commodore has ordered the squadron under way, the May will establish the starting line, and yachts wishing to be timed will cross displaying their numbers and private signals. They will finish between the May and the points indicated. Water can be taken into, and started from, the tanks up to 8 o'clock each morning.

Steamboats for members. Aug. 7.—The Commodore's Cup.—The Taurus (Iron Steamboat Co.) will leave the foot of East 25th st. at 9:45 A. M.; Long Island City (annex of L. I. R. R.) at 10, and will make a landing at Roslyn. She will touch at these points returning. Members can obtain tickets, \$3 each, and extra tickets at the same price, for all to choose from, in cruising trim, and the race be postponed, the arrangements will hold good on the 12th.

The Astor Cup.—The sea-going tug Luckenbach will leave the foot of Long Wharf at 10:15 on the morning of each race. Members can obtain their tickets, \$3 each, and extra tickets at the same price, from Capt. Sands, at the Newport station.

Tickets for each of these events will include lunch, exclusive of wines.

S. NICHOLSON KANE,  
CHESTER GRISWOLD, Regatta Committee.  
IRVING GRINNELL.

With ordinarily good weather there is every good prospect of the programme being carried out and of the fleet being back at Newport by Aug. 15 and disbanding on that date. These runs will, as usual, be races for all to choose from, in cruising trim, and the race be postponed, the arrangements will hold good on the 12th.

Apart from the racing runs three races will be sailed, the first on the day of rendezvous, Aug. 7, off Glen Cove, for two cups, one for schooners and one for single-stickers, presented by Com. Morgan, all yachts being in cruising trim. This race will give to the many members about New York an opportunity to see the fleet under way and the racing division in action. The second race will be sailed for the Commodore's Cup, sailed off Newport on Aug. 11, over one of the regular courses, Sow and Pigs or Rock Island, and will be notable as the first meeting of the four cup defenders. The third contest will be a series of two or three races, to be sailed off Newport at the return of the fleet, for two \$600 cups, presented by Mr. Astor; this race being practically limited to the four big boats, as in the event of the starting of two or three of them it would be difficult to get them to start. Yachts entering for any of the races must not have hauled out to clean after Monday.

For the past two weeks the yachts have been busy over the final preparations, most of them being docked as late as possible. Colonia came down from Newport and hauled out at Downing & Lawrence's railway, Gowanus, on Aug. 1, where she was held until the morning of Monday, going over at 3 A. M. and starting for the start for the first race. Her new hollow boom proved entirely too limber on trial and was at once discarded temporarily for the former solid one; the boom buckled badly and drew the mainsail out of shape. Another hollow boom has been made for her at Bristol, 34in. diameter in the slings and 20in. at each end. It is built of two thicknesses Oregon iron wooden hoops being used inside, with a brace between them. Being much larger than the first hollow boom it is expected to be stiffer. A similar boom 10ft. long has also been made for Vigilant. The latter boat went out early in the week at Hawkins's ways, City Island, lying there only a couple of days, but during this time she was inspected by a large number of yachtsmen. Her bronze bottom was carefully polished and the topsides painted, and a new boom and gaff made by Piegrass were slung on.

Jubilee was hauled out at the Atlantic Works, East Boston, on Aug. 2, in the presence of Gen. Paine and Mr. John B. Paine. She has had a solid topmast made to replace the hollow one first used, and one of the three shrouds of the bows has been shifted to the masthead, making two to each point. Her mainsail has been cut down, as it had stretched considerably. Pilgrim was docked on Aug. 1, at the Boston Navy Yard, where a cradle and shears were fitted for her. The one used in New York, was built for her by Mr. Jas. McIntyre, the yacht builder. She was scraped and painted and the small forward centerboard, which has never been required in sailing, was removed and the slot filled with wood. She and Jubilee will join the fleet at Newport, or possibly the latter may run to New London.

## Monday, August 7, Commodore's Cups.

Glen Cove, Long Island Sound.

Monday was a perfect racing day, clear, warm and bright, and with a rattling northwest wind, strong and steady, save for the hard puffs that are always met from that quarter. The water was perfectly smooth and the breeze tempered the heat of the sun, so that the members and guests, for whom this race was specially planned by the Commodore, had everything to their liking in the matter of weather. The iron steamboat Taurus was in the water with a band on board and the usual complement of edibles, but strange to say the turnout was much smaller than one would expect, in fact, the members were slow to avail themselves of the good things provided by the club.

The course for the race was a 26 mile triangle, between Matinick Point, a markboat off Green's Ledge, Norwalk Islands, and a markboat off Lloyd's Neck and home. With the wind N.W. it was impossible to obtain any beating, and signals from the club called for the course sailed with all marks to starboard, as usual, making a reach to the first mark, 12½ miles, naut., a reach across to Lloyd's Neck, 4 miles, and a single long leg closehauled of 9½ miles to the finish.

As the race was mainly intended for those on the Taurus, the start was delayed as long as possible for the arrival of that vessel; but after leaving New York late and waiting for the usual laggards, she reached Glen Cove, where a large party was waiting, only to find that the ebb tide would prevent her getting into the dock. A long time was wasted in ferrying the ladies out in launches, and the race had started before the steamer left Glen Cove. With such a wind no steamboat in the iron fleet could overtake the yachts; so the members lost all of the first half of the race.

May, with Com. Morgan and the regatta committee aboard, was anchored about 1½ miles off Matinick Point, with a sloop carrying the club flag an eighth of a mile inshore of her, marking the line. When the preparatory gun was fired at 12:15, the Sound and Hempstead Bay was covered with a fleet of yachts, sail and steam, down to canoes and catboats.

The racing division included Vigilant, Colonia, Queen Mab and Hildegarde, and the schooners Lasca, Alcaea, Constellation, Coronet, Emerald, Dagmar, Ariel, Ramona and Marguerite. The starting gun was fired at 12:15, the first over being Queen Mab, with Vigilant just to leeward and Colonia and Hildegarde about a minute astern. The schooners started five minutes later, the official times of the start being:

Queen Mab	12 28 13	Constellation	12 32 56
Vigilant	12 26 43	Lasca	12 33 23
Colonia	12 27 57	Dagmar	12 33 32
Hildegarde	12 28 03	Ramona	12 34 02
Alcaea	12 31 14	Marguerite	12 39 00
Ariel	12 31 29	Coronet	12 35 00
Emerald	12 32 14		

All carried jibheaded topsails and small jibtopsails, the two big cutters setting balloon foresails. With a strong quartering wind Vigilant set a high pace from the start, soon passing Queen Mab, but her race was a short one; when hardly a dozen minutes from the start her bowsprit and topmast went, the former a few feet outside the stem, and the latter at the cap; she dropped anchor, cleared the wreck and ran into Glen Cove, towing over to Piegrass's yard later in the day for new spars before the Goelet Cup race of Friday. Coronet was also in trouble, her maintopmast getting adrift and blowing out to leeward for a time, finally breaking away and sailing like a white cloud through space before it dropped into the drink. Soon after her jibtopsail burst and flew far out to leeward.

Colonia was now in the lead, driving fast for the outer mark and holding her own at this work with Constellation, of 20ft. more waterline. The puffs came hard at times, and off Greenwich two or three of the schooners were luffing out and heeling to a dangerous angle. The times at the first mark were:

Colonia	1 26 30	Ariel	1 33 05
Constellation	1 18 20	Lasca	1 34 16
Alcaea	1 32 30	Ramona	1 34 40

After a jibe came a short reach across the Sound to Lloyd's Neck. The clew of Colonia's staysail burst and the sail was stowed, this leg

COLONIA ON THE RAILWAY.

being covered under mainsail, jib and working topsail. She came for the mark with a big wave under her lee bow, the weather side of the deck wet with the flying spray and quite a heel on. Just to leeward and ahead of her was Mr. Rogers's old Bedouin, now flying the colors of Mr. C. W. Wetmore, out for a sail with ladies on board. With Colonia's huge spars towering high above Bedouin's little ones, it seemed as though the new boat should walk quickly by, but the old Bedouin held her place well until the mark was passed and she was trimmed in, when Colonia soon left her. The second mark was timed:

Colonia	1 47 50	Lasca	1 56 06
Constellation	1 51 11	Ramona	1 56 57
Alcaea	1 53 55	Emerald	1 59 40
Ariel	1 55 03	Coronet	2 01 39

After a quick luff and pull at the sheets all were off for the finish, close-hauled on starboard tack. All weathered the line on this tack save Lasca, who fetched just to leeward of the mark-boat and had to make two short tacks to get across. The full times were:

Start.	Finish.	Elapsed.	Corrected.
Ariel	12 31 29	2 48 14	2 10 45
Constellation	12 31 23	2 48 16	2 07 32
Lasca	12 31 23	2 49 56	2 16 45
Alcaea	12 31 14	2 47 10	2 15 56
Dagmar	12 31 32	3 01 55	2 28 23
Emerald	12 32 14	2 57 21	2 25 07
Ramona	12 34 02	2 50 20	2 16 18
Marguerite	12 35 00	3 03 43	2 28 43
Coronet	12 35 00	2 58 22	2 23 22

Dauntless, Mayflower and Loyall were entered, but did not start.

Colonia, sloop, H. T. Jones, 3 43 35 3 43 45  
Thetis, cutter, A. A. McKay, 3 43 35 3 43 45  
Mentor, cutter, R. E. Kennedy, 3 43 35 3 41 00  
Tortoise, sloop, A. E. Jones, 3 43 35 3 41 00  
Valkyrie, sch., L. H. E. Marsh, 1 7 20 3 12 00  
Irene, sch., Capt. Elliott and Hartley, 1 3 Did not finish.

Winner first prize, Valkyrie; second, Thetis. Officers of the day, C. J. Whyte and F. H. Bell.

## Royal Nova Scotia Yacht Squadron.

HALIFAX—HALIFAX HARBOR.

Saturday, July 29.

Race No. 7, open to 3-raters, course No. 4. Starting off Squadron wharf to flag buoy in Dartmouth Cove, leaving it on starboard hand, thence passing to windward of George's Island, to Point Pleasant Buoy, thence to buoy off Woodside refinery, thence to outer flag buoy off Squadron wharf, leaving these marks on port hand, thence to Point Pleasant buoy, leaving it on starboard hand, and finish off Squadron wharf, 9½ miles. Time limit, 4 hours; weather, unsettled; wind, south to southwest; starting gun fired at 2:35.

Rating.	Elapsed.	Corrected.

Winner first prize, Valkyrie; second, Thetis. Officers of the day, C. J. Whyte and F. H. Bell.

## Indian Harbor Y. C. Annual Regatta.

GREENWICH—LONG ISLAND SOUND.

Saturday, July 29.

The annual regatta of the Indian Harbor Y. C. was sailed on July 29, the day opening unfavorably for the large party on the club steamer, the rain falling steadily and a strong S.W. wind blowing. Even in the weather improved from the spectators' standpoint, and at the same time there was wind enough for the race to finish. The courses were, for all yachts not over 30ft., the 15-mile triangle between Little Captain's Island, Matinick Point and Center Island, and for the larger boats around the Matinick Point, then around the Center Island buoy and home again by Matinick Point. The chief incident of the day was the grounding of the schooner S. W. wind blowing. Even in the weather improved from the spectators' standpoint, and at the same time there was wind enough for the race to finish. The courses were, for all yachts not over 30ft., the 15-mile triangle between Little Captain's Island, Matinick Point and Center Island, and for the larger boats around the Matinick Point, then around the Center Island buoy and home again by Matinick Point. The chief incident of the day was the grounding of the schooner S. W. wind blowing. Even in the weather improved from the spectators' standpoint, and at the same time there was wind enough for the race to finish. The courses were, for all yachts not over 30ft., the 15-mile triangle between Little Captain's Island, Matinick Point and Center Island, and for the larger boats around the Matinick Point, then around the Center Island buoy and home again by Matinick Point. The chief incident of the day was the grounding of the schooner S. W. wind blowing. The chief incident of the day was the grounding of the schooner S. W. wind blowing. Even in the weather improved from the spectators' standpoint, and at the same time there was wind enough for the race to finish. The courses were, for all yachts not over 30ft., the 15-mile triangle between Little Captain's Island, Matinick Point and Center Island, and for the larger boats around the Matinick Point, then around the Center Island buoy and home again by Matinick Point. The chief incident of the day was the grounding of the schooner S. W. wind blowing. Even in the weather improved from the spectators' standpoint, and at the same time there was wind enough for the race to finish. The courses were, for all yachts not over 30ft., the 15-mile triangle between Little Captain's Island, Matinick Point and Center Island, and for the larger boats around the Matinick Point, then around the Center Island buoy and home again by Matinick Point. Glenwood Landing, L. I., of a model yacht as a prize to be raced for under management of above club, was kindly acknowledged and accepted at their meeting Aug. 4, they deciding that the race for same will be sailed on the large lake at Prospect Park, Brooklyn, Saturday, Aug. 23, at 3 P. M. sharp. Races to be to windward, as near as practicable. Prize open to all model yacht clubs. Yachts will be divided into three classes: First class, 48in. and under 53in. l.w.l.; second class, 42in. and under 48in.; third class, 35in. and under 42in. Each class will sail in heats, best two in three. Winners in their respective classes to start in a final best two in three in heats. Winner to take prize. Entries from model yacht clubs to be accompanied by yacht and owner's name, also length on l.w.l. and actual sail area, and addressed to Frank Nichols, 249 South Fourth street, Brooklyn, E. D. Mr. DeWolf, Park Superintendent, has offered a prize for Labor Day, Sept. 4.

FRANK NICHOLS.

### On My Inclined Deck.

FIRST CRUISE OF THE DAW.

HE Daw, Mr. G. D. Giddens's new yacht, of the P. Y. C., has at last made her debut on the Delaware, and, being the only boat of her size representing the combined qualities of that noble craft Gloriana, her performance is watched with double interest. Although the traditional corn crackers that infest these shores when out of a job predicted all kinds of inconveniences while she was still in frame are now satisfied to smile with us and are willing to offer us an apology for their truly previous gossip.

This narrow, contracted single-hander was designed by Mr. H. E. McCormick, the industrious Quaker City amateur, and she has no doubt added another feather to not only his hat, also a fringed quill to the cap of her builder, Mr. W. G. Van Deusen. Her dimensions are 20ft. over all, 21ft. l.w.l., 6ft. 6in. beam and 4ft. 6in. draft, with some 700sq. ft. of canvas split up into jib and mainsail, and outside ballast of 4,200lb.

It was unfortunately not until July 1 that she was put in commission. The Daw left her builder's basin, skippered by her owner, for a short spin on the river, going as far as Cooper's Point, where Mr. Giddens was obliged to go ashore, for he said his train was awaiting him. The favor was granted and then came a wild scene of excitement. The task of stowing aboard the numerous cubic feet and gallons of necessary maintenance, which, when placed aboard reduced the ship's freeboard several inches, and finally bringing her down to her designed waterline.

Sail was made at 5 P. M. Saturday with a good breeze and the faltering influence of the ebb tide being at our disposal.

It was now getting dark and as the shore in this locality offers no special attraction, we decided to keep right on our course, which was by this time on the Newcastle range.

But now only was the difficulty experienced, that of plank-on-edge sailing, a feeling quite different to that of the broad horizontal deck contrivance, for it obliged all hands to belay or go below and lash their shifting humanity to the lee-side of the boat, which under these circumstances assumed a more friendly position, and when turning in time arrived lots were drawn as to who should enjoy the misery of the night first.

Those less fortunate in securing the prize bunk slips remained on deck and passed the night rather pleasantly, with nothing to break the monotony save that we escaped the numerous shoals that abound in this latitude. Twilight was now on its way westward, and as soon as there was sufficient daylight for us to make an observation we discovered a rather gay place and soon anchored off Augustine pier.

The time at Augustine pier was spent in quiet rest and by Tuesday we were ready for our homeward journey. At Penn's Grove we anchored for a change of tide, in the meantime going ashore. Finally bidding this favorite watering place good-bye all hands made for the ship, but when within almost 100 yds. or so our frail craft and its interior capacity were intercepted by a load of shot fired from the shore by lovers of the gun, and who had no doubt mistaken us for a flock of decoys.

Sail was made at 11 P. M. and speeding up the river the surround-

"TAKEN FROM NATURE."

ing heaven appeared like a kaleidoscope, with fireworks in all quarters. As the hours sped on old Boreas evidently put a reef in his jaw tackle, for nothing more than a zephyr wafted us homeward, but it happily lasted until the Daw was safely moored at Cooper's Point.

Thus ended a satisfactory trial spin and also a jolly initiatory cruise of Mr. Giddens's new clipper.

W. C. L.

### YACHT NEWS NOTES.

On Aug. 3 there arrived off Bay Ridge the Italian yawl Corsaro, owned and commanded by Capt. Enrico Alberto D'Albertis, of the Royal Italian Y. C. of Genoa, a retired naval officer. The yacht was built in Italy in 1882, and is about 75ft. over all, 35ft. l.w.l., 16ft. beam and 11ft. draft, with a crew of nine. She left Genoa on June 3 and Cadiz on June 23, following closely the track of Columbus and finally reaching San Salvador on July 22. Among her outfit she carries copies of the ancient nautical instruments used by Columbus. Captain D'Albertis left the yacht at Bay Ridge, while he makes a trip to Chicago, and will sail for Italy on his return. He is accompanied by a friend, Mr. A. Justin.

The postponed race of the Royal Canadian Y. C. for the 21ft. class was sailed on July 29, the time being as follows:

	Finish.	Elapsed.	Corrected.
Thistle-down	4 42 15	1 42 15	1 40 59
Ethel	4 47 00	1 47 00	1 44 19
Gwendoline	4 48 25	1 48 25	1 44 45
Caprice			Not timed.
Recruit			Withdraw.
I. C. U.			Capsize.
Syngamma			Disabled.

The club house of the Chelsea Y. C., in the suburbs of Boston, was the scene of a terrible accident on the evening of Aug. 3. The house was crowded with members and their families and guests, the occasion being the second annual illumination and concert, when the upper balcony gave way under the unusual weight, throwing a number of persons down to the lower balcony and the club float, nearly 40ft. beneath. Two ladies were killed, and also two members of the band, and 16 persons were more or less injured.

The Rochester, N. Y., papers comment quite severely on the failure of the owners of the sloop Onward, of Rochester, to meet Zelmia, in answer to Mr. Dick's challenge for the Fisher cup, won by Onward from Norah last fall. From the accounts, the owners of Onward have avoided a meeting with Zelmia, and have offered to surrender the cup without a race, which action Mr. Dick has very properly refused to be a party to.

Syngamma is a new fin-keel with a fin rigged like Scarecrow, in a trunk. Two of the pins holding the fin were dislodged by grounding before the start, and she sailed for a time with the fin partly down, but finally withdrew for repairs. I. C. U. was second to Thistle-down when she capsized early in the second round.

If reports are true Mr. W. W. Astor has ordered a very large steam yacht to be designed and built in England.

Valiant, steam yacht, built at Laird's yard for W. K. Vanderbilt, made her trial trip on Aug. 3.

Almy, steam yacht, F. Gallatin, has sailed on a long trip to Greenland.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

### FIXTURES.

AUGUST.

11-12. N.W.A.R.A., Canoe Races, 11-26. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

2. Orange An., Arlington, N. J. 4. Holyoke, Fall, Holyoke, Mass.  
4. Iauthe, An., Passaic River. 16. Red Dragon, Delaware River.

The report of the Western Canoe Association meet and races by our correspondent shows pretty conclusively that the canoe Electra, formerly Glenwood, is a far superior boat for sailing races to any other thus far raced in the West. Glenwood's measure is well known here; last year Mr. Oxholm won the international cup in her and many other races. He defeated both Bee and Wasp and was defeated by them, Butler and Goddard sailing the canoes. Bee has hoisting sails and Glenwood a standing rig. Taking Bee as a basis of comparison a fair idea of the relative merits of the various racing canoes can be obtained—those which have appeared in the races thus far this year, and some of which will sail in the A. C. A. races.

Mr. Whitlock's new double centerboard Gardner-Stevens canoe Damosel, will require a deal of tuning up before she becomes dangerous. Barrington's Toltec is a hopeless wreck, so far as her racing powers go, as she leaks badly and cannot be made tight. Von Nardoff's rebuilt Bonnie has done some very fast sailing, but has broken down in every race she has entered. Her owner has shown, however, that he can carry 160 sq. ft. of sail in one sail on one mast in a 28in. canoe, but has not developed details sufficiently to be able to handle it comfortably and as quickly as is necessary for racing purposes.

Howard's rebuilt Aztec has beaten Bee and most of the flyers, and been beaten by Torment, Pioneer and Bee. Howard uses standing sails. Aztec was built by MacWhirter.

Mr. Moore's Torment has standing sails and is fitted with a plate board having a bulb of lead at its lower extremity. Her work thus far in different hands has shown that the lead is certainly not disadvantageous. She is a Ruggles boat.

Mr. Ward's Pioneer is also a Ruggles boat, using standing sails, and she has a cigar of lead hung by a pivot to the centerboard, and so balanced that it always retains a horizontal position. Pioneer has sailed only one race under anything like favorable conditions, a long race with Aztec, and proved a winner, doing even better than Aztec on all points of the wind.

To seem up: Bee, Aztec, Torment and Pioneer seem to be on about even terms; all are apparently as good as Glenwood, and far ahead of any other racing canoes in sight. Canada may have a surprise in store for us at the meet, but it is not likely. Pioneer will not be at the A. C. A. races, and it would seem as though the remaining three would have all the fun to themselves.

It is perhaps needless to add that all of these canoes have big rigs, long sliding seats and very small watertight cockpits. All were built previous to 1893.

The Chicago Navy is very desirous of securing good entries of canoes at its coming regatta on August 14 to 19, and if a sufficient attendance of sailing canoes can be assured, special gold medals will be provided. Lake Geneva is so near to Chicago, two hours by rail, that every opportunity is offered to visit both the regatta and the World's Fair. Mr. B. V. Johnson, secretary of the Chicago Navy, has the matter in charge, and canoeists desiring to compete will do well to address him.

### A Day's Sailing.

THE FOREST AND STREAM of Aug. 5 gives over half a column of small paragraphs recording capsize and various disasters to small sailing craft on July 23. It is very hard in the afternoon, about forty miles an hour the weather reporter said next day, and during the heavy puffs the pressure went up to forty-five miles. One does not often start out for a pleasure sail in such a gale; yet there is no law against having all the fun you can if you are out when the gale comes up and want to get home—and so it was with us.

We had planned to take a run across the Lower Bay to Cheesapeake Creek and select a spot there for a camp site to be inhabited the following week by a party of canoe men and women just for a three days' outing on the beach.

Scarecrow looked safe enough as she lay moored to the float that morning. There were the watertight bulkheads at each end of the cockpit in sight, and they seemed to give strength to the hull just where it needed it. The cockpit floor is above the waterline and the open centerboard (or rather fin) slot carries away all the water that runs into it. The hatches in the compartments fore and aft on deck I observed fitted snugly, and it did not seem as though much water could find its way around their edges even if the deck should be awash. Then I glanced at the rig. I must admit it did look light, but English liuen line is strong, as I know from personal experience, and so is phosphor-bronze wire, used for the shrouds.

In spite of the numerous unfavorable comments by owners of other boats I concluded to accept Scarecrow's skipper's invitation for a day of sailing. You have observed, no doubt, that no one rigs a boat just as you would rig it—not so well, of course. The leg o' mutton mainsail, too, had been severely handled in discussion by all the owners of gaff-headed sails. Still, it did not look to me dangerous.

We dumped in our duds and drifted off at 8:30 A. M. with a gentle northwester on our quarter and a 30lbs. open camp towing astern. Then we made out Margaret just leaving the Marine and Field Club with Ward of our crew aboard piloting the owner across the Lower Bay, as he wanted his boat on the Shrewsbury and did not care to venture across the "open" alone.

The breeze freshened when we were well clear of the land in the main channel, and the aloft wire bowed me along with a bright sky overhead and sparkling water between us and the sun.

It was luxurious lying down to leeward, with one's head resting on the coaming, the right hand on the tiller and all clear under the boom for a good look ahead, taking in the trim of the jib on the way. The owner busied himself in putting everything in order, coiling up loose ends of line, and stowing what we did not immediately need below hatches.

The breeze steadily freshened and Scarecrow responded by going faster and faster. Margaret was dropping astern, though still in sight. The mainsail was lowered when we were a mile off Port Monmouth, and we ran in under jib as close to the beach as the chart showed us it was safe to go. Then we anchored and awaited Ward's arrival.

Margaret soon came alongside and dropped anchor. The large sails were lowered and a small dandy set forward for the run down the beach. Then Ward came aboard with us and Margaret squared away and left us.

It was blowing hard. One reef was turned in the mainsail and then we hoisted sail, pulled up the hook, and started in for a five mile thrash to windward. The spray began to fly and oillers had to be put on. Ward sailed, and kept the little ship to her work without a let up, though he used her over the big seas now and then.

Not a yacht was in sight, only a few big coasting schooners under lower sails. The wind had a clear sweep of eight or ten miles across

Raritan Bay, and it kicked up a very lively sea. No solid water came aboard, but the spray was flying half way up our mainsail.

A sense of comfort and relief was imparted every time a vicious puff hit us by the thought that all the ballast was at the bottom of that fin, and the further the boat heeled over the more the lead came into play to right the little ship. Nothing parted, though the strain on rig and hull was becoming severe. It was curious that the heavy wind and sea, and the surprising rate we were traveling had no apparent effect on the rudder, and it required no effort at all to steer at any time.

It was low tide, and a glance at the chart showed us very shallow water off Cheesapeake Creek and a very exposed anchorage in that fin, therefore we abandoned the idea of going there and sailed for a sheltered anchorage under the bluffs at Princess Bay.

A small sloop hove in sight off Keyport with a three reefed mainsail and only a corner of the jib set. She was going our way and was half a mile ahead. It took about fifteen minutes for us to catch her, and we parted company, she going south on starboard tack and we west on port.

We came to anchor under the lee of the bluffs, near a fishing resort, put on dry clothes and went ashore in the canoe to dinner. The wind increased in force and blew a heavy summer gale. No pleasure boats were in sight on the bay from the bluff, but there was plenty of life along shore, and it was apparent that the wind alone kept the many pleasure seekers on land.

It was a beam reach of the way home as far as Great Hills, close hauled from there to the Narrows and then a broad reach to our anchorage.

The start was made at 3:50, with three reefs in mainsail and a No. 2 jib set. Scarecrow fairly flew along over the smooth water under the lee of the beach. The shallow water forced us to give the shore a wide berth and the spray began to fly once more.

A large 80ft. sloop yacht came out of Great Kills just ahead of us and headed up the beach our way, with a close-reefed mainsail and a small jib. We noticed that the skipper luffed her into the wind now and then when the hardest puffs struck her. Scarecrow was kept down to her work, and it was really astonishing how our little 18-footer overhauled and passed to windward of the big fellow, and it surprised the crew aboard the sloop even more than it did us.

Then we headed her up and took our punishment of spray good-naturedly. It was fairly blinding at times and came into our faces in buckets full, but little or none of it dropped into the cockpit, as the angle of keel left little of the opening exposed. That was where we got the full force of the wind, and it seemed at times that something must part, the strain was so severe, but nothing gave way and Scarecrow kept down to her work in fine shape.

Exciting? Well, the word hardly expressed it. Every nerve keyed up to top notch, the wind screaming and whistling through the rigging, the boat plunging along at a fearful rate, and showers of water pouring over the deck forward, and the mainsail wet with spray more than half way up—it was simply glorious.

The run across the Narrows put the last touch on our day of excitement. The wind blowing directly down the Upper Bay against a strong flood tide kicked up a sea such as is rarely seen inside of Sandy Hook. Right across it we plunged, and the only way to give an idea of how that boat sailed is to call it tobogganing.

The little canoe towing astern met with no accident and shipped less than a gallon of water, though there were times when it seemed as though it must break away or plunge under and fill.

One does not want to sail for fun in a forty-mile breeze every day, nor is it pleasant to get wet always when one goes sailing; but it is mighty comforting to know that the boat one owns is safe, can stand a heavy sea and breeze, and, when the occasion comes, will do first-rate work on all points of the wind in a heavy sea and with a gale blowing—such a boat is Scarecrow.

C. BOWSER VAUX.

### The A. C. A. Meet.

On Friday of this week will begin the fourteenth annual meet of the American Canoe Association, the third meet held under the management of the Northern Division, and the fifth meet held among the Thousands Islands. Members of the A. C. A. do not need to be told of the beauties of the St. Lawrence River and its islands, as nearly all have visited Crandall's at least passed down the river; and the present site is in no way inferior in beauty and natural advantages to others previously visited. The arrangements are very complete, and everything promises a pleasant meet to all who attend. After the record made by Com. Winne last year the present officers have had a very difficult task before them, as comparisons will naturally be made with what is justly considered one of the best managed meets ever

SHORE OF MAIN CAMP—BROPHY'S POINT

held by the Association. Every effort has been made, however, to provide for the comfort and amusement of the members. The hitch in the transportation arrangements from Clayton, of which we gave notice two weeks since, has been adjusted, with some trouble on the part of the officers, and nothing more could well be asked than is now provided, the service as now arranged being as follows:

From Clayton.

Sundays and Mondays boats will leave Clayton on arrival of 5:45 A. M. train; arrive Brophy's Point, 8 A. M. Other days leave Clayton 9:45 A. M.; arrive Brophy's Point 11:10 A. M.

Service to Clayton.

Sundays and Mondays leave Brophy's Point 4:30 P. M.; arrive Clayton (via Gananoque on Monday) 8 P. M. Other days leave camp 3:35 P. M.; arrive Clayton (direct) 4:45 P. M.

Service via Cape Vincent.

Leave Cape Vincent every day on arrival of New York train; arrive Kingston 12 M. Return, leave Kingston 5 A. M. and 2:45 P. M.; arrive Cape Vincent 7 A. M. and 4:45 P. M.

Service between Camp and Kingston (Sundays and Mondays excepted) Leave camp 8 A. M.; 10:30 A. M.; 11:15 A. M.; 1:30 P. M.; leave Kingston 10 M.; 1 P. M.; 3:15 P. M.; 6 P. M.

On Sunday boats will leave for camp at hour to suit members arriving by night trains.

The wharf and mess shed are now ready, Mr. Jackman has been on the ground for some time, and canoeists arriving will find everything at hand. The best recognition which the members can make of the efforts of Com. Cotton, Sec'y Burns and the various committees, is to turn out in good numbers and make the meet a success. The picture at the head of this article shows one view of the main camp east of the wharf, the tents being pitched in and about the grove which extends to the water. The picture is from a photo taken by Dr. Parrett and sent us by Mr. Burns.

Jas. Jackman of Lakeland is now engaged in building tent floors, canoe floats, etc. Members requiring floors will oblige the camp site committee by ordering at once, as there will be a big rush at the last moment.

### A. C. A. Prize Flag Fund.

The regatta committee acknowledge the receipt of the following amounts: Gen. Oliver \$5, W. R. Huntington \$5, Hartford C. O. \$5. Com. Cotton has presented a very handsome set of signal flags in silk, 19 flags in all. They are contained in a polished box of red cedar, and make a really handsome prize.

### A. C. A. Membership.

NORTHERN Division: T. N. Shannon, H. W. Gaudet, Dr. J. R. Shannon, E. A. Moore, Sanford C. Calvin, Kingston; Dr. George H. Cobb, New York; George H. Napier, Montreal; B. Batson, J. A. Jackson, Orono, Ont.; John Hart, John H. Sutherland, A. J. McBride, H. C. Walker, Dr. P. Bermingham, H. S. Dupre, E. S. Sears, Geo. R. Low, Kingston, Ont.

Chicago C. C. Calamity.

CHICAGO, Ill., Aug. 4.—Calamity of the most serious sort befel the Chicago C. C. last night, and one from which it can arise only with difficulty. Its boat house and contents, including 14 individual canoes, their fittings, and much clothing and belongings of members, were utterly destroyed by fire. Moreover, the lease of the club to its site not having been renewed, and the site being now vacant in a manner, it is thought perhaps that there will be difficulty in holding the site in tenure undisturbed by the owner of the ground, the Illinois Central Railway. The club should at once find its site on the old lines and put up a building of some sort as soon as possible. The sympathy of the craft over the country will readily be extended the Chicago boys in their hard luck. It takes more than fire to kill Chicago or Chicago enterprise, however, and the logical influence after all is that the Chicago C. C. will put up a bigger building than before and fill it with better boats than ever. Their main concern is about their building site. The railroad company surely should extend them every courtesy in this matter, as the responsibility for its fire rests solely on the corporation's carelessness.

"During the whole of the day the railroad company had been burning old ties on the bank of the lake not far from the boat house. At night there remained a huge bed of embers which the breeze frequently fanned into flame. Sparks from the blazing pile set fire to the boat house, and at 10:30 o'clock a citizen who saw the boat house burning ran to the fire alarm box and turned in an alarm. Several pieces of the apparatus approached the scene of the fire on Thirty-sixth street. When they reached the Illinois Company's right of way their progress was barred by an iron fence recently put up by the company. The engines and firemen could not get across the tracks and stood helplessly by watching the destruction of the building. A great crowd of people gathered and soon realized the situation.

"Pull down the fence," called out some one. "The call was repeated with emphasis from a hundred or more persons, and in a few moments a crowd of 2,000 people were at work, tooth and nail, pulling down the fence. The task was not a difficult one for a big crowd and the fence soon came down. The apparatus was driven across the tracks and one line of hose for each engine company was laid. The first lead of hose was cut by a World's Fair express train going in one direction and the second was cut by another World's Fair train going in opposite direction. The crowd of 2,000 people grew excited and threats of violence to the trainmen were heard on every side. They succeeded in stopping the World's Fair express trains both ways, however. A stray freight train came along next and cut the third lead of hose, and the crowd again became angry and demonstrative.

"By this time a number of police officials were on the scene and further trouble was prevented. It was too late for the fire department to perform effective work, however, for the boat house, with its contents, was effectually destroyed. The loss is probably \$2,000."

E. HOGAN.

The Elliott Trophy.

The cut represents the handsome copper trophy presented by Mr. W. S. Elliott to the Atlantic Division, and raced for at the recent

ELLIOTT TROPHY.

meet. The trophy was won by Mr. Barrington, of the New York C. C., in Torment, the other two competitors being Wm. Whitlock, in Hornet, and F. W. Noyes, in Finnen.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

Rifle Range and Gallery.

Cincinnati.

CINCINNATI, O., July 30.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day, and made the scores as appended below: Conditions: 200yds. off-hand at the standard target:

Gindele.....	10	7	10	6	10	9	8	8	7	—85
Weinheimer.....	9	7	9	7	10	9	8	9	10	—86
Payne.....	5	6	9	7	6	9	8	7	6	—69
Martin.....	7	9	8	4	5	2	8	5	9	—67
Topf.....	3	4	7	10	4	5	8	5	5	—65
See.....	10	5	6	7	8	9	6	10	9	—70
Randall.....	8	7	4	9	7	6	10	8	7	—67
Puthoff.....	7	6	5	8	6	5	8	0	0	—45
Nagels.....	0	0	5	4	8	2	0	6	1	—31

New York Central Corps Prize Shoot.

The annual festival and prize shoot of the New York Central Schutzen Corps at Washington Park, on Wednesday and Thursday of last week, was a grand success. The parade of the corps on Wednesday under the command of Captain A. Richter, brought out a larger number of members in full uniform than has been seen since the days of Captain Geo. Sieburg, who of the many prominent New York Schutzen commanders was par excellence an executive. The Central Corps is composed of a membership that has been prominent for a generation among the shooting fraternity of New York and vicinity, and at the present time the corps has many members prominent in the ranks of the New York Schutzen, among whom may be mentioned, ex-Captain C. E. Genrich, ex-Captain Jacob Dax, Fred Barham, John Eisenhardt, W. Seppenfeld, Jas. Jordan, Philip Schmidt, Wm. A. Roos, Gus Zimmerman, Aug. Luck, Fred Schmidt, Emil Berckman, and a host of others of the lesser lights in the shooting fraternity. Of the many prominent riflemen of New York, none have a greater circle of acquaintance than Gus Zimmerman, who among the German shooters is styled "Unser Gus." The constitution and by-laws of the Central Corps says that when a member has been king once he is debared from further competition for kingship for five years. Gus Zimmerman having been crowned in 1888, has been as it were, laid on the shelf until this year, when he

again became eligible for the honors. His well-known liberality and social qualities give him a large following of enthusiastic admirers, and when it became known in the shooting house during this festival that Gus was eligible for the kingship for 1893, there was a strong element of partisanship evinced in his favor.

It is customary in this corps for the members to draw numbers for their turn to shoot on the target of honor. Zimmerman's number proved to be one of the highest or last on the list, and as a consequence his many friends were kept on the ragged edge until his number was called for. Philip Schmidt, the king of last year, had put up 63 out of a possible 75. He was followed latter on by the shooting master, John Eisenhardt, with 64. When Zimmerman's number was called there was a general movement of all present in the direction of the Honor target. His first shot was 30, his second 21, the third 23, a total of 64, and a tie with Eisenhardt on the total. But Zimmerman's last shot outranking that of Eisenhardt, "Unser Gus" was declared to be the king of the New York Central Schutzen Corps for the year 1893-4.

The readers of FOREST AND STREAM, being familiar with the modus operandi of crowning the Schutzen king, we will omit further description and proceed to give our readers a list of the prize winners on the several targets. On the ring target there were 25 prizes, ranging from \$35 to \$1. Tickets 3 shots, German ring target, ties to be decided by the best last shot. Scores:

L P Hansen.....	71	R Busse.....	67	H Radloff.....	62
L Flach.....	71	R Busse.....	67	H Radloff.....	62
G Zimmerman.....	70	R Fliedert.....	67	M Schneeweiss.....	61
Geo Schlacht.....	69	Wm Hayes.....	67	M Tonjes.....	61
F Schraeder.....	69	John Dietz.....	67	J Jordan.....	61
P Schmidt.....	68	B Zettler.....	64	E Berckman.....	60
G W Plaisted.....	67	Jacob Dux.....	64	J Eisenhardt.....	60
CG Zettler.....	67	L Vogel.....	63	M Ficken.....	60

On the man target there were twenty prizes ranging from \$20 to \$1, 3 shots, possible 60:

R Fliedert.....	60	Geo Schlacht.....	54	F Schmidt.....	51
G Zimmerman.....	58	L Flach.....	53	E Berckman.....	51

L P Hansen.....	55	CG Zettler.....	52	Geb Krauss.....	50
Wm Hayes.....	55				

Bullseye target. For the most flags, ten prizes, \$10 to \$1:

G Zimmerman.....	44	L Flach.....	10	Wm Hayes.....	7
P Schmidt.....	22	L P Hansen.....	9	F Jutjens.....	4
Geo Schlacht.....	19	F Schraeder.....	8	J Eisenhardt.....	4

Greenville Rifle Club.

THE weekly rifle shoot of the Greenville Rifle Club, of Greenville, N. J., on Friday, Aug. 4, had its usual attendance. The scores are appended, 10 shots, possible 250, distance 25yds.: Purkess 241, O. Boag 239, Collins 237, Robidoux 237, Spahn 236, J. Boag 233, Dodds 232, Gassman 215, Hill 212.

THERE was not the usual attendance of members of the Greenville (N. J.) Rifle Club, in Armbruster's Park, on Saturday, Aug. 5. A game of baseball is said to have been the counter attraction. H. Mehlbrock, of the Hudson Club, was again a visitor. Henry Mang, one of the new members of the club, tried his hand at the targets. The following appended scores were made by the members participating: 10 shots, German target:

Plaisted.....	22	23	23	22	24	20	24	21	24	23	—220
Dorrier.....	22	21	23	24	23	24	21	22	21	24	—225
Chavant.....	22	23	25	24	21	23	21	20	21	20	—219
Spahn.....	20	21	14	21	21	22	11	25	23	19	—197
Dodds.....	21	20	18	25	25	0	17	19	22	19	—186
Mehlbrock.....	22	18	18	22	10	21	9	18	16	20	—174

International Columbian Prize Shooting.

CHICAGO SHOOTING PARK, West Pullman, July 30-31.—The wind blew pretty fresh on Monday, therefore some scores were left unfinished, shooters waiting for a fair wind.

The following shooters were decorated with the Columbian medal: A. J. Vandusen, Winona, Minn.; T. E. Vandusen, Winona, Minn.; C. A. Johnson, Elgin, Ill.; J. J. Seewer, Stanford, Ky.; H. Armbruster, Ann Arbor, Mich.; H. M. Pope, Hartford, Conn.; Hans Egli, Munchen, Bavaria; Fred Reichenbach, Mt. Kenney, Ky.; Robert Hendrichs, Chicago, and Wm. Ott, Chicago. The scores were:

Columbia.—Hans Egli 57, J. Seewer 53, H. Armbruster 52.  
King Target.—H. M. Pope 26, Hans Egli 201, J. J. Seewer 174, H. Armbruster 178.  
Standard.—H. M. Pope 45, H. Armbruster 43, J. J. Seewer 38, J. T. Delahanty 32.  
People's Target.—H. M. Pope 70, A. J. Vandusen 65, H. Armbruster 63, J. J. Seewer 51, Hans Egli 59, J. T. Delahanty 57.  
Man Target.—J. Ingersoll 89, H. Armbruster 89, H. M. Pope 85, J. J. Seewer 78, J. T. Delahanty 82.  
Bullseye Target.—G. F. Schmidt, Chicago, 19 flags out of 100 shot, H. Armbruster 16, J. J. Seewer 16, Hans Egli 13. A. BOESE, Sec.

Turtle Bay Club.

THE outing of the Turtle Bay Rifle Club at Woodside, L. I., on July 30 was highly enjoyed by every one present. All worked hard to bring their scores up to the gold medal series (230) but try as they would, not one succeeded in getting there. The scores are appended, 10 shots, distance 30yds., gallery targets: J. Krampert 223, J. F. Oberle 228, Jantzer 223, Walter 224, J. Ochs, Jr., 219.

A Bisley Interview.

THE CHAMPION REVOLVER SHOT AT BISLEY.

TO THOSE with any acquaintance of revolver shooting in this country information will not be needed as to the name of the individual who forms the subject of this week's article. It is Walter Winans, Esq., whose ingeniously constructed Bungalow forms, with the Bungalows of Capt. Foulkes and that of the Irish team, quite a unique feature in camp life at Bisley. Mr. Winans's Bungalow, though similar in appearance to those of the others named, is of American construction and portable, taking to pieces and folding up when the main support is removed, with the greatest ease.

On calling on Monday afternoon I was courteously received by Mrs. Winans, whose conspicuous grace and beauty are more than sufficient to account for the numerous callers partaking of 5 o'clock tea at the time of my visit, the coronets on one or two of the carriages waiting outside being the index of the calibre of the guests. On learning that Mr. Winans was shooting at the ranges I hid my head, and after duly admiring the brilliant flowers in the improvised garden which surrounds the luxurious camp dwelling house.

As he stands at the butts, revolver in hand, attired in an ordinary looking brown shooting suit with soft felt hat dented in at the top, Alpine fashion, which is, in reality, the United States Cavalry hat, Walter Winans has the appearance of a bronzed and bearded traveler to be approached with some degree of reverence, if not positive awe. After a minute or two's conversation, however, you are soon at your ease, and you find yourself in the presence of an extremely mild spoken amiable gentleman, without the faintest ostentation or indication of wealth whatever, whose sole desire appears to be to show you anything likely to be of interest to you in the camp, rather than to talk about himself.

He shows you the exhibition gift vase, wherein all the Association prizes, including a very handsome gilt vase, presented by Henry Whitehead, Esq., for revolver grand aggregate shooting, which you know your host is bound to win, although he says nothing on the subject. He accompanies you to witness the shooting for the Queen's prize, and descants upon the merits of the men, which is very nice and kind of him, but you say to yourself, "it isn't Winans," and at last you take the bull (or rather "bull") by the horns and ask him whether he is an American, for so far there has been nothing but an Atlantic in accent or phraseology. His reply is: "My parents are Americans, but I was born and bred in St. Petersburg, where my father was contractor for the Russian Government and built the railway there."

"You are an enthusiast in the matter of revolver shooting, I believe?" "I take the greatest possible interest in it, but if by enthusiast you mean I take no interest in anything else my way is wrong, for I am very fond of music, as I am also of sculpture and painting."

"As an amateur?" I asked. "Well, I neither sketch nor play for a living," he remarked dryly. "but some stag sketches of mine have been adopted by the Field for shooting scores, and my sculpture, which I exhibited this year at Sheffield, has been awarded the medal, and some of it already sold."

"After taking an interest in anything I saw my way to a feeble joke, and an opportunity to get back to the subject of revolver shooting."

"You will pardon my being personal," I said, "but are you left-handed?" For I had noticed he fired this afternoon with his left.

"No; I shot with that hand to-day because the pistol I was using kicked so."

"And you shoot equally well with the right?"

"I thought so."

"Why?"

"Because a man of your attainments must obviously be more than dexterous—must be ambidexterous."

After apologizing for my levity I asked him with what kind of revolver he usually shot, and this question brought out the fact that he has not only invented a patent revolver, but a patent side-saddle, to prevent ladies being dragged in case of accident when riding or hunting. On the merits of these, however, he was modestly dumb, and after finding out that he had been champion revolver shot ever since the establishment of the South London Club in 1885, is champion of the North London Club for the present year (the only one of its existence), had taken a hundred first prizes at Wimbledon and Bisley, is equally good at the running deer, and has killed forty-four pigeons out of eighty from the trap with a pistol, I took my leave, explaining that I was not accustomed to interview a veritable admirable Orlinton at a moment's notice and without some previous preparation.—Court Circular, London.

RIFLE NOTES.

C. H. CHAVANT, of the Greenville Rifle Club, who is an expert chemist and an enthusiastic rifeman as well, went out with the members of his club on Saturday last, devoted the afternoon to experimenting with nitro powder in his .38.55 Winchester. He informs us that if the manufacturers will make a shell which will take the No. 3 primer used in the shotgun shells, he believes that good work can be done with nitro powder in the rifle. Our manufacturers have devoted a good deal of time and money in developing the shotgun shell for the use of the nitro powder, now why not cater a little to the interests of the rifle shooters. Outside of the tests made by the Government for the new army rifle, riflemen have been left to plod along with the old-time black powder and its mullish eccentricities. Who of our many manufacturers will be the Moses to lead us out of this wilderness of smoke and recoil?

L. P. Hansen, of the Excelsior Club, of Jersey City, is coming to the front as one of our experts in off-hand shooting. At the Greenville Park two weeks since, during the festival of the New Jersey Schutzen Association, Mr. Hansen put up the winning score, 71 points out of a possible 75, on his first effort. At the festival of the New York Central Corps at Washington Park, on Thursday last, he again put up the same score on his first effort and 55 out of 60 on the man. We have in mind some of our old experts with reputations dating from way back, who at the same shoot had tickets sufficient for double pinocle, and could not get beyond 67 on the ring target.

The Zettler Rifle Club is out with programmes for its fall festival to be held at Wissel's Cypress Hills Park, on the 10th and 11th of September. Cash prizes to the amount of \$550 will be put up for all comers to compete for. It has been remarked that the Zettler Club has a habit of supplying all unfortunate out of town riflemen visiting its festival with a supper and a return ticket home. The shooter who went from New York to St. Paul to attend a Bundesfest and won an order for a ton of coal can appreciate the thoughtfulness of the Zettlers in looking after the interests of their guests.

Our New York riflemen, who attended the Columbia International Shooting Festival at Chicago last month, say that a rifeman of fair ability can attend the fair and make his expenses out of the Columbia shoot.

MR. WINANS'S POSITION.  
From a photograph.

Trap-Shooting.

All ties divided unless otherwise reported.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

- Aug. 15-16.—Columbus (Neb.) Gun Club tournament.
- Aug. 15-16.—Big Four Gun Club tournament, Burlington, Iowa.
- Aug. 15-16.—Reading Shooting Association, Shillington, Pa.
- Sept. 14-15.—River Side Gun Club's second annual tournament, at Cincinnati, Ohio.
- Aug. 16-18.—Interstate Manufacturers' and Dealers' Association's fifth tournament, at Charlotte, N. C.
- Aug. 22-25.—Third international live bird and target tournament, at Des-chre-shos-ka Island, Detroit, Mich.
- Aug. 22-25.—Keystone Target Company, seventh annual tournament, at New London, Conn.
- Aug. 23-31.—Chadwick's tournament, Marmont, Ind.
- Sept. 4.—Frankfort (N. Y.) Game and Fish Protective Association tournament.
- Sept. 4.—Endeavor Gun Club tournament, on Al Heritage's grounds, Marion, N. J.
- Sept. 6-8.—The Veteran Tournament, Indianapolis, Ind., during National G. A. R. Encampment, under the management of the officers of the North End Shooting Club. H. S. Humphrey, President.
- Sept. 14-15.—Riverside Gun Club's second annual tournament, at Red Bank, N. J. John P. Cooper, Sec'y.
- Sept. 26-29.—Pennsylvania State Sportsmen's Association tournament at Harrisburg, Pa. H. M. F. Worden, Cor. Sec'y.
- September.—Manufacturers' Trap Shooting Association tournament, at Columbus, Ohio.
- September.—Manufacturers' Trap Shooting Association tournament, at Allentown and Bethlehem, Pa. (combined).
- Oct. 27.—John Watson's tournament, Burnside, Ill.
- Oct. 19-20.—West Newburg Gun and Rifle Association fall tournament, at Newburg.

1894.

- April 4-6.—Interstate Manufacturers' and Dealers' Association's Grand American Handicap at Dexter Park, Long Island.
- May 22-24.—Knoxville (Tenn.) Gun Club tournament, \$1,000 added money.

DRIVERS AND TWISTERS.

The coming week will be a lively one for trap-shooters, and thousands of targets will be sent scaling through the air in various parts of the country. The shooters will have their choice of territory comprising Cincinnati, O., Charlotte, N. C., Burlington, Ia., Columbus, Neb., and Reading, Pa. Each of these tournaments is to be under the management of reliable parties, and each of them will be a first-class affair, which shooters need have no hesitancy in attending. The day has about passed, in fact, when parties can run tournaments with the sole intention of filling their own pockets by putting up "padded" purses and fleecing the shooters. The tournaments of to-day are run by reputable, established clubs, and invariably the management is placed in the hands of men who have not only a substantial standing in their communities, but who stand well with shooters at large.

The Baltimore (Md.) Gun Club held its first shoot on its new grounds in Grason's Park, Pimlico road, on July 27. The Pimlico Gun Club have consolidated with the Baltimore Club. The best work was done by Milton Hunt, who broke 60 targets straight. The officers of the consolidated clubs are as follows: J. Henry Keene, President; J. A. Williar, Vice-President; John Hartner, Secretary and J. R. Malone, Treasurer.

The Mecca for those shooters who like to combine a pleasant railroad trip with a pleasant time at the trap, will be Charlotte, N. C.,

where the International Manufacturers' and Dealers' Association will hold a tournament in conjunction with the Charlotte Gun Club on Aug. 16, 17, and 18. The programme, which reached us too late for publication in our last issue, is one that cannot fail to attract a big attendance. The novelty rule, one of the most popular ever devised, will be tried for the first time in that section, and if it does not capture the fancy of the Southern sportsmen the projectors will be surprised. One of the premier attractions will be the great race for teams of five men each at 75 targets per man, \$25 entry per team, one-third of the men to be shot each day. Shooters must be bona fide members of the club they shoot with. The purse will be divided 50, 30 and 20 per cent. New Jersey will send down a team, there will be one from Washington, D. C., probably one from Philadelphia, one from Wheeling, W. Va., Knoxville and Bristol, Tenn., and from Charlotte and Greensboro, N. C. Savannah, Ga., may also come to the front, as may Jacksonville, Fla. There will also be a contest for club teams of three men each, 60 targets per man, one-third of the club to be shot each day, \$15 entrance, otherwise conditions remain as five-men race. Both events will be shot under the novelty rule with no handicaps. The Charlotte Gun Club will add \$50 to the purse in the five-men team race and \$30 to that of the three-men team race. There will be six other events each day, four at 15 targets each, \$3 entry, and two at 20 targets each, \$2.50 entry, and in each of these the Charlotte Gun Club will add \$50 to the purse. In addition to this the club will award \$10, \$8, \$6, \$4 and \$2 for the best five averages during the three days. Altogether they add \$300, which is exceedingly liberal. The usual distance handicaps will be enforced in the sweepstakes.

INDIANAPOLIS, Ind., July 28.—The Veteran tournament will be held at Indianapolis during the National G. A. Encampment, Sept. 6, 7 and 8, 1898. It will be under the direction of J. A. Martin, H. S. Humphrey, G. M. Sanborn and Chas. E. Field, officers of the North End Shooting Club. The very low railroad rates which will be offered at this time make the reorganizing under their charter a very attractive proposition. The fair handicap should induce the amateurs to come as well as the experts, as it protects them fully, still allowing the experts a good show. This handicap was used at the Knoxville tournament and met with the approval of all shooters. The grounds selected could not be more perfect. Being situated on one of our electric lines and but a short distance from the Union Station, the trap and target traps and live sparrows will be used. No pains or expense will be spared to show every shooter a good time. Lunch and loaded shells can be procured on the grounds. The management has made arrangements for several large tents and other conveniences for the comfort of shooters. The merchants of our city and sporting goods dealers are expected to assist in making this shoot one of interest. All of the local talent have signified their intention of supporting the shoot in every way, and many shooters from adjoining cities have announced their intention of being with us. J. A. Martin, 410 Ash street, will be glad to procure rooms in advance for any shooters so desiring. For programmes or other information address Chas. E. Field, 77 Lombard Building, or H. S. Humphrey, 483 Broadway, Indianapolis.

STAMFORD, Conn., July 31.—At the meeting of the East Side Rod and Gun Club held at their club house Saturday evening, July 29, for the purpose of reorganizing under their charter, which was granted by the General Assembly of Connecticut at its January session, 1898, approved June 7, 1893, and electing officers and directors under the same, the following gentlemen were elected: Walter M. Smith, President; Dwight Vaughn, Vice-President; Walter D. Daskam, Treasurer; John R. Kinsey, Secretary; A. W. Sibley, Chas. E. Thompson and Nathan R. Olmsted, Directors. The club was organized last November and has over eighty members, among which are many prominent professional and business men of Stamford and New York. They have comfortable club house situated in a grove east of Shippin Point, on the Sound. Their kitchen is equipped with all the modern conveniences for cooking and preparing shore dinners, etc. They have a large shed erected for sheltering teams. The grounds are arranged for artificial target shooting. This is the youngest and most prosperous club in Stamford.—J. R. K.

It is unfortunate that our good friends of the Reading Shooting Association should have selected for their summer tournament a date which makes it impossible for many of their old reliable attendants to be present, owing to the big attractions offered by their North Carolina brethren, but this is not likely to detract one iota from the interest of the shoot to be held at Harry Matz's Three-Mile House on Aug. 15 to 18, inclusive. The association by its straightforward dealing and hospitality shown at the Union Station, the confidence of thousands of shooters who are not going South, and from these a goodly attendance can be depended upon. The shooting will all be at artificial targets, with no handicaps. In our last issue we published details in regard to the programme. The shooters will be served with dinner at the Three-Mile House.

One of the Washington, D. C. clubs intends to hold a tournament in May, 1899, just previous to the Knoxville shoot and will put up big added money for each event. The Capitol City is an excellent place for a shoot and with care in arranging the programme a big attendance should be secured. It would be well for the projectors to claim their dates as soon as possible to avoid conflicting with other tournaments.

The Leavenworth (Kan.) Gun Club has been re-organized with a dozen members and the following officers: President, James W. Sexton; Vice-President, C. B. Gunn; Secretary and Treasurer, H. W. Koehler; Executive Committee, Dr. J. A. Lane, W. F. Keller and Judge Laurens Hawk. Commence on Membership, Dr. J. A. Lane, Dr. C. B. Gunn, H. W. Koehler and John K. Garrett.

The tournament of the Big Four Gun Club at Burlington, Ia., Aug. 15 and 16, will attract a big turnout of shooters from Ohio, Illinois and Michigan, who will be strongly reinforced by the local experts. Their programme as usual is an attractive one, and the man who can hold a stiff pace should quit even.

The Wessner Gun Club held its monthly shoot near Tamaqua, on July 25, and the medal competition was won by Frank Deach, on a score of 23 breaks out of a possible 25.

The Knoxville Gun Club has decided upon March 22, 23 and 24 as the dates for its 1898 tournament. This will be their thirteenth tournament, and will not be a failure thus far.

Nebraska trap shots will have a chance to try their nerve on Aug. 16 and 18, when the Columbus Gun Club will engineer a target tournament.

At the medal shoot of the White Plains Gun Club on July 28, the medal was won by Lewis C. Platt, who broke 24 out of 25 targets.

The Essex Gun Club of Newark will shoot on Al. Heritage's Marion grounds on Aug. 17.

O. H. TOWNSEND.

### Coney Island Athletic Club Tourney.

NEW URECHTS ROD AND GUN CLUB, Aug. 3.—*Editor Forest and Stream:* Your correspondent, Mr. C. A. Dellar, in his report of concluding shoot in this tourney, is in error when he states that "at end of third round of 15 birds the Atlantics had caught up and made a tie with the New Urechts, who had a case of rattles." At the end of third round the New Urechts led by three birds, which he must have known full well, being official scorekeeper.

It was not a case of "rattles," but discrimination of the birds, that affected the New Urechts. The head trapper, who had a bet of \$5 on the Atlantics versus the New Urechts with a member of the former club, was using his persuasive powers so well with the other boys, that the New Urechts had to put in a protest (during the second round) against his having carried further to do with the shoot.

The success of the New Urechts was fairly won, they acted as sportsmen and gentlemen throughout the seven shoots. Had a fair team with reserves always on hand, who did not "celebrate" until their scores were shot out.

It is a poor excuse to offer for any club, that their two best shots did not put in an appearance, etc.; more especially as, in this instance, the shoot took place on their own ground.

The Parkways did not lead in the day's shoot. They only had two men on the ground, and of these Mr. Holmans shot three scores besides his own for amusement.

In conclusion, if any club that shot in this tournament thinks they can outshoot a team of the New Urechts, they can be accommodated with a race, being the date at such a time as they can be sure of gathering all their best shots together, the New Urechts only making a condition that no sportsman can object to: Each club handles the birds for the other side.

C. A. SYKES.

### The Virginia State Championship.

STANTON, Va., July 28.—This afternoon on the grounds of the Staunton Gun Club, Mr. Wm. F. Summerson, holder of the silver cup, representing the trap-shooting championship of Virginia, was defeated in a match for the trophy by Mr. C. P. Bowman of the same club. The match was a very close one, the traps, thrown from the new Keystone expert trap, with the North pull and the shooting was difficult. The results follow, each man shooting at 18 singles, known traps and angles; 20 singles, unknown angles and 6 pairs:

Bowman, 17 17 9—43 Summerson, 15 15 10—40

Mr. Summerson has defended the cup successfully three consecutive times, but under the rules it must be won five times consecutively to become the property of the winner.

W. G. M.

## MANUFACTURERS AT WHEELING.

WHEELING, W. Va., Aug. 3.—On Wheeling Island, between Wheeling and Bridgeport, on the Ohio River, the fifth tournament of the Manufacturers' Trap-Shooting Association opened up to-day under favorable circumstances as regards weather and attendance. The Wheeling Gun Club has not a very large membership, and therefore has to depend upon outside shooters to have any number of entries, but what they lack in number they make up in enthusiasm. The Wheeling team, composed of J. A. Penn, E. J. Wright, R. A. Lemmons, J. F. Bell and Dr. Meyers, have a record to be proud of, having never lost a team race, and besides being top notch shooters, are perfect gentlemen.

Among the outside shooters in attendance were H. McMurry of the Hunter Arms Co., Fulton, N. Y., who though he only came to see the boys and shoot, very ably assisted Mr. John Parker, the manager, in running the shoot; W. S. King, S. V. D. Huntington, D. Creelman, E. Shuman, J. E. England, of Pittsburg; J. G. Hoffman and Geo. Cochran, of Hill Hall, Pa.; H. C. Fry, of Westtown, O.; G. M. Cowen, R. Clark, H. H. McVeigh, Parkersburg, W. Va.; M. Cowen, Belaire, O.; J. B. Meyer, A. C. Darrah and N. K. Cannon, St. Clairsville; T. S. Bibber, Elba, O.; W. J. Penberthy, Massillon, O.; J. N. Crabbe, East Liverpool, S. B. Boruff, A. W. Kennon and W. N. Darby, St. Clairsville.

The shoot was held on the fair grounds and as usual the exhibits of Hunter Arms Co., Parker Bros., American Wood Powder Co. and Montgomery Ward & Co. attracted a good deal of attention. The other members of the Association, Lefever Arms Co., H. C. Squires, W. F. Quimby Co., United States Cartridge Co. not having any, the Cleveland Target Co.'s exhibit being lost in transit. The hand-loaded shells given away by the American Wood Powder Co. and Montgomery Ward & Co. went like hot cakes. Blue rock traps and targets and Paul North's electric traps were used and gave the best of satisfaction, as usual everybody was highly pleased with tournament and murmurs of satisfaction and approval were heard on all sides. The following resolutions were adopted as expressing the general sentiment:

As members of the Island Gun Club of Wheeling, W. Va., we desire to express our high appreciation for the splendid two days tournament given by the Manufacturers' Trap-Shooting Association at this place, under the management of Mr. John Parker, and to thank him, on Aug. 1 and 2. It is the best tournament we have ever had, the visiting sportsmen were thoroughly pleased and went home satisfied, and we desire to vote our unanimous thanks to Mr. John Parker and Harvey McMurry for their perfect management and courteous behavior, and to give live the Manufacturers' Trap-Shooting Association. (Signed) G. O. Smith, President; J. A. Penn, Dr. E. C. Myers, R. B. Burt, J. E. Wright, M. Dinger, G. W. Lemmon.

Coney Island A. C. Tourney.

The following resume of the contests in the Coney Island Athletic Club's shooting tournament for the Kings County Gun Club's championship cup, may prove to be interesting to the members of the several clubs as well as to the participants in the struggle for the trophy.

On the second of December, 1893, the Coney Island Athletic Club issued a letter addressed to the several Kings county gun clubs inviting them to join in a competition for a silver trophy valued at not less than \$500, to be shot for in a series of monthly shoots commencing in January, 1898. Each club team to consist of five men, to shoot at 15 birds each under Hurlingham rules, 28 and 30yds. rise according to gauge of gun. Eight clubs entered a team, and the first contest took place on the Atlantic Rod and Gun Club grounds at Coney Island, on Tuesday, Jan. 24, when the Atlantics won with a score of 65. The next was held at Dexter Park on Tuesday, Feb. 28, when the New Utrecht won with 66. The third took place at Woodlawn Park on March 28, when the New Utrecht won with 62. The fourth was on April 25 on the Atlantics' grounds at Coney Island, when the New Utrecht and Glenmores tied with a score of 67 each. On May 28 Dexter Park was the scene of the fifth, when the Atlantics won with a score of 68. They also won the sixth contest at Woodlawn Park on June 27, but only five of the original eight teams competed, the score being 73, the best made in the tournament. The last shoot was held at Coney Island on Tuesday, July 25, which the New Utrecht won with 72, and winning the trophy with an aggregate score of 433; Atlantics second, 440; Coney Island third, 439; Parkways fourth with 423. The other four clubs withdrew when they found out that they did not have a chance to win or get near the leaders.

The following tables show the results of the shooting in the tournament by the teams, with their averages, percentage, also the work of individual members that participated in five or more shoots, with a percentage of 70 and over. It will be seen that C. E. Morris, the president of the Atlantics, and G. E. Nostrand, of the New Utrecht, tied for first honors with an average of 14 and a percentage of 93½. D. Deacon, of the New Utrecht averaged in three shoots 93.

Sixty-six members of clubs competed out of the 158 entered as eligible.

Crack Shooting in India.

THERE was an exposition during the visit of H. I. and R. H. the Archduke of Austria, of a somewhat novel form of sport which is much practiced in Hyderabad now. H. H. the Nizam has of late taken a great fancy to risk shooting at moving objects, and on the 26th ultimo sports including shooting competitions, were organized on the Mulkapett Race Course in honor of the Archduke. The events in which both the Archduke and the Nizam with others competed were:

Shooting at a bottle.—A quart bottle being thrown up 20ft. or more high and having to be broken by a bullet before it approaches to within 10ft. of the ground, the shooter standing at a distance of 10yds. from the thrower.

This was well contested and resulted in a tie between Mr. Arbutnot, A.D.C. to the Resident, and Nawab Nadir Jung, A.D.C. to the Nizam, with a score of 5 broken out of 6 bottles. On shooting off the tie the

pair could not be separated with a further score of 4 breaks to the credit of each. Principal scores:

Mr Arbutnot	.....11101-5	H I and R H the Archduke
Nawab Nadir Jung	.....11110-5	Franz Ferdinand
H H the Nizam	.....10101-4	

Shooting at Glass Balls.—This was won by the Nizam with a score of five breaks out of six, while Nawab Nadir Jung and Mr. Arbutnot again tied for second honors with a hit less each. Principal scores:

H H the Nizam	.....11011-5	Mr Arbutnot
Nawab Nadir Jung	.....10101-4	H I and R H the Archduke

Shooting at a running target at a distance of 6yds., thrown 20ft. into the air. This was won by Mr. Arbutnot with a score of three hits out of six, while the Nizam and Nawab Nadir tied for second place with two hits each, and the Archduke scored one.

Mr Arbutnot	.....100101-3	Nawab Nadir Jung
H H the Nizam	.....001010-2	H I and R H the Archduke

Shooting at a swinging bottle at 15yds. This proved a very interesting competition, for their Highnesses the Archduke and the Nizam tied for first honors with four hits apiece out of six shots, and the shooting off the tie was watched with tremendous interest and bursts of applause, as each successive bottle was broken. Eventually the Archduke failed at his fourth shot, while the Nizam followed with a hit and won the competition amid great excitement. It was a most interesting afternoon's sport to see these two high personages meeting in friendly rivalry and showing such proficiency with their weapons. The rifles used were in all cases .360 rook rifles. The other events comprised tent-pegging and obstacle and screen races for ponies, wrestling on horseback, elephant and camel races.—The Asian.

Team Shoot at Westfield.

A SPLENDIDLY contested match at a hard-flying lot of live pigeons took place on the grounds of the Climax Gun Club, at Westfield, N. J., on Monday, July 31, in the presence of a select company. The day was in favor of the birds, especially toward the last half of the match, or when a stiff southwest wind made twisting towers of a large percentage. The contestants were John Rothaker, of Philadelphia, and Charles Smith, of Plainfield, on the one side, opposed to Captain Alfred W. Money, of Oakland, and Milton F. Lindsley, of Hoboken. The conditions were 50 live pigeons per man, the losing team to pay for the 300 birds and a wine supper. Neaf Appar was referee, Al Heritage trap-puller, and T. H. Keller scorer. The results are appended:

J Rothaker	.....230111111122110212111-22
C Smith	.....121222112122111211111111111-23
Capt Money	.....23012120011222221202111-20
M F Lindsley	.....23012120011222221202111-24-44-87

The wine supper was partaken of at "Dutchy's" place in Plainfield, the genial host giving it his personal supervision.

During the dinner it was suggested that those present perfect a permanent organization to be known as the Cosmopolitan Gun Club, which should devote itself exclusively to live bird shooting. The suggestion was at once acted upon, and the club formed with Captain A. W. Money, President; Milton F. Lindsley, Vice-President; Al Heritage, Treasurer; Jacob Pentz, Secretary, and John Rothaker, Captain. The club already stands to shoot any ten-men team match for money or marbles.

Crescent Gun Club.

ONLY three members of the Crescent Gun Club attended the regular monthly shoot at Dexter Park on Thursday, Aug. 3. Each shot at 7 birds, modified Hurlingham rules, for the best averages for the annual prizes and added club money. W. Coulson and L. Hopkins tied for the first, and the best score in the sweep that followed decided Hopkins to be the winner.

Club shoot:	.....2310011-5	Hopkins	.....0121121-6
Pickett	.....2310112-6	Coulson	.....2310112-6
Sweepstake, \$1 entrance:	.....100111111111111111111111111-23		
Pickett	.....01112-4	Hopkins	.....10110-3
Coulson	.....00100-1		

Sweepstake shoots, 10 bluerocks each, \$1 entrance, followed.

Colt Hammerless Gun Club.

HARTFORD, Conn., July 29.—The following scores were made by members of the Colt Hammerless Gun Club to-day, 25 Keystone, 5 traps:

J. F. MARSTERS, 51, 53 & 55 Court St., Brooklyn, N. Y.

Marlin-Sylvester.

Messrs. Marlin and Sylvester, respectively of the Marlin Fire Arms Co. and the Winchester Repeating Arms Co., of New Haven, Conn., were conversing a few days ago in a general way on trap-shooting. As such will happen, the conversation took an amicable turn on their individual capabilities at the trap. Neither one professed great skill, but each one was of precisely the same opinion in respect to the other, that is, that he could be the victor in a match at the trap. Out of good natured generalization, the matter began to assume tangible shape. Mr. Marlin mildly proposed a 100 bird match, \$100 a side. Mr. Sylvester thought that a 100 bird match, \$10 a side, would comport better with the occasion, and was so arranged, the event to occur at Watson's Park. It is said that, while neither one was afraid of the other, both were not so certain of the result as their manner would indicate. When the day arrived—one day this week—Mr. Marlin was present duly prepared for the match, but Mr. Sylvester did not appear. Messrs. Courtney, Heikes and others were present. A shoot was arranged. Mr. Marlin averaged about 80 per cent., about as well as the best could do on that day. He jumped at once into prominence as a trap-shooter, and now is honored with many challenges. It is to be hoped that Mr. Sylvester can demonstrate that he too can shoot in the first flight and that the friendly match will yet come off.

The Eureka Gun Club.

FOLLOWING are the scores made July 29 at the regular weekly shoot of the club:

No. 1, 25 bluerocks: Heikes 23, Bingham 18, Willard 19, Burgess 21, Patterson 17, D. G. Turniciff 11, Funk 22, Bissell 15, Steek 6, De Wolf 11, Maltby 10, Glover 11, Frothingham 18, Robbins 21, Goodrich 10, Turniciff 15, Burr 18.

No. 2, medal shoots, 25 bluerocks: Heikes 23, Bingham 21, Willard 23, Burgess 24, Patterson 26, D. G. Turniciff 9, Funk 20, Bissell 16, Steek 21, De Wolf 11, Maltby 17, Glover 24, Frothingham 19, Turniciff 16, Von Lengerke 23, Weart 12.

No. 3, 25 bluerocks: Heikes 21, Bingham 23, Willard 21, Burgess 19, Frothingham 21, Funk 22, Bissell 16, D. G. Turniciff 15, De Wolf 13, Maltby 14, Robbins 17, Glover 14, Turniciff 16, Weart 12.

No. 4, 25 bluerocks: Heikes 23, Bingham 23, D. G. Turniciff 13, Burgess 18, Funk 22, Bissell 17, Willard 30, De Wolf 12, Maltby 16, Robbins 21.

B. WATERS.

ANSWERS TO CORRESPONDENTS.

CONSTANT READER, New York.—Try Stevensville, Sullivan county, N. Y.

W. C. J., Duluth, Minn.—Will you be so kind as to inform me what I can use to take away the animal odor of furs, such as goatskin rugs and skunk skins, so that the odor will not be objectionable. Ans. We know of nothing, except beating them in the open air.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Yachting on Kansas Prairies.

CIMARRON, Kan., June 27.—Editor Forest and Stream: Don't say when you read this, "I don't care for the appreciation of an ignorant Kansan." Take it as heartfelt admiration and thanks for making such a good hunting and fishing paper. Your paper is clean morally, and I feel better for it, and when I read such gems as "Pecaries" and "With Mr. Al. Foster" in one paper, I must say, "Thank you." I read the whole paper and enjoy it, from your editorial—that is so much a photograph of some bit of home in the woods that it always makes me stop and dream—to the last advertisement, and enjoy it all, even the yachting, and I haven't seen a sailboat for ten years. My paper gets worn out by being read by men who cannot afford to buy it, so I am never able to keep a copy. God bless the forest and the stream and the paper that reproduces them! W. J. D.

The Zimmerman Pictures.

NEW ORLEANS, La., July 21.—Editor Forest and Stream: The pictures have come to hand and they are beauties. PHIL SCHUMACHER.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

THE BEST LINE TO CALIFORNIA from either Chicago or St. Louis is the Burlington route. Takes you via Denver, Colorado Springs, Leadville, Salt Lake and Ogden. Daily vestibuled trains, with Pullman sleepers, chair cars (seats free) and Burlington route dining cars.—Adv.

Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For quanniche trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

AKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Wlarton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

**You are invited**  
to visit the "Forest and Stream's"  
exhibit in the Angling Pavilion at  
the entrance from the main hall  
of the Fisheries Building, in the  
World's Fair.

THE INDIAN AND THE BIG GAME.

FROM the upper waters of the Green River in Wyoming comes a complaint of game destruction by Indians which calls for attention by the Federal authorities. The abuse referred to is not a new one. We have often alluded to it, and past volumes of FOREST AND STREAM contain a mass of correspondence and testimony on the subject.

Our correspondent tells us that, as occurs each year, the Fort Hall and Pocatello Indians of Idaho have this season come into the Green River country in large numbers and are destroying the big game for their hides, and as usual in their hunting expeditions, are firing the timber in all directions. Fortunately a recent rain put out these fires for the time. Our correspondent inquires whether by the laws of the United States these Indians are allowed to leave their reservation at all times, to hunt game where they please and to kill for hides in direct violation of the State laws, or to go from their reservation in one State into another State without restriction. Has the Indian agent a right to give them a permit to hunt off their reservation when he knows they are killing game for hides? or has he the right to give them a permit to leave one State and go into another to hunt?

By the last treaty made by these Indians with the United States Government, it was especially agreed that they should forever have the right to hunt on unoccupied lands of the United States. This right they have always enjoyed in the section referred to, and it is under this right that they invade the Green River country.

That country now contains many settlers, and it is perhaps a question whether it is still to be considered "unoccupied lands" within the meaning of the language of the treaty. At all events, since the Indians make a practice of firing the timber, thus doing irreparable damage to the forests and so seriously threatening the water supply of a great territory, it is the duty of the Interior Department, which controls the Indians, the timber lands and the Yellowstone Park, which is endangered by these for-

est fires, to see that the red men are kept on their reservation and not allowed to violate the State laws.

Indians have the right to take game by lawful methods and at lawful times, just as white men have. Both classes are subject to the laws of the State in which they find themselves. Neither has the right to kill game out of season nor to fire the forests. The rights of an Indian should be precisely those of a white man. When the act of either is against the general good his liberty of action should be curtailed. It must be remembered, however, that when he kills game out of season, or when he fires the forests to help him in hunting game, the Indian does not know that he is violating the law of the land. He is doing only what his ancestors have always done, what he has always been taught was the proper way to secure game. But even though his offense be committed in ignorance, it is still a violation of the statute and should subject him to a penalty. But it would be much wiser and much more for his interest to restrain him of his liberty by keeping him on his reservation rather than to allow him to be exposed to this danger. The Interior Department, acting through the Indian agent, has the power so to restrain him, and should exercise this power.

At the same time it is a matter of common knowledge that whites kill game out of season and for hides, and are seldom or never punished for it, nor in any way interfered with, in the new Rocky Mountain States. The successful prosecutions for violating the game laws in Wyoming, Montana and Idaho—except in one limited section—could, we imagine, be counted on the fingers of one right hand, and the counter would still have his trigger finger left for use. It is popular to make a great fuss about the harm done to game and forests by the Indians and to say nothing about that done by whites, who, by virtue of the color of their skins, are supposed to have the right to burn and destroy at will.

It is absurd to ignore the offenses of either race. Such offenses should be punished. Both classes should be made to keep within the law, and it is just such men as our correspondent, who might, by a little work in their own locality, arouse the public sentiment which would enforce respect for and obedience to the statutes now so lightly regarded.

WHEN THE HUDSON WAS HUDSON'S.

THERE are several claimants for the credit of having suggested the enterprise now in progress of stocking the Hudson River with salmon; and he would be rash indeed who should have the temerity to determine the justice of their conflicting claims. It is interesting to note, however, that the original suggestion of putting salmon into the Hudson was made years before the present generation of fishermen and fish culturists came upon the stage.

The project is one which has allured the fancy and engaged the attention of public-spirited citizens, and challenged their efforts for more than a century. The scheme had its origin when the dwellers on the river banks were as yet loyal subjects of George III., and fish protective laws were enacted by a Governor and council who derived their authority from the Crown, and when the Hudson River was Hudson's River. It was two years before the fateful destruction of the taxed tea in New York and Boston, that certain residents of Albany, moved thereto by a desire to increase the food supply of the Colony and fired with an ambition to add to the noble river a game fish worthy a British angler's skill, determined to try the experiment of stocking its waters with salmon.

The history of such enterprises in America must be written in large measure from the records of the protective legislation relating to them; so far as we know the only available data respecting this salmon stocking scheme of colonial days is contained in the statute promulgated for the protection of the fish. It was adopted on Feb. 16, 1771, and it will commend itself to the reader of to-day as a very sensible piece of legislation, in spirit and specification not widely different from our own statute for the protection of Hudson River salmon:

"Whereas, It is thought that if the fish called salmon, which are very plenty in some of the rivers and lakes in this and the neighboring Colonies, were brought into Hudson's River, that they would by spawning become numerous, to the great advantage of the public; and, "Whereas, a number of persons in the county of Albany propose to make the experiment and defray the expenses attending the same, in order that the good design may be carried into more effectual execution, it is conceived necessary that a law should be passed for prohibiting the taking and destroying the said fish for a term of years.

"Be it therefore enacted by his excellency the Governor, the Council of the General Assembly, and it is hereby enacted by the authority of the same, that if any person or persons after the publication of this act, and for and during the term of five years next to come, shall take any salmon in Hudson's River, creek or brook emptying itself into the same, and kill or destroy the same, every such person shall for every salmon he or she shall so take and kill or destroy, forfeit the sum of £10, to be recovered with costs of suit by any person who shall sue for the same before any one of His Majesty's justices of the peace in any of the counties within this Colony, who is hereby empowered and required to hear and determine the same.

JOHN, EARL OF DUNMORE, GOVERNOR."

Among those whose names should be remembered in connection with the history of Hudson River salmon was Mr. Robert L. Pell, of Ulster county, N. Y., who in 1857 offered to stock all the waters of the State with salmon at his own expense if the Legislature would enact a law for the protection of the fish until they should become established. Mr. Pell took a lively interest in the artificial breeding of fish, then in its primitive stage, and in the introduction of foreign species into American waters. A shipment of fecundated ova of the English sole, white bait, tench, carp and other fish, consigned to him and intended for planting in the little bays formed by the Hudson River R. R. was lost in the ill-fated Arctic. He experimented successfully with the artificial breeding of shad, demonstrated its entire feasibility, and endeavored to secure the enactment of a statute making it incumbent upon the fishermen to plant the spawn of a certain number of fish annually—a principle which has since been adopted with respect to the whitefish fisheries of the Great Lakes. But the scheme most cherished was to see the salmon in the Hudson; and although nothing ever came of his offer to undertake the work at his own expense, the discussion of the project, with the interest it aroused in the subject, entitle him to an honored place in the records of fishculture in this State.

SNAP SHOTS.

Here is an interesting coincidence. Nearly twenty years ago there was published in our columns an account of the "Pet Birds of St. Augustine." The story was of a kindly woman, dwelling on the outskirts of the town, who had won the confidence of the birds in the adjoining woods—mockingbirds, bluebirds and sparrows—so that at her call they would fly from the trees and perch on hand and head and shoulder for crumbs and raisins. It was a charming instance of the trust and familiarity which sometimes reward one's sociable advances toward the wild songsters. In our Natural History columns to-day is reproduced a photograph sent us by "Didymus," of a St. Augustine pet hummingbird, confidently sipping sweets from a bottle held in hand. The story of how the shyness of these little creatures may be overcome, and how they may be won as charming pets, has already been told by "Didymus." The coincidence is that the spot in St. Augustine where the birds of twenty years ago were tamed is practically the spot where "Didymus" has tamed his hummingbirds. There must be some potent influence surrounding the place.

The Waltonian celebration planned by the anglers of Great Britain for the tercentenary of Izaak Walton last Wednesday appears not to have brought together a large number of participants. In America the chief celebration was at Niagara-on-the-Lake, Ontario. Some seventy-five anglers were in attendance from the United States and Canada. There were fly-casting competitions, and competitive story telling. The first prize for longest and best cast went to Mr. C. Hunter, of Toronto, the second to Mr. J. Pringle, of Toronto, who also won the distinction of being the best story-teller. Hon. J. G. Ed, ar, of Toronto, took the prize for long distance and accuracy of cast. Steps were taken to establish a permanent organization. The committee named for the purpose is made up of Theodore Roosevelt, H. G. Wells and J. S. Kennedy, New York; S. S. Spalding, J. D. Sage and J. W. Aldrich, Buffalo; J. Hill and S. B. Coleman, Detroit; J. C. Kemp, C. Hunter, R. L. Patterson, M. Baldwin. Dr. J. B. Howe, J. Pringle and P. Jamison, Toronto; Judge Chadwick, Guelph; F. Stancliffe, William Ramsay and C. R. J. Johnston, Montreal; Sheriff Mercer and W. B. Wells, Chatham.

Jack up your wheel and put on some axle grease. Take a rest. Go fishing. Then you'll spin along at a faster clip than ever.

## The Sportsman Tourist.

### MR. RASTUS'S EXPERIENCES.—III.

Editor Forest and Stream:

Something more than a year ago I sent you the story of the experiences in Canadian woods of Mr. E. Rastus, of 249th street, New York. It occurred to me lately to write to my friend Judge Factum, to know whether he had heard anything further from Mr. Rastus. The Judge wrote to Major O'Glory and he to Dr. Pilule, with the result that the inclosed letter has come into my hands.—G. DE MONTAUBAN.

Dr. Tugrane Pilule:

DEAR SIR—In compliance with the request contained in your letter I will say that you were rightly informed and that I did make a second visit to my brother-in-law's brother's fishing camp, and in further compliance with your request I will proceed to relate my experiences.

And, first, for I like to be concise, I will let you know how it came about. I told you before that the green of the woods and the gray of the rocks did my eyes a great deal of good, and I also escaped my usual attack of hay fever. So, my general health being improved, I was able to undertake the preparation of an almanac for a celebrated firm of patent medicine manufacturers, with entirely new and original predictions of the weather and a great deal of other interesting and amusing matter, for which I was paid a very liberal price.

Therefore I know that the medicines are good, and if any one asks me about them I shall recommend them accordingly. I never took any of them, being a homeopathist myself, although Bess professes to hold the views of that school in the greatest contempt. But I notice that in the case of her baby she favors that treatment, giving medicine in the smallest possible quantities. In regard to food and fresh air I admit she is an allopathist of what I might call a high degree. Perhaps you will allow me to add that the youngster grows immensely and has come to be much less of a nuisance to me than he was at first. He delights to sit on my knee when I am writing, and as he usually goes to sleep with his little head in the hollow of my left arm he is not much trouble to me. The other day I heard Bess say to Tom, "It is strange how fond Erastus is of that little nephew of his." But that is not so. It is only that I am fond of peace and tranquillity, and the boy is much more quiet when he is asleep in my arms than when he is wide awake.

But never mind about that, when it came toward the end of June I began to feel tired. Tom said I was pining for the Canadian woods, which I stoutly denied. I had been there once and remembered the miseries I suffered. I had to admit that I was none the worse for them, but on the contrary, had felt better, done more and better work and earned much more money than I had for several years before.

It happened that just while we were discussing the matter a letter came from Bill (my brother-in-law's brother, as you may remember), inviting me to make him another visit.

That settled the matter. To make a long story short, the invitation was accepted by first mail, although circumstances prevented my starting until late in August. Tom said that would be an advantage, for there would be no flies, which I found to be true. However, I immediately began to make preparations. Profiting by my experiences of the year before I determined to provide myself with whatever would conduce to my comfort.

I began to read the advertisements in FOREST AND STREAM, and sent for catalogues of nearly all the things mentioned in them except dogs and guns, neither of which I like. As I had to buy a dollar's worth at each place in order to get back the 10 or 25 cents that I had paid for the catalogues, I received a good many articles from the different firms, some that might be useful and some that I didn't even know the names of.

Tom went with me to buy a rod and he got me a nice one from the firm whose advertisement you will find on page—(the number escapes me at this moment) of FOREST AND STREAM. But when it came to reels, lines, flies, etc., Tom shirked and left me to supply myself. I bought two reels, six lines and about ten dozen flies, some of them very wonderful. I looked in the natural history books in the Astor Library in vain for insects having the names given those flies.

I bought a tent and some camp stools, an air bed and pillow, a rubber blanket and coat, and a box full of crockery ware, so that I might not have to eat out of those dreadful tin dishes. I took a fine large pair of blankets, and I may as well say here that these were the only things out of all my supplies that Bill could be induced to pay any attention to, except the tent, and that he said was too big.

As I had used up all my old clothes on the former trip, I procured an entirely new outfit from head to foot. My wading boots, that came up to my thighs, delighted the baby, and Tom's two puppies slept in them every night. Ben would not let me try on my boots with spikes in the soles in the house, so I had to take them into the back yard. Tom said it would develop my muscle to walk in them.

But what amused Tom most—and Bess too for that matter—was to see me in my new suit of corduroys, knickerbockers and all. Indeed I think my appearance pleased everybody who saw me in that rig. I didn't really think the style was becoming to me, as my form is quite spare and long, but the clerk in the store said it was the only truly suitable costume for the woods, and that all trout fishermen wore it.

I put it on when about starting on my journey, but Bess thought I had better wear my usual clothing and not put on knickerbockers until I got pretty well into the forest. Tom said they were a very neat fit and that I reminded him of Don Quixote. Don Quixote is a favorite of mine, and Tom knows it, but he has a habit of saying things in such a way that I can't always tell what he means. So I don't know whether he liked my suit or not. I occasionally wonder what there is about that young man that makes Bess so fond of him. I admit he is very good and kind to her, and I don't know but she is just as happy now as she was before she married him. He is quite helpful and polite to me also, but I sometimes feel as if he didn't quite sympathize with me at all times.

However, he and Bess both lent a hand to help me to get ready. Tom's mother came round with some bottles of medicine and a package of court plaster, and his maiden sister sent a neat little basket with some pins and needles,

two pieces of tape, some yarn and a little round wooden ball such as Bess uses to darn stockings on.

Tom went down to Forty-second street station with me, bought my ticket, got my baggage checked, and, I suspect, paid the conductor of the parlor car to look after me and see that I didn't get left anywhere.

Having been over the route once, I got on tolerably well, and arrived at that four-o'clock-in-the-morning station just as I had done the other time. The same man was waiting for me, and we went over the same road and stopped at the same house as before. As I was in better health and felt much easier in my mind, I enjoyed the scenery and noticed a good many pretty things that I had not felt like paying attention to the other time. And besides, Bess had scolded me so much about not seeing nice things so as to tell about them afterward, that I looked about all I could and tried to remember them. I noted a good many places that I thought would delight Bess's heart if she could only come there and sketch them. Last year I took her home a lot of Bill's photographs and she made no end of fuss over them.

I had so much baggage this time that when we came to the end of the road, just at the edge of the woods, the men put it on a sled and the horse dragged it.

When we got to the edge of the lake I expected to have to cross in that same horrid old hog trough, and I only hoped it would be drier in the bottom that it was last year; but the men chattered a few minutes and said something to me about Bill that I couldn't understand, and then peacefully sat down and lighted their pipes. That is the way with those Frenchmen; they light their pipes when they start and when they stop, and if anything happens or anybody speaks to them on the road.

I understood it all quickly, for in a few minutes I saw a big barge rowed by four oars and loaded with ladies and gentlemen, with Bill standing up and steering it, just coming round a point. It was a pretty sight. When Bill saw me he gave a shout, the rowers pulled harder and the boat was soon at the shore. I was introduced to the people, they got me and my traps on board and the crossing was made in a few minutes and in very jolly fashion. It was a great contrast to my former arrival, when I crossed in that beastly old dugout in mortal terror all the time and sitting in bin. of ice-cold water.

I found the camp very much as I had left it, some few comforts added, but no great change. This time, however, there was a number of people, and it seemed they were waiting for me to come in order to go on what they called "a cruise." Why they should have waited for me I don't know. Last year I know I avoided all "cruises," as soon as I found what they were. I didn't like them. The two or three that I had with Bill I considered enough for a lifetime. But the people at the camp whom I had met before were determined not to go without me, and they made the others wait.

They allowed me one day to rest, and I passed it in eating and sleeping. The log camp and the tin dishes did not disgust me as much as before, and I found the trout and the baked beans very good. Bess gives us baked beans at home once in a while, but somehow they don't taste just right, although we were originally Boston people, and she ought to know how to cook them. And once I paid ever so much money down at Fulton Market for some trout, but when they were cooked they didn't seem to be the right thing at all.

In the evening we sat around a bonfire and sang and told stories, but everybody went to bed early in order to be ready for the next day's excursion. I slept tolerably well in my new blankets. In the morning I even went out and took a bath in the lake with the other gentlemen. It did me no harm, although it was the first time I had dared to bathe out of doors for several years. I rather liked it in spite of the inconveniences of dressing on the rocks and getting leaves and little sticks inside my clothing. After the bath I surprised the party by appearing in my knickerbocker suit, which was received with great applause. I felt a little queer in it at first, not being accustomed to having my legs undraped. Most of the other gentlemen wore knickerbockers also, but they were stouter than I and their stockings staid up better. Mine gave me a good deal of trouble by sliding down. The oldest of the married ladies noticed the difficulty I was in and with entire calmness offered me some things to keep them up with, which I blushing accepted and used successfully after I had made them somewhat smaller.

Breakfast being over, preparations for the excursion began in earnest. I did not want to go and would have preferred to stay, but when I found that the cruise would last three days and that nobody would remain at the camp but a guardian whose language I could not understand, I decided to risk joining the party.

I wanted to take along my air bed and pillow, my rubber coat and blanket, my wading boots and nailed shoes, besides two or three changes of clothing, but when I found that there would be several portages where every man was expected to carry his own personal belongings, I reduced my pack till it consisted of my woolen blankets, a tooth brush, a piece of soap and a towel. The married men had to carry their wives' things as well as their own, for which I jeered at them, loudly boasting of my independence of such incumbrances. I fear this was imprudent on my part, and am almost sure that one of the gentlemen tipped the wink to his daughter, for when it came to carrying things one lady or another asked if I wouldn't be kind enough to take along some satchel or other small article for her until I found I had the heaviest and most unhandy load of all. This did not happen, however, until later in the day, and then only once. The ladies let up on me.

We crossed the lake in the barge and then went down that horrid cliff I told you about before. I remembered it well, for it was very near being the death of me. I hoped I should never see it again. Some of the people went down easily, especially the younger ones, but one of the ladies had to be helped by her husband a good deal and even then she had to stop and sit down a good many times. Sometimes she sat down purposely but other times I think against her inclination, the same as I did. By exercising great care we all got safely to the bottom. There we found canoes enough to carry the whole party, two large ones, to carry six persons each, and a small one to carry four.

I have never got over my dislike to bark canoes, big or little, and never intend to. They put me in one of the large ones and sat me beside the stout lady. I don't doubt it was a good canoe, Bill said it was a "buster"—but I didn't like it. The lady being heavy and I being

light she had to sit a good deal over on my side of the canoe in order to keep the balance. I know I do not take up much room, widthwise, but I do require some space, and if I should say I was crowded I should be putting it altogether too mildly. I ought by rights to say that I was squeezed into about the proportions of a lead pencil. At first I wiggled as much as I dared, but I found that every wiggle I made resulted in my being compressed more and more, and there was a bundle of fishing rods between me and the side of the boat that made a very uncomfortable seat. The lady was pleasant and entertaining and I was thankful to her for the stocking fasteners, but her avoirdupois was considerable.

We paddled up the lake for about an hour and a half till we came to a place where Bill called out and said we could stop and straighten out our legs. My legs needed to be bent up rather than straightened out, except that my knees felt as if they were being bent the wrong way. The stocking affairs also seemed to have stopped my circulation and my feet had been asleep for half a hour. If there is anything that I detest more than another about going to the woods it is this riding in bark canoes. It was not so bad this time as when I went alone with Bill, but I resolved never to get into one again if I got back safely from this trip.

After resting awhile we re-embarked and I took occasion to place that bundle of rods between my neighbor and myself, so that she would have to sit on them if she was inclined to come too far to my side of the canoe. She seemed much better adapted to sitting on rough and uneven surfaces than I was.

We paddled on a mile or two and then had to get out and walk a short distance. The path had been disused a long time and was overgrown with raspberry bushes and fallen trees. There was also a kind of thorn brush that was extremely disagreeable. I found that knickerbockers and stockings gave less protection than my ordinary trousers. I got my limbs pricked and scratched to a considerable extent. I was, with my usual gallantry, trying to help my stout companion over a fallen log, when her foot slipped, she let go of my hand and both of us sat down, I in a mud puddle and she in a thorn bush. Notwithstanding her size she seemed to be an active woman, for she got up with great promptness and celerity. I was unable to move so quickly and before I got fairly on my feet I became aware of a good deal of general moisture and of two streams of water gently trickling down my legs. Neither of us said anything but continued on our way without making any remarks. I found myself very uncomfortable in the canoe and the lady also seemed to have difficulty in finding a position that suited her.

Arrived across a small lake at a place where we were to take our lunch. I called Bill's attention to the plight I was in and he detailed one of his men to take me to a sequestered spot and help me to wash and dry my clothes. This was some improvement, although the quickly dried corduroy felt rather like a suit of tin armor when I first got into it.

After lunch we had quite a long stretch of shallow water to go up. Most of us walked through the woods, where there was a nice path, but some of the young ladies staid behind, took off their shoes and stockings and waded and splashed in the water and had a jolly time. We could hear them laughing and shouting and having no end of fun, but we couldn't see them. The men got the canoes and baggage up the stream somehow and were in great good humor, though I noticed that some of them were wet from head to foot. Bill set the wettest ones to work and they were none the worse for their dousing.

I must say this for Bill, that although he paid very little attention to the minor miseries of his guests or his men, he took good care that they should all be made as comfortable as possible under the circumstances. What he saw to be inevitable he made no attempt to escape, but took good care to avoid accidents and dangers to the health of his parties. I myself endured untold miseries, but by following his advice I never even took a bad cold. I took this life in the woods instead of other disagreeable medicines, and I admit that it did me more good than all my doctors and their drugs.

Well, we crossed more lakes and scrambled over more rocks, logs and treetops that made the stout lady puff a good deal and get very red in the face, but did not interfere with her good humor. I got my shins barked a good deal, but it was of no use to complain, so I said nothing. The young ladies laughed and joked as if getting over logs and dams was the greatest fun in the world.

It had got to be the middle of the afternoon when Bill stopped paddling, stood up in his canoe, looked about and then headed for a point of land and went ashore. The rest of us followed, and Bill said: "We'll sleep here to-night, boys." I didn't think it was a good place to sleep in at all. I saw nothing but trees and bushes, and felt a good deal discouraged. But I had learned to trust to Providence—and Bill—so I looked on and said nothing. Bill went back a few yards into the woods and set his men at work. Some things they cut down and some they pulled up by the roots, and in five minutes they had quite a large space cleared up and leveled. One man cut some poles, and before I had done wondering what was to be done next they had two tents set up and a kettle boiling. We each took a cup of the ready-made coffee that Bill always carries, and then they went to breaking off branches that Bill said were what we were to lie on. I devoutly wished I had persisted in bringing my air bed.

One of the gentlemen put his fishing rod together and then volunteered to help me with mine. I was very glad, for I was making pretty bad work of it. He went to fishing from the rocks, and one of the young ladies invited me to go out in a canoe with her and try my luck. The idea of going out in a bark canoe with only a girl to manage it startled me, but they all said she was perfectly able, and they talked so much that I was ashamed to refuse any longer, so I consented. Bill left his work and came to see us all right and showed me how to handle my rod. He was very nice about it.

The girl paddled away and I began to fish, with great fear and trembling at first, but more confidence later on. Somehow I didn't seem to have much luck. The fish came but I didn't get any, though the gentlemen on the rocks caught several. After a while, when I wasn't looking, I suddenly felt a prodigious tug that almost took the rod out of my hands. I gave a jerk and a jump that nearly tipped the canoe over. Bill was watching and shouted out, "He's hooked, keep a taut line, but handle him easy. He's a good one. Take your time. Let him run. Now reel him in slowly. Let him go again. Steady

now. Not too hard. Take your time, old man. Don't hurry," and a lot of other things that I did not fully understand. But I tried to do as I had seen Bill do, and after what seemed half an hour the fish came up to the canoe on his side, the girl slipped the landing net under him and we had him in the boat. Then everybody began to shout and the ladies screamed, waved their handkerchiefs, and set up a general hulla-bulloo over my first trout.

The girl paddled to the shore, shouting back and apparently as pleased as I was. Bill pulled the bow of the canoe onto the bank and I landed with my prize. "Very well done, old man," he said, "you'll learn. Don't check him so quickly next time. If your tackle hadn't been first-rate you'd have lost him. He's a nice one. A good pound and a half I should say. You shall eat him for your supper." He tossed the fish to one of the men to be dressed. Every one had to shake hands with me and offer me as much congratulation as if I had just secured a fat office under the new administration.

The young lady was the most excited of the lot. She and I divided that trout between us at supper. No one else would taste it. They said we deserved it all.

I found that Bill had had some bushes cut away in front of the tents so that we had a lovely view over the lake at sunset. Bess would have gone into raptures over it. I wish she could have painted that trout when it first came out of the water.

Afterward we had a big fire and all hands sat round and talked, laughed and told stories. The canoe men sang more songs and one of them told an interminable yarn that caused great merriment among those who could understand French. But Bill and I spread out our blankets on the boughs and went to sleep, he because he had heard the story a hundred times before and I because I was not interested in it.

By and by the ladies retired to their tent and the gentlemen coming into ours roused me up. I was kept awake a long time by the shouts and laughter from the ladies' tent, which was alongside of ours. Finally these subsided, with the exception of an occasional crescendo and diminuendo of giggle that seemed to flow from one side of the apartment to the other.

I think the stout lady was the cause of a good deal of it. I found my new blankets very comfortable, although I did not sleep much more. I seldom do sleep well in strange places, and what with thinking about that trout and wondering whether I should get any more and whether I couldn't get up in time to try and take just one for breakfast, I was rather wakeful. I had agreed with the young lady that we would go out at half past four in the morning, but when I waked up at that hour and found nobody stirring I went to sleep and did not awake till somebody called me to breakfast.

It wasn't in our programme to stop at that place, so we had to pack up and be off, much to my regret, for I wanted to try for more trout.

We went up a hill and then down, along by a little stream—very pretty it was—and then canoed across another lake, and after still another walk we came to a river, not very big but swift. About noon, after a good many little walks and one longish one around the falls and bad places, we found another and larger stream. Here the tents were set up, as before, and everybody went fishing, some one way and some another. The young lady paddled her father and myself out to a little island and we fished. I felt fatigued and loaned my rod to the lady, who proved to be quite an expert. I contented myself with scooping up the trout that the others caught. I asked the girl to paddle me ashore, where Bill gave me a glass of wine and a biscuit, and I had a refreshing nap before supper. Afterward the people sang and told stories again, but went to bed earlier than the other time, and I imagine slept better.

In the morning we packed up and started to go further up the river, but the water was too high or too low or something, and I was glad of it. I was glad to see the canoes headed down stream. I wanted to get back to Bill's camp, where I could be tolerably comfortable.

It may be all very well for young and active people to go on camping expeditions and the like, but for a man nearing middle age and of somewhat sedentary habits like myself—well, those can go who like it; I have been once. I think the stout lady felt the same way, though her husband and daughter were otherwise minded.

We went down the stream very smoothly and quietly, and I confess it was pleasant gliding between the shady banks and slipping rapidly over some nice little rapids, where the water was swift but not dangerous. On the whole, I enjoyed it very much.

A little after noon we reached a village, and Bill got some horses and men and had the stout lady and the canoes and baggage carted through the woods across country to one of the lakes we had first crossed. All but the lady walked. Bill said the distance was about two miles, but I am sure it was ten. The horses got stuck in the mire, the carts broke down, the harness gave out and the stout lady was bumped about a good deal when the wheels banged over rocks, roots and stumps. The Canadians mended the carts with withies and the harnesses with strings, and yelled at their horses, so that they got out of their scrapes somehow, and we eventually arrived at the edge of the lake.

Much as I hate bark canoes I was glad to get into one this time. As a mode of locomotion they would suit me very well if I were not in such constant fear of getting capsized.

I like sitting down; we paddled five or six miles and then had to climb that cliff again. I have nothing more to say about it, except that I reached the top alive. But I am almost ashamed to admit that I shirked and left the stout lady to the care of her husband instead of offering my assistance. Perhaps she was glad of it, for her husband is a very strong man and I am not.

After that time, when people wanted to go on excursions down that cliff we let them go. She and I stayed at the camp and played cribbage.

I remained at the lake until pretty late in the season, and until I had broken my rod and used up all my flies. There are a good many of them in the branches of some trees on the banks of a river where I went to try my wading boots. I only fell down twice.

My health at present is very good, and if I can get some kind of a canoe made on the life-boat principle, so it will not upset, I am not sure but I shall go up there again. Yours truly,

E. RASTUS.

## DANVIS FOLKS.—XII.

Loup Garou.

"I DON'T see," Joseph began, as he fortified the unstable chair by setting its back against the wall, "haow father ever got a holt o' his boots when I'd hid 'em in the paound-in' berril, an' made him b'lieve they was over here a-bein' mended."

"It was a jedgment on ye fer lyin'," said Uncle Lisha. "It wunt exactly lyin', 'cause I was callatin' tu fetch 'em over."

"Probably they was revealed tu him in a pro-vision," Solon remarked.

"However he got 'em, I'm glad he did," said Sam with an emphatic squeak of the roll of sole leather on which he sat. "If he hedn't, we'd lost the wolf."

"Wal, he's ticklerd an' ef he'd hed his pension doubled an' was promisin' Josier five dollars o' the bounty fer his sinkers an' fer you knows what bub," says he. "By gee-whitteker," he ejaculated, his mind suddenly illumined. "I'll bet fo'pence ha'penny that aire boy ramshacked raound an' faound 'em for him."

"I was kinder runnin' things over in my mind arter you was here t'other night," said Uncle Lisha, rolling a length of shoe thread on his aproned knee and then carefully splicing it to a split bristle, "an' I got tu thinkin' 'bout ol' Bart Johnson's scrape wi' the wolves up on Tater Hill. He was a kinder half cracked ol' critter 'at uster come a-wanderin' raound here about oncte a year when I was a young feller, an' uster stop tu aour haouse off an' on fer a week or two at a time, an' poke 'raoun' on the maountain days, a-lookin' fer his treasure, as he called it. He'd ben a soger in the ol' French war, an' durin' which he went on a expedition agin the Canady Injins under a Major Rodgis, I b'lieve his name was. Wal, they s'prised the Injins an' destroyed the village an' fetched away lots o' stuff 'at they'd got from aour folks, tinkets an' silver an' gold an' money an' a silver idolatry imidge 'at weighed more 'n twenty paounds—jest clean silver. Wal, off they started back, a-luggin' the booty, wi' a fresh lot o' Injins arter 'em, so't they headed off toward the Connect'out River. Pooty soon they begun tu git short o' provision an' they divided up inter small parties, each one shiftn' fer himself, an' they come tu terrible straits, grubbin' fer rhuts an' gnawin' bark, an' most on 'em hove away their plunder an' hedn't no thought o' nothin' on'y savin' the mis'able lives, which was more 'n some on 'em done. But ol' Bart hung tu what he'd got, a lot o' money an' I do know but the silver imidge, an' he wandered off by himself till he come tu the top of a high maountain, an' seen the lake an' knowed where Crown Pint was. An' he came down this side a piece an' bairied his stuff, an' arter a spell he got tu Crown Pint, nigher dead 'an he was alive. When the war was ended he begin tu look for his plunder an' he consaited Tater Hill was the maountain he'd left it on, an' so year arter year, as long as he lived, he'd come an' sarch an' sarch fer the stuff 'at was going tu make a rich man on him. Some callated it wunt but a crazy notion he'd got into his head when he was a wanderin' in the woods, and some thought he raly hed hed suthin' of vally. One day he'd ben a sarchin' way up toward the haith o' land till eenamost dark, an' fore he goddaown half way tu a clearin' it was darker 'n a stack o' black cats wi' the eyes put aout, an' then the wolves begin a-callin', an' a-screamin' *owooo* here and *owooo* there, drawin' in cluster on him, till he begin tu feel his hair a liftin' on him, an' he clawed raound fer a tree he c'd climb, an' he run agin one he c'd git his arms around, an' he scrambled an' buckled tu like a good feller, till he was clean aout o' breath an' kinder settled back onter a big limb 'at ketched him, an' there he sot a-huggin' the tree fer dear life, his toes a ticklin' an' his skelp a crawlin' ev'y yowl the wolves gin. An' so he sot the hul endurin' night, oncte in a while jest savin' himself fr'm goin' tu sleep an' tumblin' off an' breakin' his neck, till bombye, arter about a week he thought, it come light, an' the wolves clear aout an' he started tu climb down, but he couldn't get daown no furder, fer lo an' behol! he was a settin' right on the rhuts o' the tree. Bart uster tell on 't an' laugh jest as hearty as any on us. Poor ol' critter, he died on the town daown tu Lakefield an' his bairied riches never done him no good, 'thout it was in expectin' on 'em, which is about all the satisf'ation any on us gets."

"I should admire tu know if he ever tried the myraculous paower of a witch hazel crotch," said Solon. I c'n find veins of water with 'em onfalible, an' the' haint no daoubt 'at they hev jest as paowerful distraction tow-ards gold and silver, hid artificial, or growin' nat'ral in the bowels of the earth. Mebby he did find it an' spoke afore he got his hand on't an' it moved. It sartainly will, ef you speak a audible laoud word. The' is allers a sperit a-guardin' bairied treasure, an' ef you speak afore you lay your hand on't, it gives the sperit paower to move it, the's no tellin' haow fur."

"O, shaw, Solon," Uncle Lisha snorted, "that's jest an' ol' granny notiern. Ef I struck a chest o' money I should holler, I know I should, an' I'd resk even my hollerin' a-startin' on't. I don't make no pret'caout o' sperits guardin' nothin'. The nighest I ever knowed one come tu duin anythin' good was—"

"O, bah gosh," cried Antoine, who had just entered and was prancing about in a burning fever of impatience, "Ah 'll ben hol' dat storeez 'bout de wolfs so long he mos' bust mah inside off. Ah 'll gat for be deliv'r of it 'fore Ah 'll died or fregit."

"It's either a lie er no 'caount, but let's hev it ef it 'll save yer life, Ann Twine."

Antoine dropped to nis favorite seat on the floor and began cutting a charge of tobacco with frequent interruptions of gesticulations, now with his knife, now with his handful of tobacco, and many emphatic jerks of his head. "Wal, seh, boy, one tam, mah fader's broder-law—"

"Must ha' come pooty nigh bein' your uncle," Sam remarked.

"Mah fader's broder-law," Antoine repeated.

"Wal, I s'pose havin' brother-in-laws run in the famly then, as naow."

"Sam, you shet up you beesinees. You Yankee tink it was be awfly beeg, forfeefy mans keel one wolf, but Ah goin' tol' you what mah fader's broder-law was be do one tam. One naght, he'll load off hees gaun wid four, probly tree ball an' hanful of shot-buck an' he'll took twenty-fav foot rope, an' he'll rrrubby, rrrubby all wid hawg blood, he jes be keel, an' he'll jump on hees traine, hees cutters, you know, an' he'll drove off on de hwood,

wid mah fader for drove, an' drag dat ropes behin' de traine of it. An' bambye de wolfs beegin for feel smell of it, an' he'll scratter togedder an' foller dat traine, more as twenty, t'irty of it an' den he'll touch hol' dat ropes, one, two, tree, ten, feefteen, so many, de hoss he moscan pull it. Wal, sah, den mah fader's broder-law, he pant hees gaun raght long dat ropes an' he'll shot poom, an, sah, haow many you s'pose he'll keel, ten of it, an' fave, he'll go off flap, flap, guet-a-ouou, wid hees laig broke off an' hees jaw spile up for bit some more. Dat was de way in Canada, two mens keel ten wolfs, not feefy for keel one, an' hol' mos-dead-mans do it den."

"Ef it wunt fer spilin' this last," said Uncle Lisha, breaking the silence which followed this recital, "I'd knock yer lyin' head off with 't."

"On' Lasha, dat head can' lied," Antoine protested, between laborious puffs of his pipe. "Noaw wait till Ah 'll goin' tol' you baout de loup garou. Ah dat was so bad ting, it mek me scare for tink of it ever since Ah 'll leetly boy an' de hol mans an' de hol whomans tol of it. Den we'll seet an' squeeze de fire, an' be scare for look behin' of us, for see de shadder creep, creep on de floor an' jump on de wall, for fred it be de loup garou."

"What specie of predarious animal is these ere loose garooses, Antwine? Be they anything of the human nater of a or'nary wolf or a loosevee, or a woollyneeg, or what?"

"Ah, Solem, dey was dev' more as anyting," said the Canadian in an awe-stricken voice. "Dev', dey'. Some-tam dey was mans jes' lak anybodee, an den dey was be wolfs, oh, more wusser as wolfs. Dey ketch dead mans in grave yards an' heat it, dey ketch live mans, an' heat it. Oh, dey was awfuls. Ah b'lieve dey ant gat some more in Canada, neow, but in de hol tam dey had it. One tam, mah gran' gran' mudder, he'll gat so hol' he'll mek off hees min's hee'll die an' mah gran'fader he'll was go for pries' in de naght an long, long way trough de hwood, an' he drivin' long on hees traine, can' hear no nowse cep de snow scroonch, scroonch under de runner an' de hoss feet of it. Wal, seh, mah gran'pere was drovin' long, ant tink for much cep for hurry fas'. He'll was goin' on smooze road through de hwood wen hees hoss was beegin for go slow an' he'll can' mek it go fas' all he'll wheep it. De hoss jes' pull hard lak he'll draw more as two ton load an' sweat so he'll smoke lak stimboat an' melt de snow on de road wid de drop of de sweat."

"Bambye mah gran'pere look behin' of it, an' seh, he'll see great big, big black dawg, mebbly wolf, he do' know if it ant probly, wid hees forefeets on de hin' en' of traine, an' he pull back more harder as de dev'."

"Mah gran'pere was mad an' scare more as he'll was mad, an' he stroke dat ting wid hees whip, an' dat ting jump raght on de traine an' put hees before feet on mah gran'pere shoulder of it, so heavy he mos' squeeze him. Mah gran'pere feel de hees knife for cut at it, cause if you drew bleed of de loup garou he'll turn mans raght off an' go way."

"But he can' fin' hees knife an' he'll ant know what he'll do. De hoss was scare an' run lak hol hurricanes, 'cause de loup garou gat hees behin' foots off de ground an' can' pull back some more."

"Mah grandpere feel dat hell ting hot bress froze hees neck, an' hees hairs bresh hees face lak needle, an' he'll shut off hees hye, so he can' see dat awfuls yaller heye clost hees hown, an' he give up for tink he dead jes' as de hoss run in the pries' gate, an' he holler an' de pries' run aout an' say some word quick an' laoud an' de loup garou be mans raght off so quicker as you mek some wink an' run off in the hwood."

"Mah-gran'fader was so scare it was took more as mos' half pant of de pries' whiskey-en-esprit to brought it too."

"I snum," said Joseph, going to the stove hearth to light his pipe, "seem's ough I'm most willin' tu be skeered by one o' the creeturs, a leetle mite."

Giving no heed to the interruption, Antoine went on in the same awed voice: "An' seh, dey was mans leave neighbor of mah gran'fader, was carry mark of wheep on hees face of it for good many day."

"Did it put an end tu his uselessness, so tu speak?" asked Solon.

"Which o' them stories is true, Antoine, an' which is a lie?"

Antoine's scared face gave evidence of his implicit faith in the story of the loup garou, but he did not hesitate to testify to the equal truth of the other tale, though it was but just improvised in his fertile brain.

"Bose of it, On' Lasha, sem always Ah 'll tol' you."

"Wal, wal, mebbe so, but wolf huntin' is pooty strainin' work, an' I guess we'd all better be a-gettin' tu bed."

And so desertion and darkness presently pervaded the shop, while the guests went plodding homeward over the snowy fields.

R. E. ROBINSON.

FERRISBURGH, VT.

## The Danvis Folks.

Editor Forest and Stream:

I wish to express my thanks to Mr. Robinson for his very interesting description of the sayings and doings of "Danvis Folks." He certainly shows an intimate acquaintance with the manners and customs of the old-time residents of the back towns of New England, a class of people who are fast disappearing.

In this region some of the old residents still cling to the old-fashioned ways, and many of their sayings are equal to Uncle Lisha or Gran'ther Hill. It is interesting to me to talk with one of these old-timers.

I sincerely hope Mr. Robinson has many chapters still unprinted of the doing of our friends in Danvis.

C. M. STARR.

DUNBARTON, N. H., Aug. 7.

## Forest and Stream's

exhibit at the World's Fair will be found in the Angling Pavilion of the Fisheries Building. You and your friends are invited to visit us.

## AMID THE PEAKS OF IDAHO.

SHOTGUN CREEK, Idaho, July 27.—*Editor Forest and Stream:* Your whilom correspondent of Medicine Brook desires to record her experiences once more in a far strange country. After a journey of about 2,000 miles by rail from Indiana to Beaver, Idaho, behold us on a mountain plateau 6,000ft. above the sea. By "us," is meant the Chief of the Medicine Brook expedition, M. of the same, and the Matron.

The rolling plains, gray-green with sage brush, is inclosed on three sides by mountains of various altitudes. To the northeast they rise sharply in rocky peaks, and to the west gradually decline to foothills, covered with sombre pines; all are beautiful with trailing shadows and sunshine, and above their summits, clouds rest in soft fullness. To the northwest can be seen three ranges, sinking away in deepest violet near, to palest opaline blue against the sky; and before the swelling hills in the southwest, runs through many shades of green, clear as crystal, and cold as clear, welling up from snow-fed springs—Shotgun Creek. But it is at sunset that the mountains are most beautiful. If as is often the case, there are clouds above, their gray lights up with an inner crimson, rimmed with silver, or liquid gold, magnificent to behold. And over all burns, to the very zenith, a deep golden glow, with the evening star trembling through, and lasting long after day has passed. On the opposite side is a curious refraction, often sending up streams of pale light not unlike an aurora. Since coming here, we have witnessed an auroral display also, with a perfect arch and dancing streamers. In a few nights more now, the full moon will pour broad and bright over silent plains and solemn mountains, and touch with silver the wandering streams.

It is almost a fifty-mile ride from Beaver Cañon to this place. We came in a wagon with the "plunder" necessary for making a camp, and found considerable difficulty in locating. Four or five miles away are wooded hills, through which winds a beautiful wide stream—Snake River—free from fallen timber, and with its trap rock banks often fallen in picturesque confusion, as lovely a spot as could be found for camping. But we were told by the natives that mosquitoes filled the land in legions, and after seeing for ourselves, decided to return and camp in the open plain, near a fine spring boiling up in a small ravine near, and from which ran a considerable stream. There, on a windy knoll among odorous sage brush, we startled the "picket pins," as gophers are called here, by lifting our tents, and bestowing our household gods. It did not require long to discover that we were in a curious country, very different from any we had ever seen before "in our goings to and fro on the earth." We are pretty far north, and the great altitude added to this, gives a long, long day, with direct rays from a blazing sun, almost tropical in intensity. With the heat began boisterous wind, which flapped everything loose, and unless they were securely fastened, sent many of our possessions flying over the plain. Indeed, it was sometimes as much as we could do ourselves to avoid being blown from a foothold.

The Chief found pleasure, however, in whipping Snake River for trout, and daily brought back a creel filled with fish, each of several pounds weight. We all looked enviously at the sage hens, with which the plains are alive, but recently a game law has been passed prohibiting the slaughter of nearly everything but fish, to continue until Aug. 15. Curlews and plover, called here jacksnipe, however, were exempted, and as they make a good soup, or stew, we were not without game. During our evening strolls over the plain or beside the streams we have been astonished by the quantities of birds. Flocks of sage hens, which are as large when full grown as young turkeys two-thirds grown, and others with numerous broods, half size, constantly flew up or ran before us, and on the water we saw wild ducks swimming with their young ones, seemingly with very little fear. At every few steps plover, quite a large bird, curlews and killdeer rose with startling whirr and scream. I have twice seen antelopes, and once small red deer, on the plains, and am told that deer are on the mountains. As yet the game has not been destroyed by hunters who plume themselves on the number of lives taken rather than legitimate sport, and it is to be hoped the game law is in time to forestall such vandalism, much as it and its officers are hated.

There has been almost no rain here this summer, and the wild grass and flowers, of which there is a great variety—often very pretty though invariably scentless—are almost dried up. Natives say the season is exceptional, and showers fall in summer frequently, usually. On May 23 last, two feet of snow remained on the ground, and snowshoes and toboggans (a kind of dog sled) were in order. I have several mornings seen white frost, and once ice crystals in the water bucket. It is patent that farming can never succeed, owing to the very short growing season and white frosts at night—save, perhaps, as a grazing country—but there is no doubt that notwithstanding its fierce winds and sunshine it is at present a paradise for hunters.

Besides sun and winds, there is yet another drawback to perfect enjoyment on the plains. As soon as the chill of morning begins to dissipate, swarms of buffalo flies—enormous green-headed things like gad flies—assail tents and awnings with a venomous buzz and roar, and their bite is as keen as a bee sting. In the shacks and ranches they blacken ceilings and windows to such an extent that, I have been told by a native, a cup full can be killed in a short time. These pests last from about July 1 until August wanes. I have been informed, and mosquitoes also make life a burden, mornings and evenings, for the same length of time. But the nights are delightful, and two or three double blankets only are needed to insure sweet sleep and pleasant dreams.

To sum up. For men accustomed to roughing it, who desire plenty of game and sport, with a minimum of labor, there are left in our rapidly filling country few places as wild. Women I would counsel to go elsewhere, unless cabins can be secured. Wind and sun blister the skin as by fire, and other discomforts from these causes are very great. Michigan or Wisconsin, the Adirondacks, Maine, or Tennessee and Carolina mountains all afford much pleasanter places for an outing, and as the variations in temperature are far less trying, they are infinitely better for nervous or feeble women.

MRS. M. E. BANTA.

## Natural History.

## PEARLS IN THE UNITED STATES.

A paper read by George Frederic Kunz before the American Fisheries Society, Chicago, 1893.

[Concluded from page 113.]

At the International Fisheries Exhibition held in Berlin during 1890 there were shown results of experiments undertaken in Germany toward the production of artificial pearls from Unios, in a manner similar to that practiced by the Chinese. Flat tin figures, usually of fish, were introduced between the mantle and the shell. Similar experiments were conducted in the Royal Saxon pearl fisheries. Either small foreign bodies were introduced into the mantle, in order to furnish the nucleus for the free pearl formation, or the Chinese method of inserting such bodies between the mantle and the shell was followed. From the second method successful results were shown. The foreign bodies that had been introduced were poor pearls from other mussels, pieces of grain, or china buttons, and were entirely covered with nacreous substance. The shape of these objects makes it impossible for the mantle to fit closely around them, and hence the nacre covers them so irregularly that little or no use can be made of them, and ornamental devices coated with a beautiful nacre would probably find ready purchasers at a fair price. From specimens exhibited, it was shown that German oysters could be made to cover a plain relief with nacre, as well as those of China. The cultivation of such forms in this country might lead to considerable income, and the brooks could be as easily protected as trout brooks or ponds are.

Efforts to make the river pearl mussel available in another way met with no better success, and are worthy

A ST. AUGUSTINE PET HUMMINGBIRD.  
Photograph from life.

of consideration in the United States, and may lead to a new industry. In 1850 Moritz Schmerler conceived the idea of making small fancy articles of the shells themselves, and succeeded so well that the German Government allowed him to take from the royal beds the shells needed for his manufacturing business. Large numbers of pearl shell pocket books and hand satchels have been made since then. The almost faultless white and reddish-tinted "rose-pearl mussels" are specially prized for this purpose, as the material may be cut so thin that a photograph pasted on the inside can be seen through the shell, conveying the appearance of being produced on the shell itself. Other manufacturers engaged in the business as soon as its success became apparent, and many hundred thousands of pearl mussels are now annually used at Aldorf, where the business is chiefly carried on. The principal sources of supply are brooks in Bavaria and Bohemia that are owned by private persons. Why not Tennessee, Wisconsin and Texas?

Pearls are usually found either by farmers, who devote their spare time to this industry, and, if no result is obtained, suffer no loss, or by persons in country villages who are without regular occupations, but are ever seeking means for rapid increase of fortune. Many shells that do not contain pearls are destroyed. In order to obviate this wholesale destruction, it would be well to give the industries a legal protection, making it punishable by fine to kill a Unio, and requiring all pearl fishers to use instruments like those that are employed in Saxony and Bavaria.\*

In the former country a thin flat iron tool with a bent end is inserted into the shell. The handle is then turned 90 degrees and the shell is opened without injury to the animal. Another instrument is a pair of pliers with sharp-pointed jaws, and a screw between the arms, which is turned by the hand until the valves of the shell are sufficiently distended to see whether it contains a pearl. If it does not, the animal is returned to its former haunts, perhaps to propagate more valuable progeny. In gathering the shells, only those that are full grown, old and distorted by disease should be taken, and these only opened and not destroyed, so that the fisheries may be preserved; and the shells should be opened as soon as taken from the water, and not allowed to open by decay, for this discolors the pearls; and particularly they must never be opened by boiling water, as this dims the lustre and lessens the value of the pearl. Many lakes and rivers, among them the Olentang at Delaware, Ohio, and a number of streams near Columbus, have been completely raked and scraped, often in a reckless manner, and consequently with very

\*See illustration "Gems and Precious Stones of North America," New York, 1893. Figs. 10 and 11, page 232.

little result. The general method of collecting shells was for a number of boys and men to wade into the mill-race or into the river to their necks, feeling for the sharp ends of the Unio, which always project. When one was discovered in this manner, the finder would either dive after it or lift it with his feet. It was the custom at that time to open the shells in the water, and once during the process a pearl the size of a pigeon egg is said to have been dropped into the water and never recovered.

The wholesale destruction, together with the depredations of hogs, which have exterminated whole shoals of Unios, when the water in the brooks was low, and the substances introduced into the water by manufacturing industries, besides sewerage and refuse from factories, are rapidly causing the disappearance of animal life from many of our water courses.

It is probable that the existence of carbonate of lime in excess, where mussels abound, influences the secretion that causes the growth of the pearls. In limestone regions, if the waters are polluted by products of decomposition that are acid, these unite with the lime and form other compounds, which are either precipitated or carried away with the impurities of the water. There can be no doubt that this cause would tend to decrease the amount of lime which the shell would receive, thus not only retarding the growth of the pearls, but often eventually leading to the extermination of the Unios themselves. At nearly all the marine pearl fisheries coral-banks abound; branches of coral frequently forming on the shells themselves, sometimes three or four species on a single shell; and it may be that these have more or less influence on the development of the pearl in the shell. In Vermont, New Jersey and Ohio, where pearls were formerly found, a fine one is now rarely obtained.

A unique method of collecting Unios is that practiced by the lumbermen, who, while sailing down the Canadian rivers on their rafts, collect Unios for food, by fastening bushes to the rear of the raft, so that when they pass through mussel shoals, where the rivers are shallow, the bushes touch, the unios close on the leaves and thin branches, holding them securely; and at intervals the bushes are taken out and the Unios removed.

In regard to these pearl excitements which appear from time to time, and as to where best to search for pearls, it may be well to state that it is advisable to search every creek and river where limestone is the country rock, since in nearly all instances the Unios secrete pearls when this favorable condition exists.

The great quantities of Unio pearls that existed in prehistoric times is evidenced by the Little Miami Valley, explored by Prof. Frederick W. Putnam and Mr. Charles L. Metz, and more recently by Warren K. Moorehead, who carried on operations for Prof. Putnam. The former procured over 60,000 pearls, nearly two bushels, drilled, undoubtedly of Unio origin, all of them, however decayed or much altered, and of no commercial value. In 1884, the former scientists examined the Marriott Mound, where they found nearly 100 Unio shells, and among other objects of special interest six canine teeth of bears, that were perforated by a lateral hole near the edge at the point of the greatest curvature of the root, and by passing a cord through this the tooth could be fastened to any object or worn as an ornament. Two of these teeth had a hole bored through near the end of the root on the side opposite the lateral perforation, and the whole counter-sunk in order to receive a large spherical pearl about  $\frac{1}{16}$  in. in diameter. When the teeth were found the pearls were in place although chalky from decay. Upward of 250 pearl beads were found, concerning which they say: "The pearl beads found in the several positions mentioned are natural pearl, probably obtained from the several species of Unios in the Ohio River. In size they vary from  $\frac{1}{16}$  in. to  $\frac{1}{8}$  in. in diameter, and many are spherical. They are neatly drilled, and the larger from opposite sides. These pearls are now chalky and crumble on handling, but when fresh they would have formed brilliant necklaces and pendants." The find of Mr. Moorehead is exhibited in the Anthropology Buildings of the World's Fair, and belongs to the collection that is to be made the permanent one of the city of Chicago to be shown ultimately in the Fine Arts Building, Jackson Park.

Among marine shells of the United States the common clam (*Venus mercenaria*) secretes pure white pearls, scarcely distinguishable from ivory buttons, as well as others faintly tinted with a purplish blue, passing at times to a reddish purple and purplish black. The white pearls are worthless, the tinted ones are of little value, but those of a darker color are often from  $\frac{1}{16}$  to  $\frac{1}{8}$  in. in diameter, and the finest ones bring from \$20 to \$100. The supply is limited and there is very little demand, for unless the color is exceptionally good they possess little beauty, lacking the lustre peculiar to other pearls; still, when mounted with diamonds, the appearance of darker ones is much improved.

The making of wampum from these shells and from the conch has been carried on by a family of Campbells, at Pascack, New Jersey, from 1770 to the present time. The last four brothers were over 80 years old in 1889. (See "Gems and Precious Stones of North America," pages 233-234.)

The common oysters (*Ostrea borealis* and *Ostrea virginica*) occasionally secrete one or more pearly bodies, always dead-white in color. The reflections produced by their fibrous, radiated structure are similar to those observed in the common conch. The "skin" of these pearls is never smooth or lustrous, and consequently they have no value.

Conch pearls—the concretions found in the common conch of the West Indies (*Strombus gigas*) are not nacreous, and therefore cannot be considered true pearls. They are usually a little elongated or oblong in form, rarely round, and most of them are very beautiful, owing to the reflections produced by the fibrous stellated structure causing the light to play over the surface, but giving a different effect from the cat's-eye or that of satin-spar. They are almost pink in color and the fine ones are wonderfully lustrous.

The Abalone (*Haliotis* or ear-shell), the principal species of which are *Haliotis splendens* and *Haliotis rufescens* (called ormer in the Channel Island, fuh-yu in China, awabi in Japan, and abalone in California) also secretes pearls. The nacreous portion of the shell itself is used for ornamental purposes, such as buttons, etc., and surface ornamentation in lacquer work, papier-mache, etc. The mollusk itself, called "mutton-fish" by the New Zealanders, has long been known to the Indians of the Pacific Coast as a valuable article of food, and it is much

# FOREST AND STREAM IN THE WORLD'S FAIR.

*As Seen by Our Staff Correspondents.*

sought after by the Japanese and Chinese for the same purpose. The former take only the very smallest fish, and eat them when freshly caught, with cayenne pepper and vinegar, while the Chinese seek out the largest and eat them only after they have been dried.

The trade in this dried meat is considerable. In 1866 there were exported from San Francisco by steamer 1,697 sacks, valued at \$14,440, and in 1867 the exports had risen to 3,713 sacks, valued at \$33,090. At present there are exported upward of 200 tons a year, which at \$175 a ton would amount to \$35,000. At San Diego, Cal., the dried meat is quoted at \$110 a ton. The shells vary from almost microscopic size to 8 or 10 in. in diameter. Before they were found to have marketable value they were thrown away. One heap a little south of San Diego, containing over a hundred tons of shells, from exposure to the rain and the sun was converted into lime on the outside; but this was broken into and many fine shells were found. The Pueblo, Zuni and Navajo Indians and all the Indians of the Pacific Coast as far north as Alaska, have made the abalone shell into charms and have used it for ornamentation with remarkable taste for ages. It was used with great success by Messrs. Tiffany & Co. as an applied decoration on silver objects, and was exhibited at the World's Fair held in Paris during 1889.

The Collector of Customs at San Francisco furnishes the information that for the fiscal year 1887-1888 the export of abalone shell amounted to \$185,414, which, together with \$35,000, the value of the dried meat annually exported, makes this quite an important industry. These shells secrete very curious pearly masses, sometimes of fine lustre and choice enough to deserve a place among pearls. A pearl measuring 2 in. in length and from 1/4 to 1/2 in. in width has been found. A necklace made in California from the finest specimens was valued at \$2,000. A pearl over half an inch long and of good color cost \$30, and was used as the body of a jeweled fly. The abalone pearls from the coasts of Korea and Japan are often very beautiful. In a lot of about one hundred shells only five were found bearing pearls, two with three pearls each, two with two pearls each, and one with a single pearl.

Capt. J. W. Collins—I have been very much interested in the valuable paper read by Mr. Kunz. It is timely and important, and is worthy of careful consideration by those of our citizens living in the interior, who are interested in the collection of fresh-water pearls. As most of you know, many pearls have been gathered in the Central States, and especially in some of the States bordering the Great Lakes. I fear, however, that lack of information on the part of those who have been engaged in this effort has resulted in the practical extermination of pearl-bearing shells in certain regions, since I believe it to be true that, practically in all cases, the animals have been killed in order to ascertain whether they contained pearls or not. If the people who sought the pearls had known that it was perfectly feasible to obtain them without injuring the animals, by the use of a simple tool, such as has been mentioned by Mr. Kunz, and had they realized the importance to them in future years of conserving the supply of these wealth-producing bivalves, there is reason to believe that quite a large collection of pearls could have been made at intervals of every few years. Now, however, because of a lack of this knowledge the pearl-producing shells in the sections referred to are practically annihilated and it will probably be many years before it is possible to reap another harvest. I know of nothing which bears upon the fisheries of interior States which could be of more service to those interested in the industry, than the widespread publication of the paper that Mr. Kunz has favored us with. Whatever tends to improve the knowledge of our fishermen, and enables them to conserve the supply of those animals which constitute objects of fishery, while seeking aquatic wealth, adds materially to the welfare and prosperity of our country and the comfort of our people.

Among the fishery subjects that demand the intelligent consideration of State legislators, none, perhaps, should receive more prompt attention than this matter of gathering pearls. No State can afford to neglect legislation on a subject so important, unless there is legislative restriction, we may look for a repetition of what has been done in the States referred to by Mr. Kunz.

## A Pet Hummingbird.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* I inclose you a photograph of my wife's pet hummingbird—probably the first live one ever photographed.

A little patience is required to tame them, for they are startled at the slightest movement, but when once brought under management they are utterly fearless.

I tame them nearly every summer for my wife's entertainment, though I confess to as great a weakness for the little pets as she has.

She suggested having this one photographed, and though he was a very uncertain customer to make an engagement, I sent for the photographer to come at a certain time of day; by refusing to feed the bird all he wanted, we kept him hovering around us on the lawn for hours. My wife has a very small bottle with a bow fastened to the neck so he can sit and sip his sugar and water comfortably, though I make him sit on my finger. The photograph shows the bird perched on the bow of the bottle.

The great trouble is that after we have become much attached to the pets a stronger bird is liable to come along and drive them away, and oftentimes they never return.

ST. AUGUSTINE, Fla.

## Northwestern Iowa Game Notes.

MATLOCK, Ia., August.—The present indications point toward good shooting this fall. Quail are more plentiful than ever known here before. Have not seen any young ones yet, but old ones are "Bob Whiting" everywhere. Have seen several coveys of young chickens of from ten to fifteen in a covey, some nearly full-grown. Rabbits, both cottontails and jacks, are very abundant. Whistling snipe or plover are not as plentiful as during past years. A few ducks have bred on the Otter Creek near here. Season opens on ducks Aug. 15, chickens Sept. 1, and quail Oct. 1. Some illegal hunting is already being done, though not as much as in former years. LONGFELLOW.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## The Gas Engine and Power Co.

THE exhibit of this well known company, the Gas Engine and Power Co., of Morris Heights on the Harlem, New York city, is situated in Section D, Block 5, near columns 22 and 23, in the Transportation Building. The company has a large and important display of its boats, six in all, and from one-horse to ten-horse power. They were not specially prepared for exhibition, but were taken out of the stock which the company makes for the trade regularly. Besides the exhibit in the Transportation Building (which, by the way, is on the main floor) the company has two boats on the lake, one the Geo. R. Davis, a 30-footer, and the Chicago, a 35-footer. The company would have taken the whole of Block 5, could it have been secured, for a still larger display of its boats. As it is, the company has utilized its space to the utmost. The boats shown were nicely finished, each one having in place a naphtha engine appropriate to the size of the boat and the motor power required. For their naphtha launches the company makes special claims of moderate cost with a maximum of utility, safety, ease, comfort and pleasure. Also that its boats have special good features in maneuvering, in that they can be gotten under headway in five minutes and stopped in less than 5yds. Economy in space is also claimed for the naphtha engine, and that all the combined useful qualities have won the adoption of the company's productions for commercial work, and by oystermen, by the U. S. Government for the work of the hospital, quarantine, and coast survey department and by transportation companies. Close by the exhibit is a section of a steamship showing the inside arrangements for the comfort and transportation of passengers, etc., by the American Line of steamships, and from this high point of vantage spectators often gaze many minutes at the beautiful launches of the Gas Engine and Power Co. The exhibit is in charge of a most affable and intelligent gentleman, Mr. P. S. Townsend, who takes pleasure in giving all necessary information.

## The American Net and Twine Co.

Any one in search of knowledge appertaining to nets and their uses, have unlimited opportunities at the exhibit of the American Net and Twine Co., in the Fisheries Building. To attempt anything like a description would fill columns of FOREST AND STREAM. A mere list of the articles exhibited would fill a catalogue. The company has about 5,000 square feet of space, the larger part of which is on the main floor. There are nets and seines, from a small hand net to a large mackerel purse seine 1,200ft. long and 100ft. deep, barked and fitted for use. Numerous models of different pounds are set up to illustrate the manner of using nets in inland lakes, in the deep sea, in rivers and in different sections of the country to conform to the local peculiarities affecting the use of nets. The intention of the company was to show every variety of nets used in all kinds of fishing from Labrador along the coast into the Gulf of Mexico and in the waters of the Pacific Coast, and in inland waters. Some of the nets are full size, others are illustrated by working models faithfully reproduced. The nets are in astonishing variety and in all sizes of mesh and twine. Of the latter the company manufactures its own supply. Some idea of the output can be gained when it is mentioned that the company employs 700 hands in its manufactory; quite a pleasant contrast to fifty years ago when it only employed five or six hands. The exhibit is in charge of Mr. A. A. Adams, who is most thoroughly informed in all that appertains to fishing and who takes pleasure in imparting information to others. B. WATERS.

## All About the New Baker Gun.

In response to a note of inquiry from Forest and Stream Pub. Co., the Baker Gun and Forging Co., of Batavia, N. Y., sent the following advice:

"We have no regular exhibit, but at the request of the Government we made a small model of our new hammerless gun, and this your correspondent will find in the Patent Office exhibit. We think it is the smallest gun on the grounds. It is in complete working order and weighs something like 14lbs."

I went on a still-hunt after this gun, over in the Patent Office section of the Government Building, and asked for it of several attendants who were strenuously holding down athletic armchairs and giving the corrugations in their brain tissues a chance to cool out.

"Is it a cannon?" asked one duke with whom I had parley.

"No, my dear sir," I said unto him, "It isn't a cannon, but I reckon it's a corker."

"Ah?" said he, meditatively. "In that case, you'd better look on the side of the wall along that next aisle."

I looked, and actually got lost in a wilderness of models, showing all sorts of things in the past and present of American firearms. This really is a most interesting study, and well worth the time of any one in the least concerned with guns. All sorts of ideas, some worthless, some good, some forgotten and some of world-wide use, are filed away here in the solid, respectable, formal and musty Government fashion, and there was an embarrassment of riches. At length, while engaged in watching the development of the American revolver with one eye and listening to the growth of the repeater with the other ear, I fell upon the object of my search, duly out, dried and labeled, Government fashion, as follows: "Breech-loading and magazine guns. W. H. Baker. U. S. Patent No. 248,249, Oct. 11, 1881. A lever on top of the stock, just at rear of the breech, is rigidly attached to a vertical shaft, which has bearings on the top and bottom of the frame. This shaft is held in its normal position by a spring. On the shaft, and inside the gun frame, is a lug to which is pivoted a link which connects the shaft to a locking slide passing through the lever part of the breech iron and engaging a lug on the bottom of the barrels, when the gun is closed. A push-pin on the top lever revolves the shaft, withdrawing the slide and permitting the gun to be 'broken down,' or opened for loading. When the lever is released it is returned by its spring to its normal position."

The above will, I trust, make it perfectly plain to any body just how a Baker gun works. I could not get the model out of the case to examine it as I wished, but I know the Baker gun is worth a much more thorough examination by any gun lover than was possible for me to give the original model, this young gun which had not had time to grow yet. But with this number on its first patent, how could the gun fail to succeed? No. 248,249. Come seven, come eleven! What a gig for Mr. Johnsing! Now, I know why Billy Baker Crosby wins at tournaments. He has an invincible combination up his sleeve. No. 248,249; 7-11; 4-11-44. The broad policy of the Baker people is easily understood.

## Came from Maine.

In the American gun group, just over the way from the case of Lefever ejectors over which Col. Courtney watches with eagle eye, is the modest display of the C. C. Brooks Arm & Tool Co., all the way from Portland, Maine. The output of this firm includes single and double shotguns, three-barreled guns, single-shot magazine rifles and target pistols. All the guns and rifles work by an under lever action, which cocks the gun and locks the trigger up on the sears. All have automatic ejector action, the ejector returning flush home after the expulsion of the shells. The locks of all these guns are certainly simple and few of parts, though the guns shown are rough from the file and not finished for the trade. The magazine rifle carries its magazine in its stock, as all newsdealers carry FOREST AND STREAM.

In this exhibit are to be seen what are probably the two finest mounted moose heads that ever came to Chicago, one of them simply magnificent. They are all the way from Maine.

## A Bad Dispensation.

Mr. Lewis, secretary of the Brooks Company, and Mr. Winslow, his assistant in attendance, mourn the fact that the authorities that be have placed them so far back under the gallery that nobody can find them, and that nobody can see them after they have found them. All this is true in similar measure of the whole American shotgun display, and it is a disgrace that the officials had no better ideas of values than to place these grand displays of American gun makers, such as the Parkers, the Marins, the Lefevers, and those above mentioned, in the secluded, ill-lighted and niggardily-dispersed space allotted them. But by all means, gentlemen, let us have room for the man with the patent farm gate and the new lightning protector.

## Some Callers.

Mr. Thos. J. Storr, gathering material for Bancroft's History of the World's Fair, stopped for information and a chat at the FOREST AND STREAM corner this week.

Mr. E. S. Osgood, of the Eastern end of A. G. Spalding & Bros., was at the pavilion this week, and at command stood and delivered the story of how he caught the big Rangeley trout, which is shown in the Spalding case. Mr. Osgood naturally thinks there is no place like the Rangeleys.

Mr. C. P. Hubbard, of Broken Bow, Nebraska, a FOREST AND STREAM man, missed me in his call, and I am sorry, for I should have liked to talk about chickens and things.

E. HOUGH.

## In "Forest and Stream's" Corner.

DURING my recent visit to the World's Fair, the first day of my visit, before my legs had lost their elasticity and my feet become tender through much tramping, I made my way toward the brown tower of the Fisheries Building, and once inside, instead of wasting time looking about, obtained a pointer from a Columbian guard and soon stood before the rail of the FOREST AND STREAM exhibit. A very pleasant young lady was on duty at the desk, and upon my introducing myself as an humble correspondent of the paper I was invited in, introduced to the register and made to feel perfectly at home.

I don't think I enjoyed a more delightful half hour during my week's sojourn at the Fair than the one within the rail at the FOREST AND STREAM corner. The priceless files were placed at my disposal, and I confess that it was with great delight that I pointed out to the young lady some of my own work away back in the 70s, when FOREST AND STREAM and I were both younger.

The Sairy Gamp, with its accompanying "pudden stick," was examined with great interest, as were also the other curiosities, and we had quite a discussion touching the merits of "Nessmuk" as a writer of prose and poetry, the young lady holding that it was as a poet the old hunter shone conspicuously, while I argued that his chief literary merit lay in his delineation of camp life and sportsman's hints. In defense of her opinion she turned to a copy of "Forest Runes" and bade me read an extract, and I was almost persuaded, for the beauty of the poetry combined with the earnestness of "Nessmuk's" fair advocate made a combination hard to resist. It was a pathetic sight to me, that little, tenantless old boat lying there so far from its native waters, while the great, soulless, sightseeing throng rushed madly by not a paddle's length away.

The fisheries exhibit is a wonderful aggregation, and as a study is one of the most interesting on the grounds. It is well patronized, too. I noticed that the visitors simply viewed it as a show, there is a fascination about those glass tanks and their seal occupants similar to a cage of monkeys or the lion's den on the Midway Plaisance. Somehow I could not help feeling for those little captives as they clustered about the aerating points in the tanks as though trying to get a breath of fresh air; it positively made me gasp, and I vowed that the sight of half a dozen trout in a pool in my own mill creek was better than the whole poor scored-backed display. But I did enjoy the technical exhibits of the capture of food fishes, and the methods of propagation, the boats and apparatus and specimens; but I couldn't help feeling sorry for the captives in the tanks.

The young lady in charge also showed me Mr. Hough's medal, honestly won as the champion teller of true fish stories. Unfortunately the owner was absent, for being something of a liar myself, I should have been pleased to meet him. I noticed that the FOREST AND STREAM Register was liberally patronized, indicating that the paper's large constituency is visiting the Fair in goodly numbers. My advice to all is, first, Don't miss the Fair, and second, don't miss the FOREST AND STREAM exhibit. You will not only be welcome, but you will find much to interest you.

H. W. D. L.

## Game Bag and Gun.

### A PAGE FROM OTHER DAYS.

#### DIAMOND VALLEY.

Often have I been requested, and as often have I tried to make up my mind, to furnish for the benefit of brain workers my experience in outdoor sports in the pursuit of fish, game and healthful exercise. Several factors have thus far stood guard and succeeded in holding my purpose at bay. The first and most important obstacle was want of time. While I always managed to find time to get away to the mountains and plains for six weeks in every year, and during that time to keep my diary up to date, and the loved ones at home informed of my whereabouts, I never felt that I could spare the time to tell my fellow workers what pleasure I have enjoyed, what satisfaction I have had and what a vast amount of good I derived from my rod, gun and camera.

Now that I have begun, here goes: I know you will follow me, and if all who can will take my advice, many lives might be lengthened and premature old age averted. The principal excuse I have to offer for now taking the time to write up my journals, while engaged in a busy professional life, is the fact that I was born fifty-four years ago in the mountains of central Pennsylvania, where game of all kinds was then plenty, and where on this very day my father is celebrating his seventy-eighth birthday, and he is still an ardent hunter and fisherman. He taught me to handle a gun when I was scarcely able to carry the weapon.

Some of my first recollections come vividly, how I used to toddle off to the neighboring woods at the heels of my father in quest of the nimble gray squirrel. I yet hear him say: "Now Sammy, do you see that fine fellow up there sitting on that limb with his tail over his back? No, the other side of the tree—here, look over the gun barrel," as he would level it in the direction of the game: "Now, I will just snuff the end of his nose off; watch him drop." With his trusty, long muzzle-loading rifle, 120 bullets to the pound, he would deliberately take aim, and I can yet feel and hear the throbbing of my heart as I held my breath and awaited the report. He seldom missed doing just what he said, "Snuff the nose." When Clip, the old half-hound and half-cur, would tackle the squirrel, I would run to join the melee, claim the prize, string him up, and by this time my father would have another charge safely rammed home in the old rifle, when father, Clip and I would further investigate the neighboring hickory trees for the nut-gatherers. Usually it required but half or three-quarters of an hour to shoot a "mess" of squirrels, and it mattered not whether we got one or a dozen, their skins were whole, except what covered the head. All this happened long ago, and just up in the bottom not five hundred yards from the old log house, close by the bank of the creek, where over fifty years ago I first saw light. Yes, the same bottom where in the fall we hunted squirrels, coon, possum, butternuts and shellbarks, and in the spring time, when the sap rose, we held high carnival flaking maple sugar.

In the happy days of my boyhood shotguns were almost an unknown quantity in our neck of woods—Shaver's Creek Valley, Huntingdon county, Pa. Men and boys used either the rifle, straight-cut or smooth-bore gun. The two last named were of larger caliber than the rifles, and were used for either shot or ball. I can well remember how important I felt when but a small boy I was allowed to take one of the inferior guns from the corner in the kitchen, where always stood half a dozen or more, and practice on the red squirrels along the creek. I also well remember one of my most important exploits as a hunter. It all happened in the clump of trees just above old Dan Stevens's house, against the side of the hill, where more than once I lay for hours watching for a ground hog to stick his snout and fat cheeks up out of his hole. One day the old gentleman put in an appearance; I plugged him square under the chin with a 300-grain round ball from the old smooth-bore. That old fellow I had watched for often, and as often been disappointed; but this time I caught him square. He was as much as I could lug, and I could hardly wait until I got home to exhibit my game. I think now that a few such experiences during my boyhood made impressions upon me which in after years stimulated me to fuller enjoyment and appreciation of the benefits of the pursuit of fish and game in search of the recreation so important for brain workers.

It was not long after the above event until all the boys in the neighborhood knew that I had killed a hog, and a ground hog at that; and I soon began to think I was a veritable hunter, and most of my time was spent lugging the old gun around, shooting at everything animate, and soon my hunting proclivities had to be curbed. I was always on hand when a coon hunt was on the tapis, and one, if not the first, to notify Dan Stover, the Lightner, Yokum and Longenecker boys; when, together with Uncle Sam, father and the dogs, we scoured the neighboring country and always succeeded in gathering in one, or sometimes three in one night. When the coons were hibernating, or out of the usual season, we always had something on hand—gigging, setting outlines or dipping for suckers when the water was right during the freshets.

When I was fourteen I had an idea that I was old enough to kill a deer. Squirrels, robins, sapsuckers, and even groundhogs failed to be sport enough for me. In those days father and my old bachelor uncle could go up over the hill and on the leading ridge, not over three miles from home, and kill a deer in the winter season, when there was a good tracking snow, just about whenever they wanted fresh venison. The deer hunting fever had been troubling my dreams for some time, and soon an opportunity offered. A deer hunt composed of several of the neighbors was on hand, information of which I got by standing around the blacksmith shop, both hands in my pockets and both ears open. As I considered myself a hunter, I insisted upon being one of the party. I well remember I slept but little the previous night and was up long before daylight, scouring out the old smooth-bore, which no one else would take to hunt deer. We were all to assemble at break of day at a certain point on the leading ridge, which forms the southern boundary of Diamond Valley, and there on time we joined Sam Striker, Adan Lightner, Harry Lightner, Hen Longenecker, John

Decker and Dan Stover. The hunt was planned from that point. It was to be a breast hunt on the south side of Tussey Mountain, which formed the northern boundary of Diamond Valley. The valley being but about one and a half miles wide, it was not long until we were strung about 100 yds. apart, ready to hunt against the wind.

As this was my first deer hunt it may be imagined how I looked, and peeped, and stepped on tiptoe, ostensibly for deer, but most likely as often trying to discern the whereabouts of the hunters above and below me, for I have got a faint recollection that I was afraid of being lost. We had not gone over half or three-quarters of a mile, when hearing a rustle to my right I caught sight of a fine deer coming loping toward me and not more than 40 yds. below. I stopped stone still, cocked the old gun, brought it to my face, and by this time the deer was immediately below me. I bleated; the deer stopped; I aimed and fired and the buck dropped in his tracks. Of course I yelled like a Comanche for Stryker, who, I knew, was below me, and who soon appeared on the scene. I had shot the deer too high and too far back, and the consequence was that by the time Stryker came the deer was making down the mountain, dragging his hind parts. I had forgotten to reload, and when Stryker came he shot at the buck's head, the ball passing through his snout, which only accelerated his passage down the mountain. While he was reloading I did the same, and as there was no snow on the ground the deer got away, and although the whole party hunted for him a long while we were unable to find him, until some time afterward the carcass was found in the thickets several hundred yards below where I had shot him. The pain I experienced in not getting possession of the first noble game I had the satisfaction of bringing down, was the first great disappointment of my life, and the one which, as years roll by, still clings to memory; and I never yet hunt deer but the first hunt comes up; and ever after that, when the deer stands broadside to me, the bullet hole is sure to be through the shoulder blades.

The recollection of those boyhood days are the most fascinating I could dwell upon, and might be indefinitely extended, but space forbids; though I was very forcibly reminded of them but a half dozen years ago, when, public duties preventing me from taking my usual six weeks' vacation, I spent a week at the old homestead. Father, mother and uncle were still there; the two old shot-pouches covered with spotted fawn skin, and several old powder horns, were in the same drawer in the same old side-board, which stood in what was then used as kitchen and dining room. In the same corner stood the guns, but they were of a different style from those of forty years ago. Many changes had taken place since I was a bag-hunter and fisher. The old log house wherein I was born over fifty years ago, still stood across the creek. The site of the old school-house was a pile of rubbish, and the new one occupied a more eligible place. The old grandfather had fallen dead with a trap in his hand in 1893, but his gun still stood in the corner. Where hickory and maple trees had covered the creek bottom in sight of the house, and furnished good shooting in season, scarcely a stump was left to mark the spot or tell where I had spent many happy hours hunting squirrels, gathering nuts, angling for the gamy fall fish, or gathering the sweet sap for the sugar camp, which was always a gala time in season. The two-barreled revolving muzzle-loading Schuler guns had given way to repeaters. One a Spencer carbine, used during the war by one of my brothers, had been loaded up, with an additional supply of iron attached to the under surface of the barrel to balance her up, and was used by the eighty year old uncle for hunting deer. He had removed the original trigger-plate, and instead the part was supplied with the good old-fashioned double on-sett trigger.

Again I find I have wandered from noting the events of my week's outing in the same locality where I had killed the big buck, and didn't get him after all.

All being in readiness, father took me out to Diamond Valley, to the cabin which was occupied by a party of old hunters who were boy hunters when I was—Tommy Montgomery, Bill Conrad, John Eberle, Mead Barst, Sam Steele and Joe Carman—and Uncle Sam, with his Spencer carbine .50-caliber, was to join us on the following day, preferring to hunt from home to the cabin. On the second day in camp we had a good tracking snow, and the following morning we were all up early and had the old cook stove piping hot, and breakfast over before a glimmer of daylight lit up the eastern horizon. The farmers in the adjoining Shaver's Creek Valley used Diamond Valley (which is about fifteen miles long and an average of one and a half miles wide, well wooded and watered) as a cattle range during the summer, and each herd had one of its number adorned with a bell. Once or twice a month the farmers would go out to salt and look after their herds. The deer became accustomed to the tingling of the cow bells, and so the practice has been for one of a party of hunters to take a bell and follow the track, while the others were all posted at the well known runways or crossings where the game crossed from the mountain to the ridge, or *vice versa*. The sound of the bell aided the watchers in determining the direction taken by the deer, and oftentimes enabled them to obtain advantage by changing their location where there were no hunters enough to cover all the ground.

On this occasion, Sam Steele, a royal good fellow and a quick, sure shot, acted as the bell wether. I was assigned a place at the edge of a small open space near where there had been an old saw-mill. I sat in the edge of the scrub oak thicket, with my back against an old stump and my Winchester lying across my left knee. From where I sat I had a good view of the small open space to my right. Directly in front of me, and just 2 ft., stood a small bunch of scrub oak not more than 6 ft. high and about 6 or 8 ft. in diameter. I took in the situation, and had not long to wait, for in a few minutes I saw a fine large buck and fawn jump out of the timber into the open space to my right. In less time than I can write it he landed about four feet in front of the scrub oak clump. I bleated just as he lit, and stone still he stopped, at the same time throwing his head to his right in the direction of Steele and his bell. He fell pierced through both shoulders, and I had killed a specimen of the noble game of the Alleghenies within 3½ miles from where I was born half a century before. Before the week was up we had three hanging against a gum tree which stood just north of the cabin.

Since that little hunt time has brought some changes. Uncle Sam passed peacefully away at a ripe old age, and we laid him in the little churchyard, leaving behind him

a host of sorrowing friends and acquaintances. The autumn leaves had yellowed and fallen; his fox beds were located and baited for the winter's sport; but the traps were never set, and sly reynard held high carnival over what would have been dangerous ground had he not been called away. Conrad has also passed to the great beyond. The rest of the party are all living and hunted over the same ground last fall, but with poor success. Since 1885 a railroad has been built through the hunting ground, the timber cut out and the game driven off; and another of my old stamping grounds has given way to civilization. The inevitable must come—so be it. SHONGO.

LANCASTER, Pa.

#### AN ILL-FATED SHOT.

It was in the month of October, 1886, when N. L. Hanscom arrived in the town of Orland, Hancock county, Maine, for a hunt. Having somewhat of a reputation as a hunter among the boys of that town, I was selected to go with him and lead the way to the best hunting ground. It was a beautiful October day and the leaves of the Maine forest had just commenced to put on their golden hue, and the lofty hills all around presented a grand scene. One of these hills was known as Mason's Mountains, at East Orland, which we selected as our hunting ground. This mountain is north of Mason's Mills, between Toddy Pond and Craig's and Hart ponds, and was noted in those days as a hiding place for bears, deer, foxes, rabbits and partridges on account of it being covered with a thick young growth of white birch and pine trees.

After getting an early breakfast Capt. Hanscom, myself and brother started for the top of this mountain with great expectations, thinking we would get a deer or two, and perhaps a bear. We gradually worked our way up this steep mountain through the underbrush, and sometimes we had to take hold of the limbs of the trees and pull ourselves up, and at last we reached the summit. The sun was shining very bright and there was not a cloud to be seen in the sky, and the scenery around us was grand beyond description. Looking in a northwest direction we could see a chain of tall mountains as far as the eye could extend, and in an easterly direction we could see the Mt. Desert hills, the tops of them looked as white as if they were capped with snow. Turning our faces to the south we could see the broad ocean, dotted with vessels, with their white sails passing and repassing. After resting ourselves for a while we concluded we would pass down the mountain in the direction of Craig's Pond Brook. I told Capt. Hanscom I would take the outside course to the right, while he should take the left side and my brother the center; and we would walk along carefully and keep sight of each other so as to avoid any accident in shooting. The young white birch and the small pine growth was very thick, and we had gone but a short distance when I saw a rabbit, which I shot; and in a moment I heard a faint voice ahead of me "I am shot."

I ran in the direction of the voice, and saw Capt. Hanscom hanging on to a limb with one hand, but before I could reach him he fell to the ground prostrated, and it looked for a few minutes as if he were dead. The shock was so great that he fainted, but in a short time he revived so as to speak and requested me to take a flask of brandy out of his pocket and give him some. This I did, and it seemed to restore him quite rapidly; and as soon as he could talk I asked him where he was shot. He said he did not know, but his right leg was very painful. On examination I found that the ball had passed into the leg just above the knee. In a short time he was suffering most excruciating pain and could not stand a moment. After looking the situation over we came to the conclusion there was no other thing to do but to carry him down that steep mountain into the valley below where we could reach him with a conveyance; so we put our shoulders under his arms and walked along a piece with him, and all at once he asked me if I had killed the rabbit. I assured him I did; he then said, "Lay me down and go back and get it, for I want to take it home with me to show that you are a good shot."

So I went back and got the rabbit, and we continued our journey down, over the roughest place I ever saw, until we reached the low land below. Here we laid him down on the grass and placed my coat under his head, while my brother went for a horse and buggy to take him to his old friend, S. P. Brown, at Orland Village. After arriving there several physicians were called and every means known to the profession was used to extract the ball, but all proved a failure.

He knew I felt very badly over the accident, and he told his friends that I was not to blame; but that had he obeyed my request and kept his place on the left and not got in ahead of me on the right he never would have been shot.

The next day he was taken to Bucksport and put on the boat and taken to Boston to the best surgeon there, who found the ball had struck the bone and glanced up the leg and lodged near the groin. The ball was never taken out, but after several months of confinement to his house the Captain recovered.

Soon after this I moved to the Far West and heard nothing of Capt. Hanscom till 1878, when I saw he had been stationed at the Navy Yard in New York. I saw a very fine wild turkey in our market. I bought it and sent it to him, and wrote him a letter and asked him if he remembered the boy who had shot him in Maine. The following letter was the reply from him:

NAVAL CONSTRUCTOR'S OFFICE, Navy Yard, New York, Dec. 2, 1878. —Dr. W. O. Blaisdell, Macomb, Ill.: My Dear Sir—I have often wondered what had become of you, and until the reception of your kind note of the 25th ult. thought you might be numbered with the dead. I am very glad, however, to know that you are yet alive and I hope enjoying life. The ball in my knee troubles me but little—only when I take a violent cold, which happened for the first time in three or four years about three weeks ago; and now I am sound. But I have to thank you a thousand times, for the splendid wild turkey just arrived in excellent condition. It is a noble one and I wish I could be here to attend the post-mortem soon to be held on the body. I am to officiate as surgeon, my wife being coroner, hence you see, as the weight of either of us being over 200 lbs., the examination bids fair to be a thorough one. You will have our blessing at the most critical time—the commencement of the dissection. If you should come this way I hope you will come and see us. You will find the latch string out. Come and see. Thanking you again for your kindness, I remain, truly yours, W. S. HANSCOM.

Capt. Hanscom was placed on the retired list in 1876. He was a brave officer and a genuine companion. He died at Malden, Mass., about 1878, May peace rest over his ashes. W. O. BLAISDELL.

MACOMB, Ill.

THE ADIRONDACK LEAGUE'S HUNT.

THE first annual deer hunt of the Adirondack League Club will be held during the last week in September, beginning on Monday, Sept. 25, and ending Saturday, Sept. 30. Mr. A. D. Barber, manager of the Forest Lodge club house, will be the master of the hunt, assisted by the managers of the other two club lodges. The occasion will be one of the greatest interest, even to non-participants in the hunt, and special arrangements will be made at all the club lodges for the accommodation of members. The preserve of the club, embracing as it does over 200,000 acres of primeval forest, and protected, as it has been for three years, by the enforcement of the game laws and the stricter club regulations, has become probably the finest deer park in the country, as well as the largest. Probably at no time in twenty years have the deer been so numerous as now on the League's preserve. A clerical member of the club reports having seen five in an hour's trout fishing on Lime Kiln Creek, near Little Moose Lake, one noble buck refusing to leave the water until literally scared away by shouts and cries.

The League has enforced on its preserve regulations much more strict than the provisions of the game law. For instance, it prohibits entirely jacking or floating, and earnestly endeavored last winter to secure the enactment of a law prohibiting it throughout the Adirondacks. It also forbids the killing of does, and in the club hunt it is probable that a rule will be made that bucks shall not be killed when swimming in the water, thus giving the animal a reasonable chance of escape.

In this connection is given a photograph of a buck swimming for his life in Little Moose Lake. Seldom, if ever, has a photographer secured such a shot as this. Mr. George H. Johnson, of Bridgeport, Conn., a member of the Adirondack League Club, drove over twenty bucks to water before he secured an exposure, and this is the result of his perseverance.

It is the intention to start the hounds in the mountains to the easterly side of the preserve, the participants in the hunt being stationed at the various runways and watch points where the deer would be most likely to come within the huntsman's range. Applications for assignment, or for the entry of private hounds, should be made to Mr. Barber, at the Forest Lodge (Honnedaga, Herkimer county, N. Y.) at least a week before the beginning of the hunt.

The Adirondack League Club is the largest and most prosperous of the Adirondack proprietary clubs. It has over 200 members, each one of whom has a proprietary interest of one-five-hundredth of all the club property for each membership share he holds; the property being estimated at \$1,200,000. The club owns 104,000 acres in Herkimer and Hamilton counties, from which it derives an income of \$30,000 a year, thus obviating any annual dues or assessments on the members. The membership shares are now sold at \$1,200 each.

There are three handsome and well-equipped club houses, the most recent, Mountain Lodge, having recently been completed at a cost of \$80,000. Bisby Lodge, on First Bisby Lake, was acquired by the League on the consolidation with it last May of the old established Bisby Club. Forest Lodge, on Honnedaga Lake, is the oldest and best known of the club lodges. Besides this chain of club houses, which extend for twenty-five miles through the preserve, there are numerous club camps scattered through the preserve at the most popular fishing and hunting resorts.

A COLD WEATHER STORY FOR AUGUST READING.

It was in December. I had been sitting by the table reading *FOREST AND STREAM*, and after reading "Cumberland's" experience about our down grade from forty, I laid down the paper, took my glasses off, and as I laid them on the table noticed another pair I had discarded only a few days before. They had grown too young for my eyes, at least, I had to hold the paper too far from me, and then I had to get a pair two numbers stronger. I took a look in the glass. Sure enough, instead of being gray, my hair is almost white. Yet I could not expect it to be otherwise, for I have passed fifty-three of old Father Time's milestones, and am rapidly approaching the fifty-fourth. While I know I have crossed the summit and am a long way down on the opposite side, yet my love for sport has not even passed the summit, and probably never will.

I opened the door and looked out. It was snowing. The ground was white, and from the general outlook there was going to be a snowstorm. After getting a breath of the storm I again seated myself, picked up the paper and read until I was aroused by the clock striking 9. I laid away my paper and went to bed, but before going to sleep I made up my mind that to-morrow I would go and try an experiment—I would see if I could find a deer and kill one if found. With this determination I fell asleep and was lost to all cares until I heard the clock strike one stroke. As the clock strikes the half-hours I could not tell which one it was, but one thing I was sure of, I was not going to lie in bed and risk staying awake until the clock should strike again. I jumped up, lit a match and saw that it was half-past 4, a very good time to get up. After making a rousing fire in both stoves, I took a peep out to see how things looked. The snow was about an inch, weather mild, still snowing.

"Well," I thought, "if I do not kill a deer to-day I might as well dispose of my little .44 and confine the rest of my hunting to the scatter-gun."

After breakfast came the question of foot-gear. The snow was too shallow and moist for moccasins, and boots would be too heavy and slick; so I put on two pairs of

socks, then moccasins, then overshoes, then lace leggings, then a light duck hunting coat. When daylight came I started for a mountain to the north with the intention of being back by noon.

I walked pretty lively until I got to the base of the first hills, where there is good hunting ground, and soon I struck a very fresh track, which I followed for a short distance and determined it was the trail of a buck. I passed on, for I have no use for a buck this time of the year. I had not gone far when I struck another fresh track, which I also knew from its size was that a buck. This I left. Then I crossed through a fir flat, the wind coming from my right and the snow falling fast.

I had crossed the flat, and was nearing the base of the last mountain, when my dog Frank struck a scent; and from his actions I knew that it was either a hot track near by or a deer not very far off. I followed him very carefully and thoroughly looked the ground over. We had gone about 200 yds. when I saw a deer's head. The deer was lying down, and had not yet seen me. I carefully measured the distance with my eyes, pronounced it 125 yds. or so close to it that if I raised my peep sight to three notches and did not dodge or wiggle just before I shot, I could kill that deer dead in its bed. I raised my rifle and could see the deer's head through the aperture disc very plainly; after holding on for a second or two I fired. The deer stretched out in its bed. I expected to see another one or two get up but it was alone; it was very fat. I hung it up out of the reach of the coyotes. As I hang a deer up differently from any one I have ever been out with, it might interest some of your numerous readers to know how. For a small deer, anything under 80 lbs., I take a stick 9 or 10 ft. long, place one end near a tree, and the other end in the neck, where I cut the wind pipe off from the tongue, then I up-end it. The deer will hang straight; the birds can't peck out the hams; its hair

SHOT IN LITTLE MOOSE LAKE—WITH A KODAK.

By Geo. H. Johnson, A. L. C.

turns off the storm and rain; and it looks nice when you drag it in on the snow.

We started back with the storm, intending to follow down the gulch that puts into Mill Creek about one mile below the mill. I had not gone far when I saw where a deer had been running; it had got scent of me and cared nothing about sight. I follow on down the gulch, which at some seasons is a great place for deer to feed and lie, but I did not see a track until I had got within a hundred yards of the mill creek cañon; here I saw where two had come up out of the cañon and had kept up toward the mill. I followed them a short distance when I thought I saw a deer lying under a fir tree not more than 60 yds. away. I stepped back a few steps to see if I could get a better sight of it, when up jumped two and bounded off down into the cañon. That disturbed me but very little, for the cañon here was very steep and from 400 to 500 yards across. I stood still and began to turn up my peep-sight for 400 yds., as that was the point at which I thought they would first come in sight. After waiting a little while one stepped out and stood broadside, and I raised my rifle and fired. At the crack of the rifle the deer gave a big jump and went into a small thicket and stopped; I did not see the other; it kept down along the creek in the brush. After waiting a little while I moved down the brink of the cañon and soon could see the one I had shot at standing in the brush humped up. I knew then I had shot it too far back. I shot again, when out it went and started up the hill. I shot a number of times but could not get the right elevation. Pretty soon I saw the other come out of the brush lower down and go quatering up toward the wounded one, which was near the top of the hill.

I went up to the house, got my dinner and waited until 2 o'clock, then I went down on the opposite side of the cañon to where the deer came up the hill. Here I found some blood. I followed on and looked the ground over well; and soon saw the wounded deer lying in a small cañon about 400 yds. away. I slipped back and went down a small gulch, and soon saw I could get no nearer, so I raised my rifle and shot at her head and struck her in the ear. She straightened out. I then looked for the other one to get up, but it did not. I went back up the gulch a short distance and went around to where I could have a better view of the little cañon in which the deer was lying, and soon I spotted the little fellow lying in the brush. I shot at its neck, as there was some brush between me and its head, and broke its neck. I went down, dragged the little one near the old doe and hung them up high, thinking it might be four or five days before I should drag them in.

I had shot the old doe through the middle. The bullet had torn her liver very badly, yet she had traveled nearly one mile; and had I kept on after her she could have traveled for five miles. When I wound a deer, unless it is getting very late in the day, I do not follow them for a few hours, but give them time to get weak and to quit watching on their back track; it always pays.

LEW WILMOT.

LOOMIS, Wash.

SPORTSMEN AND FARMERS.

Editor *Forest and Stream*:

As you well know, anything pertaining to the preservation or protection of our game birds or fishes is of more than passing interest to me, I cannot refrain from penning a few lines thanking you for your views as expressed from time to time in your editorials. It has been my constant aim and desire to bring about a mutual good feeling between the sportsman and the farmer, believing, as I do, without a proper understanding between them the protection of our game and enforcement of laws becomes a difficult task. We in America are fortunate in having as a class sportsmen who are generally enlightened and reasonable men, who, while they go to forests, field, and streams in quest of game, always find pleasure in such surroundings as nature gives. These very surroundings tend to keep their heart in the right place and perpetuate a fellow feeling always conducive to good. As a rule they respect their neighbors' rights and property, whether it be in city or country. Should they be the so-called city sportsmen, they are as loth to injure the farmer's crops, fences, or other possessions as the farmer would be to commit a depredation were he in the city. We all know full well when on pleasure bent there goes a certain amount of license, still the sportsman rarely ever takes the benefit of it. The nature of his pleasure or sport requiring coolness and consideration, he is careful to do no wrong.

This fact I find is becoming better understood by the farmer, who himself begins to take an interest in preserving the game in close season. Where I am now summering, not fifty miles from a large city, several of the farmers, to oblige me, had their field hands plant stakes in the growing grain near partridge (quail) nests as a warning to drivers of reaping machines not to disturb the nests. This I think they will do again, as some of them, though men well advanced in years and rusty with the gun, take quite an interest in the occasional target matches I give them, which tends to make them proficient wing shots, and engenders a spirit of friendly rivalry. With such interest once aroused, I am satisfied will come their attention to the protection of game.

We want more farmer sportsmen, and should do all in our power to secure their help and cooperation. By placing *FOREST AND STREAM* and similar papers in their hands much good can be accomplished. I send my papers to a certain Grange in this State, and am told they show almost as much thumb marking as the agricultural sheets.

I appeal to the sportsmen generally to pay more attention to the farmer, use your persuasive powers and get him interested in this matter so dear to us. Once have him espouse the cause, our Legislature will not only grant our request for good game laws, but what is better still, the farmer will help us see that they are enforced. This once accomplished, greater still will be the pleasures of a day's outing with rod or gun. The suggestion I make, if worth working upon, would entail neither great expense nor labor, and should soon show results. Of course we must expect occasionally to come across a flinty fellow, headstrong and obstinate, who sees no good in game laws, believes in trapping and snaring game, and takes pleasure in ordering you off his few poor acres. Brother, pass him by with sorrowing contempt, he's unworthy of your notice, and fortunately such are few and far between; he has not the respect of the community in which he lives, and is no more to be likened to the average farmer than the market-gunner or pot-hunter is to yourself. I have enjoyed many pleasant trips afield in the Eastern, Middle and Southern States, rarely ever receiving other than courteous treatment at the hands of the farmers of whom as a class I think more than well.

MOUNT ROYALL.

Criticised the Alligator.

AN amusing incident occurred on Main street one day last week in front of the aquarium in the window of E. P. Wonsou's lunch room and cigar store. Three young ladies, one from New York, the other from Kansas and the third from Florida, were interested spectators of the young alligator, which, as immovable as the sphinx, lay on the window ledge basking in the sun.

After watching the saurian for some minutes the young lady from the South spoke up, saying: "The man who stuffed that alligator did not know his business. Why, I have seen thousands of alligators, and none of them in life ever carry their tail or curve their leg in that ridiculous fashion."

Just then the alligator gave a quiver, opened his capacious jaws, snapped at a fly, and as he slid into his tank the young lady from Kansas is quite positive he winked an eye. The young lady from Florida subsided.—*Gloucester (Mass.) Daily Times*.

Lake Grove Club.

THE Lake Grove Gun Club, of Suffolk county, L. I., has been incorporated. The trustees for the first year are William Imhauser and John E. Rayner, of Ronkonkoma, and Daniel B. Hawkins and Henry L. Gould, of Lake Grove, L. I. The club intends to maintain a hunting and fishing preserve and also to enforce the game and fish laws.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Early Snipe Again.

CHICAGO, Ill., Aug. 9.—This year, as was the case last year, the jacksnipe are down very early again. They are abundant this week on the Kankakee bottoms. The cause of their early migration is doubtless dry weather in the North.

## Horicon Club.

Advices from Horicon Marsh, Wisconsin, state that the redheads, spoonbills and teal have bred in such numbers that the prospect for good sport on opening day is very flattering indeed. On the upper club grounds Mr. Percy Stone, the hustling manager who has had both clubs in charge, has put up a substantial club house and made many improvements. The upper club is now in far better shape than it ever was before, and is as good as the lower club in all respects and qualities, so far as one can see. It has taken rapid work to get everything in shape, but the buildings will all be up and finished by Sept. 1. A goodly Chicago crowd will attend at both the lower and upper clubs.

## Utes Are Out.

This morning's Durango dispatches say the Colorado Utes are out and are willfully destroying quantities of game.

## Louisiana Deer.

Advices from Opelousas, La., to the Western office of FOREST AND STREAM state that several deer have recently been killed in the eastern part of St. Landry Parish. This is in the close season and citizens object to it.

## The Idaho Law.

Idaho swings away into line with her game law, a copy of which is mailed me by Mr. M. L. Twogood, secretary of the Boise Rod and Gun Club. Moose, caribou, mountain sheep, mountain goat and elk are protected absolutely until Sept. 1, 1897, a close season of a term of years. Hide or head hunting, solely, of any sort is prohibited. The hides of moose, caribou, elk, deer, antelope, mountain sheep or goat are prohibited to be bought or transported, at any time of the year. The open season on deer and antelope is Sept. 1 to Dec. 1. Certainly Idaho must be feeling the loss of her game. The wilderness is nearly gone.

## Unexpected Find of Wood Buffalo.

My Winnipeg friend, Mr. Thomas Johnson, writes me in regard to a most interesting piece of game news as follows:

"I send you a cutting from to-day's *Free Press* (July 25) which may interest you. Mr. Mundie is a personal friend and neighbor and the information is thoroughly reliable. The Mr. Secord referred to gets his supplies from us, and I shall see him in a few days and get full particulars. I expect to get a musk ox head from him."

The article from the *Free Press* will create the liveliest surprise in the minds of those best posted on the total buffalo supply. It seems that the Peace River herd was not yet exterminated, after all. The cutting reads:

Mr. James Mundie, a representative of the firm of Carscaden & Peck, who has just returned to the city from a business trip in the West, brings an interesting bit of intelligence concerning the wood buffalo of the North. Three years ago when Mr. Mundie was at Edmonton, on a trip similar to the one just completed, he purchased the head of a wood buffalo, and it was thought at the time that it was the last one that would ever be seen, as the species was supposed to have become practically extinct. Imagine, then, Mr. Mundie's surprise a week ago on again visiting Edmonton to find there one trader with ten heads and another with twenty robes, and to learn that over 200 of the animals had been killed by Indians this season in the Slave Lake and Peace River districts. In the lot which Mr. Mundie saw at Edmonton was the largest head he had ever seen, and the robes were of an exceptionally good quality, the hair being very dark and grizzly. The traders told him that some of the animals killed were of such a great size that the Indians were unable to turn them over, and had to split the carcasses in two in order to remove the robes. This is a point worthy of note, as it has always been stated by those supposed to know that the wood buffalo are smaller than the plain buffalo.

Mr. Secord, the trader, who brought in the robes from the North, had also in his pack 200 musk ox robes from the barren lands east of the McKenzie River. Another trader brought in 100 ox robes. Mr. Secord is authority for the statement that 300 wood buffalo robes will reach Edmonton this summer from Slave Lake and Peace River.

The question, where did those wood buffalo so suddenly come from? now naturally suggests itself. The Indians and traders had long ago given up hope of ever seeing any again. The theory, and a plausible one it is, which is advanced by the traders, is that the remnant of the large herds that once roamed through the prairies and forests of the far Northwest found a feeding ground secluded from the customary haunts of the Indians, and safe from the Winchester's of the hunters, and rapidly replenished their decimated numbers. Last winter the weather was unusually severe, and in addition to the terrible cold, heavy snowstorms prevailed, and thus the animals were driven southward in search of food, and wandered into the track of the Indians, who only too eagerly rushed among them and slaughtered them right and left. The heavy catch of musk ox is accounted for in the same way, they having been driven south from their feeding grounds in the barren lands by hunger. Raw musk ox robes are selling this year for \$40 apiece at Edmonton.

Mr. Mundie states that Mr. Secord's pack of furs was worth \$10,000. He had in the lot no less than 600 beaver skins, the finest that has ever been seen in this country. In fact, all the fur that is coming from the North this season is far better than ordinarily.

## Wild Celery.

Mr. Arthur G. Baumgartel, of Holland, Mich., writes me:

"Would you kindly let me know through FOREST AND STREAM where I could get some wild celery seed, what it would cost and about how much I should need to plant an acre or two as an experiment. Ducks are getting scarce here, and we want to do something to attract them. We are feeding them corn this fall. Have some wild rice here, but blackbirds get most of that."

"I think planting hemp for the quail a splendid thing, and several of us here will try it."

"We are trying to introduce the Mongolian pheasant here. Received six birds last week and they are doing well."

"If you could tell us where we can procure the celery seed we would be very much indebted to you. I saw an article on the wild celery by you in FOREST AND STREAM several years ago, but cannot find it now."

If Mr. Baumgartel will write to ex-State Warden J. Y. Wentworth, Fort Atkinson, Wis., or to Mr. Duane Starin, Whitewater, Wis., he can perhaps get the information he wants. These were the two I mentioned as gatherers of the seed. I do not know of any one else who sells the wild celery seed, and am not sure that either of the above is doing so now. Corn will be found a good feed for the marsh ducks.

I hope the Mongolian pheasants will do well. Our wise governor here, John P. Atgeld, has decreed them a dangerous bird, and vetoed a law protecting them. Hardly

any other governor will do likewise. Idaho has passed a law protecting the Mongolian pheasant.

## The Cost of Camping.

An odd advertisement is that of the Hudson's Bay Company (incorporated 1670, the advertisement says), which offers to outfit camping parties as below:

We will provide you with sufficient tea, coffee, bacon, ham, biscuits, bread, sugar, salt, mustard, vinegar, butter, eggs, pepper, corned beef, brawn, tongue, sardines, pork and beans, milk, tomatoes, marmalade, jams, rice, oatmeal, pickles, syrup, flour, lime juice, soap and matches to last one man for one week at \$3.75 for a party of four or more. We will furnish this, with the use of a camping outfit, including a tent, a canoe or boat, an axe, lantern, can of oil, small sheet iron stove, towels, corkscrew, can opener, teapot, coffeepot, saucepans, frying-pan, spoons, forks, knives, plates and cups for four men, at a rate of \$8 per week, per man. This delivered at the stations and with lowest possible transportation rates.

Certainly cheap enough.

## Where to Get Coyotes.

Some time ago I published the inquiry of Mr. Martin L. Cummins, of Washington, D. C., for some coyotes, stating that I had none on hand just now. The mail of July 22 brought me two letters about coyotes which I ought to have mentioned sooner. The first is from G. R. Rucker, M.D., surgeon to the M. K. & T. Railroad, Eufaula, Indian Territory, and reads as follows: "Mr. Martin L. Cummins, of Georgetown College, Washington, D. C., can probably get two half-grown coyote wolves from Hon. Sam. Grayson, Eufaula, Indian Territory. They are gentle, but make short work of all chickens in reach, and can make more noise than half a dozen dogs."

My other letter was from Mr. W. J. Dixon, of Cimarron, Kas., very well known to the FOREST AND STREAM readers. It says:

"CIMARRON, Gray County, Kas.—I have written to Mr. Cummins. Can get him an assorted lot of two coyote pups, tame, at \$5 each."

"Don't give away such snaps as this in future. I can at any time get skunks, rattlesnakes or such produce on short notice, with neatness and dispatch, and will give you 25 per cent. commission on sales. I fear that Mr. Cummins will have 8,000 coyotes offered him at 50 cents each, and this will ruin Gray county industries."

"P. S.—Tell us about the new Winchester shotgun."

The new Winchester shotgun is all right. Mighty good gun for a lazy man, and I think our friend Dixon would like it. But about the coyotes, I trust Mr. Cummins is satisfied. If any gentleman wants coyotes, or anything else, FOREST AND STREAM can get it for him, if it isn't in stock.

## It is There.

Mr. Ezra E. Howard, of Edgar, Neb., writes:

"Hope you are having a successful campaign for the FOREST AND STREAM at the Fair, for the paper ought to be in the hands of every man who shoots."

The campaign at the Fair is in the nature of a boom. The paper is already in the hands of about every man who shoots. There is one man down in Texas somewhere, I believe, who does not read it, but he is known.

## Marked Personal.

Mr. Wilbur DuBois, of Cincinnati, whom his introducing friend in his letter tersely describes as "one of our sort," paid FOREST AND STREAM a very pleasant visit this week while on a flying trip to the Fair. "Mr. DuBois would stay longer at the Fair," said Mrs. DuBois, who accompanied him, "but he doesn't want to subtract any time from his fall duck hunt."

The Fair is a great thing, and at first thought one would think its wonders would attract strongly all classes. But there are other things, and perhaps more useful things. For some time I have been saving a little poem taken from the *Atlanta Constitution*, and it seems to come in so pat here that I can't help subjoining it, with its lesson as to what and where one may learn some things he maybe couldn't learn even in the White City.

## WHEN A FELLER TAKES A DAY OFF.

"When a feller takes a day off—set his soul to loafin' round Where the hills climb up to heaven an' the rapid rivers sound, 'Pears like the world is newer, with its loveliness and light, An' his eyes are seemin' truer, and his heart a-beatin' right."

"When a feller takes a day off there is lots o' things to see; I kin hear the winds away off, jes' a-welcomin' of me; An' the violets peep so purty! an' the rose I usester miss, Feels the red a-rushin' round it, an' comes climbin' for a kiss."

"When a feller takes a day off—O he learns a lot o' things From the very waves a-flyin' with the music in their wings; From the hills an' from the valleys, where the dreams and dews is found—"

When a feller takes a day off, an' his soul is loafin' round!"

909 SECURITY BUILDING, Chicago.

E. HOUGH.

## A Minnesota Conviction.

SIoux CITY, Iowa, Aug. 8.—*Editor Forest and Stream:* In these days of disregard of game laws it is refreshing to hear occasionally of the conviction of some of the numerous offenders, and thinking that my fellow readers of your paper would like to hear of a successful prosecution, I give you the particulars as they recently happened at my home at Washington, Minn.

One of our town butchers recently took it into his head that a few prairie chickens would be a good addition to his stock of meats, and acting on that impulse shot a few in the usual pot-hunter style, I presume. Our local game warden, Mr. H. M. Twitchell, however, got wind of it, and a search revealed three plump chickens hidden in a tub of brine, their feathers removed to conceal their identity. Mr. Butcher claimed that they were tame chickens, but as we boast of many oldtime hunters and others as well who are thoroughly acquainted with the bird we had no difficulty in proving what they were, particularly as our warden purchased them. The result was a conviction and fine of \$15 for each bird, which with the costs amounted to over \$50—rather an expensive hunt, when you take into consideration the fact that some of our lady experts ate the birds. But it did not end there. Sir Pot-Hunter undertook to get \$50 worth of satisfaction out of the warden on the court room floor, but after making the sudden acquaintance of Warden Twitchell's fist, which by the way is a few sizes larger than a full-grown ham, he concluded to postpone the luxury. The next move will be a prosecution for resisting an officer while in the discharge of his duty, and by the time it is all settled it will, I think, prove a salutary lesson not only to this particular offender, but to others as well. This by the way makes the second conviction this year, the first

having been of five parties for spearing game fish this spring.

The evil effects of the blunder in the Minnesota game laws as regards ducks, geese, etc., are just cropping out; you may be aware that the omission of the word "except" reverses the law entirely, and now all day long we hear a fusillade on every lake and slough within hearing distance. We are quietly spotting the offenders, however, and several will receive a rude shock after Sept. 1, for we intend to prosecute every one of them under the law as it reads; those who respect the intention of the law, however, will not be interfered with. W. R. HALL.

## California Deer.

SAN FRANCISCO, July 31.—I have been on my annual fishing and deer hunting trip about 200 miles distant. I got a fair share of trout and three deer to my rifle. It has been illegal to kill deer in this State for two years last past. As a consequence the game is more abundant than I have seen it for over twenty years. No skins nor venison can be sold under our present statute, and the open season in most counties extends only six weeks. Under these conditions deer hunting ought to be good for many years. L. O. R.

## Chenango County Law.

In our issue of July 29 we printed the New York State law and the local county laws which up to that date had been filed with the Secretary of State. Two days later, July 31, Chenango county laws were filed, providing close seasons as follows: Skunk, mink, coon, March 1–Nov. 1; muskrat, May 1–Oct. 1. Partridge, squirrel, woodcock, Jan. 1–Sept. 15. Brook trout and brown trout, April 15–Aug. 1. Fishing is forbidden for five years in inlet and outlet of Genesautlet Lake. Ice fishing is forbidden in Guilford Lake and North Pond in Guilford.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## OFF-SHORE AT CAPE MAY.

OUT AT SEA, Aug. 1.—Cape May is a veritable happy valley for women and children and for the retired sybarite or the broker whose clientele "go broke!" This city by the sea goeth like the friend of Charles Lamb, "lame but lovely."

The Franco-German poet, Heine, that sad, bad, glad, quaint poet of Paris says that when the Persian armies had darkened the sky and Xenophon's 10,000 world-weary Greeks saw the sea, whose waves whispered to them of home, and the tired soldiers shouted in concert:

"Greeting to thee, thou infinite sea!

Like the tongue of my country ripples thy water;

Like dreams of my childhood seems the glimmer

Of thy wild, wavering, watery realm."

And in some such spirit did I welcome the Favonian breezes which bore Dan Dawson, the poet; the writer of this screed at sea, and Dr. W. B. E. Miller on a morning in August, in the cat yacht, the Dauntless, over the bounding billows and away to the banks, where failing to strike an east wind, the throbbing heart of the sea is sure to give up its piscatorial treasures in generous fashion.

"Polky" Schellenger is a character, and as he trod the quarter deck of the Dauntless he felt every inch a sailor, and he boasted, as is his habit, of how he had robbed the sea of every kind of a fish that wears a fin, as he had "scooped" on land every bird that flies with feathers, and had destroyed with his good double-barreled Parker all fur-bearing animals from a catamount to the big elk of the Yosemite Valley. Polky is nothing if not picturesque, and with his jaunty cap inscribed Dauntless, this nimble-witted piscator looked like a mild-mannered freebooter who had descended from the pirate kings. J. K. Polk Schellenger is a talker from Wayback in Talkerville. He told us what the great Democratic party had done for the country, and J. M. S. replied that he himself had once had an attack of that malady but believed it was not incurable, save in the case of Schellenger, who would never give up his faith unless a hole was knocked in his occiput, democracy taken out with a pair of pincers, and the skull carefully trephined. Polky consented to this view of the case and insisted that he "imbibed his present views political with his mother's milk."

Dr. Miller asked Polky what politics had to do with so many "busted" banks. Schellenger said that subject was a trifle too deep for a hot day, and he "must go and man the tiller and take a bird's eye view of the piscatorial situation," giving as a parting shot to Dawson his opinion that the Almighty made his communications only through a Democratic "medium." "Thas being the case," said the poet of *Lippincott's Magazine*, sotto voce, "I think the Almighty has been very quiet since the fourth of last March."

But it was agreed on all hands that politics should be tabooed, for as Polky expressed it, "we had come out for to fish."

Dawson is nothing if not poetical, and he chanted us some beautiful rhymes of his own, from "The Seeker in the Marshes and Other Poems," just published in Philadelphia, which seemed strangely in accord with the spirit of the day, which was a "very bridal of the earth and sky." Dawson was quoting from Byron, when "Hist!" cried Polky Schellenger, dancing about the yacht like a Cold Spring fiddler at a country dance. "See them white-winged gulls a-diving off yonder, they're eating the little mossbunkers that have been cut to pieces by the voracious jaws of the mackerel."

The Dauntless was headed for the slow-flying gulls and soon we saw a sight that thrilled the fisherman's pulses like the strains of sweet music at night, when Polky takes his Sunday girl to hear the opera of "Martha," on the Iron Pier. The swift-moving mackerel made the briny deep boil as they chased and cut up the inoffending flying mossbunkers. One line was out astern and two out-riggers, with their shining squids, leaping out of water like a live bait minnow. This bait would deceive "the elect,"

much more a greedy mackerel. As Polky, in the voice of Stentor, shouted "hard-a-lee," and the good catboat swung around obediently, each of us three pulled in a big mackerel, in spite of our three lines getting badly tangled. Then the fun begun in earnest.

Wherever we saw a flock of gulls we gave chase and soon had fifteen rousing good bluefish. Polky was jubilant. He said, "Boys, I can catch more fish, dive down deeper, stay under water longer and come up muddier than any man in Cape May county."

We dined while with sail down, and with cordage mildly creaking drifted on the throbbing, pulsing bosom of the sea, till there seemed a kind of human tenderness in the sympathetic air. It was a day glorious and fresh from the Maker's hand; such a day as the eye of faith first saw when the poet sings:

"The stars forever singing as they shine,  
The hand that made us is divine."

Tired of pulling in the mackerel, we turned our boat's prow toward the home of the black bass, off Angelsea, where we found a dozen boats yanking the toothsome sea bass galore.

It did not take long to fill a barrel with bass, and no good sportsman ever catches more fish or shoots more game than he can use. Polky was loth to leave. He enjoyed the scene and was wild over our good lunch, for Polky is an emotional animal. With a strong Cuttyhunk line out, with staunch Limerick hook on it, Polky swore he'd catch a 15ft. shark or the first red drum of the season.

While idly lounging on the deck admiring the big catch of the day, Schellenger's line began to whizz through his fingers like greased lightning.

"Hold him tight," said Doc. Miller.  
"No, play him for all he's worth," said the poet Dan Dawson.

But presto, as Polky leaned too far over the rail he fell into the briny deep, in thirty fathom water.

"Throw me a line," said the scared Polky, "I'll save this fish or drown," and he hung on to his hand line like grim death to a defunct Scipio Africanus. The fish was rapidly towing J. K. P. S., who is a good swimmer, off toward the bell-buoy. The sea was full of sharks, but we doubted whether they would bite a tough sinner like Polky.

A Swede boy and the writer jumped in the little boat and by hard pulling reached the swimmer in two minutes, still hanging on to his red drum, which proved to be a sixty-pounder.

We hauled Polky in by main force. He was dripping like a drowned rat. "I've eaten lots of fish," he exclaimed, "but I thought these fish would eat me this time."

All's well that ends well, and five happy and hungry fishermen came sailing home, after a jolly day's sport, while the harbor bar went moaning.

JAMES MATLACK SCOVEL.

## ANGLING NOTES.

### Of Interest to Fishculturists.

A FEW days ago I received a letter from an engineer in Austrian Silesia from which I am led to believe that something of vital interest to fishculture in this country may result. I give an extract from a translation of the letter, and it is quite likely that later I will have more to say about it in detail: "In an Austrian journal was published by Herr Max von dem Borne, a renowned German pisciculturist, an article entitled 'Results of Artificial Fishculture in the United States of North America,' in the form of a letter to which your name was signed. \* \* \* The first and most important question to be raised in the artificial culture of all fish is as to the proper food with reference to their kind, stage of growth and the purpose they are to subserve. This question so long unsolved, except in part, by all nations, I, by following further on in the line of the Frenchman Lugin, have solved, and have tested the solution as being good, cheap and practically feasible, and I desire to intrust it unreservedly to you. For America, with her extensive inland-water fishculture and her great interest in this subject, which has as yet not been developed to such a point upon the Continent, my method would have a priceless value." M. Lugin's method, in connection with M. du Roveray, as practiced at Gremaz, in the Department of Aix, in eastern France, is, in brief, a system of breeding daphnia, cyclops, fresh-water shrimps, etc., in countless myriads at merely nominal cost.

### Friends.

I do not know that I am blessed above other men in the number and steadfastness of my friends, but certainly I have a large number of very dear friends and very thoughtful friends. If anything comes to them in relation to fishing or fish that can be conveyed to me, I am quite sure to get it.

The president of one of our solid insurance companies once met me with the greeting, "I have been keeping something good for you for weeks. It is so good that I was strongly tempted to tell it at a public dinner at which I was a speaker, but I have kept it locked up for you." It was a fishing story, and I afterward told it in *FOREST AND STREAM*.

A staid banker in New York city, who looks when in his office as though he never heard of such an amusement as fishing, has been known to turn from the contemplation of stocks going skyward or downward out of sight, and send me a fishing item about a certain species of fish. He says it relieves the pressure for a time that seems to be driving him mad, and he knows that such items are always grist in my mill. These little attentions on the part of my friends are always appreciated, and I speak of the matter more because one of these good friends of mine has just sent me a page of the *Christian Union* containing an article by the "Spectator." My friend says: "Here is some word painting that will delight your soul and take you on the wings of thought away from the heat and worry of town to the balsam-scented woods and the wave-lapped shores of a trout lake." Why is it that we are critical? Why not take what the gods send, and not kick because of one or two false notes?

Now the "Spectator" has given us a most charming bit of word painting, as my friend says, and I enjoyed it, enjoyed it greatly, and thought that the man who writes so fascinatingly about fishing should at once set about becoming a fisherman himself, for it is very apparent that he has it in him to become one. How do I know that

one who writes so feelingly of angling is not an angler? Because of the earmarks. "One afternoon early in July the 'Spectator' asked leave to accompany a fly-fisherman on his trip along the shores of an Adirondack lake. Permission was granted, but not till he had been duly warned that those in a fisherman's boat must have patience, and must be skilled in the difficult art of sitting still. Trout cannot be treated like bullheads or chubs." That alone is a confession that the writer is not skilled as an angler, but the following extracts are just as convincing: "We were moving slowly along the shore, and as we went the fisherman threw his long line and catgut leader toward the bank. \* \* \* At regular intervals the long, slender fly-pole sawed the air with deliberate and stately motion and the flies fell close to the boulders and into water that lay cool beneath the shade of overhanging branches." Several times the trout rose to the bait and one nearly a foot long was hooked. \* \* \* Finally (the boatman) would reach forward with the landing net and slip it behind the trout with so dexterous and smooth a motion that the shy fish attempted no struggle till all struggles were too late."

Where the idea originated that the silkworm gut leaders used by anglers were made of catgut I never knew, but I have seen it so stated on one or two previous occasions. The mere fact that a man called a fly-rod a fly-pole would be to most fly-fishermen conclusive evidence that he who used the term was not a fly-fisherman, and I would not require the further evidence that rising to a fly was called rising to the bait. To be sure a fly is a lure, but in the nomenclature of the fly-fisher a fly is a fly, simply, and never under any circumstances is it a bait, for in this country we do not practice "dapping," "bibbing," or "daping" with the natural fly, as is done on the other side of the big water. A fly is a counterfeit; a bait, as a rule, is real. If a trout is netted from "behind" it must be netted tail first, and while small trout may be safely netted tail first it is not a practice to be commended, for from habit an angler might try to put a big fish tail first into a landing net and so lose the fish.

A fish moves forward in its efforts to escape, not backward, and many good fish have been lost through trying to net them tail first. When the tail touches the bottom of the landing net, if the fish has life left, it will spring forward, and, aided by the purchase obtained by the tail against the net, the chances for escape are increased. Head down in the net the action of the powerful propeller tail only drives the fish more certainly to its fate. My friend who sent me the page from which I have taken the extracts that I have criticised, did not see what I did in the article, for he is not a fly-fisherman, and perhaps it would be as well had I seen nothing to criticise, for the article in its entirety is excellent and written by one who, as "Nessmuk" used to say, evidently "loves the blessed woods," and I am sure that he requires only practice to become a fly-fisherman, and then he will say nothing more about "catgut leaders," "fly-poles," "netting trout from behind," and an artificial fly will not then be a "bait."

A. N. CHENEY.

## NEW HAMPSHIRE FISH AND GAME.

MANCHESTER, N. H., Aug. 9.—*Editor Forest and Stream:* Noticing that your correspondent, A. N. Cheney, stumbled over the words "alleged," used in one of my communications in connection with Lake Sunapee as the home of bass, and Newfound Lake where trout are "said" to abound, I will say to our new friend that in neither instance are the words used in a slurring sense, or to sully the reputation of either sheet of water as fishing grounds. From my personal experience, and from anything I had ever seen, I could not refer to them otherwise, whereas if my luck had been like Mr. Cheney's, or the man of whom he speaks as taking forty in a day from Sunapee, or I had ever seen samples of the above-named fish that had been taken from the waters in question, the words as quoted would not have occurred. Two years ago last month a friend and myself visited Sunapee Lake, stopping at the Forest House, Blodgett's Landing, arriving there Tuesday morning, with the intention of spending the balance of the week bass fishing. We fished till dark in a pouring rain the first day, begun again Wednesday, at daybreak, having one of the best of guides, and with the exception of lunch time did not stop a moment till dark, when our catch for the two days amounted to one bass, too small to evade the law, and I presume he is there yet. Nothing else troubled our bait, which consisted, in turn, of helgramites, shiners, crickets, grasshoppers, angle worms and frogs. Thursday we shook Blodgett's dust from the first boat. My experience at Newfound is practically the same, without the one small fish. A friend of mine in the city spent eight days constant fishing at the latter place, at the opening of the trout season, without a strike. Yet I have no doubt the two places are good grounds for the kinds of fish with which they have been stocked, that pleasing results can usually be obtained at any of them, and good sport also, but that they are as good as their most interested friends claim them to be, unfortunately my limited experience, and that of my acquaintances, has not prepared me to affirm, hence I spoke of them in my letter as I knew them.

Fish and Game Commissioners W. H. Shurtleff, W. H. Griffin and Nathaniel Wentworth visited this city the 4th inst. to make arrangements toward forwarding the new fish hatchery, the production from which is to be used for the benefit of this county, and is expected to reach a million or more young trout each year. The preserve is to be located on Hon. Perry H. Dow's place, has an excellent water supply for the purpose, and brook trout fishermen are looking for happy results from this new enterprise by the State in the near future. They promise to produce from six to eight million fish per year for distribution in the brooks of the entire State. Another thing the Commissioners propose to do, quoting from Colonel Shurtleff, "is to colonize some game birds here. Ruffed grouse are becoming very scarce, as some insect is destroying them. We are going to secure a few Chinese grouse, and put them where we can watch them. They are a beautiful bird, larger than a prairie chicken, and are extremely gamy. They are secured from Oregon, and thrive finely on the Pacific coast, and I don't see why they shouldn't here."

Reports from all parts of the State indicate that game birds and gray squirrels are unusually plentiful, thus assuring the gunner plenty of sport after September 1, when most sportsmen will gladly lay aside rods and take up their guns, which have been quietly resting in hot attics or dark and remote closets, remove the rust prevent-

ive, and limber them up ready for use. The fishing season, heartily welcome as it is, furnishes intense enjoyment, and filling in for sportsmen a segment in the circle of the year which, without it, would be an entire blank in their line, can never be more than a weak substitute for the pursuit of game. The two branches of sport compare very much as a beggar and landlord do. If by using all the coaxing, bait, allurements, etc., at your command the fish chooses to become your prey, it is your good luck, while on the other hand he may as easily, and often more likely will turn up his nose and bid you and your enticements "good day," which is luck of another character. Whereas, after September 1, if with gun in hand you get your eye on a choice piece of game and it does not come to your call when properly extended, you have only yourself to blame, unless you can shoulder the failure off, as it is sometimes a relief to do, on to your innocent gun or its ill-prepared contents, which in either case is productive of more satisfaction than is experienced in seeing a nice fish swim away with a look of disdain in his eye. The all-round sportsman who does not very much prefer gun to rod, I think, is a rarity.

I have often wondered why it is that in visiting an unfamiliar pond, lake, etc., whoever is guiding or directing you, from whatever point of the compass you approach, the good fishing grounds are on the opposite side, necessitating a long pull in a boat, and the boat, my experience dictates, my memory suggests, is not always built like a duck, as though intended for use on the water, but more like a dump-cart; sits on the water like a washtub, keeps its course as easily, is just about as sensible a thing to pull, and usually has a porous bottom. This seems to be the inexplicable fate at times of some fishermen, but being an uncomplaining class such things all pass for sport.

W. C. Hubbell hooked a 14lbs. female landlocked salmon at Lake Sunapee the 4th inst. Said to be the largest female salmon ever taken there. Sylvanus Ingalls assisted in landing it. George Woodward a short time previous took two of the same species weighing 8lbs. and 10lbs. respectively.

Dr. George H. Fowler, of Bristol, is still at his old tricks. In five days at Newfound Lake last week he captured five trout, one each day, the two largest weighing 15lbs. and 20lbs. The latter went to Boston friends. The man has not yet appeared who can touch the Doctor's success on Newfound. His position is secure at the head.

I wish to doff my hat to "Von W.," of Charlestown, for his kind hints and criticism on Sunapee salmon and bass.

PAYSON.

## ESCAPE AND CAPTURE.

### Editor Forest and Stream:

A late article in your paper entitled "Escape and Capture" puts me in mind of a rather remarkable experience I had this summer.

While fishing on the waters of the Culasagee River, in Macon county, N. C., during a blinding rain storm, I made a cast close under a fall and hooked what promised to be a very fine fish. The pool at the foot of the fall was about 40yds. long, but was partially divided into two, near the foot, by a ridge of rock that came within 6in. of the surface. The volume of water passing over the falls made a very strong current the whole length of the pool, and the very narrow ledge of rock, close up under the falls, from which I struck my fish, made it a very difficult matter for me to handle him to my notion. After a very fierce fight, in which my main object was to keep the fish from getting over the ridge that divided the pool, I found that the strength of the water added to that of the trout was too much for my light tackle, and I was forced to allow him to cross the bar. During the fight he had leaped clear of the water two or three times when I discovered that he was hooked on my top or "bob" fly, which I knew to be a brown hackle that had done a good deal of service and could not be relied upon. Just as I expected, as soon as he got over the ridge he made a dive for the bottom, when the sudden slackening of the line told me the sad truth that he was gone. It is useless for me to tell fishermen what my thoughts were at that moment.

I had hardly time, however, to formulate an address to him before a savage tug at my line told me the father of the trout family had taken a notion to sample my flies. It soon became evident to me that I had now hooked no common fish, and that if I was successful in capturing him I would have something to brag about round the camp-fire. Now commenced a fight the equal of which I have never experienced in fishing for trout. For about half an hour he surged back and forward in the depths of the pool, but very strangely never coming to the surface so that I could get a glimpse of him. By slow degrees I worked my way along the ledge of rock on which I was standing down to the ledge that divided the pool, gaining line inch by inch. At last my labors, aided by my tough little rod, appeared as if they were to be rewarded. Slowly but very reluctantly the fish began to come toward me, and at last a flash of silvery light under the water gave me my first sight of him. With a sweep of the landing net I had him safe.

But what was my surprise when a glance revealed the fact that, instead of the monster that I had fondly thought him to be, he proved to be a rainbow trout that would not weigh more than 1½lbs. The mystery was soon explained by my discovery that he was firmly hooked close to the tail, hence the fierce fighting he put up. But surprises were not at an end, for when I looked closer I found from the fresh scar on his mouth that he was the same fish I had lost shortly before. I suppose that when he broke loose, in diving to the bottom, the released line, meeting him with a sudden jerk, had planted the tail-fly in him. Anyhow, if I did not get the father of the family, I had had about three-quarters of an hour of as wild sport as any angler need want.

This stream was planted with the rainbow trout some 5 years ago through the enterprise of Mr. Henry Stewart of Highlands, N. C., and they have thrived so well that now about 75 per cent. of the fish caught for 10 miles below where they were planted belong to this breed. Some very fine fish have been caught, weighing as high as 3½lbs., and that was two or three years ago. I have noticed, however, that as the rainbows increase in numbers, the native speckled trout seem to decrease, and I would like to know if the one is destroying the other. Probably some of your correspondents might be able to answer this.

The fishing has been very fine in western North Carolina this summer.

W. M. BROWN.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## The Chicago Fly-Casting Club.

CHICAGO, Ill., Aug. 11.—Last Wednesday afternoon Mr. Waters and myself were trying to get even with the world by taking a cup of coffee at the Guatemala building, on the south shore of the "north pond" of the lagoon at the World's Fair. This is just opposite the Walton lodge, and as we sat we could see the members at work in their casting, this being the tenth club contest. It was Waltonian day, but the Waltonian tournament was postponed. From our position we saw the best of the work done. The first caster, Mr. Isgrigg, we mentioned to each other as being of pretty good form in his work, and we liked his rod, which seemed quick and steely. Foot by foot his fly crawled out, and we saw it go past the 70ft. float, and we knew, even at our distance, that he had done good work.

Next we recognized Mr. Babcock at the score, and if he will forgive us, we thought he had a little too much arm push to just suit us, though he seemed to get out some line. Then we recognized also Mr. Goodsell, and we criticised him some, and thought his rod was too slow in its action, and allowed he couldn't cast a little bit.

Then we went over to the club house and found that Mr. B. W. Goodsell, who we thought couldn't cast, had won first for distance, retaining the club medal for distance he won last week. Mr. Goodsell cast 75ft., and we found the slow rod he was using was a heavy tournament Kosmic, which wasn't particular how far it cast. Mr. Isgrigg had out 75ft. with his rod (the make of which I could not learn), but he failed to recover his line. Mr. Isgrigg, however, won the club medal for accuracy and delicacy, taken last week by Mr. W. H. Babcock. Last week was Mr. Babcock's busy day, for he also won then the medal for accuracy and distance in bait-casting. Mr. W. E. Wilkinson won the latter this time.

## A Congress of Fisheries.

On the grounds we met Capt. Collins, Chief of Fisheries, who said, in regard to the proposed meeting of anglers and fishermen next month:

"I can now announce definitely the dates of Sept. 19 and 20 as established for the Congress of Fisheries. This I have called in the interest of all sorts of legitimate fishing, fish protection and fish propagation. We hope to have it not only a collection of scientific men, fishculturists, etc., but also a collection of anglers. I hope all clashing interests may be united for that date and this purpose, and trust that harmony and good fellowship will prevail to make the occasion one long to be remembered by all taking part in it. This is a season of congresses of all sorts, and we want to have one right here as good as any. In view of the probable importance of this meeting, the opening tournament of the Chicago Fly-Casting Club will be held then."

## Possible Looseness of a Screw

By the way, FOREST AND STREAM had received no notification of this club meeting, although its representative is a duly paid up member of the club. My friend, Mr. Davidson, the secretary, however, tells me the notice was mailed, and I believe him.

There was a tournament committee meeting last week, however, of which FOREST AND STREAM of course received no notice. That would be asking too much courtesy. In regard to some of these things I am inclined to think there may be a screw loose. Let us see.

Last week's committee meeting was called by the president. The president had no notice sent FOREST AND STREAM or its representative, though the latter is a regular paid member. All members were excluded. It was a star session meeting. But it leaked.

The president is Mr. Strell. Mr. Strell is employed on a Chicago sporting paper. That paper goes to press Tuesdays. By calling meetings for Monday evening or Tuesday before evening the president, in his capacity as employee of the Chicago paper, could (if FOREST AND STREAM had no more resources than the Chicago paper has) either come out a week ahead of FOREST AND STREAM with each club report or cause the latter and better paper a little trouble. The records of the club will show that the president, in his capacity as employee of the Chicago paper, has always called his meetings with one eye on FOREST AND STREAM's publication day. In other words, he has constantly used an official position for business purposes. In journalism this is considered unprofessional. I do not know of any other paper which would do that. I do not now happen to have among my friends a newspaper man who would do that. It is out of form.

## Couldn't Beat Her.

But beat FOREST AND STREAM? Oh, no; not in a thousand years. Not even by a specially guarded star chamber session.

FOREST AND STREAM, neither East nor West, can be or will be beaten on any matter of news it wants to get. There is no concern about that. It takes newspaper work to do that. You can't beat her. But that isn't it.

## Can Beat the Club.

You can't beat FOREST AND STREAM, but you can hurt the Chicago Fly-Casting Club. You can hurt it, damage it, practically destroy it, make it a by-word and a term of scorn among gentlemen. This can be done easily. It can be done by conduct such as the above by any one of its officers. It can be done by prostituting the interests of the club to individual interests.

Now, I have the story of this last committee meeting, which belonged of right not only to me, but to each and every member of the club. It would only harm the club to publish it verbatim. I would rather not revert to it at all, but fear I must. In brief, the president, for what reason I do not learn and cannot imagine, took occasion to state, from his position in the chair (though whether in his capacity as club officer or paper employee I cannot say), that he "did not wish to be compared in any way to the FOREST AND STREAM representative; there was no comparison; he did not compare himself in any way with the FOREST AND STREAM representative."

Thanks. But now, after all, when one calmly thinks the thing over, isn't that one of the things one would rather have left unsaid? For the sake of the club, isn't that one of the things far better left unsaid? Even if it had been the case—which it never was—that the FOREST AND STREAM had ever begun the odious game of compar-

sons personal, would it not have been far better, for the club's sake, to leave such boyish foolishness unsaid, whether in regard to this member or any other member, whether at a star chamber or any other session? Would it not have been better, if the president in his personal capacity felt that he could not lick the FOREST AND STREAM man in a news way or any other way, to wait till the latter came under the window, and then pour water on him, or call him real mean?

FOREST AND STREAM will not scabble in the dirt for pennies with any one. It will get what news it wants to get, and cut out news it does not think useful for its purposes. It will be always a newspaper more than able to hold its own, but it will be a newspaper conducted in a gentlemanly way. If I should set about it, I could, perhaps, in my journalistic capacity, say as unkind and harsh things as the president of the Chicago Fly-Casting Club did in his presidential-journalistic way. But I do not think it right to do so. One of the worst results of that would be still further damage to the best interests of the Chicago Fly-Casting Club, an organization which, while its late mistakes and misfortunes have been numerous enough, is still a body potential for usefulness in a worthy line of sport. The club numbers over fifty members. Perhaps among these a wider interest could be created if a wider and less jealous disposition were shown on the part of a few. This club, in common with all other sportsmen's clubs in this day of dignity and worth in sport, owes to itself a dignified purpose and a living up to it. It owes to itself dignified and parliamentary meetings, not egotistic and wholly unparliamentary ramblings from the chair. It owes itself a dignified and hearty comradery, not bickerings and jealousies, at its field meets. It owes to itself the keeping of every promise it makes. First of all, it should make to itself the promise of generous and chivalrous fellowship, indoors or out of doors, in competition or out of competition. The world is old, and will grow older. It is not all on our shoulders. Let the other fellow live—especially if he's going to do it anyhow.

That's the way to make a good club, a club whose news the public will like to read.

## What They Read.

Meantime, the members of the club, and everybody else who wants the angling news, here and all over the country, and also the literature of the kindly sport treated in an intelligent and modern way, continue to read FOREST AND STREAM, which has set its standard high, and which keeps the promises it has made itself.

FOREST AND STREAM has a larger circulation in Chicago than any sporting paper published. It is more quoted. It is more read. It is more respected. It is more believed.

## "Along the Line."

Aug. 12.—The Wisconsin Central Railway has this season issued a neat and useful angling hand book, which it calls "Along the Line." The information is brief, but is based on actual knowledge of the spots named. All the old favorites of the Fox Lake system are named, and then the scene shifts to the far North and the pine woods country. The hardly known chain of lakes near Fifield are mentioned. To read the little book makes one a bit uneasy for a fish. It is thought to be more reliable than the ordinary railway fanner.

## Low Waters.

The Illinois, Kankakee, Fox and other rivers hereabout are at exceptionally low stage of water. Fishing has, however, been good of late. Mr. R. B. Organ took seventeen fine bass on the Kankakee last Saturday, near Mak-saw-ba club. The small-mouths are just beginning their campaign in Fox River district, so says our friend Mr. Kenyon, lately back from a week's trip. E. HOUGH.

909 SECURITY BUILDING, Chicago.

## MICHIGAN, MY MICHIGAN.—III.

## "Birds of Michigan."

LANSING, Aug. 1.—Prof. Cook, of the Michigan Agricultural College, has just published a most excellent little book entitled "The Birds of Michigan." The book is well worth a place in the library of any of our bird-loving people. It is the only work that has been published for many years upon this subject that especially interests Michigan ornithologists.

The bird fauna of Michigan seems to be constantly changing, and it requires close application and abundant opportunity for the study of bird life to keep fairly well posted upon the subject. Prof. Cook has been an enthusiastic student of ornithology for many years. He is a lifelong resident of our State, has been a close and accurate observer of bird life since boyhood, and in his work at the State college has probably had better opportunities for the study and investigation of our birds than any other ornithologist in Michigan. The book is published as Bulletin No. 94 of the Michigan Agricultural College, and is creditable alike to its able author and to the State. As I understand it, the book is not for sale; but a few copies have been published, and they are intended for purely scientific work. It is to be hoped that Prof. Cook may see his way clearly to publish an edition that will be placed on sale. Such a work is of great value and the demand for it would be large.

## At Niagara River.

Mr. A. H. Whitehead has just returned from a fishing tour to the mouth of Niagara River. His fishing partner was Mr. Charles Clark, of Buffalo, N. Y. Mr. Clark often visits Lansing and when he is here the feasting and festivities at the Whitehead cottage, at Pine Lake, are something to be long remembered. The two lone fishermen first caught their minnows, or chubs, in the rapids in the river above the falls, and they claim that the minnow fishing is the most exciting part of the entire business. The water runs so swift that it is all one's life is worth to anchor the boat in the stream and fish for minnows. The small-mouth bass were plenty and bit well. They are more gamy than our Michigan small-mouth and fight the battle to the end. Lake trout of five to ten pounds weight would now and then jump out of water near the boat, but they refused to take the bait. The small-mouth bass were taken in forty or fifty feet of water, and when they took the bait they started for the surface and would often turn a summersault in the air before striking the water again. The two, fishing from the same boat, caught twenty-three small-mouth bass Monday evening. Ducks, locally known as cowines, were plenty on the river. The ducks seemed

to be well contented and at home, and quite tame. Mr. Whitehead shot a cormorant, or water turkey, at Pine Lake this spring.

## Fishing with Floats.

Pap Fillmore had it put to him rather strong that his fishing with tin can floats was a direct violation of the Michigan fish law. Pap don't like to be known as a law-breaking fisherman, so he called upon Attorney-General Ellis for authority in the matter. The attorney-general has had occasion to look up the law very carefully, and he gives it as his opinion, that there is no law that prohibits fishing with floats or bobs, in any of the waters of Michigan. The last act of the fish law of this State, in no way applies to fishing with floats or bobs, which are not in any way connected as set lines. The attorney-general has published an opinion upon this point, in the case of Major Winans, who was arrested for fishing through the ice with bobs, in a small lake in Livingston county, and that method of fishing was held to be strictly legal. Game Warden Hampton is an attorney, and according to his views of the fish law, the fishing with any line fastened, or set, or tied, and not constantly held in the hand, whether attached to a rod fastened to a boat, or stuck in the mud, or fastened between stones on the banks of a stream, would be legally understood to be set lines. It was decided that the game warden was not correct, and Major Winans was declared not guilty. A set line as the law intends, is a line with a number of baited hooks attached, and the line then placed in the water and fastened at each end, and intended to be left in the water for some length of time and not requiring the immediate attention of the fisherman. It was held that to fish with a tin can, or a bottle, or cork, or with any other floating substance, whether fastened to a line or left to float in the water by itself, was not a violation of the law. With the attorney-general as his backer, Pap Fillmore feels that his case is fully vindicated, and that he is not liable to be arrested as a law-breaker, for fishing with tin can floats. JULIAN.

## SOME MICHIGAN FISHING.

BASS fishing around Lansing just at present is like a faded flower; and he is a lucky man who can catch a string of the beauties. Pine Lake, where such large catches were made during April and May, has yielded very few up to date, but they are biting a little freer at present than the past eight weeks; and in two or three weeks, bass fishing will be good again.

At Grand Ledge, fly-fishing for bass is all the go, and there large strings are caught thus in that manner.

Perhaps the most lucky among them is Geo. Coryell, who may be seen any day with rod and flies whipping the river below the Seven Islands; it is said by those who know him that he would rather fish than eat; it certainly looks that way.

There are fishermen who fish in reality and others who fish at home. Lansing has one of these in the shape of a doctor, who, by the way, has everything a sportsman wants, and who is as fond of talking and showing his tackle and guns as one who spends his time in camping. He is a great lover of all kinds of outdoor sports and never tires of talking about them; he reads all the papers that treat of sporting life, and FOREST AND STREAM is his favorite. A camp that could have the doctor as one of the party would never be lonesome, for he is one of the jolliest of the jolly.

Mr. B. Sumner and the writer have made several trips in a folding canvas boat from this city to Grand Ledge, which by water is about twenty-five miles; and success on the road was very good, but as the water is rather low, there will be no more trips until fall, when the river will have risen so as to allow the boat to float without taking off the canvas from the ribs. There is no fun in carrying a boat fifteen out of twenty-five miles, even if it does fold up.

Many Lansing people are camping at the World's Fair or at Park and Pine lakes; many others who would like to, cannot, for their cash is camping in banks which have closed their doors to the public.

Pike (or as known here, pickerel) fishing is very good; and it is the only fish that is fit to eat caught in Grand River around Lansing, for now the bass are grubby. Since all the severage from the cities above Lansing and of Lansing empties into the Grand, and the water is filthy, it is a wonder that the people on the river below Lansing are alive, for the filth lies half the length of the dam, is a foot thick in places, and the stench is awful. Whether it is this or the use of bombs to kill fish is not known, but there is any amount of dead fish along the banks above Delta. Jason Nichols says he is going to enforce the law in regard to illegal fishing; and that is just what the sportsmen want done. MONTE CHRISTO.

## Salmon in the Connecticut.

HOLYOKE, Mass., Aug. 12.—I think the dream of Mr. Charles Hallowell, of salmon once more running up to their old beds on the Connecticut can in a measure be realized, if he will do the writing and you the printing, and help, as you so well know how, with the voice of FOREST AND STREAM. It is a fact which seems unknown to the public at large, that there has been a large number of salmon in the pool below the Holyoke dam every summer for several years. Three years that I know of they have been there. This year they seemed as plenty as ever—nice large ones. Now, what is wanted is a way for the fish—not a "fish-way," for we have that now. The Water Power Co. are to build a new stone dam here. I think, if a few of the many able writers for the FOREST AND STREAM will ask, and keep on asking, and then ask some more, that we will have a way for the salmon to get to the old bed at Hadley. Once get them over the dam here and all dams above will soon be fixed. I think it worth trying for. RAYMOND.

## Canadian Salmon Fishing.

TADOUSSAC, P. Q., Canada, Aug. 2.—Salmon fishing with me this season has been a failure, all on account of such a heated term such as I never experienced in Canada. Thermometer from 80° to 90°, temperature of water 73°, at which point or even much below salmon will not take a fly. WALTER M. BRACKETT.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## BOSTON AND MAINE.

BOSTON, Aug. 14.—It is not very pleasing to the genuine fisherman, the angler who loves angling in reality, to reflect that his favorite trout waters are to-day the lounging place of the vacationist, the dawdling fisherman, who fishes only because it is fashionable. But such is the case. Nearly all of the celebrated trout waters of Maine and the Provinces, not under the control of anglers' clubs, are to-day overloaded with vacationists and would-be sportsmen. This sort of vacation is becoming more popular every year. Even the more distant and inaccessible resorts are crowded with visitors of the vacation stamp this year. They fish a little because it is the thing to do. The most of the men are armed with rifles and shotguns, and alas for the fate of some of the game birds and game animals! There is far too much shooting out of season. The hotel and camp keepers wink at this. Their guests shoot, and because they are their guests they are not complained of. The guides make no complaint, if they are employed, and it is only by the employing of guides that these vacation sportsmen can injure the game much. Deer are more plenty than ever in Maine this year, but it is a fact that they are not as plenty around these resorts even though in the depths of the forests and far from settlements, as they are nearer the settlements, and in localities where these vacationists do not go. Deer are being seen in the fields and in the near vicinity of settlements to a most remarkable extent this season. The only conditions seem to be that there are woods and mountains in the near vicinity, and that the residents have not killed them off or dogged them out of the country. The usual silly items are beginning to appear in the Maine papers, about Mr. So-and-So's beans being destroyed by deer, or that the oats of Mr. Thus-and-So are all eaten up by deer. Usually these items are followed by the suggestion that the local game warden be called upon to take care of his deer. Such nonsense does not have much weight, beyond the showing of the sentiment that prevails against one of the most wonderful game supplies that exists in the world—wonderful because it has sprung up where there was next to nothing only a few years ago, for the simple reason that dogging and crusting and shooting in the midst of the breeding has been partially stopped by a code of wholesome game laws.

Ex-Governor John D. Long, of Massachusetts, and party is at the Rangeleys for a short vacation. The Governor was reared in Oxford county, in that State, and the love of the line and rod was a part of his early education. He takes a fishing trip or two every year. Governor Russell, of Massachusetts has been taking a yachting trip with Mr. Bayard Thayer, the owner of the beautiful Birch Lodge camps at the head of Richardson Lake, in Maine. Mr. Thayer has been in Japan all of the season till of late. Doubtless he, with his friends, the Governor and Mr. Herbert Leeds, will make a fall trip to the old sporting grounds. Mr. and Mrs. C. E. Kennard, Master Ralph Kennard and Miss Edith Kennard, with Mrs. Col. Matthews, all of Boston, are on a trip to Eustis, Me., where they will take in Tim Pond and Round Mountain Lake. Mr. and Mrs. F. S. Dexter and Miss Addie Schirmer are about starting on their annual trip to Kennebec. They have spent several weeks of August and September at that lake for a number of years. Mr. Dexter is now a resident of Dixfield, Me., but was formerly well known in the paint and oil trade of Boston. Mr. Hal. Haskell, son of E. B. Haskell, one of the senior proprietors of the Boston Herald, with some of his friends will soon start on a trip of some weeks to Camp Allerton Lodge, on Mooselucmaguntic Lake.

A funny story of a big trout comes from the Maine papers, and whether true or not, it is too good for the FOREST AND STREAM to lose. It is about a Canadian Frenchman who has lately taken a big trout at the Upper Dam. In telling the story the Frenchman said: "O sacre! He was a dinger. When me cut his head out and his gut off, and throwed the rest away, he weighed 10lbs. and 13in. He'll nearly broke me back off!" SPECIAL.

## NEW CALIFORNIA FISHES.

A SPINY box fish was captured near San Pedro and has been described by Prof. Carl H. Eigenmann in the *American Naturalist*, and afterward, in the Proceedings of the National Museum. The specimen is now preserved in Washington.

Dr. Jordan has described in the Proceedings mentioned, a new variety of the red-throated trout which he calls *Salmo mykiss aqua-bonita*, the golden trout of Kern River. The name *aqua-bonita* is derived from that of the Agua Bonita Falls, near which the type specimens were found.

The golden trout is a very handsome black-spotted form with a broad scarlet band along the side, the back olive, and the belly light golden. There is no crimson blotch between the branches of the lower jaw as in other varieties of the red-throated trout. The dark spots are limited chiefly to the tail and the hinder part of the body.

Dr. Jordan believes this is the same trout described by Mr. Henshaw in the following extract:

This is the common "brook trout" of the small mountain streams of the Pacific slope, and up to an altitude of 9,000ft. it is the rare exception to find a suitable stream that is not well stocked with it. Upon many of them, as the tributaries of the South Fork of the Kern River, these trout are found in very great abundance, each pool and rapid numbering its finny denizens by the score. They may be taken in any sort of weather, at any hour of the day, by almost any kind of bait. During the heat of the day they frequent almost entirely the deeper pools, lying under overshadowing rocks or in the shade of some convenient log. In early morning or late afternoon they come out and run more into the shallows and rapids, under which circumstances they bite best and furnish the finest sport. Like the average brook trout, the species rarely attains any considerable size, ranging from 4 to 8 or more inches in length. Their colors are usually very bright, and for beauty this species takes rank among the foremost of its kind, and has been well called the "Golden Trout." In this respect, however, it is subject to the usual variations obtaining in the family, a change of color not only accompanying a difference in locality, but being plainly discernible in individuals taken in different parts of the same stream not far distant. In fact, as a specific character, color in this family seems to be at its lowest value. The character of the bottom and water itself has much to do with this, and I remember to have fished in a small rivulet on one of the subalpine meadows not far from Mount Whitney, whose sluggish waters flowed over a bottom of dark mud, in which the color of the trout simulated very closely its hue; they had lost nearly all the flashing iridescent tints characterizing the same species caught but a few hours before in another stream, and had become dull and sombre hued. Accompanying this change of color was a correspondingly noticeable difference in habits and motions, and the several dozen trout caught that evening for supper were taken out with the hook with the display of very little more gameness than would be noticed in 80 minnows poured. On the contrary, in the clear rapid current of the mountain stream, a flash of sunlight is scarcely quicker than the gleam of gold

and silver seen for a single instant as the whirling waters are cut by one of these trout as he makes a rush from his lurking place for some chance morsel which is being borne past him. The western trout are rarely as shy as their relatives of eastern waters, and because of their numbers and the consequent scarcity of food are apt to be less fastidious; yet, even when most abundant, due caution must be used if one would be successful, and not every one can catch trout, even in the west. With the proper care in concealing one's self, a pool may be almost decimated ere the alarm will be taken, and I have seen fifteen fair-sized trout taken from a single small pool in quick succession.

## Spokane Waters.

SPOKANE, Wash., Aug. 4.—Some of our fishermen, notably among them Mr. V. H. Brown, make good catches.

The Spokane River has been, and is now, a splendid stream for what is known in this section as rainbow trout. In fact I have never seen any other of the trout species caught in the river above Spokane, trout weighing 12 and 14lbs. are frequently taken, while those from 1 to 5lbs. are of common occurrence. The great mystery is how it is possible that a stream fished so thoroughly could have so many big fish. One theory is that it is supplied from Lake Couer d'Alene, about 30 miles above Spokane, but this can hardly be the fact, as they must come over Post Falls, which is about 30ft. high. The fishing in Lake Couer d'Alene is good at all times, and the tributaries of the lake, St. Joe River and the Couer d'Alene River afford splendid sport. Below Spokane salmon are taken; early in the season they run up the small tributaries to the springs. I have seen them in shoal water so they could be shot with a rifle. At the mouth of the Little Spokane they will rise to a spoon hook, 15 and 20lbs. fellows.

The lakes within a short distance of Spokane, Fish Lake, Hayden Lake, Lake Pend d'Oreille, etc., offer sport which cannot be equalled for those fond of fishing.

A. B. KEELER.

## Given A Niche.

THIS note, with the sketch, was sent to us by the late Dr. E. Sterling, of Cleveland:

Looking over an old scrap-book to-day I came across the inclosed character, having varied it a little by adding to the creel and "string" a few more fingerlings and placing our hero in a niche. It is the work of some correspondent of a New York daily, who, as a tenderfoot, undoubtedly was describing for his paper what to him was a veritable "Leather Stocking" of the trout streams, lauding him for skill in these words: "This evening I noticed his stalwart form as he passed the veranda of the hotel. Going up to him we carefully examined his outfit, which was truly original, but more particularly did we regard the large string of speckled beauties that hung by his side and filled his basket, making, as he informed us, the last of his catch of fourteen hundred within the last two weeks. We immediately hired him as our guide for the next day."

DEDICATED TO THE FRATERNITY OF "TROUT HOGS."

## Cleaning Out Skaneateles Lake.

SPECIAL State Game Protector E. D. Crossley, of Scott, and his assistant, Jeff J. Brown, of Glen Haven, made a trip down the Skaneateles Lake, Tuesday. Within two miles of Glen Haven, on the east shore, they captured two square dip nets; at Pray's Point they found a summer sojourner, whose home is in Michigan, shooting bass; at Mandana, a new 25-rod gill-net was captured, which was burned by Brown when the men arrived in this village. Crossley and Brown also allege that at the Skaneateles end of the lake they found two parties catching perch, suckers and other fish with nets, contrary to law. Warrants were sworn out against all the parties found fishing illegally, and suits for penalties will follow. Two villagers against whom charges are made say they were only catching bait, which they claim they have a right to do.—*Skaneateles (N. Y.) Free Press, Aug. 4.*

## Naming the Day.

OMAHA, Neb., Aug. 2.—A man who loves the sport of fishing, has the means of reaching in one night the "happy fishing grounds" of four States and has his business in such shape that he cannot leave; is not to be blamed if semi-occasionally he loses control of himself and declares life to be a delusion and work abominable, prefixing and affixing to these declarations sundry words not used in polite society or a first-class journal like ours.

From the 15th of May up to the present time, various dates have been fixed for our start, but as the time has

## CHAINED TO BUSINESS?

Can't go fishing? Do the next best thing. Read about it in the "Forest and Stream."

drawn near we have been compelled to lay aside all hope of being in readiness, until at last the partner of our hopes and joys, and likewise our outing trips, had packed tackle boxes, rods, nets and all the other impedimenta under a lot of winter underclothing in the bottom of the deepest chest.

E. Hough's letter of July 11 (may he enjoy many, many more such camps and write of them) when read to the mistress must have touched her, for I found the chest unlocked and a slightly little split-bamboo where it could easily be reached. Perhaps a box of toothsome pike shipped by express from Spirit Lake had a little to do with it; at any rate my trusty lancewood is where I can see it a dozen times a day; and it is a fact that another date is actually set.

Our ten-year-old, under the guidance and tuition of his grandsire, is finding a goodly number of the largest pike in Spirit Lake, and his letters setting forth his achievements are—well, I am happy to say he will make a first-rate fisherman if he keeps on.

Three in a boat one day last week, on the north shore of Spirit Lake, in part of the forenoon hooked 50 large fish, mostly pike, but with a sprinkling of croppie, rock and silver bass, and one or two nice pickerel; and the beauty of it is that a catch of this kind can be taken to the lodge and not a bone wasted, all being prepared for the table or shipped to distant friends.

Such tales from our friends there and in FOREST AND STREAM set us to dreaming and you may say wailing, for this wail is from the heart of one who longs to leave sooty, dusty air and hot, paved streets for the crisp, bracing wind from ten miles of water and a soft rocking in a good cedar boat, with an occasional, only an occasional, bite, just to remind him that his hooks are outboard—and he is pretty near heavenly bliss.

JOHN PEABODY.

## Washington Notes.

A SUNFISH, or mola, has attracted much attention in Center Market. It was shipped from Washington, North Carolina, by Mr. J. D. Cordon, who, in announcing its capture, described it as having the appearance of a black bear. The specimen measures 3ft. 10in. in length, and probably weighs more than 150lbs. Mola is from the latin, meaning millstone. Headfish is another name applied to the species in allusion to the all-head appearance of the creature.

The ocean sunfish is found in all temperate and tropical seas, and takes this last name from its habit of coming to the surface of the sea in calm weather, lying there on one side, sleeping or basking in the sun, and lazily floating with the tide. Dr. Goode observes that they feed upon jelly-fish or sun-squalls found floating at the surface. The flesh of the mola is not used as food, but an oil, good for sprains and bruises, is extracted from it. The fish is easily approached and many are harpooned by the fishermen on our East Atlantic coast in summer, when they appear more or less numerously. The size attained by the mola is something enormous. About one year ago one was received at the National Museum, from the New Jersey coast, which weighed fully 400lbs., and more have been frequently recorded. The skeleton of the mola is composed of non-ossified bone, which is soft like cartilage, making it one of the most difficult subjects for the osteologist.

Mr. C. C. Nutting of the Iowa State University, with a party of students recently passed through Washington on their way to Iowa City. Mr. Nutting and a party had a three months cruise in the West Indies, sailing from Baltimore, where they made collections in natural history. An unusually pleasant time was had and many interesting forms of marine animals were secured for the museum.

Several members of the Washington Anglers' Club have been catching bass. Frogs, small ones, are the bait used. The fish will not look at a minnow. Lots of bass are to be seen in the river and good sport is predicted for September.

BART.

## Long Island Bluefish.

LARGE schools of bluefish are reported off Rockaway and Fire Island Beach. A boat from Sayville caught 64 on Saturday trolling. Weight from 6 to 10lbs. each.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

ON THE AL FOSTER.—New York, Aug. 12.—All this week passengers on steamer Al Foster and Angler caught plenty of large flukes, 1 to 4½lbs., sea bass from ½ to 7lbs.; many individual catches of 20 to 30.

CAPT. AL FOSTER.

STATEN ISLAND.—Tottenville, N. Y., Aug. 12.—No fish to be reported, except at Sandy Hook, where fluke and bluefish are taken in large quantities by casting from the beach.

JOHN T. HAWKINS.

EAST BRANCH, N. Y., Aug. 11.—Trout fishing in this vicinity very poor, but the bass fishing is very good. Mr. Frank Hermes caught six this morning in two hours fishing, the average weight being 1½lbs.

JOHN E. O'MARA.

WASHINGTON, Aug. 11.—The weakfish, or salt water trout, are biting splendidly now in the lower Potomac and Chesapeake Bay. Some good strings have been caught. Several camping parties from Washington and Baltimore are at Point Lookout, Md., taking advantage of the fine sport.

R. O. D.

GREENWOOD LAKE (Lakeside Hotel), N. J., Aug. 11.—Fishing has been fine this last week. Dr. R. Vanden-henden caught an Oswego bass on the 9th that weighed 6½lbs. heavy, besides bringing in 4 or 5 others. Mr. Harry Barry, of Passaic, N. J., caught 23 bass, casting a frog, on the night of Aug. 9, largest weighing 4½lbs., average 2½lbs. Messrs. Rogers, Dinkleberg and Forbes have also made some fine catches.

R. L. PATTERSON.

FLORISSANT, Col., Aug. 10.—Sheriff Bell and Conductor J. J. Wilber, of this place, have arrived home from a three days' fishing trip on Goose Creek. They brought in 512 fine trout.

S. T. S.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y. Entries close Aug. 23.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y. Entries close Sept. 1.  
Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park. D. C. Collins, Sec'y. Entries close Sept. 4.  
Sept. 19 to 22.—World's Fair, Chicago. W. I. Buchanan, Chief Dept of Agriculture.  
Sept. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec.

#### FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. R. J. Gallagher, Sec'y, Winnipeg.  
Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 6.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 15.—American Field Trial Club Trials, at Carlisle, Ind. W. J. Beck, Sec'y, Columbus, Ind.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### The Type of Great Danes.

BY A. H. HEPPNER.

(Continued from page 105.)

It is to be regretted that Mr. Muss-Arnolt never found the time to fully explain his decisions, because being an artist he has the advantage of illustrating what he desires and why he puts type first. I decline to state here what I would have done as a judge in a competition between Melac and Wenzel. But I do not believe that there was any necessity for the competition of these two dogs at the New York and Baltimore shows. I think that possibly a better representative of Mr. Arnolt's conception of a great Dane might have been selected in a different dog than Wenzel. Undoubtedly, there are times when extreme measures are justifiable, such as I consider were required in 1891 at Chicago, when among 53 dogs shown only a half dozen great Danes could be picked, the balance being indifferent, short-coated big dogs. On such occasions I believe the judges justified in going rather to the extreme and selecting typical dogs, though small, in preference to big dogs that have apparently no breeding.

In New York in 1893 there was a good class, possibly a reaction on the condition in Chicago, and I do not believe that extreme measures were judicious.

There has been no occasion on which different German and English ideas in regard to dogs have clashed more intensely than at the show at Barn Elms, in 1887, to which I heard one of our best all-around judges refer as being present. He will know best whether the following critique taken from a German paper as to that show is correct.

"Long before my report," says the German critic, "is in your possession you will have heard on *ditto* about the judging or rather misjudging of great Danes by the English judge, Mr. Groom. In Germany, as you know, we do not prize size, but we prize the dog that combines quality with size, if possible. But you prize quality first and look for a specimen as large as possible with that quality. With you a dog having a thick, curled stern with a round head, could not, if ever so large, ever so graceful and ever so symmetrically built, get a first prize. I hope you will adhere to that *modus operandi*, only thus can Germany keep the lead and achieve grand results, while England, thanks to her present system, will remain a good customer in buying your second-rate dogs and making champions of them. Another reason for great disappointment to German exhibitors is the positive neglect as to clean color. A yellow dog with brown markings and red nose, by the name of Diego, received a fourth prize and second special. Breeders do not seem to understand here that you have to keep solid color, brindles and harlequins separate. Even if you do not judge them in special classes you must keep them separate in breeding so as to avoid dirty colors by mixing whole-colored dogs of different kinds among each other. A black and tan dog is not alone useless for breeding but a positive damage to our purpose, which is to breed typical dogs of size, with clear, well defined colors. In the challenge class for dogs and bitches Vendetta received a first prize. Her head is too long, snipy, she is not clean enough in throat, and her stern is carried too high. She may be the best of her class, but she is not a dog of the first order. After her comes Cedric the Saxon and third Cid Campeador, with too thick a stern and long hair at that, he is too short in body and stands on the joint of his toes like a greyhound. In the open class, first prize went to a brindle dog, Paramount, second and two specials to Leon, a yellow dog with an abundance of dewlap, badly carried tail and snipy and cheeky; third prize to Sea King, a harlequin who stands straight behind, has a thick tail, but is good in head and color; fourth, Diego, with wrong colors, red nose, abundance of throat, thick tail badly carried. After him was put Achille, a very good yellow specimen of Herr Messter's. He gets an *he*, and special for best dog owned by a foreigner. All other dogs of Messter's had to be contented with *he*, and *c*."

I will omit the balance, which are described in about the same manner as the former dogs, and take only, as the worst part of the judging, the award of second prize to Countess Warwick. She is very cheeky, and her hair at least 2 in. long, of wrong texture, and has a thick tail. She is a mongrel and yet she received a special prize, while Messter's Elly got a *vhc*. The article closes with the advice to send to England only flesh, bone and sinew. In a different journal I find another critique on Barn Elms, from which I infer that German exhibitors should take to England only big dogs of the lowest order of quality.

I quote from a German critique of the Kennel Club Show at Crystal Palace in 1887 as follows: "The two most celebrated champions of England are Cid Campeador and Cedric the Saxon, in whom we can find nothing but size, which merit helped him to beat several bitches of real quality. Cid is better in our opinion than Cedric, but his stern has been operated on, in spite of a certificate from an English veterinarian denying this. His tail curves like a snake as he moves and can be detected as tampered with at first sight. He is very snipy and short in muzzle. His figure is graceful but too straight behind. Cedric the Saxon, bred by Herr Messter, is also very large, but his head is altogether too light and short. He beats Cid, we think, justly. A champion, Nello, is small and bad in head, cheeky and ring-tailed. Better than dogs are the bitches, with three good specimens: First, Ortrud; she beat Vendetta. Ortrud was bred by Herr Essig; Vendetta is from Wurtemberg, by Harras I. ex Flora. Both

are nice specimens. Ortrud's head should be heavier. She is good in body, very clean in neck and has a good stern. Vendetta is graceful, as large as Ortrud, but snipy and very throaty. Beauté is a highly graceful bitch, a wee bit snipy. Had we been judging we would have reversed judgment and placed as first Beauté, second Ortrud and third Vendetta." I omit the description of the other bitches because according to German ideas they should not have a mention, and the translation of what is being said may appear a one-sided criticism inspired by jealousy.

I would consider the Germans unjustified in criticising English ideas on other dogs because I believe that German breeders cannot "open the shoestrings" to their English competitors. But the proof of the pudding is in the eating. If English ideas as to great Danes were correct and could prevail, then Germany would be compelled to buy English-bred great Danes as well as America. But how is it that we all have to go to Germany to get these dogs? Must not the German ideas of breeding and judging be correct? Who has ever seen a great Dane imported to this country, bought from a reliable German breeder, with a bad color? I would not object to a great Dane having all colors if these colors were pure and clean. But I have, as a result in faulty color breeding, seen dogs here of a dirty gray color, with white spots and a brindle ground. If at present you take a great Dane and breed him to his own color you will positively get a clean color of the same tint as the parent.

It is much easier to breed long-coated dogs, for instance a St. Bernard, for size only, and yet retain typical heads than short-coated ones. The slightest exaggerations of coarse blood will show itself in a bad coat and a bushy tail. Coarse blood should be added to type with proper caution or the result will be a boarhound of former times.

If you want a great Dane as big as possible, you must, firstly, settle the question, What is desired, height or heavy structure, or both? If bred for height only, he will soon get too narrow in chest, light in bone and snipy in head. Breeding for heavy bone and a wide chest primarily, you will naturally get a Dane that is likely to stand crooked on his legs, or whose legs are simply able to carry weight, but not to move it as desired in a great Dane. He will be very throaty, have a short, thick head and neck, and will likely be cheeky. If you desire the combination of both, *i. e.*, height and substance, content yourself with at the utmost, say 33 in., or you invite rachiitis. This is not touching the question of type at all. Let us breed slowly as to increase of size and weight, and let us be contented with a height of 32 to 33 in. and a weight of 160 lbs. Let us, however, breed for these dimensions after we get the type, because without type they are of no value. We must breed for type, pure colors and beauty, and within these limits get the dogs as big and heavy as type will permit. If I had to-day a typical dog, a beauty of 120 lbs., I would be as little contented as if I had the heaviest and tallest common dog in existence, because, in order to be satisfied I desire above all a thoroughbred dog, which means in this breed type, clean color and substance.

If on one side Mr. G. Muss-Arnolt selects Wenzel, on the other Mr. James Mortimer selects Melac, and both judges give us their reasons for their decisions, the breeders will split and a portion will follow Mr. Arnolt, the others Mr. Mortimer. We will always have two camps with a general to each. After every show a council of war will decide how the respective judge is to be attacked most effectually, and the poor dogs will suffer. If the great Dane is to be a fancy and companionable breed, let the public decide which of the two extremes are most desired. I believe that a strain like Wenzel will find more friends than Melac's Major McKinley.

### POINTS AND FLUSHES.

(By a Staff Correspondent.)

#### St. Bernards and the Fair.

NEAR the Fifty-ninth street entrance of the World's Fair is a dog show of St. Bernards which is not restricted by a four-day limit, or by by-laws and other things which may mean a great deal or nothing at all, according to the caprice or interest of the powers that be.

Mr. Adolph Thommen, of Waldenburg, Switzerland, has a team of six St. Bernards which he brought over to this country for exhibition at the World's Fair dog show, but, as the reader knows, that show was postponed. Then the idea of a private show occurred to Mr. Thommen. He built a most comfortable, well-ventilated building, sub-divided it into stalls, to each of which an abundance of water is carried by pipes. It is the pink of neatness. He will continue his show till the World's Fair dog show begins, so he says.

We often hear of great financial nerve and enterprise, but to me there is no greater nerve than starting a dog show of well-conditioned dogs within three blocks of Buffalo Bill's camp of Sioux Indians. Keep an eye on those Indians, Mr. Thommen. A dance is good cause for suspicion, a fire is good cause for fear, and a little bottle is good cause for locking the dog show hand and foot. For the Indian, a fat dog fills a long felt want.

His star attraction is Barry of Hauenstein, which is valued at \$20,000. His attendant, a bright young man, informed me earnestly that a California lady had offered \$15,000 for Barry, but that the offer was declined. I intimated that she should have shown more courtesy to her paternal ancestor by respectfully asking him to buy her a bow-wow, and the said paternal ancestor might have favorably considered her application.

There appears to be, therefore, a strong bull market in dogs at present, notwithstanding the fluctuations and destruction in other branches of the stock market, as shown in this instance where the seller and buyer are \$5,000 apart, and the former making no concession.

The flinty-hearted wretch, the daddy of our folk lore, who wouldn't purchase for his dear offspring a bow-wow, probably did not care to mortgage his broad estate to qualify for a bow-wow gift.

Such absurd figures do much harm to canine interests. If it were but one instance it would be of small consequence, but unfortunately the dog show catalogues contain many of them. Of course dogmen as a rule understand that \$20,000 may mean a prohibitory price, but the term "Not for sale" means much the same thing and carries with it no implication of a purpose to deceive.

#### California Field Trial Matters.

From a correspondent in California the prospects of the inaugural trials of the Southern California Field Trials Club are most encouraging. He says:

"We are receiving entries for our first annual Derby, and from present indications the Southern California Field Trial Club will be more than a success. The sportsmen of this section are awakening to the fact that talk don't go, and as there will be an opportunity to test their dogs in open competition, they are taking advantage of it. In adopting our rule it was the desire of most of the members that they should be worded so as to have the typical sportsman's dog win, and in this I think the club has acted wisely. A dog that has to be whipped continually is not a pleasant companion afield, and the same will hold with the timid ones. Cheerful obedience and good work will be the chief features, and they are good ones."

#### The Manitoba Trials.

In a letter dated Aug. 5, Mr. R. J. Gallagher informs me of the resignation of Mr. E. D. Adams from the secretaryship of the Manitoba Field Trials Club, and his removal from Winnipeg to Calgary, Alberta, Northwest Territory. Mr. Gallagher further says: "You can imagine what a

loss that is to us just at present, when he had been working up the affairs of the club in connection with our trials in September, and had the whole business at his fingers' ends. I have succeeded him and find that I have got a lot of work to do with which I am in a measure unacquainted. However, I am getting along in a fairly satisfactory manner. The prospects of a successful meeting in September are good. Eastern sportsmen are taking advantage of our early trials by sending their dogs here now to train on chickens preparatory to running in the trials. To those who propose sending their dogs to the Manitoba trials, I will say that it is advisable to notify the secretary-treasurer, giving description and value of their dogs, the date on which they will be coming and the road on which they will come, in order that satisfactory arrangements can be made for them with the customs officials and thus avoid unnecessary delay. A vent got here on Monday with a string of 18, and L. W. Smith, of Morrison, Ill., arrived last night with 11."

The address of Mr. Gallagher is P. O. Box 1224, Winnipeg, Man.

Sportsmen who visit Manitoba will find it a most delightful country. The trials afford a thorough and fair trial of the competitors.

The two trials on chickens in Manitoba, growing constantly in importance, make a competition worthy of the consideration of all field trial men, both in respect to the honor of winning and the value of the money prizes.

#### The McLin Affair.

The following letter to me, under date of Aug. 9, from Mr. Freeman, is deserving of the earnest consideration of every dog fancier. He says:

"I am a little surprised that the handlers have been so slow in making their contributions to help prosecute McLin. As for Mr. Mayfield and myself, we have received only \$5 from that source, and that was from Capt. C. E. McMurdo, of Charlottesville, Va.

"I am very much afraid that we will not get funds enough to carry the thing through successfully, unless contributions are sent in more liberally. I am very much surprised, as I had thought that an affair of that kind would have brought out a greater expression from the sportsmen than it has. Can it be possible that all the boasted love for the dog is all gush? It looks that way at present to me. I have about come to the conclusion that Mayfield and I were somewhat hasty in having McLin's second arrest made, and guaranteeing the cost of prosecution, but we are into it and will get out the best way we can. It looks now as if we will have to go down pretty deep into our own pockets and pay out.

"There has been a good hatch of young birds, and they are now about half grown. The prospects are good for plenty of birds for this year's trials."

#### The World's Fair Dog Show.

On Friday, August 11, I called on Mr. Buchanan, chief of the Agricultural Department, and asked him if there was any news in connection with the bench show. He replied that there was no news.

"Is it true," I asked, "that the dates of the World's Fair show, Sept. 19 to 22, have been cancelled, or expunged, as mentioned in a contemporary?"

"No, sir," he exclaimed, "the dates have not been cancelled. We hold the same dates now. The statement is wrong. The matter, however, is now under consideration, and will be definitely settled by next Wednesday. If the advertised dates are cancelled, there will probably not be any dog show. All this will be settled in the near future."

There are hints from those who are close to the powers which be that the board of control will give the matter of holding or not holding a dog show, more consideration than the matter of changing the dates.

The Western esteemed contemporary is deserving a great deal of praise for its irrepressible penchant and enterprise for publishing "true facts" a week or two before they occur. It then has but to wait for the news to fit the facts or the facts to fit the news.

B. WATERS.

909 SECURITY BUILDING, Chicago.

#### The Rhode Island Show.

THE long-looked-for premium list of the Rhode Island State Fair Association's dog show to be held Sept. 19 to 22, is now before us. The first thing that strikes us is that the entry fee is only \$1, and on turning to the list we find that liberal challenge prizes of \$12 are given to mastiffs, St. Bernards, pointers, setters and collies. These have open classes with prizes of \$12 and \$6. Deerhounds, Russian wolfhounds, greyhounds, foxhounds, beagles, field spaniels and cockers, too, bulldogs, bull-terriers, fox-terriers, Irish terriers, Boston terriers and pugs have challenge classes of \$10; open classes in these breeds get \$10 and \$5. In the first named breeds puppy classes are provided, and \$8 and \$4 given, other breeds get \$6 and \$3 in their divisions. The more popular breeds are offered kennel prizes of \$15 by the Association for best four or more. Entries close Sept. 4 and should be addressed Rhode Island State Fair Association, Cranston, R. I. Mr. Walter J. Comstock, the well-known Irish terrier breeder and exhibitor, is chairman of the bench show committee, and that means that exhibitors will find a friendly face who will see that they are not neglected. The judges so far selected, as stated before, are Messrs. John Davidson and James Mortimer, others may yet be appointed for special breeds.

The "vet" is Dr. T. G. Sherwood and Mr. John Read will see that the show is properly superintended. We may add that the premiums will be paid the last day of the show. When dogs and bitches compete together, if there are five of either sex entered the class will be divided, and when no regular class is made for a breed, if there are five or more entries, classes will be provided. If exhibitors do not care for the money prize their dogs may win, a medal will be given instead. The U. S. Express Co. will return dogs free under the usual conditions. In looking through the general instructions to judges contained in the premium list we find one or two remarks that might well be considered in dog judging.

"No animal will be allowed a premium unless sound. [The judges are required to give special attention to the foregoing clause.]"

"A premium card or ribbon is a mark of merit and in no case should it be attached to an article or animal where meritorious qualities are lacking."

With good prizes, popular judges and a pleasant outing in view for exhibitors, it will be matter for surprise if "Little Rhody" does not make a record.

#### Ottawa Show.

##### Editor Forest and Stream:

The premium list of the Ottawa show is no doubt in the hands of nearly all dogmen by this time, unfortunately a few were sent out before the changes relating to our American cousins were made. I would therefore like to call the attention of those who have received such to the fact that all American dogs shown at the Canadian shows this year must first be entered or listed with the Canadian Kennel Club. There is another important point to which I would like to call the attention of American exhibitors. Challenge or champion dogs will not under any consideration be allowed to compete in open classes, as was done last year at all the Canadian shows. Our judges have not yet been appointed, but will be announced shortly.

ALFRED GEDDES, Sec'y and Supt.

OTTAWA, Can., Aug. 9.

# DOG CHAT.

## Brittle Changes His Quarters.

We can now confirm the rumor we heard a week or two since that Mr. H. W. Smith, of Worcester, Mass., had purchased Brittle, the well known English champion wire-haired fox-terrier, from Mr. R. F. Mayhew. Brittle has been kept in seclusion, with one or two exceptions, since his importation in the spring of 1892, and when shown has been anything but fit. In proper shape he is without doubt the best wire on this side. Brittle won many prizes in England, and was shown when the wires were a grand lot. He has beaten all the cracks, Carlisle Tack, Jack's Yarn, Tees Hap, Briggs, Bruiser and Carlisle Tick, and was selected as one of the 6 rough terriers to compete against 6 smooths at York show in 1888, when the wires won. He is the sire of The Reclaimed, winner of the fifty guinea cup at Barn Elms in 1888; First Attempt, Brittle's Mixture, Britanny, Brunette, Banter, Busy Brittle, Dawning and Mr. Smith's late crack Saint Brittle, who were all winners in England, and Sister Grit, bred by Mr. Smith and a winner at the late New York show in two classes. Mr. Smith is one of the few American exhibitors who shows his purchases under his own name in England before bringing them here, and he has just been advised by his English representative that at Leicester his Surrey Janet won first in her class and then beat Jack St. Leger for the cup for the best in the show, and again repeating his victory at Darlington. Cribbage was beaten by Prompter, a decision which has generally been the other way and was not indorsed at the ring side. Surrey Janet won in her class and then beat Prompter for the cup, so in four days she bowled over the three crack wires in England. The English *Stock-Keeper* speaks of the fact and congratulates Mr. Smith on the success of his bitch, and she must indeed be a flyer to win under such judges as Messrs. Vicary and Clear. Mr. Smith has asked Mr. Carrick, of Carlisle, to advise him which dog to put to Janet before sailing, and when she has been mated both Cribbage and Janet will be sent over in charge of Spratts Patent.

## Toronto Dog Show.

The following railways will carry dogs over their lines going to and from Toronto dog show, Sept. 11 to 15, at the following rates: Grand Trunk Railway, of Canada, will return dogs free, charging excess baggage going; the Canadian Atlantic Railway will do the same as the Grand Trunk; the Minneapolis, St. Paul and Sault Ste. Marie and Duluth, South Shore and Atlantic Railway, will return dogs free, charging excess baggage rates going, estimating the weight at 100 lbs. per dog. Mr. C. A. Stone says in his letter: "I am having the buildings thoroughly cleaned up and painted, and will erect some hundred more kennels, and by my new arrangements will have two judging rings down and two up stairs. The feeding will be done by myself, using Spratts biscuits, and the disinfecting will be done by the Canadian Sanitary Company, using Jeyes's fluids and powders. Remember, the entries close Aug. 31." It was our duty last year to criticise the superintendent over the unclean state of the show building at Toronto, and exhibitors will be pleased to hear that there will be a change for the better this year. If Mr. Stone will be just a little more independent, not bother so much with the red tape and go ahead on his own lines, for he knows how these things should be done, and remember that Toronto is looked upon as an international affair almost and demands more careful management than a local event, he will be sure to come out with flying colors this time. Our friend must remember also that in criticising the management of this show we recognize simply the official Mr. Stone, not the Stone that we knew—say at the Spaniel Club dinner—free from the cares and trammels of an important office.

## Shows Under A. K. C. Rules.

There are three A. K. C. rule shows held during the Sept. 19 to 22 week—World's Fair, Rhode Island and Mt. Holly. This probably makes little difference, but we simply draw the attention of exhibitors to the fact. As so many of these fairs hold shows on the same dates, and as the increase of interest in the dog will doubtless create more of them in the future, the A. K. C. should make some special legislation in their favor. Most of these fair associations think it incumbent to join the A. K. C., and something must be done by the latter body unless they allow the rule referring to clashing dates to become a dead letter. It would be too bad if this rule should militate in any way against these associations holding shows. Although not very popular with the regular exhibitor who wishes to dispose of stock, still the amount of benefit fair shows do in disseminating an idea of what good dogs are like among people who have the best opportunities to keep dogs, is inestimable, and should be encouraged in every way.

## Mount Holly Dog Show.

In the premium list issued by the Burlington County Agricultural Society we find 106 classes provided. The prizes may be considered fairly liberal and an improvement on last year. Challenge classes with prizes of \$8 are given in mastiffs, St. Bernards, deerhounds, greyhounds, pointers, setters, spaniels (for field and cocker each), collies, bulldogs, bull-terriers, beagles, fox-terriers and pugs. In the open classes mastiffs, St. Bernards, pointers and setters have \$8 and \$4, with \$4 and \$3 in puppy classes. Most of the other breeds have \$6 and \$3 in open and \$4 and \$3 in puppies. Great Danes get \$8 and \$3 in open classes. At the end of the list the judges given are Mr. James Mortimer and Major J. M. Taylor for non-sporting and sporting dogs respectively. This must be a mistake, as we have seen it stated that Mr. C. H. Mason judges all classes. As Mr. Mortimer is down for the Rhode Island fixture the same week, it is not probable that he will judge at Mt. Holly. The show commences Sept. 19 and lasts four days. The entry fee is \$3, and entries close Sept. 11 with J. Holmes Longstreet, the superintendent, Bordentown, N. J. In any class where five or more entries are received the classes will be divided for sex. The Mount Holly show is popular with the Quaker City fanciers, and no doubt will score a good entry in spite of other attractions during the same week. The society offers \$5 for the best in each variety, \$10 for best four by one exhibitor in all the leading varieties, \$30 to the handler with largest exhibit, and \$20 for exhibitor with largest entry. The Ashmont trophy will be put up here if Tree does not win it at Toronto the week before.

## Appreciation by Sportsmen.

The fanciers and sportsmen of Leamington, Ont., to the number of about 25, met at the Deming House July 31, to show their appreciation in a tangible form of the honors won by Mr. H. Milkins's well known pointer, Count Graphic. After partaking of an elaborate supper an address was read to Mr. Milkins, which embodied all the virtues and records that pertain to this well known pointer. Afterward Count was presented with a silver collar. Count Graphic is the sire of Prince Graphic, Count Grosvenor, Duke Graphic, Baron Fritz, the latter a field trial winner and the others winners on the bench.

## Kennel Specials.

Wise fanciers know the value of these line "ads." They mean quick sales because the class of people who read *FOREST AND STREAM* are well able to pay for a good dog, and advertisers tell us that when they get an answer to an ad,

in this journal it means business and not endless and useless letter writing. Geo. Bell, we see this week, proposes to sell his fine kennel in one lot or separately. It's a great chance for some one, when one reads the names of well-known dogs contained therein. W. M. Woten seems to have some valuable field stock to dispose of, entered in the field trials, too; W. S. Dixon, of England, draws attention to any one wanting bulldogs; W. K. Purington offers English setter pups; P. O. Box 18, beagles; Standard Kennels, dachshunds and beagles; Ed. Marshall, beagles; F. L. Colley, Angora cats, etc.; Oakview Kennels, great Danes; Albany Pointer Kennels, well bred pointers; Glenrose Beagle Kennels, beagles; Edgewood Kennels, well bred pointers and English setters.

## Another Crack St. Bernard.

It is now the turn of Mr. J. F. Smith, of Sheffield, to astonish the St. Bernard world with the sensational debut of a smooth dog. At Darlington, Eng., he brought out an eleven-months-old pup, by champion Keeper, called Marengo, over which the critics go into ecstasies. *British Fancier*, the only English paper to hand this week, remarks that for an eleven-months pup, after careful scrutiny, they felt it impossible to find any fault with him. Of course, this is an opinion with a string to it; but further they quote such a well-known man as the Rev. Mr. Carter as saying "Marengo was the grandest St. Bernard that had ever existed in England." There must be something wonderful about this young dog when we remember that Sir Bedivere came from England. Marengo's head is said to be much better and more massive than Keeper's, his equal in symmetry, better bone and exquisite markings.

## National Foxhunters' Association.

At the coming Lexington, Ky., show there will be a more than ordinarily large gathering of foxhound men. At this show the National Foxhunters' Association will be launched. It begins, we are told, with a membership truly national, as the most prominent foxhunters of the North as well as the

"NUMBERS WRONG."  
Wissahickon Show, 1893.

South being at the back of it. Its object is to improve the foxhound by the crucial test of the field trial, and arrangements will be perfected to hold a national meet in November in one of the Central States, at which purses will be hung up that will prove an incentive for dogs to compete from all parts of the country. Those who remember the interesting gathering of foxhound men at the last Lexington show may be sure that there will be fun ahead and plenty of music in the air at the coming meet.

## Heavy Loss in St. Bernards.

Mr. Arthur Ritter, owner of the Ravenswood Kennels Long Island, has indeed met with a severe loss. During the past week he has strangely lost by sudden death seven of his St. Bernards, the symptoms showing plainly, according to their owner, those of arsenical poisoning. Among the dead are Coquette and Merchant Hesper. The former died Saturday week, and Hesper the day following. Three others died on Tuesday, one the next day and another on Thursday last. The dogs were all affected by a dry cough, which was followed by weakness and enlargement of the pupils of the eyes. The weakness increased until the dogs could not hold up their heads. Every effort was made to save them, but in vain. Mr. Ritter has three dogs left, but one of them, Flora, was at last accounts dying and another may go. Mr. Ritter has our sincere sympathy.

## Empress of Contocook.

Every St. Bernard lover knows this lovely animal, and those who lean to type will be pleased to hear that she has whelped two bitch puppies. A peculiarity about this event, however, was that they came seven days behind time. Mr. Booth says he has known a bitch that was three days overdue, but never a week. Empress has missed three times. The last time she threw one pup, but this time she goes one better, and besides, has plenty of milk, when before she hadn't enough to raise a pup. These crack bitches, Princess Florence, for instance, seem as erratic as a prima donna. Empress's pups are by Alton, Jr., and should therefore turn out well. Signa has a litter three weeks old, by Marvel.

## A New Blenheim.

Mr. Geo. W. Wambach, of Baltimore, has received per steamer Queensmore, and shipped from Halifax, England, Halifax General, a Blenheim dog 2 years old, weight 8 lbs., which he describes as a little beauty. The new dog is by Jolly Country Squire out of Dianah, and is registered in the E. K. C. S. B. He will be placed in stud and will be exhibited later on at the shows.

## The New England Beagle Club Trials.

In all probability Messrs. Geo. F. Reed and A. C. Krueger will be chosen to judge at these trials which will be held at Oxford, Mass., a place which, we are informed, is by far the best yet used for the purpose. The dogs can be followed on horse or afoot, the grounds being immense berry pastures, 500 or 1,000 acres in extent and rabbits plentiful. An executive meeting of the club will be held Aug. 17 at Boston.

Mr. W. Hawkins, of Monterey, Mass., feels that life is

worth the living these days, anyhow, now that his pointer bitch champion Revelation has increased his kennel stock by three dogs and five bitches, which she threw to his Westminster Drake. Drake is a good dog both on bench and field, but Revelation is a better as far as looks go, and the pups should prove worth owning, even if they are not all champions.

## Grand Master Sold.

Mr. W. Stewart Diffenderfer, of Baltimore, is dropping St. Bernards and has sold that good young dog Grand Master, third at New York and Baltimore last spring, to Mrs. Adele W. Lee, of Toledo, O. We do not know the price given, but know that Mr. Diffenderfer held the dog at about \$700. This gentleman is thinking seriously of owning a field dog or two, and will buy one or two shortly. Grand Master, as one of Hesper's best sons, should prove a valuable dog at stud, as he is an all-round good dog himself—and sound too.

Mr. John Coles, of Boston, Mass., has evidently made a good purchase in the bull bitch Haphazard, which comes from Mr. A. M. Hodgson's kennels. This bitch is a light weight, and that she must be a good one is proved by the following list of good wins: Gloucester, Birmingham, Bath, Manchester, Preston and Bristol also; a number of specials, among them Capt. Piddock's cup three times.

Two thousand five hundred dollars have been refused by Mr. Stephens for the noted fox-terrier sire Stipendiary, the offer coming from this side, so *Stock-Keeper* leads us to suppose. Stipendiary has earned \$1,500 during the year, so that it will be seen that neither the offer nor the refusal were at all out of the way.

The bull-terrier Cordona is said to have been purchased for a fancier in this country from Mr. Pegg, her English owner.

We regret to hear that Mr. R. Dudley Winthrop is down with concussion of the brain as the result of injuries received at polo. Mr. Winthrop is known among the bulldog fancy as the owner of the noted dogs Leonidas, Stanley and several others. Mr. Winthrop was thrown violently to the ground during a practice game, his pony falling and rolling over him. His case is serious and the crisis will not be passed for several days, though we trust he will eventually have a speedy recovery.

Mr. F. W. Chapman goes up to his Maine kennels on the 20th to stay for a week or two and will then choose his entries for the National and New England club trials. He expects to run half a dozen in each, so we shall see the "Chapman lope" after all.

Mr. A. S. Dixon, of West Derby, Liverpool, Eng., intends to bring some bulldogs to New York next October, and is also prepared to execute commissions for intending purchasers.

Mr. James Robinson has been appointed manager of the Woodlawn Park Kennels in place of Mr. Clark.

The valuable Kentucky foxhound bitch Star, owned by Mr. O. F. Joselin, of Oxford, died recently. She was to have run in the Brunswick Fur Club trials this fall.

Mr. Henry Jarrett took a trip down to Chester, Pa., the other day, and Mr. Byrnes next day shipped him a pair of collie pups. One of these quiet trails of the Chestnut Hill man that will lead to something in the near future.

Mr. Charles Myers, East Boston, Mass., has purchased the St. Bernard Prince Draco (champion Plinlimmon, Jr.—Maude).

"Dick" Morgan, as he is known to his friends, has killed this season, up to last week, 123 woodcock, three-fourths of which were shot over his Rodrigo bitch, Maygirl, one of the setters he offers for sale in our business columns this week. Mr. Morgan starts South Oct. 1, and will remain till April 1, 1894. In the section of country (which he does not tell us the name of) where he will locate he says he has found upward of thirty beves of quail in a day's hunt, and from what he can learn, he says the quail crop is the largest known for many a year, owing to the extremely dry season. He will be pleased to see his patrons this winter come South and see their dogs work and have some good shooting when game is plenty.

Owing to our absence from the office the past two weeks, correspondence has accumulated to such an extent that we must claim the indulgence of our friends till we can get things straightened out.

Mr. A. Russell Crowell, who for some time has had charge of the *Pacific Sports* kennel columns, has now taken Mr. C. W. Kyle's place as kennel editor of the *Breeder and Sportsman*. He thinks he will have more time for his kennel now. He has "only" 22 cockers, and he thinks some are pretty good. Our California contemporary has made a good move. Mr. Crowell is a hustler, and will be sure to make its pages newsy.

## Has Any One Lost a Pointer?

### Editor Forest and Stream:

There is in this vicinity a very handsome lemon and white pointer dog, about two and a half years old, and as the party who has him can give no account of his breeding, from himis dropped at certain times I feel sure he is a stolen dog. He has been in this man's possession about a year or more, and seems to be fairly broken. The man tells people the dog is from Sensation stock. If this should meet the eye of the right owner, I feel sure he would be very glad to regain possession of him. John Rider, detective of London, Ont., says he has information from a party that the dog was stolen from one of the New York shows. This I know nothing about, but if you will publish this in your widely circulated journal you may, if the above is correct, find the thief who stole him. The dog goes by the name of Dick.

JOHN HAMMON.

NIAGARA FALLS, Ont., Aug. 10.

## Flaps from the Beaver's Tail.

TORONTO, Canada.—The next issue of the official organ of the Canadian Kennel Club will contain a card from Dr. Wesley Mills, stating that owing to his time being now so fully occupied with his scientific, professional and other work that next year he will be unable to accept any office in the gift of the club. Dr. Mills, I understand, expects to be away from home a good deal on a professional tour.

I was surprised to learn from Mr. George Bell that he intended dropping out of dogs for a year or two, and was offering all his kennel for sale. The loss of Troublesome and Fascination was a big blow to him, but not this, but "the cloudy state of the canine atmosphere," as he says, is his reason for retiring.

H. B. DONOVAN.

## Spaniel Field Trials.

## Editor Forest and Stream:

What a pleasure it is to read "Uncle Dick's" frank and candid communication in answer to mine. I cannot agree with the statement that my argument, that a square muzzle means a good nose, is weak. "Uncle Dick" adduces only one dog, a mastiff, to support the reverse theory, this dog, for instance, I have always been led to believe had a very fair nose. I am glad all my other arguments stand good, and no one has dared challenge them. I heartily apologize to Mr. Fellows for speaking of the weeds and lap-dogs as his type. I am glad to see he likes a bit of stamina, and that he has a genuine interest in the breed aside from a pecuniary one. I think all gentlemen will unite with me in saying it would be better for all concerned if people would sign their names under their letters in a manly and straightforward manner.

Regarding the much-talked-of trials, I think the records of the sporting papers will bear me out when I say I was the first to publicly recommend them. We lovers of the working spaniel hope to see the matter threshed out and brought to a head. Let every one make some suggestion, then we can take the whole collectively and make use of what is practical. Of course after the first trial we can more easily eliminate bad points, improve on good ones and add new features that are wanting. Let us outline what a spaniel ought to be tested for; first, scenting powers—this might be done by letting a bird with a clipped wing run across pasture and from that into scrub, remarking carefully the time the dog takes to retrieve, whether he keeps the line and if he handles it tenderly. Birds alive or dead might also be hidden by the judges in places unknown to handlers, then compare the action and celerity of the different entries in finding.

Obedience should next come on the list, I think; coming to heel, paying attention to orders immediately the dog is spoken to, breaking shot, etc. Retrieving from water should most certainly be gone into, which could be easily done by throwing in a bird and firing a gun. Endurance ought to be tried for but would consume too much time. There is one thing certain, that all the tests must be made artificially. I don't think the judge should be tied down to any set principles, because a clever man who thoroughly understands it can soon pick out the best all-round worker. Neither must we overlook a spaniel's pluck in facing the briars, he ought to do so without hesitation, game or no game; mine do so or they get punished, but as I go in for a plucky and willing dog I seldom or never use whip-cord. As a means of testing their pluck the handler should be made to hunt his dog in a specified piece of thick brush.

Regarding the World's Fair show, as a correspondent of FOREST AND STREAM, while mingling with English dogmen at trials and shows during my stay here in England, I felt it my duty to apprise them of it and extend them a cordial invitation to come over and compete. I did the same thing among the shooters for the tournament for which America was too poor to hang up a few extra dollars (in London alone an immense sum is shot for annually), and as they both up to the present time have fallen through (not on account of any fault of FOREST AND STREAM, which should have the credit of doing all that was done by the press of any sort to promote it), I have had to bear the hurt of some good-natured banter, and *en passant* it makes it more difficult to advance the interests of the greatest sportsman's journal in the world, a paper that doesn't diverge into such extraneous matters as agriculture, gardening or the apary, it is strictly a sportsman's paper from cover to cover. It isn't the chaff my mind so much as the fact that such failures give Englishmen very little faith in their cousins' ability to engineer a big thing, when Americans out of all the earth, really and truly know best how to run a gigantic and colossal tournament. Hoping the FOREST AND STREAM may some day be the great connecting link between the Old and New World sportsmen, as well as the channel for keeping one another in touch with the latest developments in sporting science.

CECIL COX.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blank (furnished free) will be sent to any address.

## NAMES CLAIMED.

## Prepared Blanks sent free on application.

Major Fox. By Jas. Jeffries, Westfield, Westfield, Mass., for black, white and tan foxhound dog, whelped March, 1893, by imported Boy out of Bess.

## BRED.

## Prepared Blanks sent free on application.

Rubie—Bend Jr., G. W. Wambach's ruby spaniel bitch Rubie to Bend Jr., (King Charles), May 18.  
Veracity—Holster. G. Collison's (Wilmington, Del.) fox-terrier bitch Veracity (Bachchanal—Dewdrop) to R. G. Stewart's Holster, July 5.

Ran—Holster. F. Caress's (Washington, D. C.) fox-terrier bitch Fan to R. G. Stewart's Holster, May 31.  
Flora—Holster. R. T. Douglas's (Washington, D. C.) fox-terrier bitch Flora (Regent Vox—) to R. G. Stewart's Holster (Kerminech Lancer—Qui Vive), May 28.

Jack's Darling—Holster. R. T. Douglas's (Washington, D. C.) fox-terrier bitch Jack's Darling (champion Ruby Mixer—Suffolk Riot) to R. G. Stewart's Holster, June 5.

## WHELPS.

## Prepared Blanks sent free on application.

Rubie. G. W. Wambach's ruby spaniel bitch Rubie, July 18, four King Charles bitches, one ruby dog, by Bend Jr., Jr.  
Maid of Kippen. J. O. Gabriel's (Westover, Pa.) pointer bitch Maid of Kippen (Pontiac—Lass of Kippen), July 31, eight (four dogs), by his Ben Hessen, (Duke of Dessen—Hedge Rose).

Nora M. Jas. Jeffers's (Westfield, Mass.) pointer bitch Nora M., Aug. 1, ten (seven dogs), by Auctioneer (Royal Clip—Pan Bow).  
Jack's Darling. R. T. Douglas's (Washington, D. C.) fox-terrier bitch Jack's Darling (champion Ruby Mixer—Suffolk Riot), Aug. 1, three dogs, by R. G. Stewart's Holster.

Frisk. P. A. Plant's (Washington, D. C.) fox-terrier bitch Frisk, July 30, seven (three dogs), by R. G. Stewart's Holster.  
Flora. R. T. Douglas's (Washington, D. C.) fox-terrier bitch Flora (Regent Vox—), July 27, six (three dogs), by R. G. Stewart's Holster.

Fan. F. Caress's (Washington, D. C.) fox-terrier bitch Fan, July 27, four (two dogs), by R. G. Stewart's Holster.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. E. J., Westfield, Mass.—Write to Mr. Calvin S. McChesney, Troy, N. Y., about the foxhounds.

H. S., Pittsburg, Pa.—You need not worry about your terrier's nose. The white will more than likely disappear before it is six months old. You can tell nothing much about his ears yet, they may be carried beautifully this week and be semi-prick next.

J. H. W., Brooklyn, N. Y.—My collie bitch has four puppies and they seem to be troubled by some disease of the eyes and nose. They are all the time snuffling at the nose, and their eyes look gray and dull. Sometimes their eyes will be stuck fast in the morning. The puppies are between three and four weeks old. Aus. It looks very much like distemper. Keep the eyes clean and apply the following lotion:

Acid boracic..... 3 i  
Aq. ad..... 3 viii  
Lotion. Apply to eyes four or five times a day.

## OCTOBER.

- 5-7-9. New York, America's Cup, Sandy Hook.
7. Miramichi, Chatham-Newcastle.
- 7-8. Cor., San Francisco, Cruise.
14. Cor., San Fran., Closing Day.
14. Buffalo, Closing Cruise.
14. Commonwealth, Novelty Race, Boston Harbor.
14. Cor., 85-footers, Long Island Sound.

The Boston Herald is responsible for a story which is funny enough to be true, as it probably is, to the effect that Mr. Herman B. Duryea, who is with Mr. Carroll on Navahoe, cabled to friends on this side after the second race, "We've got them sure; bet." Later cables from Mr. Duryea have said nothing more about betting, and we understand that they confirm the newspaper reports of Navahoe's bad steering in a breeze.

We have several times commented on the limited knowledge of geography which some yachtsmen possess, apropos of which is a recent remark of the Scotch correspondent of the Boston Herald that Wenonah's success on the Clyde has led to a demand for "The Bostonian type of craft." The suburbs of Boston are extensive and elastic, but they do not yet include Bristol, Rhode Island. Should Navahoe fail to retrieve her reputation and one of the fin boats win in the trial races, it is probable that the distance of Boston from Bristol will be increased by several thousand miles; in fact, the little Rhode Island town may be forced entirely out of Yankeeedom. Another curious geographical paradox exists among some New York yachtsmen, who are lauding the local pride and patriotism of the men who have sent their money to Bristol to build New York boats, and at the same time decrying those who have put their money in a fourth cup defender; and for no better reason than the boat was designed in Boston, seventy miles from Bristol.

The case of Navahoe's defeat seems to be one in which the least said is the soonest mended, but unfortunately two of the parties chiefly interested have rushed into print, and with unfortunate results. There is but one opinion among yachtsmen as to the bad taste of the attempt of Navahoe's builder to throw all the blame on her owner and sailing master, and while no one seriously believes Mr. Carroll's statement that the yacht is all right, there is a general feeling that the responsibility for what from all appearances is a complete failure, lies further back than the ownership or handling.

It is quite probable that Mr. Carroll stipulated that the yacht should not exceed the limits of 84ft. l.w.l. and 12ft. 6in. draft, and that she should be capable of crossing the Atlantic in safety, in fact it is the owner and not the designer who must decide on such general limitations. There is no reason to believe, however, that Mr. Carroll went any further and attempted to meddle with the proper functions of the designer in proportioning power to a given limit of waterline and draft. If, as Mr. Herreshoff states, the yacht was in a measure intended for a fast cruiser rather than an out and out racer, there is all the more reason why she should be primarily a ship, carrying her sail and answering her helm, and not a tender and unmanageable machine. The limit of draft stated, 12ft. 6in., is at least 2ft. greater than in Volunteer; the lead, disposed after new methods, is much lower in proportion, and there is nothing in these conditions to prevent a designer turning out a fast and able yacht. As a matter of fact Navahoe is far beyond the limits, being 87ft. instead of 84 on the waterline and considerably over 12ft. 6in. draft, and yet she fails to carry her sail.

Mr. Carroll's recent assertions that the yacht is all right, carrying her sail well and answering her helm, must be very gratifying to her builders, but they will hardly convince yachtsmen in the face of the evidence that has been steadily accumulating since the first trial trip, and all pointing in one direction. Mr. Carroll has insisted from the first that the yacht was all right, although the very expensive alterations to her keel gave good evidence to the contrary. In view of all that has been said on both sides of the ocean it would have been far better if no attempts had been made to disguise or conceal a thing that is of necessity evident to every observer.

Now that all the new yachts have been hauled out, and the innermost secrets of the designer have been laid bare before the profane and vulgar eyes of the yachting laity, to their wonder more than their edification, the question again arises whether it really pays, and what has been gained by the secrecy maintained at so much expense and trouble. Taking Navahoe's case, the most extreme of all, it does not now seem likely that there are any special features in the design or dimensions which other designers could have profited by copying. Early in the winter Mr. Carroll made the statement, by way of justification for the refusal to allow any one to see the yacht, that she would be fitted with new and important devices, any or all of which might be easily applied to British yachts should they become known. Looking back now it is easy to see what a humbug the whole secrecy

business has been; how little of importance there really was to conceal, and how very little has been concealed at all in spite of the efforts of owners and builders in this or the other Herreshoff boats. While rival designers have lost nothing, on the other hand it is quite possible that had the true dimensions of Navahoe been generally known from the start, the serious defects of the design would have been pointed out in time to have been remedied.

Just at this time Mr. Carroll is coming in for a good deal of hard criticism on all hands, and even some of the New York Y. C. are not wearing very deep mourning over Navahoe's defeat. Whatever may be said now over the folly of crossing with an untried boat, it must be remembered that Mr. Carroll has at least made a bold and sportsmanlike attempt to maintain the honor of American yachting abroad, at a very heavy personal expense, and that whatever the outcome may be, it should be a matter of pride for American yachtsmen to stand by him.

## NEW YORK Y. C. ANNUAL CRUISE.

At the end of the first week of the long-looked-for cruise of the New York Y. C. it is impossible to avoid the conclusion that for several reasons the cruise had been a disappointment to most of those concerned. The central feature of the cruise was to be the racing of the four new Cup defenders, although the schooner division is particularly large and strong this year there is comparatively little interest in its racing, and as for the squadron runs, they are less popular than two or three years ago. The fleet has become so large that the close intimacy and social intercourse of the old times has to a certain extent been lost.

So much has been printed about the big single-stickers that their meeting in a few good races would have given life and excitement to the cruise, apart from all other features, but with no wind there could be no racing, and one day of disappointment has followed another through the whole week.

On Monday at daybreak there was wind in plenty and a very fine race, but the breaking down of Vigilant spoiled completely a fine race, and the good race of the schooners attracted less attention than it deserved. On Tuesday and Wednesday none of the four Cup defenders were entered, and on the first day the run to Morris Cove was a tedious drift, while on the second it was little better.

On Thursday two of the new boats, Vigilant and Jubilee, were pressed, but big outer beyond the Dulwich and returning at once, so a good opportunity was wasted. There was wind enough for a race, though not much of a test, and a very close finish was marred by the fact that it has not been possible to measure the boats, so that no corrected times could be calculated, and it is not yet known whether Vigilant or Jubilee won.

Friday's race, the great event of the season, for the Golet cups, was in every way a disappointment; one of the four big yachts was disabled at the line, crippling her to a great extent, the wind was so light all day that the race could hardly be called a test of sailing, and the finish was made after midnight, the result not being known until noon next day.

Saturday, the usual day for the run to Vineyard Haven, was ushered in by a light southerly air and a dense fog outside the harbor, a few yachts worked their way out, but the Dulwich and returning at once, causing a derangement of the latter half of the cruise.

The fleet of 1893 is a very large one, probably larger than ever before. Among the recent additions are the big steam yacht May and White Layde, both handsome craft, and the new auxiliary, Intrepid. Other notable steam yachts are the big Nourmahal, seldom seen with the fleet of late years, the old Isis, once a schooner, and a steam yacht of modest rig, and now challenging admiration with a brigantine rig. The new Seabury yacht Embra is with the fleet, and also the 30 knot "Dark Secret" Fisen, a handsome piece of woodwork. The oldest of the steam craft is the dwarfed and misshapen Hattie Palmer, which puffs about in the wake of the Vigilant, loaded down with extra spars, gear, racing hatches and other parts of the yacht's equipment. The Palmer is merely a rough experiment, but if she does her work successfully it is quite possible that in a few years each racing yacht may be conveyed by a steam craft specially designed for the service, which will carry everything not actually in use on the yacht. It would certainly be a great convenience if instead of lowering and stopping up a spinnaker or balloon-bittop sail on deck, it could be dropped or hoisted to be picked up by the tender, dried, ironed and stopped up and passed aboard again when needed. In the same way the decks of the racer might be kept clear of topsail yards and spinnaker booms, merely signaling for them from the tender when they are needed, and the customary sandwiches and cold prog could be replaced by a hot meal passed aboard. Following out the same line of improvement, it would be a great convenience to have a floating repair shop, and a floating machine shop, of the British Navy. Yachting is nothing if not progressive, and there is no telling what degree of perfection may be reached in the near future.

This year the rage for white paint is almost universal, and a black yacht, either steam or sail, is the exception. From the late flagship Electra to the smallest 30-footer everything is white. The worst case of white in the fleet is the cutter Clara, once as trim and stylish a yacht as any in the fleet, in spite of her narrow beam, by virtue of shining copper and a glossy coat of black. Painted white from copper to rail, she is now as homely and commonplace in appearance as any craft that ever hailed from Govanus or the Bronx.

This year the newspapers have tried again the experiment inaugurated on Vamoose last season, and the steam yacht Harriet, a trim craft built in Providence a couple of years since, has been chartered for the cruise by the Sun, Herald, World, Times, Tribune, Recorder and the Boston Globe and Herald. Thus the yacht has done very good service, being able to follow the fleet easily in ordinary weather, and the reporting has been very well done.

Another vessel that has accompanied the fleet is the tug N. P. Doane, with Mr. N. L. Stebbins, the Boston photographer, on board.

## First Squadron Run.

## GLEN COVE TO MORRIS COVE.

Tuesday, Aug. 8.

For the third successive year the fleet has made its rendezvous at Glen Cove, near the west end of the Sound, instead of at New London, some 75 miles to the eastward, and after many opinions for one place or the other, the westerly rendezvous seems to be generally acceptable. After Monday's race the fleet lay in Glen Cove Harbor over night, the fleet was to start at 12 o'clock, for New London if the westerly breeze held, and for Morris Cove, New Haven, in the event of a head wind or light airs.

The morning broke with no wind at all, a clear, bright summer day, but only a shade better than a fog from a yachtsman's standpoint. Colonia had laid at anchor all night, but with no competitor she did not wait to race, but was under way early, with a very light air from the west, went to the flag, and at 12 o'clock, when the fleet was under way, she took her place off Mattinecock Point, firing the preparatory gun at 12 o'clock and the gun for the absent Class 1 at 12:10. The other single-stickers starting at 12:15, and the schooners, all handicapped, at 12:25.

There was a faint easterly air and an ebb tide, the yachts drifting slowly on their way with hardly a semblance of racing. Later the wind went to the southward, and as the sun declined it grew far enough to the west to coax out some spinnakers to starboard. Slowly the fleet drifted on, each class scattered, and slowly it found its way into Morris Cove long after dark. As a race the times are of no moment; but as prizes are given on the result, it has a certain interest. The official record is as follows, the course being 37 miles:

Preparatory gun, 12 M.; first class shoops, 12:10; other shoops, 12:15; handicap for shoops, 12:30; handicap for schooners, 12:25.

Second Squadron Run.

MORRIS COVE TO NEW LONDON.

Wednesday, Aug. 9.

The flag ship was ready in good season, having laid at the finish all night to time the late arrivals, and at 9:40 the preparatory gun was fired. A light S.W. wind called all the kites out of the sail locker, and some spinakers were broken out, but before long the light and fickle breeze had dropped to a calm which lasted for some time, finally coming in more steady. So far as any close work is concerned the fleet was too widely scattered, some on one shore and some on the other, to make the details of any importance; boats in the same class were an hour apart at the finish, and the whole story of the run of forty miles is told in the official table as follows:

Preparatory, 9:40, sloops; start, Class 1, 9:50; all other sloops, 9:55; schooners, 10 o'clock.

SCHOONERS—CLASS 1.

The winners are: Constellation, Fortuna (2d), Lasca, Emerald (2d), Ariel, Dagmar (2d), Neaera, Katrina, Huron (2d), Queen Mab, Wasp. There was little expectation of a meeting of the big cutters short of Newport, as Colonia was not seen after starting on Tuesday morning. Vigilant was at City Island with much to do to make her ready for racing, and neither of the Boston fleet was looked for at New London. There was both surprise and disappointment throughout the fleet when the tall spars and double masthead spreaders of a Cup defender were visible at the mouth of the Thames, and many saw for the first time the fourth Paine boat, Jubilee. While all were glad to see her with the fleet, there was general regret that all the others were absent when they might well have been there. In the harbor were many warlike yachts, among them the new 40-foot keel Camilla.

There may have been a time when the yachtsman's hop at the Pequot, over which so much ink is annually expended, was more than a tradition, but of late years it has dropped to a display of Chinese lanterns about the veranda and three or four pieces of music in the parlors, with a mixed throng of people from the town, the cottages and partly from the yachts. As a distinctive yachting function the night at New London has lost all its old character, and would hardly be missed if it omitted entirely.

Third Squadron Run.

NEW LONDON TO NEWPORT.

Thursday, Aug. 10.

The first look over the big fleet on Thursday morning showed a second big single spar outside where the larger yachts were lying, and she was quickly identified by her queer looking consort, the morfydite steam vessel before mentioned. Vigilant had completed her repairs by Wednesday and hurried on to rejoin the fleet. The cause of her mishap is laid to her bowsprit shroud, of 5/16 in. diameter wire rope, which had already been condemned by some as too light; but it is further stated that the real cause of the mishap of Monday was the stripping of the thread on a turnbuckle, and not the stranding of the wire.

The prospect of a race between Vigilant and Jubilee excited more interest through the fleet than that of Monday between the former and Colonia, as it renewed the old rivalry between Boston and New York. Like the three preceding days, Thursday was fair and bright, with smooth water and blue skies, but unlike Tuesday and Wednesday, there was enough breeze to get the fleet under way. Not a few made an early start by way of the Island Sound, but the fleet was so large that there was still left a large racing contingent. The start was made at 10:10, the two big cutters working cautiously about the line in a light southerly wind, alert to make the most of a "one gun" start. Such a start is unusual in the New York Y. C., but as it is to be used in the Cup races it is likely to be tried in some of the earlier meetings of the boats. At the wheel of Jubilee, with General Paine near by, was the stalwart figure of Captain John Barr, and with his old-time skill he took the start and the weather berth from his rival, leading over the line by 5/8 in. The two had only 5m. start of the smaller cutters and sloops, and 10m. of the schooners, but they had soon spun this slight handicap out to a good lead and were by Race Rock without a tack. Jubilee gained slightly all the while, whatever advantage there was in the light wind. As they bore off for the new course Jubilee had a good lead of Vigilant. The rest of the fleet were not so lucky as the wind headed them a little and several tacks were needed to get by.

After Race Rock was passed sheets were trimmed for a long reach to Point Judith, and the fleet strung out in one long line, at the head being Jubilee and Vigilant, Lasca, Ariel and Wasp. The two big fellows were close together, Jubilee holding the lead, but the two classes were so broken up that there was no close work, each merely trying to reach the finish as soon as possible, with little regard to class competitors. The wind held light, dropping at times and then coming in strong enough for a little while to raise hopes of a quick run in to the finish off Dumplings. Jubilee and Vigilant were giving and taking, the fin boat still with a clear lead. They rounded Point Judith in this position, both with much lead of the others, but the windward work at the line in and broke hers out, but Vigilant was sharp enough to keep off shore and come up on Jubilee's weather, not setting her spinaker until about five minutes later, by which time she had covered the other boat. They ran very evenly for several miles, but Vigilant finally drew ahead and crossed the line with a lead of less than a minute. The performance all day showed little more than that the two were very closely matched in a light wind. The windward work at the line was so short to give any true gauge of the superiority of either boat, and in both running and reaching they held very close together. As the rest of the fleet came in by Narragansett Pier another big singleslicker came out and stood off to the eastward and was recognized as the other fin-keel, Pilgrim. She had made Newport at 5 P.M. on Wednesday, after a quick run around the Cape.

The finish off the Dumplings was much like that of last year, all with spinakers to starboard and a large attendant fleet of yachts and small craft. The official times were:

Signals, preparatory, 10:00: first class sloops, 10:10; other sloops, 10:15; schooners, 10:20.

Rosalind.....	10 20 10	.....	.....	.....
Nymph.....	10 18 54	4 57 44	6 38 50	.....

The winners were: Constellation, Ramona (2d), Fortuna; Lasca, Mayflower (2d), Ariel, Emerald (2d); Neaera (2d), Katrina, Huron (2d), Queen Mab, Wasp, Uvira (2d); Marquita, Nymph (2d). As Vigilant and Jubilee are not measured it is not known which wins. The new fin-keel Carmita sailed first race, making but a poor showing and being beaten by Uvira and Jessica.

The generally fluky character of the race is shown in the wide differences at the finish in most classes. There was a very large fleet in Newport harbor, and many of the larger yachts laid in at the Cape, or even outside Goat Island. Colonia was resting at her anchor about the island, awaiting the fleet; the two days having been passed in alterations. Her mainsail had been cut down on the head, and her bowsprit shrouds, of 5/16 in. steel wire, were replaced by new ones of 1/4 in. wire. Pilgrim anchored off the middle of Goat Island, while Jubilee and Vigilant went into Brenton's Cove with the big steam yachts. Thursday evening brought a thick fog from the sea, penetrating the town and harbor, and the morning at Brenton's Cove was illuminated, and a reception was given to the members and their guests.

Goelet Cup Race.

OFF NEWPORT.

Friday, Aug. 11.

The first real meeting between New York and Boston in the contest for supremacy in yachting was in the Goelet cup race of 1885, on a day still remembered with pleasure for the strong breeze and fine race, in which Puritan and Priscilla sailed over the Sow and Pigs course, and the former scored a complete victory. In the following years important races were sailed earlier in the season, off Marblehead and New York, but the yachts were never in their best form before the cruise, and the Goelet cup race has been eagerly awaited as giving the first thorough test of the season's new boats. This year, with a new fleet of Cup boats, the interest in this race has been increased by the fact that it is the first meeting of the four, and the speed of each is an unknown quantity, the uncertainty being in no way decreased by the two races of Monday and Thursday.

The sight of four great singleslickers with clubtopsails aloft carries one back half a dozen years to the time of the last race for the Cup in 1887, and to the many changes which have taken place in that short time. General Paine is still the principal figure among the defenders of the Cup, and around him on the deck of the new boat are seen some of familiar faces. Messrs. Richards, Bryant and Fay are still with him, but the kindly, pleasant face and slight stooping figure of the designer of Puritan, Mayflower and Volunteer is missed and mourned by all. The designer of the new boat is aboard, however, a bright, active young fellow, whom no one would suspect of such a task, the son of the General, Mr. John B. Paine. One of General Paine's old lieutenants is missing from his side this year, Mr. E. A. Willard, of New York, who had shipped aboard of Vigilant at a time when there was no thought of a fourth Paine boat, and whose skill and energy is now directed entirely to the success of the "bronze-bottom." Another familiar face that is missing from the Paine boat is that of Capt. "Hank" Haif, all his life a strong centerboard man, winning his reputation in the flat old Fanny, and now using his utmost efforts to put the keel Colonia is faster than her centerboard sister and the fin-keels as well. Perhaps the strangest freak of all that time has played on the fleet is that which placed Capt. John Barr on the deck of a Paine Cup defender, the skipper of Thistle and Clara; the tall, sturdy figure which swung the long tiller to and fro, now standing gravely beside the wheel of Jubilee.

In 1887 Mr. George Stebbins was reporting the races for the Boston Globe, now he is the principal in a Cup defender designed by himself and his associate, Mr. Binney, another young man and unknown at that time. In the same year the Burgess 70-footer Titania was just beginning a remarkable record, now she is completely lost in the schooner Dagmar, with a grotesque modern snout. At that day white was ultra-fashionable, and a "clipper stem," as on Sachem and Volunteer, a novelty; now a black boat is the exception and a shroul snout a mark of disrepute. In 1887 Cythera made her last cruise under the flag, Capt. Chas. Barr was in command of the diminutive Shona, Pappoose was considered a wonder, the 40ft. class was not even suggested, the Herreshoffs were building steam yachts, apparently without any thought of sailing craft, Grayling, with her plumb stem, was the leading schooner, old Capt. Coffin was finding and writing yarns that all were laid to listen to or were being told to not even a suggestion of Nells Olse were a waistcoat, several sizes smaller than in the present day of grace. Taken all together, the changes have been many and important, and opinions may easily differ as to the degree of advancement made by yachting in six years. The cups presented by Mr. Ogden Goelet this year are the same in value as in the past, \$1,000 for schooners and \$500 for cutters and sloops, to be sailed for without time limit, over one of the two usual courses from Brenton's Reef Lightship, the Block Island or the Sow and Pigs, and a triangle of about 33 miles.

Friday morning was cloudy and sultry, with a light breeze shifting between north and east. Clubtopsails were set on the racing yachts, and everything about Newport that could sail or steam headed out for the start off the lightship. The yachts carried gay parties of guests and several large steamers were crowded with people from Boston and even New York, who came just for the day. The steamer Gay Hawk carried the members of the New York Y. C.

About the line at 11 o'clock were the four Cup defenders, Jubilee, Colonia, Vigilant and Pilgrim, the latter nominally owned by Mr. Bayard Thayer and entered in the club under his name. The schooners were Ariel, Lasca, Emerald, Constellation, Dagmar, Ariel, Marguerite, Mayflower and Alcega. The 46 footer Ilderim was entered, this being her first race, though she was built in 1891. Larger she was not, but the old fleet of singleslickers of 1885-87 would have been dwarfed beside the new quartette, the smallest of the latter having a larger rig than Volunteer.

Just before the start an accident happened to Pilgrim, the wire top-sail halliard chafed through and the yard fell, breaking the jackyard. There was no wind at the time, but a long, easy roll, which was not likely to stop the boats, but was hard on the gear at such immense weights. The sail was quickly lowered and a jibheader set in its place.

With the lightest of airs from S.E. the four were sent away at 11:35, the flag ship lying north of the Brenton's Reef Lightship. All were slow in crossing, Pilgrim coming first to the line in good time, but nearing and going back for a late start. Jubilee came next, followed by the other three, but the wind was so light that the line on starboard tack from the south end near the lightship, with Ilderim astern. Vigilant crossed on the port tack from the north end,

crossing Jubilee's wake, and Colonia followed Ilderim and Jubilee. Pilgrim was at the line almost becalmed when the handicap gun fired. With all eyes on the cutters, the schooner start received little attention, Lasca, Ariel and Volunteer came over the line on starboard tack, followed by the gun, Emerald, Loyal and Dagmar following them later, while Marguerite, Mayflower, and Alcega crossed from the north. Several were handicapped, Constellation being the last.

Baby jibtopsails were set on the cutters. Jubilee held on starboard tack with Colonia and Pilgrim in her wake, the latter moving very slowly with her working topsail in place of a club and with her way killed on the line. Vigilant stood on for a time on the port or off shore tack and then went about, Jubilee crossing her bows. Vigilant tacked to windward of Jubilee's wake and about on Colonia's beam. Volunteer was the leading schooner from the start, being more than a quarter mile to leeward of Jubilee, while Emerald and Ariel were beam on to each other astern of Volunteer.

Pilgrim was still doing very poorly, the others dropping her though they were moving slowly enough. She finally made a tack to the north and left the fleet to hunt for flukes. The two leaders were sailing very closely together, Vigilant a little too far from Jubilee's weather quarter to hold her back any, but what slight difference existed was in Jubilee's favor. For nearly two hours they held the port tack in a very light air, Jubilee pointing a little higher and opening the distance, though the gain and loss in all this time was very small. At times the whole fleet was lost in a belt of fog, which would lift as suddenly as it came, and after dropping half a mile astern left them and stood to the south for more wind. Volunteer, when seen through the fog, was far ahead of the schooners, with Ariel second and Lasca third.

At 2:15 P.M., when within sight of the Vineyard Sound or Sow and Pigs Lightship, seventeen miles from the start, the fog shut in very thick and nothing was visible for a quarter of an hour. The fog was then cleared, and the lightship was visible, showing that Jubilee was still ahead and within a quarter of a mile of Vigilant. A little later and a third sail appeared well to the south; Colonia, with a good lift up on the leaders and within dangerous distance as all came for the mark.

A couple of short tacks were made, Jubilee sending down her baby and setting the ballouster in stops, and then she broke it out as she passed the Lightship at 3:57:00. Vigilant went by at 4:00:35 and Colonia at 4:01:30.

The wind had picked up for a time, but as they neared the mark it fell very light. Jubilee had a turn in the head of her balloon jibtop-sail and she hurried to set a spinaker before attempting to

Following are some of the scores of the second and first series of contests. Number of entries about 16. Conditions: Pistol, distance 50 yds. 50 shots. German 25-3/4 in. ring target. "Ang" ride and Spring

Packard.....11111111111111—15—0—15  
This is Packard's third win, his scores being 29, 28, 28.  
R. J. Bissett, Secretary.

One Hundred Guns at Oakland.

SAN FRANCISCO, Aug. 8, 1893. *Editor Forest and Stream:* In closed place score of our last tournament, held on July 30 at our shooting grounds in Oakland. It was one of the most successful events of the season, bringing together a larger number of sportsmen than have ever been present at an event of this kind in California. The entry list speaks for itself, there being no less than 100 shooters in the main event. The program opened at 10 o'clock A. M. and closed at 6 P. M. In that time the schedule matches and ties were all shot off.

CLABROUGH, GOLCHER & CO.

Sheboygan Shots.

SHEBOYGAN FALLS, WIS., Aug. 10.—I inclose herewith some of the scores made at the second annual tournament of the Sheboygan Gun and Rod Club, on Aug. 4, 5 and 6. There were several crack shots from outside who took part in the tournament, two or three of whom we understand are not recorded by their right names, which ought not to be. The local gunners were not left in the rear every time, and many of them made good records, as the following scores will show:

No. 1, 10 blue-locks, entrance \$1, 50, 30 and 20 per cent.; Keller 8, Neumeister 8, Kroos 7, Warren 5, Winfield 9, Heicks 10, Davis 6, Ladwig 9, Brazelton 5.

No. 2, 10 blue-locks: Kroos 4, Keller 9, Neumeister 8, Davis 9, Heicks 8, Winfield 10, Warren 7, Ladwig 5, Brazelton 7.

No. 3, 15 blue-locks: Heicks 15, Davis 12, Keller 15, Warren 10, Neumeister 12, Winfield 13.

No. 4, 20 blue-locks: Heicks 19, Neumeister 10, Keller 11, Davis 17, Kroos 12, Winfield 16, Zurheide 14, Ladwig 18.

No. 5, 10 blue-locks: Zurheide 4, Warren 5, Kroos 8, Davis 8, Heicks 10, Winfield 9, Ladwig 9, Neumeister 7, Shadolt 9.

No. 6, 15 blue-locks: Davis 11, Kroos 10, Heicks 12, Zurheide 8, Winfield 13, Keller 11, Neumeister 13, Ladwig 8, Shadolt 10.

No. 7, 10 blue-locks: Keller 10, Warren 8, Neumeister 6, Zurheide 6, Rummele 6, Winfield 6, Barrett 3, Brazelton 10, Heicks 10, Ladwig 7.

No. 8, \$40 guarantee purse, 20 blue-locks, \$2 entry, 30, 25, 20, 15, 10 per cent.: Heicks 20, Keller 16, Zurheide 14, Brazelton 15, S. Warren 13, Bandman 20, Baldwin 10, Barrett 15, Rummele 17, Winfield 16, Neumeister 11, Bock 12, M. Kroos 13, Ladwig 14.

No. 19, \$50 guarantee purse, 20 blue-locks, \$2.50 entry, 30, 25, 20, 15, 10 per cent.: Winfield 18, Barrett 13, M. Kroos 10, Ladwig 17, Zurheide 10, Brazelton 14, Heicks 19, Keller 19, Kaufmann 15, Bandman 13, Bock 15, H. Gruebner 12.

No. 20, team shoot, any three men to constitute a team, 10 blue-locks, \$3 entry per team, 50, 30, 20 per cent.: Keller 8, Ladwig 5, Brazelton 6, Heicks 10, Winfield 10, H. Gruebner 6, Yorgy 2, Bock 7, Bandman 8, Kaufmann 8, Zurheide 6, Barrett 8, A. Kaufmann 6, C. Kerskamp 3, M. Kroos 9.

No. 21, 15 blue-locks: Barrett 14, J. Kroos 12, Brazelton 11, Bandman 14, M. Kroos 14, Keller 12, Heicks 15, Winfield 14, Ladwig 11.

No. 22, 20 blue-locks: Heicks 20, Winfield 16, Keller 18, J. Kroos 17, Barrett 12, M. Kroos 10.

No. 23, 10 blue-locks: Ladwig 10, Trester 5, Traudt 4, Keller 6, Bock 7, Kaufmann 5, Barrett 5, Brazelton 8, Meixner 4, S. Meunier 4, Yorgy 7, H. S. Laehle 5, J. Kroos 5, Winfield 9, Heicks 10.

No. 24, 10 blue-locks: Barrett 7, Heicks 19, Yorgy 6, Trester 3, S. Meunier 8, Keller 8, Kaufmann 7, Meixner 6, Winfield 10, Ladwig 8, Traudt 5, Henry 4, Kroos 4.

No. 25, 15 blue-locks: Heicks 15, Winfield 14, Meixner 13, Traudt 8, Kaufmann 13, Henry 14, Bandman 11, Barrett 12, J. Kroos 12, S. Meunier 13, Ladwig 11, Trester 4.

No. 26, 10 blue-locks: Meunier 8, Barrett 8, Ladwig 8, Winfield 8, Bock 9, J. Kroos 7, Kaufmann 8, Heicks 10, Meixner 9, Bandman 9, Trester 4, Traudt 6, Keller 8, Schiffender 6.

No. 27, 20 blue-locks: Heicks 19, Meunier 15, Bandman 18, Winfield 13, Barrett 17, Bock 18, Kaufmann 17, Meixner 19, Keller 16, J. Kroos 19, Bandman 13, Henry 14, Ladwig 13, Rummele 16.

No. 28, 10 blue-locks: J. Kroos 10, Keller 10, Markham 3, Rummele 10, Meunier 10, Henry 6, Winfield 8, Meixner 9, Kaufmann 9, Barrett 9, R. Neumeister 4, Staehle 3, Bock 8.

No. 29, 15 blue-locks: Winfield 14, Meixner 15, Barrett 13, Bandman 15, Keller 14, J. Kroos 11, Heicks 15, Rummele 12, Henry 9, S. Meunier 7.

No. 30, \$75 guarantee purse, 20 blue-locks, entrance \$3, 30, 25, 20, 15, 10 per cent.: Heicks 20, Kroos 19, Keller 18, Barrett 18, Rummele 17, R. Neumeister 9, Schiffender 12, Brazelton 13, Dillingham 13, Winfield 18, Meunier 17, Bandman 18, Meunier 17, Bock 14, Kaufmann 17, Ladwig 15, Henry 12, J. Bitter 10.

No. 31, team shoot, any three men to constitute a team, 10 blue-locks, entrance per team \$3, 50, 30, 20 per cent.: Bandman 10, Heicks 10, Rummele 8, Kroos 8, Kaufmann 9, Bitter 6, Bock 6, A. Kaufmann 6, Schiffender 6, Winfield 10, Keller 6, Meunier 6, Meixner 10, Ladwig 9, Trester 6, Dillingham 6, Brazelton 9, R. Neumeister 4, Henry 9.

No. 32, citizens' purse, 25 blue-locks, entrance \$2: Barrett 25, J. Kroos 17, Meixner 24, Trester 16, Henry 12, Guenther 9, Meunier 21, Traudt 21, Heicks 24, Keller 20, Winfield 23, Rummele 16, Bandman 25, Ladwig 16, Brazelton 17.

No. 33, 15 blue-locks: Barrett 14, Heicks 15, Keller 15, Meixner 13, Lingelbach 3, Koehn 1, J. Kroos 9, Traudt 13, Kehl 4, R. Neumeister 8, Guenther 9, Bandman 13, Winfield 14, Schlyter 8, Fritzlaiff 4, Kaufmann 14, Trester 12, Meunier 12, Blust 11, Ladwig 13. W. C. T.

Wauregan Gun Club.

THE Wauregan Gun Club held their monthly shoot at their club grounds, Pelhamville, N. Y., Aug. 11, 1893, in which twelve members competed for prizes. The birds were a fine lot of flyers:

L. E. Minor.....0222121210-8 F. Lyon.....121122122-9  
W. H. Brickner.....1001201122-7 R. Darling.....201010111-6  
G. W. Silberhorn.....2222110111-9 M. F. Brickner.....111011111-8  
F. Knof.....121112212-3 J. N. Mills.....21202212-8  
D. Volenti.....212302010-6 F. Kerker.....212010211-7  
D. Bornhooff.....1111200212-8 J. W. Spencer.....111200111-7  
Sweepstakes, \$2.50 entry, first and second money:  
F. Knof.....1202-3 R. Darling.....20201-3

Miss and out, 3 bird limit: W. Brickner 2, R. Darling 2, F. Kerker 2, D. Volenti 0, E. L. Minor 0, J. Spencer 0, F. Knof 2.  
J. H. Mills, Referee.

Nickel Plates.

CHICAGO.—At the annual meeting of the Nickel Plate Gun Club, held Aug. 10 at Chamber of Commerce Building, the following gentlemen were elected officers for the ensuing year: President, E. Baggett; Vice-President, H. O. Perry, re-elected second term; Treasurer and Secretary, E. Colby, Jr., re-elected fourth term; Board of Directors, E. P. Arnold, V. F. Sivore, W. F. Harrison, being newly elected; S. S. Kimbell and A. H. Brinkman holding over.

The New Burgess.

The new Burgess repeating shotgun has been put upon the market and may now be seen in sporting goods stores. It has many features which will commend it to sportsmen. It is symmetrical in appearance, well finished and well balanced, and is provided with a simple device for separating the barrel from the stock for convenience in carrying. The mechanism of the gun is based on a new principle, differing from anything which has yet appeared in the line of repeaters, and possessing novel features. The advertisement of this gun will be found in our columns next week.

Manufacturers' at Allentown.

DETROIT, Aug. 10.—The sixth shoot of the Manufacturers' Trap-Shooting Association will be held at Allentown, Pa., Sept. 12 and 13, on the grounds of the John F. Weiler Gun Club. There are five railroads running into Allentown, viz.: the Lehigh Valley, P. & R., Nor. Penn., Central R. R. of N. J., Lehigh & S. R. R. and Perkiomen R. R., and, therefore, it is easily reached. The grounds are about fifteen minutes' ride by electric car from city, and are inclosed and contain a cozy club house, with a large hotel at entrance, where meals can be procured at all hours at moderate prices. The electric cars pass all the depots, and if shooters choose they can go direct to grounds. All shooters are invited to visit club rooms on North Seventh street. There is no doubt that this shoot will be well attended on account of the novel, interesting and liberal programme presented by the Association. The trophy race will attract a good deal of interest, as it proves beyond a doubt who is the champion target shot of Pennsylvania.

JOHN PARKER, Manager M. T. S. A.

Douglas Gun Club.

CHICAGO, Aug. 5.—In the medal shoot to-day Eich won A medal, Sherman B medal, and Hart C medal. Scores for A medal:

J. Church.....11111101001101011111-19  
M. J. Eich.....111101110111011111-21  
For B medal:  
E. Essig.....1010011110110101110101-15  
J. Sherman.....11111111111111111111-22

Des-chree-shos-ka.

DETROIT, Aug. 10.—The third international tournament to be held on Des-chree-shos-ka Island, Detroit, Sept. 5, 6, 7 and 8, will be a very interesting one. There will be two \$300 guaranteed events and one \$100 guaranteed purse, a \$100 purse entrance free, a two-man team race, \$50 first money entrance free; two trophy races for the international championship of U. S. and Canada, one on live birds and one on targets. There will be one big sweep on live birds, \$25 entrance, 25 live birds, 4 moneys; the Parker sliding handicap will be used, but not apply on the guaranteed events. Programmes will be out next week.

JOHN PARKER, Manager.

Harrisburg Shooting Association.

HARRISBURG, Pa., Aug. 3.—*Forest and Stream:* At a meeting of the Harrisburg Shooting Association the following officers were elected to serve for ensuing year: Jas. H. Worden, president; W. R. Fieles, vice-president; H. B. Shoop, sec.; D. M. M. Connick, treas.; W. H. F. Worden, captain. We are now busy as nailers arranging for the State shoot in September, which will be the largest and grandest shoot ever held in Harrisburg. Trap shooters should write for the finest programme ever provided by a shooting association.

W. B. Shoop.

Capt. Bogardus and the Unknown.

CAPT. A. H. BOGARDUS writes of his forthcoming match: "It will be a more skillful match than has been shot for years. We are to shoot at 100 live pigeons each, 15yds. rise, with a circle of 10yds, drawn around the trap, all birds must be killed inside the circle, and must be retrieved by a dog. Use of one barrel only. The conditions approach closely field shooting. The match will be shot some time between Sept. 20 and Oct. 1. I shall name the day in a week or two. The man who is to shoot against me is unknown. I do not care who he is; I think I can win."

A. H. BOGARDUS.

ANSWERS TO CORRESPONDENTS.

W. L. M., Pittsburg, Pa.—Will you kindly advise me if any change was made in Pennsylvania law on squirrels? My last copy of *Game Laws in Brief* gives Sept. 1 as the opening day. Ans. No, the law remains the same.

H. E. S., Columbia, S. C.—Our goggle-eye is a poor fish abounding in lakes and streams, generally frequenting deep water and going in schools. Is it the *Pomoxys sparoides*, elsewhere known as calico bass? Ans. Yes. In Lake Erie it is the strawberry bass or grass bass, and in Illinois the calico bass. It is also in various parts called goggle-eyed perch, bank lick bass, bitter-head and lampighter.

E. M. S., Lansing, Mich.—Would you please advise how English carp can be taken out of a small pond with muddy bottom? You cannot catch more than one or two at a time with a hook and line, and it is impossible to catch them with a net, as they bury themselves in the mud. Ans. If you wish the fish for use persevere with the hook or drain the pond and scoop them out. If you regard them as pests to be gotten rid of, you may drain and scoop, or if there are no other fish in the pond, and if the pond is not connected with other waters, use lime or an explosive.

THE BEST LINE TO CALIFORNIA from either Chicago or St. Louis is the Burlington route. Takes you via Denver, Colorado Springs, Salt Lake and Ogden. Daily vestibuled trains, with Pullman sleepers chair cars (seats free) and Burlington route dining cars.—*Adv.*

SAVE YOUR TROPHIES.  
Write for Our Illustrated Catalogue  
"HEADS AND HORNS."

It gives directions for preparing and preserving skins, Antlers, etc. Also prices for Heads and Hugs, Birds and Fish, and all kinds of work in Taxidermy.

WARD'S NATURAL SCIENCE ESTABLISHMENT,  
ROCHESTER, N. Y.

Most sensible people who realize how complex and variable the game and fish laws are, do not try to

REMEMBER

them, but depend for reference upon the standard compilation, in fact the only comprehensive and correct compendium—the *Game Laws in Brief*. It covers the United States and Canada, and has numerous half-tone pictures. It may be had of your dealer, or will be sent postpaid by the FOREST AND STREAM. Price, 25 cents.

FROM the first issue of this paper it has been used, and for nearly twenty years this particular space has been occupied by

ABBEX & IMBRIE,

who now say that they have given up advertising at least for the present.

Notice to Fishermen! Cut Prices for 1893.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.50 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9ft., 6oz.; 10ft., 7oz.; 10ft., 7oz.; 11ft., 8oz. Reel seats below hand.

Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,000 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSOGGIN LAKE (via Bryant's Pond or Bethel) - Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.) - For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Qu-bec).

LAKE ST JOHN REGION (via Quebec) - For ouananiche trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles) - For mascaougue, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston) - For pickerel, black bass, mascaougue, pike.

MUSKOKA LAKE - The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.

AKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).

LAKE SUPERIOR (via Collingwood, Wlarton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

### WE HAVE LOST A BEAR.

THE FOREST AND STREAM grizzly died last Saturday. She was the survivor of the pair of cubs sent to us in 1885 from Montana, where, in the wilds of Cut-Bank, Piegan Indian John had taken the scalp of the maternal grizzly in fair and open set-to. The cubs were placed by us in the Central Park of this city. The male died in 1888, having succumbed to a pulmonary complaint contracted in the great blizzard of that year. The female in turn died of consumption. Each met an untimely death. Amid the higher altitudes of the Rockies they might have lived to a green and grizzly old age.

We should not do our grizzly justice, if we permitted her to pass into oblivion without adverting to those lovely and unobtainable traits which were conspicuous in her character and endeared her to the populace. She was, as bears go—or more truly, as bears do not go—a creature of sweetness and light—sweetness not wasted on the desert air nor light hidden amid the gloom of the thick timber. She exhibited a side of bear nature not revealed to those who study the race with traps and clogs and guns. All that a savage and ferocious bear of the wilderness should be, she was not. All that a civilized and polished bear of the town should be, she was. Her life was a beautiful demonstration of the great truth that the children of the tribe of Ephraim are after all but the creatures of their surroundings.

Snatched in a tender stage of ursine infancy from the rugged and roughening scenes of her native lair in the wilderness, she was removed from the companionship, the influence and the teachings of grizzly exemplars, and was brought to dwell among men in the metropolis. Here, amid the beauties of landscape gardening, the monuments and statues of poets, painters, patriots, philosophers and divines, within hearing of the hum of the concourse where the equipages of fashion roll their ceaseless course, surrounded by art galleries and libraries, churches, synagogues, hospitals, colleges, vast apartment houses and hotels towering in the air, here, in a word, in a center of civilization and culture and refinement, she curbed her savage instincts, took on the graces of an amiable sociability, and as she grew in years and bulk and length of claw, and her disposition mellowed, she proved herself worthy of the exalted station to which destiny had called her. She renounced the immemorial traditions of her race with respect to human kind. She was a stranger to fear of humanity, and felt no infuriate animosity toward it. Man the death-dealer and exterminator of grizzlies she knew not, and knowing not hated not. Man the purveyor of peanuts and confectionery she knew, and knowing loved.

Her life was one continuous levee. It is with bears as with men—

Stone walls do not a prison make,  
Nor iron bars a cage.

During the years of her sojourn in the bear pit of Central Park, she furnished a spectacle for the curious gaze of millions of visitors. Some of them she amused with her antics; others she entertained with her winsome ways;

and the thoughtful among them she baffled with her eyes. Those eyes were mild, luminous with intelligence, now twinkling with humor, then quizzical, on occasion contemptuous and scornful, in the distress of her last days appealing and pathetic, mysterious and uncanny with something of the human in them—so wonderfully human that looking into them one might well understand why the red Indian ascribed supernatural power to his brother the bear, and might know how the doctrine of the transmigration of souls came into the world.

### THE BERING SEA DECISION.

THE arbitrators chosen to decide the points in dispute between the United States and Great Britain, in connection with fur sealing in Bering Sea, rendered their decision on Tuesday, Aug. 15.

Not very many years ago there arose in the North Pacific Ocean the practice of killing the fur seals for commercial purposes during their migrations to their breeding grounds. Later, the seals were followed into Bering Sea, and vessels hovered about the Pribilof Islands killing the animals on their journeys between the islands and their feeding grounds 60 or 100 miles away. A large proportion of the seals so killed were breeding females, and about three-quarters of those killed were lost by sinking before they could be secured. Thus the destruction was very great and very wasteful. The industry of pelagic sealing at length assumed such proportions that the United States, claiming that the seals were its property, took active measures to put an end to the slaughter, and captured and confiscated certain vessels engaged in it, which were flying the British flag. Much diplomatic correspondence ensued, and a treaty was at length made between the United States and Great Britain, which provided that the whole subject of the jurisdiction of the United States over the waters of Bering Sea, the preservation of the fur seals which habitually resort to that sea to breed, and the right of citizens and subjects of either country to take the fur seals in the open sea, should be submitted to a tribunal composed of seven arbitrators, two to be named by Great Britain, two by the United States, one by France, one by Italy and one by Sweden and Norway.

The arbitrators chosen were, for the United States, Justice John M. Harlan and Senator John T. Morgan; for Great Britain, Lord Hannen and Sir John S. D. Thompson; for France, Baron de Courcel, who was subsequently chosen president of the tribunal; for Italy, Marquis Emilio Visconti-Venosta, and for Sweden and Norway, Judge Gram.

The various questions in dispute were embodied in Article VI. of the treaty of arbitration, which will be found in another column. A brilliant array of counsel appeared before the arbitrators, some of the best lawyers of England and the United States being represented.

For the United States it was contended (1) that the Bering Sea was not included in the Pacific Ocean, as that term was used in the treaty of 1825 between Great Britain and Russia; (2) that being a body of water nearly surrounded by land, Bering Sea belonged to Russia when that surrounding land was Russian territory; (3) that whatever rights Russia had to Bering Sea and in the seal fisheries passed unimpaired to the United States under the treaty of March 30, 1867, by which the territory of Alaska was purchased; (4) that one of those rights so passing to the United States was the right of protection of and property in fur seals frequenting islands of the United States in Bering Sea, wherever such seals might be found, whether on shore or in the open sea outside the ordinary three-mile limit.

Great Britain held that the United States had no jurisdiction in the waters of Bering Sea outside the three-mile limit, and that the seals in the open sea were *feræ nature* and belonged to whomever might take them.

On all of these questions the decision of the arbitrators is adverse to the United States. In other words, on all points of law the arbitrators decided against this country. The contention of the United States was for the establishment of new principles of international law, and it was the duty of the arbitrators who listened to the arguments made by the counsel of the two Governments to announce what the law was. Their declaration agrees in all respects with well established principles of international law, and thus is against the United States.

On the other hand, the arbitrators have formulated a series of regulations for seal fishing by citizens of the United States and Great Britain which gives to the seals

a large measure of protection, almost as much, indeed, as the United States contended for. By these regulations:

- (1) It is forbidden to kill seals within a zone of sixty miles around the Pribilof Islands.
- (2) A close season is established from May 1 to July 31 inclusive for fur seals on the high seas in the Pacific Ocean north of the 35th parallel of north latitude and east of the 180th degree of longitude from Greenwich.
- (3) Only sailing vessels shall be permitted to take part in fur sealing operations.
- (4) Each sailing vessel must be licensed and carry a distinguishing flag prescribed by its Government.
- (5) Masters of vessels shall keep a tally of the number and sex of seals captured each day, and these records shall be communicated to the two Governments at the end of the season.
- (6) The use of nets, firearms or explosives is forbidden in fur sealing at any time in the Bering Sea, but shot-guns may be used in fishing outside of Bering Sea during the open season.
- (7) The two Governments shall take measures to control the fitness of men engaged in fur sealing.
- (8) Indians may be engaged in fur sealing, provided they are not employed by other persons and provided they do not hunt fur seals outside of territorial waters under contract to deliver skins to anybody.
- (9) These regulations shall remain in force until they have been fully or in part abolished by a common agreement between the United States and Great Britain.

The establishment of the close season, the sixty-mile zone about the Pribilof Islands and the prohibition against steam vessels, firearms and nets will if rigorously enforced be likely to result in the serious crippling of pelagic sealing, if not in its actual abolition. There is still a number of details which will come up for settlement, and it will be necessary for some agreement to be made between the two Governments for enforcing the regulations announced.

It is unfortunate that other nations, whose territory is washed by waters frequented by the fur seal, were not represented at the arbitration conference at Paris, and are not bound by its decisions. The regulations should govern citizens of Russia, Japan, China and other less important nations, if the seals are effectively to be preserved. These regulations will be law for the citizens of the United States and Great Britain, but not for vessels flying the flags of other nations. Heretofore, almost all pelagic sealers have been either Americans, Englishmen or Canadians, but it will not be difficult for an American or a Canadian who wishes to engage in fur sealing, to obtain a registry from another country and to pursue his trade. Since, however, Great Britain, Russia and the United States seem to be of one mind on the question of seal preservation, it should be possible to induce other nations to conform to the regulations laid down last week by the arbitrators at Paris.

Although the United States did not by any means obtain what was desired in this arbitration, it is yet a matter for congratulation that through the efforts of this Government the fur seals will now have a much greater chance for life than at any time since pelagic sealing has been practiced. And the civilized world may rejoice that a dispute between two of the greatest nations of the earth, which at one time threatened to become serious, has been amicably settled in this way. It is another triumph for arbitration; the world has advanced one step further along toward the time when armies and wars shall be abolished.

### THE REAPPOINTMENT OF MR. JAMES GAYLER AS FIRST ASSISTANT POSTMASTER GIVES GENERAL AND DESERVED SATISFACTION TO ALL WHO HAVE DEALINGS WITH THE NEW YORK POST-OFFICE.

Mr. Gayler has been in the service for thirty-eight years, and has held his present position since 1880. He is highly esteemed both by the department and by the public as an efficient and valuable official. He is an enthusiastic fisherman, and it is quite clear to us that the success of his career is due to the fact that he has had the good sense to go fishing whenever he could break his chains and get away, and when he could not has made the best of the situation by reading FOREST AND STREAM. The weekly copy of this journal bearing the First Assistant Postmaster's address label is one piece of second class mail matter deposited in the New York post-office which the clerks take good care to see shall reach its destination.

## The Sportsman Tourist.

### MIDSUMMER ON THE MOLALLA.

"Lazyin' long the grassy bank,  
Where the crick has made  
Turnin's in an' out ag'in,  
Huntin' fer the shade;  
All the sunny afternoon,  
Ef I had my wish,  
I would never do a lick  
'Cept ter fish."

—W. J. Lampton in *Detroit Free Press*.

THE pleasure of absolute indolence is appreciated by none more than by the angler who, for a fortnight of the heated term, lives in the forests of remote mountains where trout are plenty and where the rules of camp forbid catching more than can be used.

My friend Judge Cheney, in a recent letter, writing of his outing at Sunapee Lake, said: "I fished, loafed and rested. Did not read a newspaper or write a letter except to my daughter in Europe, and it was as near paradise as one gets in this world." Now, the whole angling world knows that Judge Cheney is absolute authority on all matters pertaining to true angling, and that if there is an anglers' heaven on earth, he can come about as near describing it as the next fellow. These outings are for recreation, and if one expects recreation pure and unalloyed he must dismiss business, forget his troubles and throw all care to the winds. Artistic fly-casting may, by the exercise of too much energy, shade into a sort of scientific labor, and thereby lose much of its poetry and many of its charms. There's little poetry in perspiration and no sentiment in wet stockings.

Imbued with these sentiments our crowd went to the Molalla—the men for trout, the women for berries, and all for a season of quiet camp life and listless inactivity, spiced with just enough trout and berries to keep us good-natured. There was to be no labor except that which might be necessary to meet the demands and fill the requirements of a well-regulated mountain camp. We have returned. And now, impartially reviewing the trip, its incidents and results, I feel constrained to say that, as a whole, it was a brilliant illustration of the superiority of man's will power over that of woman's.

We men, particularly Billy, scarcely deviated a hair's breadth from the original programme, while my wife and her mother gathered and preserved over sixty quarts of berries, besides those necessary for camp, which were no small item, for both Billy and Mead dearly love fresh berries with cream and sugar, as well as berry pies. Such an exhibition of energy on such a trip, in the face of those solemn asseverations about rest and recuperation, is disagreeable and offensive and should be rebuked. My reason for reproaching her through the columns of *FOREST AND STREAM*, instead of speaking to her privately about the matter, emanate from a philanthropic desire to avoid renewing some of the scenes in camp which transpired when she returned from the hot berry patch to find us of the sterner sex asleep in the hammocks under the whispering firs by the murmuring stream, with no wood in camp.

I have said that we men kept our lazy lines well, but that I may not be misunderstood, I would like to add that, of all men of my acquaintance, Mr. J. Roberts Mead, my accomplice on this occasion, loves to fish the best. As Judge Cheney once said, it is a mild sort of mania with him. The Molalla was never in better condition, the trout were never finer, nor were the environments ever more pleasing and encouraging. Under these circumstances it is an easy matter to imagine how difficult it was for Mead to behave himself and stay in camp after securing all the trout we could use or give away. I wish that "Podgers" could have been with us instead of out on that dry stream "away back in the mountains" in Sonoma county, California, about which he has manifested so much distress in your issue of Aug. 5. "Podgers" is entitled to better treatment, and I shall never be satisfied until I take him a-fishin' on some of the pretty mountain streams of Oregon, notwithstanding his prejudices.

Well, as I was saying, the Molalla was just lovely. Its rifles were barely passable, with a two to one chance that the tumultuous waters would take one's feet from under him, which said condition of said river occasioned many mishaps and ludicrous incidents, very pleasing and entertaining to him who witnessed but did not suffer them.

For but three or four days did we fish for all there was in it. Even so, and although everybody in camp was required to eat fish, and all the neighboring ranchers were made to feel our generosity to a nauseating extent, we were forced to feed a few nice trout to the hogs. You anglers all know how hard it is to listen to the admonitions of conscience when the trout are rising well to the fly. Billy abhors long, tedious trips, and, as a natural consequence, the circumstances afforded him ample opportunity for berating us for our prodigality, while excusing his own indolence and claiming credit for a frugality born of constitutional inertia and consummate laziness. But William is pretty smooth just the same. He would sneak out of camp silently, just as the sun was sinking behind the western mountains, and then bob up serenely after dark with a half dozen or more 12 or 15in. mountain trout, and as many more 18in. yarns about bloody battles with certain other mountain trout that still remained in certain neighboring pools. But then it takes all this and these to make a happy camp.

However, in justice to Billy, I must confess that on several occasions we actually caught him in the truth about some of the monsters of the Molalla depths. One night in particular his earnestness and apparent chagrin about the loss of the larger of two giants hooked at one and the same time in the deep pool just below camp, induced Mead to agree to go at dusk the succeeding evening and assist in the capture. The contract, as I remember it, was that Mead should do the fancy work, while Billy was to be the reserve force, supporting the landing net. Imagine my surprise, when on the following evening they returned to camp just as I was about to retire, with a genuine mountain trout weighing nearly 2lbs., besides several other fine fish. My surprise vexed Bill, for had he not told us almost the exact size and dimensions of the trout the previous evening? Of course my humiliation was complete when he reproachfully called my attention to his Reuben-Wood still in the trout's mouth from the previous evening's experience.

Billy had ten good reasons for not taking any long trips. I remember but two of them; first, it wasn't necessary; tenth, he didn't want to. So it devolved upon Mead and myself to do the artistic work and suffer those hardships necessary to a proper recognition of the requirements of a camp on the Molalla, while Billy got up wood and water and left the dignity and reputation of the camp to take care of themselves.

Wednesday of the last week of July Mead and I took a tramp up the South Fork, fished diligently, were rewarded with ten dozen beautiful trout, and were back at camp in time for an early supper. Of course this was no great catch, but the trout were of fair size for mountain trout, and were of extremely fine quality. There is a dullness and languor about the trout of lakes and sluggish streams, which is never observable in the fish of these cold mountain streams. This is certainly true with the trout of this west coast. The fish we caught that day would probably average something more than 10in. in length, many of them over a foot; and they all seemed to be bundles of muscle and nerve, affording as good sport and as fine play as any of double the size in sluggish waters. We were forced on several occasions to follow our fish to the second and even the third pool before attempting to land them. The Molalla trout are energy personified; and they are always very hard-meated and most beautiful in color and proportion.

As an instance of their strength and vigor I must tell one on Mead. He had hooked a 15in. trout, played him out of the pool and back again, felt that he had him, and felt that he had lost him a half dozen times (we were not bothering with landing nets), and finally got him up on the rocks safely. We measured him, admired him, and Mead put him in the basket without taking the precaution to break his neck.

Knowing the Molalla trout pretty well, I had frequently admonished him to look out for the hole in the top of the basket and keep his elbow over it if nothing more. Well, he proudly put his trout in the basket and stooped down to wash his hands. Presently I observed a sort of spotted agitation on the rocks, over at his basket side. "Look at your fish," I yelled. He turned just in time to see Mr. Blackspot on the last rock near the water's edge, and made a vicious grab for him. The trout slipped through his fingers, of course, and made another flop. As Mead made a lunge for him the trout made another lunge for the deepest part of the pool, and for a moment it was a question in my mind which would get there first. In a twinkling the trout was lost to sight, and presently Mead emerged from the pool, a wetter and a wiser man. He looked at me with a ghastly sort of smile and remarked, "Well I'll be darned." That was the only time I ever heard him swear, and I felt that, under the circumstances, he was excusable.

But the circumstance proved a hoodoo to him. He had no more luck that day. It was one continued string of misfortunes for him until he got back to camp. He became morose and a bit ugly. He declined to talk and made his casts in a mechanical sort of way that was offensive to even the fingerlings. Presently he came to two boulders sitting well out in the turbulent stream with their bases close together and their crests wide apart, the interspace forming an exaggerated letter V, and the whole nearly buried in the foaming waters. Nothing would do but that he must perch himself on one of these boulders. Doubtless it was foreordained that he should, for he was out of luck. No sooner had he planted his feet on the smooth, slippery top than his heels flew up and down he went between the two pretty boulders, with his heels on one and his head on the other.

I was out on the bank and enjoyed the exhibition as much as was consistent with the solemnity of the occasion, and without giving vent to any undue hilarity. No one could help him; he couldn't help himself to any great extent. All he could do was to work himself around lengthwise in the trough, turn over on his face and get up as a man should, head first. His six-shooter, hunting-knife and fly-book were all "in it" along with him, and doubtless the romance of the situation was all lost to him. He had several falls before we reached the horses, and then, to add to his misery, his wet clothes proved offensive to his bare-backed cayuse and she was skittish all the way to camp and galled him badly. On this trip we started a bear and saw innumerable tracks of deer and other game but made no attempt to get any.

Saturday afternoon before our return to Portland we took a trip up the North Fork and captured about eight dozen very fine trout. They were nearly all black-spotted or mountain trout with a sprinkling of rainbows, and would probably average nearly or quite a foot in length. They were as fine a lot for the number and kind as it has ever been my pleasure to participate in catching. The caddis-worms in both Forks had not yet hatched and were very plentiful, which condition undoubtedly had much to do with the trout abstemiously declining our pretty flies and seductive casts. They gorge themselves and grow very fat on these case-worms, husk and all. But we had our baskets full to overflowing, and more, for this afternoon's work. The North Fork is the smaller of the two streams, and the trout had evidently commenced to drop back from their mountain retreats to the deeper waters of the main stream. We took our outing this year nearly a month too early, for the spring and early summer were very backward and cold, and the Molalla was yet rather full and almost icy cold. However, I have never known its waters to be warm enough to bathe in. Whether in midsummer or midwinter, I have never observed any material variation in its temperature. Nevertheless we had a delightful time and saw more grouse, pheasant and quail than I have ever seen any season heretofore for ten years.

Circumstances over which we had no control required our return to Portland just as the shooting season opened. We had only part of one day's shooting, but, as far as it went, it was eminently satisfactory. By the way, I must record a very neat double made by my wife with her little 16-gauge on a brace of superb grouse that gave her a quattering shot. And by the way too, I must tell you that she potted three young raccoons out of a tree, where Fritz, our German friend's small boy, had treed them; and almost cried because the old ones escaped.

Before closing this rambling letter I would like you to accord me space for the relation of a little North Fork incident illustrative of some men's innate cowardice. The upper Molalla is a weird sort of place. I have seen many streams in many countries. I have hunted the mountains and fished the streams of Oregon and Wash-

ington for a dozen years or more. The Molalla River is the prettiest stream I ever saw. Many beautiful streams have been spoiled by the logger. The Molalla will probably never be logged. A log, started down either Fork, would be converted into match-wood before it could reach the main river. There is a wild recklessness about its rapids that is fascinating; a weird ghostliness about its pools that is enchanting. The gloomy mountains, the rushing waters, the solemn boulders, the ghastly fissures, the dreamy cañons, the tilted strata and the all-pervading loneliness charm the beholder—hypnotize him as it were. One seems to lose his personality and become only an inert factor of the charming phantasmagoria which nature here wantonly exhibits; the plaything of some occult, unintelligible power.

But to the incident. The side of a mountain had fallen into the river, which in seeking its way had divided into four good sized streams; three of which had gone out through the forest on their own hook, to join the parent stream again a mile or more below. One of these seemed particularly attractive to Brother Mead and me. Its course was dark and shadowy, and oh! such lovely, deep pools and foaming rapids. Well, we fished that branch part of the way, and neither of us seem yet fully to understand why we did not fish it clear through. I was just below an abrupt bend of a deep, lovely pool. Mead was just above. Neither could see the other and neither was armed. I was busily engaged with flies and fish when a suspicious sound in the brush behind me caused me to turn. The noise ceased, and I fished again. Presently I heard it again, but could see nothing. Somehow the shadows seemed to become deeper and the loneliness more intensified; and I thought I would quietly move up and join Mead, just to be sociable, you know. There was nothing about the snapping of a few twigs to alarm any body, but the ghostly surroundings made a fellow feel that he would like company, particularly when good society could be had just around the bend, where fishing was just as good. Mead had moved on and I moved after him about half a mile, rather rapidly and without wetting a fly, before I overtook him on the open river. We both proceeded to fish along up the stream just as if we had not skipped a half mile of good water. Nobody let on, for neither had any idea that the other fellow was "on to" anything in particular.

That night by the camp-fire Mead suddenly broke the silence by asking me point-blank whether I noticed anything peculiar that afternoon in the brush back of that dark pool. I looked him in the eye and answered him Yankee fashion with the query: "Did you?" "Yes," said he, "I did; and I saw a thundering big bear track besides, and thinking that, possibly, you had cut across to the main river I thought I would move along and catch up with you just to be sociable, you know." So it seems that we both concluded to be sociable about the same time; and that the promptings were so strong that we actually chased each other like two jack-o'-lanterns, while Mr. Bruin, or whoever or whatever his royal nibs may have been, is probably even yet in blissful ignorance of the fact that he was at any time in such close proximity to so much of a social nature. While we sat there by the smouldering camp-fire thinking about the circumstance and silently estimating each other's characteristics and noble attributes, I imagined I heard a plaintive murmur from the direction of Billy's tent that sounded something like: "The wicked flee when no man pursueth, but the righteous are bold as a lion." But somehow those dismal cañons of the upper Molalla do set a fellow to thinking solemn thoughts; and often, I presume, remind a fellow of more mean things than he has really been guilty of.

PORTLAND, Oregon, Aug. 10.

S. H. GREENE.

### IN THE ROCKIES.

READING a recent article on ruffed grouse in the *FOREST AND STREAM* recalled to mind many pleasant days spent in the New England woods, and in strong contrast to those green shades and babbling brooks arise the scenes of later years.

Here in the heart of the Rockies, at an altitude of 7,000 feet, one may easily reach the two extremes, the high lands and the low.

Going up the valley, facing the snow-covered peaks which rise to an altitude of nearly 14,000ft. and close in the valley, both to the north and east, one quickly passes through the piñones and sage brush and reaches the timber lands. Here is the primeval forest, as yet untouched by man's devastating hand, grand and solemn, but different in every way from the woods of the East. Here are only towering pines, with no deciduous trees intermixed to lend variety to trunk and shade. Free from undergrowth, these trees stand far apart, upon a carpet of mountain bunch grass, no intertwining of branches, no loving embrace of trunks; but each—sufficient unto himself—stands aloof from his fellows, and drawing about him a mantle of pride lives out his solitary life unapproached by any of his kind.

And yet, lacking all these graceful elements of undergrowth and changing greens, these forests, or parks—for they are more like parks, are very beautiful—stretching away for miles and miles along some flat table-like plateau.

He wanders the black-tailed deer and now and then a stately elk in parks of royal dimensions, but the elk are few and yearly becoming fewer, ruthlessly slaughtered by our "red brother." Soon they will be gone, for though it is an offense for a white man to kill one of these noble creatures the Indians are free to slay as many as they please and go unpunished. As one moves on through this park-like expanse, he may occasionally hear the *quit, quit* of that grandest of all feathered game birds, the wild turkey. Moving cautiously along to the rise of ground ahead you see a flock of these large birds running swiftly; and then with a thunder of wings they sail away across the deep cañon that yawns before you.

Going on, always up and up, one passes out from under the pines and into the quaking asps—always shivering with some unknown dread, their leaves ever restless and continually rustling. Intermingled is the tall tapering spruce.

Here is the summer home of the deer; they live on the luxuriant mountain grass and wild oats during the warm months, ranging clear up to timber line. Here too one finds the blue grouse, the snow-shoe rabbit and the ptarmigan, now dull in color; but when the winter's snows fill the gorges they array themselves in spotless white.

Here one may find the mountain lion, the lynx and the

bear. The bears are none of the "little fellows for a dime" which one finds in the Eastern woods, but a veritable full-grown bruin with "blood in his eye" and chip always on shoulder.

A week in these high altitudes is a week of pure delight. Far from all signs of civilization, in the depths of nature's wildest solitudes one throws away the cares of life and the busy world and lives.

High above tower the rugged mountain peaks, their scarred and wrinkled faces showing plainly the ravages of time. Below deep cañons and gorges with steep, precipitous sides to which cling the sturdy spruce. Far, far below one catches the murmur of the distant stream as it tumbles along over rocks and fallen timber, and from between the dense growth of cottonwoods which fringe its banks it flashes like a ribbon of silver.

Such are a few of the attractions the mountains continually hold forth to the lover of nature, and dull indeed must be he who feels the cool, inviting wind from above and does not respond to its prompting, or at least feel the desire to do so.

Let us now turn toward the lower lands to the south. How different! How unlike the same country! Mounting your good horse, you start out along a well traveled highway bounded on both sides by ranches whose fair level fields stretch out from hill to hill, covering the entire bottom of the broad valley. Gradually these ranches grow fewer, leaving spans of rough land unfenced, and as you advance they become more and more primitive. Then the valley draws together and the tillable land narrows down to a small strip along the banks of the stream. Finally you pass one shabby little cabin, the fences disappear, you no longer travel a well-worn road; but only a trail marks your way, the last sign of civilization is passed and you are entering a deep narrow cañon, with only the rocks and trees for landmarks. You

FIG. 1. WILD TURKEY.  
*Meleagris gallopavo.*

are on the Indian Reservation and beyond the land of the white man.

The trail is grandly picturesque, now winding in among the heavy growth of cottonwoods upon the river's bank, and now mounting the sides of the cañon climbing over huge blocks of rock dropped ages ago from the towering cliffs above. Then again the trail leads out on to some little flat of land covered with the piñon and sage brush, the latter silvery green and throwing out its strong, aromatic odor, bringing to you a realization that you are in a different land from old New England—that land of your boyish dreams, the wild West. From the fancies which thoughts of home bring up you are aroused by a call from one of your companions, and you see, by following the direction of their pointing arms, a little wall of rock way up under some overhanging cliff. Only a little wall of masonry, with one or two square holes left therein, but it brings a feeling of awe as you realize that you are looking upon the handiwork of a race which passed away hundreds of years ago, dead and gone, leaving no record of their living except the specimens of their cunning workmanship. It is an ancient cliff dwelling, hundreds of feet above the present level of the stream. Leaving your horses tied to some piñon trees, you climb and scramble up, till exhausted and dizzy, you reach the narrow ledge upon which this home of long ago is perched. Naught there repays the climb, only some pieces of broken pottery and the dwelling itself, simply a square wall of masonry, built upon the narrow ledge of rock with the overhanging cliff for a roof. After gazing for a time, first at the house and then at the scene spread out before you, and conjecturing again and again upon the kind of beings these ancient people must have been, you make the descent, how, you know not, only that breathless and scratched, you finally reach your horse, and with a sigh of relief regain a seat in the saddle.

For many miles the trail leads through the cañon till the great cliffs drop lower and lower, and it spreads out into a broad plain. Vegetation is almost entirely gone. Small clumps of white sage, an occasional bunch of blue grass, some grease weed and the sharp spikes of the yucca are all.

A jack-rabbit jumps up seemingly from the ground, makes a few leaps; stops, flicks his ears; a quiver passes over his body, and the spot where he was is vacant and only a streak of gray marks his flight.

Just on the little rise of ground ahead a skulking form is seen; it is the coyote, and the pistols are quickly brought into action. You knock the dirt up about his feet, too close for his comfort; and he, too, vanishes from view.

For miles in all directions stretches the plain, hot and arid, till it melts into the distant blue of the mountain ranges far to the southward. The sun sinks toward the horizon and you hasten to a fringe of trees ahead, which marks the course of the Rio San Juan. Entering a grove, you make camp, and after a supper eaten with the relish that days in the saddle bring, light the pipes and gather around the blazing fire; for the warmth is grateful at night when, the sun gone, the cool breeze comes down from the snow-clad hills above; so you talk of the day's sights, and gradually they drift into the reminiscences of other days. The fire burns low, only now and then some ember, fanned by the breeze, glows with renewed life; a feeble blaze flickers for a moment, lighting up the gloom for a small space and showing the white branches of the cottonwoods overhead like spectral arms stretching out, vainly trying to grasp the fantastic shadows that dance about on the edge of the lighted space. The distant howl of the wolf is heard, answered by others from many sides. Reluctantly you leave the glowing bed of coals and crawl between the blankets, tired and sleepy and ready for the deep sleep sure to follow.

JORGE.

## Natural History.

### MOUNTED GAME BIRDS IN THE U. S. NATIONAL MUSEUM.

BY DR. R. W. SHUFELDT.

WITH the view of submitting a general report upon the subject, I have for several months past been making a very careful study of the collection of mounted animals of all kinds, on exhibition at the Smithsonian Institution and the United States National Museum at Washington, D. C. It is now a well recognized fact to students of taxidermy in this country that within very recent time the progress of that art has been so substantial that it now stands quite co-equal with its sister arts of painting and sculpture. My studies have carried me into a consideration of the various methods employed to preserve and prepare for exhibition the groups which constitute the great kingdom of the Invertebrata, and the accomplishments along those lines have been especially satisfactory. But this progress has been none the less gratifying in respect to the fishes, the reptiles and batrachians, the birds, the mammals, even including man himself. So broad is this field, however, that it will be impossible within the limits of this article to touch upon more than a very limited part of it, and in selecting that part I have endeavored to choose a subject of the widest interest, and I believe it will be admitted that our game birds studied from any point of view interest a host of readers among us. I have not been actuated altogether by this, however, for in studying the exhibit of the ornithological department of the U. S. National Museum, I find that it is among the so-called game birds that progress is perhaps the best shown. This is largely due to the fact that the game birds were the kind which were being mounted at the time the museum added to its taxidermical department at least one or two artists of great skill and talent, and so it was here that improvement was first evident.

Now the game birds I propose to allude to here are such of the sub-order Gallinae, as include the family of grouse and partidges (*Tetraonidae*), and the turkeys, which belong to the sub-family *Meleagrinae*, of the family *Phasianidae*, which in a broad sense includes the pheasants and their kin. This to the exclusion of the water game birds of any kind whatsoever, and the guans (*Cracidae*) and pigeons, etc.

When we come to study the old collections of the ornithological department of the Smithsonian we are confronted with a most remarkable series of avian effigies. There are wild turkeys that are wild in more senses than one. Prepared by some unskilled taxidermist, a quarter of a century or more ago, they are at this writing a sorry lot to behold, with plumage all awry, wires exposed, body distorted, and, worst of all, such heads! One specimen, which I particularly have in mind, has had, by way of a change, all the feathers on the back of his neck drawn round to the front, and the skin of his head stretched so tight that every character has been obliterated from it by its drum-head tenseness. Then the somewhat over-patriotic taxidermist, to add insult to injury, has blotched this part of the poor bird's body all over with small isolated patches of red, white and blue paint, to imitate, I presume, the beautiful, varying colors of an old gobbler's head. But the turkeys were not the only sufferers among the game birds at the hands of those early taxidermists, for we find in the cases some miserable-looking moor cocks, a motley lot of fantastic pheasants, some queer-looking quail and a host of their kin, all pretty much in the same shape.

Of recent years, however, taxidermy has taken a great stride in advance, and has passed from the stage of a botch trade of bird-stuffing into the realm of an art; quite on the same plane with that of painting and of sculpture. This progress has been most beneficially felt at the Government museums at Washington, and for several years past, by the wise appointment of young and talented men at the institution, a great change has been wrought, and it is not at all likely that we shall ever see there again any backsliding on the lines indicated. So far as the ornithological department is concerned, some of the best work put in is to be noticed, perhaps, among the group we have here under consideration. A moment ago I was speaking of the sorry lot of mounted turkeys there were in the exhibition cases, and now these doleful-looking specimens are made to look more respectable by the appearance among them of one or two pieces preserved according to the most improved methods known to the art. Turkeys' heads nowadays, instead of being simply skinned and allowed to dry, as formerly, are modeled in clay, over which the parts are most perfectly restored in wax. This latter is so naturally tinted and besprinkled with the hair-like feathers which normally occur in that region, that the effect is the most life-like that can possibly be imagined. They look for all the world the counterparts of the living birds, and I especially admire one old gobbler recently mounted for the museum by Mr. Henry Denslow, who has also done some admirable work in the American Museum of Natural History, at Central Park, New York city.

Another very fine turkey has been mounted for the National Museum by Mr. Nelson R. Wood, of the museum's

workshops, and I am permitted to give an excellent figure of it here in illustration, taken from a photograph made for me at the gallery of the institution in question (Fig. 1). This old male bird has been preserved in an attitude of having just completed, or being just about to complete, a "strut." His elegant plumage is naturally elevated, the wings are lowered to the ground, the tail is spread and held obliquely, and, indeed, not a single point overlooked that characterizes this grand fowl when he assumes the position of strutting. It is one of the most artistic and withal the most successful pieces of bird taxidermy that I have ever seen, or with which I am acquainted.

All the other specimens of game birds figured in this article were preserved by Mr. Denslow, to whom I have already referred above—with the single exception, I believe, of the dusky grouse, which I think is the work of Mr. Wood. Another very fine thing we have to notice is the specimen of the English pheasant shown in Fig. 2. It is an old male bird in full spring plumage, and he has been most artistically mounted in a position very commonly assumed by that species. Standing upon one foot, he gracefully surmounts a high perch, much as he would some elevated point in his native haunts, from which, as he is shown doing here, he can survey at his leisure such objects as may attract his attention in the surrounding country spread out beneath him. The poise; the evident feeling of security; the observing look; and, in fact, everything pertaining to this pheasant have most admirably and artistically been wrought out. As in the case of the turkey just described, it is the accomplishment of a close

FIG. 2. ENGLISH PHEASANT.

student in the art, and the work of a master-hand—and so, a master-piece. To obtain the proper attitudes and postures for all birds of this kind, and indeed for any kind that is to be scientifically mounted for museum exhibition, constitutes one of the chief aims of the taxidermist, and one of the most important parts of his professional labors. There are several main lines of research from which he derives his hints of this nature. He may depend upon a close study of the positions assumed by birds that he has from time to time the opportunity to observe, either in their natural haunts or in zoological gardens or in cages, and all such observations can be preserved and the memory materially assisted by the aid of sketches made upon the spot. Then again the taxidermist can resort to the use of the photographic camera armed with an instantaneous and time shutter. Good photographs of living birds in natural positions and bereft of all superfluous surroundings, stand, in my opinion, head and shoulders above any other kind of aid in this direction that the taxidermic artist can obtain.

To this subject the present writer has given some little attention, and the chief requisite demanded, next to a thorough knowledge of the use of the camera in all its varied departments, is a familiarity of birds' habits, and a stock of tact and patience sufficient to supply a thousand men with that quality in the ordinary pursuits of life. Finally the taxidermist in some cases may rely upon the figures and plates that illustrate our larger and standard works upon ornithology. Audubon, for example, gives a great number that are good; Wilson not nearly so many; Brehm's superb figures, and those in Wood's Popular Natural History, with a great many others, are all useful for the purpose indicated. But it must ever be borne in mind that with respect to all manner of prints, sketches and photographs, they represent the bird on the flat, and not the round, and to be above all criticism, a well-mounted specimen of a bird must show normal contours of every part of its body, from whatever point of view we may select to regard it.

[TO BE CONTINUED.]

### A Happy Event.

FOREST AND STREAM last week celebrated the completion of its fortieth volume, the rounding out of twenty years of sturdy and virile growth. In the press of America our esteemed contemporary occupies an enviable position, and the lover of all manly outdoor sport, from yachting and canoeing to the company of rod, gun and dog, can find among its pages just what he wants to read about, written by men whom he involuntarily feels a friendship for, though he may not know them. The paper is worthy of its success, and Mr. Charles Hallock, whose genial portrait adorns last week's issue, is to be heartily congratulated on the development of his conception in founding it.—*Marine Journal.*

# FOREST AND STREAM IN THE WORLD'S FAIR.

*As Seen by Our Staff Correspondents.*

## The Last "Forest and Stream" Big Fish.

CHICAGO, Aug. 11.—The FOREST AND STREAM tarpon, as is by this time pretty generally known, is the largest ever taken on rod and reel. The FOREST AND STREAM big-mouth bass is the largest specimen known to have been taken in the North. The FOREST AND STREAM brown trout, the "King of Castalia," mentioned last week as the loan of the Upper Castalia Club, is the largest trout of that species known to have been taken in sport in this country. (In a recent issue I was made to credit a gentleman with the statement that a "40lbs. brook trout" was once taken in Wales. The types should have read "brown trout.") This week comes yet another big fish for the adornment and betterment of the ever-improving FOREST AND STREAM corner in the Anglers' Pavilion. This time it is a magnificent specimen of the (Dolly Varden) trout of the Northwest country, thought to be the largest one ever sent East.

This last big fish has a curious history. It came here in the winter time to the great game and fish market of F. M. Smith, at the corner of Dearborn and South Water streets, and the daily press and certain anglers here pronounced it "the largest brook trout ever taken." (Its weight was 13½ lbs., and in length it was 33in.) The local sporting press here, not being very well up in such things, also called it a brook trout. Mr. Smith therefore thought it was a brook trout, and it went at that, and was so labeled until this week, when it started for the FOREST AND STREAM exhibit.

This summer the owner of the big fish, Mr. F. M. Smith, out of the goodness of his heart presented it to his friend, Mr. Geo. W. LaRue, formerly of New York, later of Chicago, and now of New York again. Mr. LaRue is very well known in the sporting world, especially as owner of fine pointers, and is sincerely devoted to the sports of the field. On receiving the fish Mr. LaRue at once wished his friends and others to see it, and he wrote asking whether FOREST AND STREAM would not like to place it in its exhibit. There being nothing in the world which FOREST AND STREAM would rather do than just that, he was not long in getting reply, and soon the big fish was with the others of the interesting group near the door of the pavilion.

Mr. LaRue, in common with Mr. Smith, thought he had a brook trout. The case was labeled "Brook trout, caught in Montana by an Indian girl," together with weight, dimensions, etc. Dr. Henshall, who never saw the fish, was credited by a morning paper here as saying that it was a "brook trout over 200 years old," which was not at all a bad story for the local boy to work up. But a brook trout, more's the pity, our celebrated fish can no longer continue to be, as Dr. Henshall's appended statement will show. There are no brook trout in Montana.

The Dolly Varden trout (*Salvelinus malma*) is, according to the authorities of the FOREST AND STREAM office, expressed in record of personal experience, sometimes of even heavier weight than this, though this one, 13½ lbs., is a fine specimen. Confined chiefly to the Cascades, it is taken in streams east of the Rockies flowing into Hudson's Bay (I quote still from the FOREST AND STREAM letter). Its mountain name is "bull trout."

There is a fine specimen of *Salvelinus malma*, mounted, shown in the dining hall of the Castalia Upper Club. It was taken in the Coeur D'Alene River, Idaho, by Mr. Beebe, of Columbus, O. Though large, weighing, if memory serves me, 12 lbs., it is not so handsome as Mr. LaRue's fish, which now forms one of the most attractive features of FOREST AND STREAM's gallery of notable things at the Fair.

This Dolly Varden trout was mounted by Mr. R. A. Turtle of Chicago, who also reworked the record tarpon kindly furnished to FOREST AND STREAM through the joint courtesy of the owner, Mrs. Stagg, and Dr. Henshall, who had it in charge for exhibition at the Fair.

[I have just seen this trout for the first time, and examined it as well as I could through its glass case. It is apparently a "bull trout," or Dolly Varden (*S. malma*), as stated above by Mr. Hough.

J. A. HENSHALL.]

Aug. 12.—The newly appointed Illinois Fish Commissioners, Col. Geo. E. Langford of Havana, Richard Roe of East St. Louis, and O. B. Sickles of Geneva, met to-day at the Fish Commission office in the Illinois Building, World's Fair. Col. S. P. Bartlett of Quincy, late secretary of the Commission, outlined their work to the new Commissioners. Mr. Roe was chosen president and Col. Langford secretary. The Colonel's headquarters will be at Havana, where he will have charge of the steamer Lotus, and will direct the gathering of the native fishes from the bayous of the Mississippi.

## A Sight to Be Seen.

Everybody knows about the Lyman patent rifle and shotgun sights, that is, everybody thinks he does, and doesn't; but perhaps not everybody knows where he can see a complete line of them on exhibition. This he can do at the Marlin Firearms Co. exhibition, Section Q, Manufactures Building, Mr. Lyman not having any separate exhibit of his own. Arrived there he will find more sights to be seen than he had thought. There are Lyman's patent combination rear sight, and his patent wind-gauge sight, and his patent lead sight, and his ivory bead front sight, and his ivory hunting front sight, and his patent ivory revolver sight (the latter, by the way, I believe was made on the suggestion of Mr. Harry Marlin. It is pinned in the rib, is cut to easy curves, with the eye-back corrugated to break the light, and with the old Lyman principle of an ivory bead). The "new system" shotgun sights are of course on hand. Last perhaps, or most interesting, because it is the latest Lyman production, is the new Lyman patent ivory combination front sight. This sight, excellent for all around hunting and target shooting, is really a combination beach and ivory sight, the ivory bead coming into use when the shading "globe" or ring is turned down. There are a whole lot of things that plenty of people don't know a whole lot about, some of whom Mr. Lyman's sights are which. Any gentleman who has seen a deer disappear behind a hind sight can get his deer rectified by calling at Section

Q, at any time when the American gun contingent is not out drinking cocoa at the free cocoa stand not far away.

## Something New Under the Sun.

In the "American gun corner," as Section Q of the Manufactures Building is coming to be called, and just across the aisle from the dais on which stand the magnificent Parker and Marlin exhibits, the investigating visitor may find a new sort of shotgun, under the guidance of the Burgess Gun Co., of Buffalo, N. Y. The exhibit is not large, holding only about two dozen guns, rifles and all, but it is full of interest, and for its main feature we almost claim the distinction of something new under the sun. As the descriptive handbook tersely says:

"As a result of thirty years of experiment and invention, there has been known to the public but two systems of rapid-firing arms, viz.: the left hand sliding motion, and the right hand lever motion. It has been reserved for the Burgess Gun Co. to produce an entirely new and improved system."

In this new invention the action does not consist in an underhand lever nor in a trombone slide, and probably no one could guess how to work the gun if he saw it, and had no one to show him how. In short, you work this gun by the pistol grip! The handbook again says: "The handle consists of a sleeve around the neck of the stock, a pistol grip, a trigger and a trigger guard. When the right hand grasps the handle, the forefinger is always in position in the guard on the trigger, and an easy backward and forward motion is all that is required to operate the gun. The trigger may be pulled to fire continuously or deliberately, at will. When the gun is supported against the shoulder, the left hand holds the barrel by the checkered forestock, and as is usual in all guns, the right hand pulls backward on the neck of stock and pistol grip, to hold the butt firmly against the shoulder. The recoil from the discharge gives the right hand an impulse forward, but the counter recoil immediately throws the body of the gun forward, and the right hand, unconsciously recovering its normal backward tendency, receives a greater impulse, and thereby slides back the handle to open the breech, without effort. The hand will then instinctively return to the firing position, carrying handle forward and closing the breech; and if the forefinger continues its pressure on the trigger, it will again fire the gun, and repeat in the same manner."

A very pleasant feature of this gun is its detachable barrel. The barrel does not screw into the frame, but slips into it along vertical threads, being taken off or returned with ease.

I wonder if everybody in the world knows who invents all the guns? You can't tell by looking at the name on a gun who first designed its interior mechanism, any more than you can look at the door plate on a man's house and tell what he ate for dinner Sunday. Mr. Andrew Burgess, the inventor of this new gun, has taken out some 600 patents in all. The handbook calmly, but rather startlingly, I imagine, remarks: "Among the claims in his patents, the Kennedy, Marlin, Colt, Hotchkiss, Schuloff, Mannlicher, etc., may be noted as some of the steps by which his later results have been reached." Did everybody know all that?

The Burgess exhibit is in charge of Mr. W. H. Skinner, late of Montgomery Ward & Co., well known among shooters, and now with the Burgess Gun Co.

## W. & C. Scott & Son Gun Exhibit.

One of the best features of the British section of the Manufactures and Liberal Arts building is the fine collection of firearms displayed by English makers. Prominent among these one naturally would expect to find, as he does find, the exhibit of Messrs. W. & C. Scott & Son, of Birmingham and London, than which none is more perfect in its way or more tastefully arranged. Among many other testimonials you may see the following recent one:

FEB. 5, 1893.—Messrs. W. & C. Scott & Son: On my return from Monte Carlo, I hasten to advise you of the brilliant result obtained by me in the International shooting with the last gun you made for me, and which I used in the shooting for the Grand Prix du Casino, where I won the chief prize of the year. Your gun was praised by everybody. I must express my satisfaction with this truly exceptional gun. I have had a gold plate fitted to it, with inscription of the victory. In a short time I will send you a photograph of the object d'art.

GIUSEPPE GUIDICINI.

The Monte Carlo objet d'art as displayed is of singular beauty, and its value, \$4,000, shows well enough the degree of interest to which shooting matters may attain, and the care necessary to be employed in the making of weapons for use in such competitions. Such trophies are well housed in the handsome case of this display, for the one is the excuse for the existence of the other.

Briefly speaking, the Scott exhibit is simple, elegant and complete for its purpose. The black and crystal case is in effect upright, and contains in all 35 guns, among which are to be found magnificent specimens of workmanship. In value the hammerless run from \$130 up to \$565, the latter being the price of the Premier Imperial, hardly better than the \$400 Premier, which, elegantly bedded, lies fast asleep at the bottom of the case, a central point of much interest to critical observers.

The arrangement of the case suggests a three-fold handling. At the lower oblong rests the Premier in case, surrounded with suitable adornment of material pertinent. In the second story there are racks with hooks holding guns, among these a few useful looking hammer guns at \$90 up. The third story lies above the great swinging glass shelf, on which stand in state 25 more guns, in all a noble group indeed, and one showing as artistic treatment by the maker, as is in evidence among the vases, the fine pottery, the ornate textile fabrics of other lines of manufacturing display.

The crossed guns which adorned the front of the case at the time of my visit, a Premier and an Imperial, do well enough as text for the brief commentary possible. In these days the excellence of shooting of any high grade gun goes without saying, and I suppose that many readers

know of the value of the Scott cross bolt and block safety system as well as if one should spend columns in describing them. It is only a question beyond that of perfection of outline, of symmetry and balance, of artistic ornamentation. The point I make then is, and the reason FOREST AND STREAM gives up so much space to what might seem mere trade mention, is that it is not possible in the local shops of most communities to see specimens of the highest development of the gun. It is wise and useful, then, for FOREST AND STREAM to call the attention of its readers to such worthy exhibits as these, so that sportsmen visiting the Fair will know at once where to go to see that which they naturally want to see. A half hour spent actually examining the guns themselves is worth much writing and reading. So much is true for this or any other exhibit.

The visitor, then, who stands in front of our two crossed guns may admire them fully and understandingly (though not all Americans may yet fancy the straight-cut English pigeon gun stocks, quite devoid of pistol grip. The outlines, the proportions, the ornamentation, all are complete. It seems that nowadays mere engraving is not good enough. Your artist comes to embossing, to chasing—on the Premier and Imperial really to hand carving. Or he may deliver you an etching on this Damascus fabric whose cunningness is such that age does not wither it, and time but makes more beautiful its intricate tracery of dreamy lines. Happy indeed the sportsman of to-day, for his every requirement and his every longing can alike be filled.

In the chinks and corners of the Scott gun display are to be seen the customary models and working parts, sectionals, etc. A fully engraved gun left "in the bright" is shown, also barrels in the rough, showing the making of the three-stripe Damascus. A few Webley English revolvers are also shown, though after leaving it occurs to me that I did not see the Scott double rifle which is mentioned in the circular I took away with me.

The entire collection of these handsome guns will be sold, at the close of the exposition, by Messrs. Hartley & Graham, of New York. The display is in charge of Mr. William J. Scott, a young but able representative of the firm.

## The Lancaster Gun Exhibit.

Across an aisle or so from the Scott exhibit is that of Chas. Lancaster, very similar in general scheme of arrangement. The case is upright and contains in all thirty-eight guns, representing a value of \$8,000. Here we have a considerable range of interest, for besides the grand specimens of ejectors which Miss Annie Oakley and other well known shooters have made familiar at the pigeon traps of this and other countries, there are other sorts of arms displayed, which to an American seem odd and new. There are twelve rifles shown, ranging from the English rook or rabbit rifle (a tidy arm which would make an excellent squirrel gun for this country), to the heavy double express. There are four four-barreled pistols also, for use at short range on big game, effective, perhaps, but enormously ugly enough to quite frighten any but a stout-hearted bear or tiger merely to look at them. Again one may see a unique looking four-barreled 20-gauge, oval-bored, for use with either shot or ball—something which we have been wrongly educated to be an impossibility, but which is not an impossibility, but an assured fact, and that in a very handsome and well-balanced form. This odd gun will, I fancy, attract much curious attention from visitors who are not accustomed to seeing guns look just that way. The uses of a world's exposition are to broaden our ideas on such things.

Still another strange arm is the "Colindian gun," which the maker describes as follows: "A combination ball and shot gun, a non-fouling, smooth, oval-bore, rifled gun, from which can be fired conical-shaped, solid or express bullets, with the accuracy of an express rifle, to 100 yds., and shot of all sizes, with the excellent pattern of a shot gun."

A handsome double express, \$300, impressed us as being a pretty decent gun for our Rocky Mountain shooting, and I rather fancied it. The double rifle has never attained popularity in America, though those who have used them say they are just the right compromise between the slow single shot and the rapid repeater. Other rifles besides the small bores (which the maker singularly enough describes as suitable for rook, rabbit and antelope shooting—he can not mean our prong-horn, certainly) are the heavy oval bores and the Colonial 450 double rifle, at \$180, with hammers and safety, a gun yet foreign to American eyes.

The ostensible *pièce de résistance* of the display is the gun case at the bottom of the cabinet, containing two elegant hammer guns, straight grip, pigeon model, handsomely inlaid with gold and marked \$750. In these hammerless days the American shooter would not understand the wherefore of these guns, were he not advised that they show the style of gun supplied to "Her Imperial Majesty's Government of India and the Native Princes, etc." It is a long way to India, and one can take privileges as to hammers on \$750 guns which go over the "road to Mandalay."

A pretty feature of the Lancaster case is a specimen of the genuine English tin bluerock pigeon, mounted with wings outstretched and suspended in the upper part of the cabinet. Much toil, much money and much art are these days expended in encompassing the taking off of this little bird. It seems about two-thirds the size of our typical trap pigeon.

The Chas. Lancaster exhibit has no regular attendant, but is in charge of Messrs. Pitt & Scott, shipping agents, of London, Liverpool, Paris and New York, who have forty-five different exhibits under their care at the exposition, this being their only gun display. Mr. Herman Scott was good enough to show the FOREST AND STREAM representative through.

E. HOUGH.

FOREST AND STREAM, the best sportsman's paper published, has an exhibit at the World's Fair, and in every issue publishes the following invitation: "FOREST AND STREAM's exhibit at the World's Fair will be found in the Angling Pavilion of the Fisheries Building. You and your friends are invited to visit us." Let every one who visits the Fair remember it.—Schenectady Union.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Game Bag and Gun.

### A MEMORY OF THE FRONTIER.

I was raised on the frontier, where we always kept a little ahead of the schools. Whenever we lived long enough in a place for there to be scholars enough to start a school, our family would move a little further west. I have been in the mountains since June 10, 1860. Looking over some of the FOREST AND STREAM letters has carried me back to those boyhood days.

Many a day and night did I put in after wild turkeys. In 1854 we moved to Kansas, where father bought a piece of timberland over in the Missouri bottom, and put up a shingle mill; and when I was not working on the farm I would haul shingles to Atchison or blocks to the mill. One day in the early part of December as I was returning from the Atchison landing, I noticed where a flock of wild turkeys had crossed the road since I had been down in the morning. The snow was about 4in. deep, and while it was not so very cold, yet it was cold enough after dark to make any one who was out keep moving. After supper I took down my little rifle. The arm carried 180 balls to the pound; it was a splendid little gun, made in the county, and cost \$14.

I started down the road and traveled as fast as I could, until I reached the track, keeping my dog near me. I had no difficulty in following the track. The moon shone very brightly and I had to travel very carefully, for the wild turkey is very shy, even if it is night, and sometimes they will begin to fly when the hunter is 300yds. off. I followed those turkeys all around through our cornfield, along an old slough, through dogwood thickets, and wherever they would chance to go. I knew I should soon start them and was looking very carefully, yet with all my caution. I was startled by that *put, put*; and sure enough, out of a very tall sycamore tree flew one, which from the noise he made on the still night air, I thought would weigh a ton. I stood motionless for at least fifteen minutes; and finally saw one, then another, and then another, until I counted seven. Then I told the dog to hunt them up, knowing that they would watch the dog and would not fly nearly so quick. As soon as the dog began running around under the tree, I moved around to get the turkeys between me and the moon. I located one out about 4ft. from the body of the tree and near the top. I moved very cautiously, and finally got him just right and raised my rifle. As the sharp report rang out on the clear, cold air out rolled a gobbler, and out flew the rest. I listened and heard a number of them alight. I had killed a nice fat gobbler, which weighed 14lbs. dressed. I reloaded my rifle, and shouldering my turkey, started quartering toward home, not caring very much whether I killed any more or not; and as I was not using much care I flushed another. Then I made straight for home, which I reached about 1 o'clock, tired, I can tell you.

LEW WILMOT.

### "SHOOTING WITHOUT A GUN."

Editor Forest and Stream:

It may be without question that the bow and arrow are the earliest weapons known, unless, perhaps, we except the club with which Cain killed his brother Abel. As a means of amusement the bow and arrow have been handed down to the present day and are now usually the boy's first weapons. With them, I have seen boys so skillful that it was considered a feat of ordinary marksmanship to hit a robin at twenty paces, and when I was a boy, too small to use a gun, I had a hickory bow with which I could more easily send an arrow through an apple hanging in the top of a tree than I could bring it down with a club, and many a ground squirrel, and sometimes a black squirrel (there were no gray squirrels in that part of the country then) fell to my aim, if it can be said that one aims with a bow. It is an instinctive kind of shooting, but when one acquires the knack, and if his arrows are well made, of the right weight and length, and as straight as is possible to make them, it is not so difficult as one would suppose. I used no feathers or other means of guiding them except to have the head heavier than the "heel," so that it would balance on the finger a little more than two-thirds of its length toward the head, which was about 2in. long and 3/4in. thick, pointed, sometimes by burning, for a burnt point was considered better and harder than any other. The stem was smaller and gradually tapered toward the heel, where it ended in a small knob for grasping with the thumb and finger, and a notch out precisely in the center. With a bow of such strength and elasticity that any youngster could draw a 2ft. arrow to its head, I have seen an arrow driven through a soft pine board.

We knew nothing of the sling shot used by the boys of the present day, a crotched stick fitted with a rubber band and a piece of leather in the middle to hold a pebble, or sometimes a kind of cup filled with shot that, in the hands of an expert, is death to sparrows, frogs, and, I am sorry to say, a good many of our song birds. But sometimes we used a contrivance that would throw a pebble or buckshot with more force and as much precision, and was easier to make. This consisted simply of a piece of hickory or other elastic wood about 18in. long, tapering from a handle for the hand, flat or oval, to the smaller end of which was fastened a stout leathern cord a little longer than the stick, which ended with a loop to hold a pebble or shot. When drawn and let go with the proper flourish which practice alone would acquire, this weapon would throw a buckshot with almost as much force as a rifle.

We are all familiar with the old-fashioned sling shot made of a strong cord and a piece of leather in the middle which, circled around the head a few times and one end of the cord let go, would throw a pebble "out of sight."

The blow gun is still used, as many a bald-pate will testify. "Shootin' off his mouth" is a practice with which some are more familiar than shooting with a gun, and "drawing the long bow" may be classed with this kind of shooting. This can be practiced at short or long range, but if the shooter happens to be practicing on some absent one whom he fears to meet in fair and open competition the longer the range the better for him. It is not always a harmless amusement and many an innocent person has been seriously injured by a careless or spiteful marksman, whose shots were too well directed. Corner groceries and other favorite loafing places of

long winter evenings are the galleries in which this kind of shooting is mostly done. Sometimes, though, one can find a great deal of amusement in joining a party of congenial "mouth shooters", whose lies, if harmless, make merry the time and lighten the heart of the man whose business cares prevent him from indulging in any other kind of shooting.

"Shoot the hat" is not unfamiliar to those who happen to be caught out with a straw hat long after the leaves have fallen and when a warmer head covering is more appropriate, if not more comfortable.

"Shootin' craps" is said to be a kind of gambling much practiced, and "shootin' snipes," attended by some excitement and earnest competition, was a regular morning practice in our city until the police put a stop to it. When the day began to break and the shooters could see well enough, Italians by the score could be seen in the streets with a bag thrown over their shoulders gathering up cigar stumps and half-smoked "tobies," which were taken home and after a cleansing process made into "dude sticks" and mould "tobies."

"Snap shooting" with the camera is probably the most delightful as well as the most expensive recreation in which both sexes, old and young, may take part, and as there is no close season, there is perhaps more of this kind of shooting done than any other. That there is no certainty of hitting the mark many a beginner, and expert, too, will readily testify, but when a successful shot is made the beautiful result more than compensates for the misses. I am glad the FOREST AND STREAM has added this to its many excellent features. There are so many varieties of game for the camera shooter that one is at a loss to know what to go hunting for.

If one may be said to shoot without a gun while he dreams, I have made a most wonderful record—what bears

BABY CARIBOU.  
Photo by E. B. White.

I have killed and what wonderful shots I have made in dreamland.

July 4 is an interesting day with us. The boys inherit the family patriotism, and with their firecrackers and little cannon create more din than ever sportsmen heard at trap or afield. A jolly lot they are. I hope they may live to celebrate many an anniversary of liberty and independence. God bless the boy, and if he lives to the age of a hundred years may he retain some of his boyish hilarity, for I think that the most miserable of all God's creatures is the man from whom all the boy has departed; and there are too many who know more about shooting without a gun than with a gun.

McKEE ROCKS, Pa.

### THE DUTY OF SPORTSMEN.

In thirty-eight States and Territories laws have been framed calling for close seasons for game. In many States, after the laws have been passed, the people very complacently sit down with their arms folded, and apparently imagine that the laws are automatic and will enforce themselves. This is a great error and an "iridescent dream" that should be quickly dispelled.

The sportsmen are the ones who make the sentiment in their locality in favor or against game protection; they ought to devote some of their energies toward the suppression of poaching by others. I must confess to having some impatience with those sportsmen who, while game law violations are going on all about them by their neighbors, will do not the first thing to put an end to such a disgraceful state of affairs, but are always ready to write to some paper perhaps a thousand miles away and signing their articles "A Sportsman," accusing outsiders, without any particular care whether their charges can be actually substantiated by facts or not. Sometimes they profess to have abundant evidence to convict the violators. When called upon to furnish evidence they say, "we presume" or "general rumor" says "that John Jones is shooting out of season."

If the law-abiding citizen will do nothing but talk, the game laws will be openly violated. But if he sees that every person who violates the law and whom he can get evidence against is prosecuted, infractions will be few indeed. One ounce of action is worth more than ten carloads of talk. What does the poacher care if some one in the close season says to him: "You ought not to kill game birds now." By bringing the guilty poacher before some justice of the peace, and making sure that he gets a fine with the costs added, you will find that a sudden change has come over his clouded brain.

The exceeding excellence of this method is a crucial test, and the problem to solve it is not of such an intricate nature as was at first supposed. It is the dignity of the court, the significance of the fine, the undesired notoriety, the deliberation of the complainant, that brings the recalcitrant man to his senses, and he will resolve that there will be no more foolishness on his part. Let sportsmen try this method, and I know from personal experience that the violations will be few. It is hardly necessary at this time to say that everybody clearly understands, that those who pretend to desire the protection of game, but will not turn their hand over to do the least thing to help morally or financially, are making false pretenses.

Blow and bluster and idle talk will not protect game. Talk is a cheap commodity, but to protect game means work. It is far better to do some work in behalf of game protection, and then talk. Work is something more effi-

cient for the purpose named. It is quite true there are some black sheep in the flock of sportsmen, and it would be strange indeed if among the many hundreds who profess to be sportsmen there were not found some unworthy to be called such.

The poacher's votaries and apologists recognize the self-sacrificing patriotism of the weak-kneed afraid-of-his-own-shadow sportsmen, who dare not be known as being in sympathy with the proper, equitable and just enforcement of the game laws.

The overmastering sense of duty ought to prompt every one in the interest of game protection to throw his weight of influence against the illegal capture of game. We do not have one law for the rich and another for the poor. The laws are for all classes equally. Men with a large bank account should not be spared on the ground of their wealth or connections. Those men of legitimate tastes for legitimate sport should awaken with a good degree of interest toward securing an efficient enforcement of the game laws.

The annual "tinkering" of the game laws is an insidious and baneful practice, especially in changing dates. Sometimes, however, when a law is defective or ineffectual it is advisable to secure the passage of new laws to avoid the objections which have been found in the old ones. As a rule the annual "tinkering" of the law will not prevent the people from looking askance at the statutes instead of helping enforce them. Let the sportsmen all unite for one purpose—the better enforcement of the game laws, such as they find on the statutes. In many cases the laws are changed before any prosecutions have been brought under them. There is not so much in the law as there is in enforcing it. Now, when the danger of a total extermination of game has grown to be real, and not mythical, it is time for action. It is therefore especially incumbent upon the body of sportsmen to practice a prudent and wise economy in killing game, but to see every illegal infraction of the law punished.

HARTFORD, CONN.

A. C. COLLINS.

### PHEASANTS FOR MICHIGAN.

HOLLAND, Mich., Aug. 8.—After considerable trouble and much delay, we have at last secured our pheasants. We sent at first to Oregon, but owing to the non-export law were unable to obtain them there. We then wrote to Mr. Verner De Guise, Mahwah, N. J., for both English and Mongolian pheasants, but could get no pure bred birds and had to be content with a cross between the two, a cross which Mr. DeG. says is more called for than the pure bred birds. Nevertheless, I shall endeavor to obtain both kind in the spring.

We bought six birds, four hens and two cocks. The males have a green head, a white ring around the neck, the middle of the breast reddish. Sides of breast more golden, looking especially so in the sunlight; the rest of body and the tail gray, each feather barred with light brown. The females are gray, pure on the breast, rest of the body barred like the male.

We intend to breed them in confinement and put out the young each fall. Pheasants are protected by law, in this State, for five years. We have them in an inclosure of wire netting 6ft. high and boards 6in. under and 1 1/2ft. above ground, making the entire height 7 1/2ft. It is covered with wire netting also. This run is 12x26ft. with an addition of 6x14ft., besides which is a basement under a barn and 6ft. high, 10x14ft. in size. They have a grass plot and plenty of gravel in the run. We feed them soft feed, corn meal, wheat bran, etc., in the morning, and grain in the evening, and plenty of cold water at all times. They are very light feeders, a handful of grain lasting one bird a couple of days.

The birds were very wild when first taken from the crate, but are comparatively tame now. The pheasants show their wild nature, even in confinement, for when my pointer or any person comes upon them suddenly, they drop in the grass and one can barely distinguish them. They will lie still longer than my dog cares to point them. There is one thing in their favor, they do not stay together in a bunch like quail, so the boys cannot get a pot shot at them. I have gone out to look at them nearly every night for the last two weeks, but only once did I see two of them near together. Each one seems to look out for itself. They prefer to roost on the ground rather than on a perch. They can beat a quail in running and sneaking away, and for this reason I think that one without a good dog would see but few of them in a day's tramp, even in a country where they were very plentiful.

The people here are very much interested in the pheasants, and I have many callers to see them. I can always get my dog to make a nice point on them, a novel sight to many. I shall watch them carefully and learn all I can in regard to their habits. I hope to report success in rearing the young next spring.

We were very favorably impressed with Mr. Hough's item on feeding quail. Some of us sportsmen here will sow hemp seed on our shooting grounds this fall and next spring.

The prospects for shooting here this fall are exceedingly slim. Quail were nearly exterminated by the deep snow; ruffed grouse scarce; but few ducks.

A. G. B.

### The Baby Caribou.

HOULTON, Me., Aug. 7.—Editor Forest and Stream: In a late number of FOREST AND STREAM I notice that you publish a letter from Mr. Chase in relation to the baby caribou, in which he mentions that "Mr. Mansur and Mr. White were up from Houlton and photographed him." Thinking one of the photos might be acceptable, I mail you one. We called there on our return from a fishing trip, and Mr. Mansur held him while I made a snap shot. He is as "tame as a kitten." Mr. Mansur had hard work to keep him from climbing all over him. As shown in the photograph, Mr. Chase had just pushed him off at arm's length when I made the snap. Had I waited a quarter of a second I might have got him in the act of striking. He will raise himself slightly on his hind feet and strike out "straight from the shoulder," sometimes with one and sometimes with both feet, "quicker than lightning." I should not care to have an old bull stand within 50ft. of me and get a notion in his head that he could "knock me out," for if he is nearly so quick as the little fellow no mortal man could dodge him. Mr. Chase was in town the other day and said that the little chap was lively and doing well.

E. B. WHITE.

## SHOOTING DUCKS ON THE WATER.

OSKALOOSA, Ia., Aug. 11.—*Editor Forest and Stream:* You ask, "Is it lawful to shoot a duck on the water?" I vote no, though I have done it when I knew less than I do now.

Duck shooting is the grandest of sport and should be grandly followed.

It may be pure selfishness, but somehow I have got to the point where I feel very little temptation to shoot on the water. I go for fun more than for ducks, and certainly one duck "all broke up" at a dizzy height is worth a dozen wilted down on the water as if they were vermin. No other game bird that flies is so much master of the air as the wild duck, and ideal sportsmanship surely should discountenance taking any unfair advantage of it.

A bird which, besides having the most gorgeous plumage and superb edible qualities, is also so much an aristocrat that he must have a summer and a winter residence thousands of miles apart, deserves to be given the one chance for life that his strong, brave wings afford.

I wish that in hunting, as in fishing, we could give the beauties back to freedom again uninjured after having tasted the joy of possession. In fishing you can have your cake and eat it, too, by returning to water those fish not needed. Not so in duck hunting, where we shoot to kill.

Wildfowl shooters generally agree that a duck on the wing presents a larger and better mark than one on the water. I practiced what I am preaching when last fall I "shooed" my first wild goose out of an ice hole and killed him on the wing. Many a duck have I likewise "shooed."

This shooting, or shooting at, ducks on the water is often prompted by the same "break-the-record" spirit that catches a string of bass or shoots a bunch of ducks in one day so large that three men can hardly lift it. The shooter is afraid to go home empty-handed and face the gibes of friends, and so argues that a duck is a duck, on the water or in the air. Oh, how sadly do many of our sportsmen need to read to themselves each day a lesson on the doctrine of moderation. These men who break the records must have a lot of friends and they must be very active in distributing among them their fishes and ducks before they spoil. Many who write, otherwise most entertainingly, of sporting events, mar it all by recounting the excessive amount of game destroyed.

Young sportsmen read these accounts and are led to believe that the great end to be sought in fishing and hunting is the destruction of countless lives.

Mr. Hough, "Kingfisher" and others, who so delightfully entertain us, are shining representatives of those who know the noble qualities of moderation. It seems to me that *FOREST AND STREAM* might properly put a limit upon the size of the game bag or creel that it will give publicity to. This summer I fished in Minnesota with moderate success, where a few years ago it was a very usual thing for two or three men to go out in a boat, fish all day, and at night throw nearly a boatload of fine fish upon the shore to rot. If this thing keeps up what will the future be? J. E. SEEVERS.

MATLOCK, Ia., Aug. 16.—*Editor Forest and Stream:* In reply to your query as to rule of shooting ducks on the water, it is the general practice to shoot a duck wherever, whenever and however one has the chance. I do not believe more than five out of every hundred sportsmen would flush a duck before shooting (provided they could get a pot-shot at it sitting). My rule has always been to shoot no bird sitting that I can get a fair shot at flying. Why should a duck be shot at sitting (provided the surroundings are such as to offer a shot flying) any more than a grouse or partridge or other bird? If there are no good reasons for this, let us abandon it and flush our duck as we do our quail and grouse. LONGFELLOW.

## MOOSE CALLING IN NOVA SCOTIA.

I HAD planned to take my usual yearly holiday by means of a hunting trip down the Liverpool Lakes, to last about a fortnight, and under the guidance of my old companion, Jim Charles, a Micmac in habits, but of French extraction on his father's side. He was a skilled woodsman and hunter, and capital fellow in every way. His wife Lisbeth was a full-blooded Indian and kept his little house as clean as hands could make it. Between them they cultivated quite a little farm, keeping several head of cattle and a horse. She for many years spent each summer in Newport, R. I., where she was well known as an Indian doctor. She has often told me how kind the Mayor was to her, taking charge of her money and in many ways showing her much courtesy. She once got into trouble by adopting a white child, a destitute orphan, and he seemed to have taken much pains to get it returned to her when some over-officious friends took it from her. I have seen the little girl at her house frequently. She several times brought home several hundred dollars as her professional earnings. I did not think it wrong to give her many hints, showing her our native herbs and explaining their medicinal virtues.

At this particular time Jim had also two tame moose which he and his wife had caught when only a few hours old and reared on cow's milk. The female fell and broke her neck playing with a little dog. The male was sold to the King of Sardinia, and may, for aught I know, be now in the zoological garden of that monarch, at any rate he arrived there safe and sound. On asking Jim what so young a moose was like he answered, "Well, 'bout as big as a wabbit, but my, what legs! go so," waving his hands about in illustration of their uncertain movements. He and his wife had been paddling home in the dusk of the evening when they spied a moose swimming to one of the islands. Judging it was seeking a safe retreat for calving they visited it early next morning. The cow rushed away on their approach without the least attempt to defend her young, which lay coiled up among the tall grass, unable to stand. Lisbeth had brought with her some milk which she warmed and fed to them, and, toward evening, wrapping the little things in a blanket they brought them home. They were not confined, but ran among the cattle and were not at all afraid of strangers.

Our party consisted of five, myself and two friends and another guide, Dave Lewis, a lumberman and hunter from his boyhood, a capital fellow, powerful, hardy and full of fun. He and Jim were to be our pilots, having charge of the stern paddle, either of us feeling capable to manage the bow. We had two fine birch bark hunting canoes, each one intended for two persons and their dunnage, and with this load quite safe to go any-

where, but three make them rather too deep when the lakes are rough.

The lakes about which we planned to spend our fortnight are on the Liverpool River, which is a succession of stream, lake, rapids and still waters extending nearly across Nova Scotia from north to south, the lakes predominating.

It was resolved that we should make at once for headquarters and from there organize expeditions as circumstances should require, calling for moose whenever a favorable chance should offer.

The call can be heard on a still night, and no other is suitable, two or three miles, if you are on elevated ground, or if near a lake, much further, and a moose will come that distance, if he is of mature age, answering every few rods as he advances. A young one rarely answers often or loudly from fear of an older and stronger rival.

Should two well matched in size meet there always follows a fierce encounter. When the caller imitates the bull it is to arouse the combativeness of the coming moose, and I have seen two heads with the horns so firmly interlocked that the poor creatures could not disengage them, and so perished miserably from hunger. I one night heard a battle of this kind from the opposite side of a small lake. It lasted more than an hour. We visited the spot in the morning, where the trampled undergrowth over a half-acre of ground, the broken branches of trees and the upturned moss and stones stained with blood testified to the enormous strength of the combatants and the obstinate nature of the battle. But even when they are in their lustiest pride and strength they rarely attack a man.

We camped that night in the barn among the sweet, newly cut hay. The only incident of the night was due to the untimely crowing of a cock from one of the beams. Presently there was a rustle in the hay; I heard some one groping about and using words more emphatic than elegant; then a rush of wings, a dull thud on the barn floor, followed by a dismal "squaak," then with a self-satisfied grunt some one seemed to return to his lair, and we had no more of Chanticleer's joyous notes. In the cheery morn no one would own up to the undignified display of temper, and it remains an unexplained mystery to this day.

It was a lovely morning. Breakfast over, we reached the canoes and started, Dave and my two companions with their guns, rods and a few packs in one, Jim and I with the greater proportion of dunnage in the other. It was a sight to see the ease with which the two hunters threw the canoes over their heads and deftly picked their way over the rough track; road there was none. A canoe is carried by running the paddles under and over the three middle thwart; these rest on the shoulders of the carrier, his head being entirely inside. The canoe slopes backward so that he can use his eyes.

Numerous flocks of ducks were to be seen in distant bays, some quietly feeding, others splashing the water into showers of diamonds as they pursued each other, half flying, half swimming in circling sport; or if frightened by our approach, just flitting in long lines to some more sequestered spot. Promising ourselves some good sport in the evening from these unsophisticated birds, we pushed on to the further end, where the final carry of a few rods would bring us to our camping ground on another lake—the "Home of the Loon"—a favorite breeding place for these large birds. It is nearly circular, about a mile across, with excellent calling ground all about.

The spot we selected for our camp was a smooth slope on the north side, facing to the southward, within a rod of the shore and with a little brook emptying into the lake close at hand. Tall hemlocks sheltered it on the three other sides, but were placed back from the lake some three or four hundred yards. This inclosed space was thickly covered with a young growth of hardwood ten or twelve feet high, with quantities of blackberry and huckleberry bushes laden with fruit, now in perfection. A more lovely and suitable spot for our purpose could not be imagined. It had been from time immemorial a favorite camping ground of the Micmacs. To arrange our home was our first care, for if the wind fell we were to call this evening. Our tent, a lean-to with wide flaps, was pitched back to the lake to secure us from the cold draught that always comes off a lake at night; a few stones piled in front made our fireplace. It was up hill, so that at night the warmth of our fire would radiate directly upon us and reflected from the sloping tent make blankets a superfluity.

A more elaborate structure of stones, crotches and hooks, erected a few paces to our right to avoid the nuisance of smoke in camp, comprised our kitchen, and when a plentiful supply of wood had been chopped and piled up at a convenient distance, we looked around with much complacency on the spot that was to be our abiding place for the few weeks that would all too soon glide away. About an hour before sunset, the wind still being too high for calling, we determined to divide our forces, Dave with his canoe and party going in quest of trout and ducks on the lower lake; Jim and I taking the other canoe on the upper lake to see what we might discover, to prospect in fact. This arrangement we adhered to for nearly the whole trip, which will explain whatever in this sketch may seem egotistical, for I narrate mostly what of the fun fell to my lot. We first skirted the shore looking for beaver sign. They eat only the bark and smaller twigs, and have a habit of putting the barked wood on the top of the house. One can generally tell at a glance that a beaver house thus added to has inhabitants, the white wood being conspicuous from a distance, so what one looks for on the banks is fresh cut stumps or chips. I have seen these chips fully an inch wide, and stumps of poplar trees 15 in. in diameter felled by beaver. We soon found sign in plenty. As we silently stole along in the shade of the bank I heard Jim tap the side of the canoe, a signal that game was in sight; and on turning my eyes from the shore that I had been closely scanning, I saw out in the lake about two gunshots off, a beaver towing his stick. We watched in silence till suddenly he dived, "House close by," said Jim, "find him to-morrow," and again we quietly slipped along.

How lovely it all was. The tops of the tall hemlocks bowed gently and sighed to the passing gusts; but our little lake was so sheltered that it was smooth as glass. Two or three loons were to be seen near the outlet; and occasionally the hoarse clatter of a kingfisher was heard, as after a plunge he returned to his branch with his captive trout or perch. But the silence was generally so un-

broken that the musical tinkling of the drops of water falling back from the steersman's paddle was all we heard.

I had laid aside my paddle, and was enjoying the outlook with the deepest and purest pleasure, when again Jim's tapping reached my ear. This time I caught sight of two little black objects 100 yds. or so outside of us. They dived. Jim put the back of his hand to his mouth and made a sort of kissing, smacking sound. I had my gun ready, in a minute they reappeared about 50 yds. off. I sent a bullet from my left barrel at the one nearest me. It splashed right on the little spot and then went skipping along the surface of the water far away. It seemed to require but one sweep of the paddle to put us alongside of the thing kicking out there, and then I pulled in my first otter. My ball had carried away the end of his nose, so his beautiful skin was uninjured. It was not quite in season. When skinned an otter is seen to be a most muscular creature about the neck, shoulders and chest, made still more conspicuous by the meagre development of his hinder parts. A full grown otter can catch and hold a salmon. The otter's odor is very much like that of a very doggy dog. We completed our circuit, finding ample promise of sport; got a sheldrake at long range by happening to have in an Eley's wire cartridge; and joined the other section of our party. They had had fine sport among the trout, two dozen, averaging a pound each, being the result. They also had bagged three black or dusky ducks. Pork was soon frizzling in the frying-pan, and presently a dozen trout minus their skins were lying on a sheet of birch-bark cooked to a turn.

If any one wishes to taste trout in perfection, he should eat them as we did that evening. They lose much of their fine flavor if out of the water even for a short time. The stronger the stream in which you catch them the finer they are. Trout caught in streams that empty into the Atlantic are more gamy and of flavor superior to those in the rivers emptying into the Bay of Fundy; they are also thicker, deeper fish, and more brightly colored. In the waters where we now were they rarely exceed 1½ lbs. in weight; but in the larger lakes Kedge-ah-makougie and Rosignol, I have taken them weighing 4 lbs. I have frequently had three, each over a pound, on my line at once. During this trip my companions in one afternoon actually loaded the canoe, the Indian refusing to let them catch any more, as they had to cross the lake. I was not one of the party, but I saw the catch. I do not think there were a dozen in the lot of less than half a pound weight, and none over 2 lbs., certainly a handsomer basket of fish could hardly be caught anywhere. The largest we lightly salted and smoked; they were then very delicate eating.

The next morning early we all tried our rods with good success. We were relying altogether on our guns and rods for food, having in our knapsacks only flour and biscuit, with a few pounds of pork. Some of us walked back to camp by the edge of the lake and shot several partridges; in the groves of hackmatack we looked for spruce partridges. The male spruce partridge is one of the handsomest birds we have in our woods. They are so tame and stupid that an Indian can generally get all he wants with stones or by noosing them. Jim cut a long, slender, straight spruce and trimmed it close; then pulling up the small roots of the same he peeled them and made a slip-noose which he fastened to the end of his pole. Then stealing up to the tree where the birds were sitting, he from behind put the noose carefully above the head of the bird, slowly lowered it and then with a sudden twitch brought his game down. If you touch a twig the bird will fly, and you must catch your lowest bird first.

My space will not allow me to go into the details of each day's sport—our duck shooting; loon hunts, when we ran them down with a canoe; our visits to the beaver houses and dam. I shot one beaver only, for their skins were not yet in season. Nor were the young ones nearly full grown. But I watched their curious ways closely, several times having them within three or four feet of me. Our object in coming to the woods was certainly not to slaughter uselessly such inoffensive creatures. As they gazed at me, so near that I could touch them with the muzzle of my gun, their beautiful soft, lustrous black eyes were so human in their expression that I had no desire or wish to harm them.

I asked Jim so many questions, to him silly, as to their habits that at last he turned to me with a laugh and said, "Ha! you read book that not so," and I found that many of the "truths" told us by naturalists were, as Jim said, "not so."

I must hurry on to our call. It was several days before we got an evening still enough for the purpose, but at last it came. Dividing as usual, Dave and his party crossed the lake to ground on that side about a mile back, while Jim and I packed a small store of provisions in our blankets and started on foot for Cedar Lake, situated a mile to the northwest of our camp. This would put three or four miles between the parties, so that one caller could not hear the other. When we arrived at the desired spot the sun was still an hour from setting; we stood on a small knoll of granite rock. Looking to the west, before us was an extensive barren of rocks and bushes, in the far distance a meadow and stillwater, on our right was the lake with a broad edging of meadow and bog. On the left, but not in sight, a dry bog sprinkled with hackmatack extended for several miles. Behind was the barren we had crossed, swept by fire, the naked pine ram pikes standing all about or piled in confused heaps as they had fallen before the wind, a desolate scene, excepting that on the far side of the lake a ridge of green hardwood ran east and west as far as the eye could see. But the small bushes were pasture for the moose, the green wood a shelter from the sun, and the lake afforded them a change of diet in the way of lily pads and a capacious bath.

Jim called as soon as the sun was out of sight, when the full harvest moon was rising in the east as the sun declined. In half an hour he called again. "Too much call bad."

Night had now fairly set in. We were posted so that one could overlook the upper marshy end of the lake, the other the big meadow, both listening with all our powers for an answer. Listen anywhere on a perfectly still night and the listener will hear many curious sounds; but a novice who is so situated in the woods, if he have any imagination, will certainly find food for wonder. Some sounds may be familiar, as the dismal *who-hu-hu* of an owl, the melancholy cry of a loon, the drumming of a partridge, the rustle of a mouse in the leaves at your elbow, which to your excited senses is some large creature

at a distance. But others are heard, weird and mysterious, not to be explained by anything on the earth or above it. Among them a sudden solemn boom like the vibration of a big bell after the clapper has struck, but not continuous like it. Voices and whisperings, perhaps the bay of a dog, whether conveyed to the sensorium from without or whether originating in the brain itself, 'tis hard at the time to say. After what seemed a long time I heard something different from all these. After a pause, again. Looking at Jim, I saw from his uplifted hand and the turn of his head that he, too, had heard. A moose had answered. But we heard no more of it. After what seemed an hour of suspense, Jim crept to me and whispered that it was a little one, a "sneak," and advised no more calling till morning. A "sneak" will come up making no more noise than a cat, and the chances are that he will see or smell you and be off, giving the hunter no intimation of his presence. Nor in the deceitful shadows of the moonlight is it at all easy to see him. In daylight the hunter is not at this disadvantage.

Creeping into a little shelter we had built under the lee of a big rock we went to sleep. At early dawn we were up and the first call was answered loud and full from the ridge of green wood. Jim's eager whisper, "He big fellow, he come," tingled in my ear. One more call and we could hear his rush, his horns rattling against the branches, as he forced his way through the thickets, and at almost every step his hoarse answer shook the air. On he came to his fate. He crossed the bog at the top of the lake in full sight of us, a huge, ungainly creature, his large antlers tossing backward and forward as he swung his head, his mane erect, pride, strength and vigor displayed in every movement. Once in a while he would stop, arch his back and hook savagely at some little bush as if it were an antagonist, then, belching out his loud, fierce cry, trot on. He came within less than a hundred yards of where we were crouched behind a large rock, stopped and raised his head to give another defiant snort. A shot from each of us blending almost into a single report stretched him lifeless on the moss. His race had run.

On reuniting with our party that evening we found to our great joy that Dave had been equally successful, and our friends had secured a handsome set of horns.

I cannot say that I particularly care for calling. The waiting for an answer, and the approach of the moose are exciting enough, but it lacks the free swing, the fierce rush and keen rivalry of a snowshoe chase, as well as the endurance, skill in woodcraft and patience needed in still-hunting or creeping. It seems a sneaking piece of business, to allure a poor brute to its death by means of the "tender passion" all for our sport—and it is a test of skill on the part of the "caller" alone.

WESTPORT, NOVA SCOTIA.

## THE BEHRING SEA DECISION.

In the treaty between the United States and Great Britain which provided for the arbitration of the points at issue between the two Governments, these questions were grouped in Article VI., which was as follows:

In deciding the matters submitted to the arbitrators it is agreed that the following five points shall be submitted to them in order that their award shall embrace a distinct decision upon each of said five points, to wit:

1. What exclusive jurisdiction in the sea now known as the Behring Sea, and what exclusive rights in the seal fisheries therein did Russia assert and exercise prior and up to the time of the cession of Alaska to the United States?
2. How far were these claims of jurisdiction as to the seal fisheries recognized and conceded by Great Britain?
3. Was the body of water now known as the Behring Sea included in the "Pacific Ocean" as used in the treaty of 1825 between Great Britain and Russia, and what rights, if any, in the Behring Sea were held and exclusively exercised by Russia after said treaty?
4. Did not all the rights of Russia as to jurisdiction and as to the seal fisheries in Behring Sea east of the water boundary in the treaty between the United States and Russia of March 30, 1867, pass unimpaired to the United States under that treaty?
5. Has the United States any right, and, if so, what right of protection or property in the fur seals frequenting the islands of the United States in Behring Sea when such seals are found outside the ordinary three-mile limit?

At 11 o'clock on the morning of Tuesday, Aug. 15, Baron de Courcel delivered to the representatives of the two Governments the original copies of the decision signed by all the arbitrators. After a short preamble the decision reads as follows:

"We decide and determine as to the five points mentioned in Article VI. to which our award is to embrace a distinct decision upon each of them:

"As to the first of said five points, we, Baron de Courcel, John M. Harlan, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta, and Gregorio W. W. Gram, being a majority of said arbitrators, do decide as follows:

"By the ukase of 1821 Russia claimed jurisdiction in the sea now known as Behring Sea, to the extent of 100 Italian miles from the coasts and islands belonging to her, but in the course of the negotiations which led to the conclusion of the treaty of 1825 with Great Britain and the treaty of 1825 with Great Britain, Russia admitted that her jurisdiction in said sea should be restricted so as to reach a cannon shot from shore.

"It appears that from that time up to the time of the cession of Alaska to the United States, Russia never asserted in fact or exercised any exclusive jurisdiction in Behring Sea or any exclusive rights to the seal fisheries therein, beyond the ordinary limit of territorial waters.

"As to the second of the five points, we, Baron de Courcel, John M. Harlan, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta, and Gregorio W. W. Gram, being a majority of said arbitrators, decide and determine that Great Britain did not recognize or concede any claim upon the part of Russia to exclusive jurisdiction as to the seal fisheries in Behring Sea outside the ordinary territorial waters.

"As to the third point, as to so much thereof as requires us to decide whether the body of water now known as Behring Sea was included in the phrase "Pacific Ocean" as used in the treaty of 1825 between Great Britain and Russia, we unanimously decide to determine that the body of water now known as Behring Sea was included in the phrase "Pacific Ocean" as used in said treaty.

"On the fourth point we decide and determine that all the rights of Russia to jurisdiction and to the seal fisheries passed to the United States, limited by the cession.

"On the fifth point, we, Baron de Courcel, Lord Hannen, Sir John S. D. Thompson, Marquis Emilio Visconti-Venosta and Gregorio W. W. Gram, being a majority of said arbitrators, decide and determine that the United States have no right to the protection of or property in the seals frequenting the islands of the United States in Behring Sea when the same are found outside the ordinary three-mile limit.

"And whereas the aforesaid determination of the foregoing questions as to the exclusive jurisdiction of the United States leaves the subject in such a position that the concurrence of Great Britain is necessary to the establishment of regulations for the proper protection and preservation of fur seals habitually resorting to Behring Sea, we, Baron de Courcel, Lord Hannen, Marquis Emilio Visconti-Venosta and Gregorio W. W. Gram, being a majority of the arbitrators, assent to the whole of the nine articles of the following regulations as necessary outside of the jurisdiction limits of the respective Governments, and that they should extend over the waters hereinafter mentioned:

"Article 1. The United States and Great Britain shall forbid their citizens and subjects respectively to kill, capture or pursue at any time or in any manner whatever the animals commonly called fur seals within a zone of sixty miles around the Pribilof Islands, inclusive of the territorial waters, the miles being geographical miles, sixty to a degree of latitude.

"Article 2. The two Governments shall forbid their citizens or subjects to kill, capture or pursue in any manner whatever during a season extending in each year from May 1 to July 31, inclusive, fur seals on the high sea in that part of the Pacific Ocean, inclusive of Behring Sea, situated north of the thirty-fifth degree of north latitude from Greenwich until it strikes the water boundary described in Article 1 of treaty of 1867 between the United States and Russia, following that line up to the Behring Sea.

"Article 3. During the period of time in the waters in which fur sealing is allowed only sailing vessels shall be permitted to carry on or take part in fur sealing operations. They will, however, be at liberty to avail themselves of the use of such canoes or undecked boats propelled by paddles, oars or sails as are in common use as fishing boats.

"Article 4. Each sailing vessel authorized to carry on fur sealing must be provided with a special license issued for the purpose by its Government. Each vessel so employed shall be required to carry a distinguishing flag prescribed by its Government.

"Article 5. The masters of vessels engaged in fur sealing shall enter accurately in an official log book the date and place of each operation, the number and sex of the seals captured daily. These entries shall be communicated by each of the two Governments to each other at the end of each season.

"Article 6. The use of nets, firearms or explosives is forbidden in fur sealing. This restriction shall not apply to canoes or boats which are used in fishing outside of Behring Sea during the season when such may lawfully be carried on.

"Article 7. The two Governments shall take measures to control the fitness of the men authorized to engage in sealing. These men shall have been proved fit to handle with sufficient skill the weapons by means of which Indian seal fishing is carried on.

"Article 8. The preceding regulations shall not apply to Indians dwelling on the coast of the territories of the United States or Great Britain carrying on fur sealing in canoes or undecked boats not transported by or used in connection with other vessels and propelled wholly by paddles, oars or sails, and manned by not more than five persons, in the way hitherto practiced by the Indians, provided that when so hunting in canoes or undecked boats the Indians shall not hunt for seals outside the territorial waters under contract to deliver skins to anybody.

"This exemption is not to be construed to affect the municipal law of either country, nor shall it extend to the waters of Behring Sea or the waters around the Aleutian Islands.

"The intent herein contained is intended to interfere with the employment of Indian seal hunters or otherwise in connection with sealing vessels as heretofore.

"Article 9. The concurrent regulations hereby determined with a view to the protection and preservation of the fur seals shall remain in force until they have been wholly or in part abolished or modified by a common agreement between the United States and Great Britain. Said concurrent regulations shall be submitted every five years to a new examination in order to enable both Governments to consider whether, in the light of past experiences, there is occasion to make any modification thereof."

A special finding was made by the arbitrators on the facts agreed upon by representatives of both governments as to the seizures of vessels in the Behring Sea in 1887 and 1889. Further, the arbitrators after making certain other suggestions to the two governments, recommend that they come to an understanding to prohibit the killing of seals on land or sea for a period of from one to three years, and should enact regulations to carry out the findings of the arbitrators.

## AMERICAN PROOF HOUSE.

### Proposed Gunpowder Test.

*Editor Forest and Stream:*

In conformity with the request as expressed by a large number of American sportsmen, to establish the real and relative merits of the various nitro powders on the market in this country, I have concluded to arrange a public trial during September next of the following powders: American wood, S. S., Schultze, E. C., Sportsmen's Pet, Walsrode, Curtis & Harvey Diamond No. 4, Dupont's Eagle ducking and Crystal grain, Lafin & Rand's Orange special and Orange Lightning, American Powder Mills' Dead Shot. The experiments will be carried out either in the vicinity of New York or Chicago, and all interested parties will have the opportunity to witness the trial.

The different powders will be tested for bursting strain, velocity, penetration, pattern, recoil, fouling of gun barrels, regularity of gas pressure, velocity, penetration and pattern, susceptibility toward moisture and dry heat, the greater or lesser quantity of smoke developed. All powders will be treated precisely alike and tested under similar conditions. For this purpose one shot will be fired at the time from one kind of powder, the second from another, and so on, and the same gun and barrel—12-bore—will be used throughout the trial. The shells will be used as loaded by the manufacturers, or loaded according to directions, but the shot charge will be the same for all powders, 14oz

The result of the test when completed will be made public in the columns of FOREST AND STREAM. Time and place will be announced hereafter. Parties having any suggestions to make pertaining to the proposed trial will please address

ARMIN TENNER.

50 BROADWAY, ROOM 103, NEW YORK.

## The Opening of the Rail Season.

MILFORD, Conn., Aug. 21.—*Editor Forest and Stream:* The rail season in Connecticut opened to-day, and I visited the meadows to see how the birds were both as to condition and numbers.

The tide served early in the morning. A northeast storm was in progress, with wind and rain. Four boats went up the river. There seemed to be a number of native birds, but the tides are poor now, the moon being in Apogee, and it was impossible to "get anywhere." The scores were 21, 15, 13, 8. I saw a flock of 10 black ducks, one wood duck, one loon and an albino blackbird. The grass is heading out, but very little is ripe. The birds are in good condition, and a good many reed birds are about.

MORT.

## Mississippi Quail.

FERNWOOD, Pike County, Miss., Aug. 10.—The quail crop in this section will be the largest known for years, and with the shooting privilege of over 10,000 acres I think I can give my dogs sufficient experience to make bird dogs out of them; and if any of our northern brethren (of the right stripe) come my way I'll make an effort to give them a quail hunt, if they will just leave a few for seed.

MC.

## A New Florida Line.

The Richmond & Danville R. R. in connection with the Florida Central and Peninsula R. R. announces a through train and sleeping car service between New York, Washington, Savannah, Jacksonville, St. Augustine, Tampa and all points in Florida, to take effect about Oct. 15. This extension of the Richmond & Danville's service has been made possible by the completion of the Florida Central & Peninsula new line between Jacksonville and Savannah, which will be open for traffic about Oct. 1. The "South Bound" between Savannah and Columbia, S. C., where connections will be made with the Richmond & Danville. The new line promises the shortest route, quickest schedules and best service New York, Savannah, and all points in Florida. For rates, time cards, etc., address the General Passenger Agent, Washington, D. C., or Alex. S. Thwaitt, E. P. A., 229 B'way, New York.—Adv.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant

## GAME QUALITIES OF OUANANICHE.

SYRACUSE, N. Y., Aug. 16.—With astonishment and genuine regret I have just read the article in your issue of June 29, entitled "Lake St. John Ouananiche," from the pen of Mr. R. C. Lowry. I cannot let such an unfair article pass without a reply, and should have answered at an earlier date, but that I have just returned from a month's outing at Lake St. John, and only saw the article within a few days.

For five years past, and with an experience of from four to five weeks each year in catching ouananiche, I can truthfully pronounce it, with the exception of the salmon, to be the gamiest fish I have yet found. This fish, named by the Montagnais Indians, the *habibans* of Lake St. John, the ouananiche, from *ouaman* (salmon), and *iche* (the diminutive)—the little salmon—is properly named, since who better than they know its derivation and nature?

In the past, the salmon went from the sea far up the Saguenay to Lake St. John to spawn. Some convulsion of nature occurred and raised an impossible barrier at Chicoutimi, a sheer fall of 60 or 70ft. Thus the salmon imprisoned above became landlocked, and in the intervening years they have deteriorated only in size. They have every mark of their progenitor, and have kept the fighting qualities intact. Added to this is the fact that they are generally caught in rapid flowing or eddying water; thus one has to contend with the water as well as the fish, making a strong combination for a 7oz. rod.

In his criticism, Mr. Lowry says that the fish is yellow. In this I must differ with him. When first caught, the color in every instance is a shade of peacock blue, which in a few moments changes to the natural salmon gray. The belly is grayish white, gray predominating, and I have never seen one of any other color or shade. I have compared the salmon and the ouananiche side by side, point by point. The head in all its points is identical, with no more resemblance to a trout than a salmon has; the small solid fin anterior to the tail on the top, peculiar to the salmon family, it has in a marked degree; the dorsal fin in shape and texture is the same; the scales, crosses—not spots—tail, color, and general contour do not vary in the slightest degree. The flesh is pink, varying from light to dark in different fish, firm and tender, and properly cooked, equal to salmon.

Frequently, in the *brou* or foam, covering an eddy, their dorsal fins can be seen as they circle about. Cast immediately in front and the fly is quickly taken. But for uniformly good fishing, the best success is obtained in swift, running water at the foot of a rapid or fall. Shore fishing is preferable, as a canoe seems to frighten them away. The width of a ouananiche tail is larger in proportion than any fish I have ever seen. Their strength is wonderful, and I have frequently seen them ascend rapids and jump falls impassable by any fish but a salmon.

It was my good fortune last year to make some short fishing trips from Lake St. John, with the late Dr. Lundy of Philadelphia—a man who had fished all the waters of our own continent, as well as the most noted of other countries, an able writer on fishing and forestry, and a recognized authority. He came to try the ouananiche for a week and remained during the entire season. I will quote his opinion of ouananiche, as expressed to me:

"I have, in the seventy years of my life, fished the trout and bass waters from Maine to Alaska. I have fished in England and Scotland, and even caught fish in the River Jordan; but I never met with, or believed there could be, a fish with such fighting qualities as the ouananiche possesses. As long as my life is spared, I shall never go elsewhere or seek other fish."

Here is the authority of an expert, and it cannot be gainsaid. I have induced many friends, ardent fishermen, to try this fishing, and they did so, prepared to meet with more or less disappointment, attributing my "fish stories" to over-enthusiasm. They returned fully as enthusiastic, and invariably remarked, "You did not say half enough in favor of the ouananiche." If necessary, I can refer, with permission, to any of the gentlemen.

Of the many fishermen I have met, who have caught this landlocked salmon at Lake St. John (and the number is large), I have yet to meet one who has not claimed that it was a far greater fighter than a trout or bass. Therefore was Mr. Lowry's letter a great surprise to me, and I could not take up the cudgels in defense quick enough. All kinds of fish have their good and bad days, and ouananiche are no exception; consequently, one day with such an entirely new fish is not sufficient experience to condemn them.

A 6ft. heavy leader with two flies is in my experience the proper thing. My best success is with a brown-hackle or cow-dung for the trail fly, and a Jock-Scott or silver-doctor for the dropper. The dropper should be placed at the last knot on the leader next to the line, so that in drawing the cast it will skip the water and constantly swing a few inches above. The greater part of the catch will be taken on this fly. In smooth, swift, running water, the fish can be seen to strike, and it is easy to strike him in return. But in seething, white water, the first intimation is generally to see the fish jump from the water in the vicinity of the flies, immediately followed by a hard jerk. If this occurs when the rod is being carried back finishing drawing the cast, there is rarely time to give the fish the tip, and the quick hard jerk breaks the rod, leader or hook, generally the latter. Flies for ouananiche should always be tied on a No. 4 hook. Smaller than that will be easily broken, the break always occurring on the strike.

After July 1, the fishing in the Grand Discharge diminishes, as the fish are *en route* up the large rivers emptying into Lake St. John, to the spawning beds 300 or 400 miles north. This makes the best fishing in July and August in the pools at the higher falls along the rivers, where the fish congregate in their efforts to ascend. The fifth falls of the Mistassini offers a beautiful camping place, and a particularly fine pool for fishing. Located some forty

miles from Lake St. John, the distance is covered by canoe in a day and a half. Here the river drops about 30ft. in a beautiful fall about 200ft. in length. To the right is a small rocky island on which we camp, and still to the right is another fall 20ft. wide. The smaller fall is divided into four or five leaps, and here it is that the ouaniche ascend. From the rocks jutting into the pools at the foot of both falls, the fishing is done. In the white, boiling water, the fish seem to lie, an average cast of about 80ft. reaching them.

Mr. H. N. Curtis of New York accompanied me to this point in July, and in two and a half days' fishing we secured eighty-two fish, with an average of 3½lbs. One morning in particular, a dark showery day, I secured fourteen fish and lost seventeen, in four hours and a half. This I did at the expense of both rods, several leaders and a number of flies broken. In fact, one may always expect to lose more ouaniche than are saved, their fighting and leaping being so tremendous that something must occasionally break. Nine out of ten of these fish will plunge, jump and sulk, as I have never seen another fish do. The first action in being hooked is to leap from the water, then a mad running from side to side with an effort to run under the falls. I find the most successful way to handle them is to stop the line running out and play them with about 20ft. Draw sufficient line into the left hand to ease the jumps; and hold them perfectly tight, and more will be saved than any other way. If poorly hooked, they are reasonably sure to get away, but if fairly hooked, a tight line will save them. They do not but rarely take the fly into the throat, but are hooked through the lip. I find a fair-sized ouaniche of 2½lbs. or more will make a fight from fifteen to twenty minutes. They will shake violently both in and out of water to get rid of the fly, then plunge 8 or 10ft. down and sulk and pull. They are in constant motion in or out of water, and only when tired out can they be safely led to the net. On two occasions I have seen an ouaniche when hooked, jump entirely across a canoe of the fisherman in a mad leap. I saw Mr. Curtis hook one in a pool at the head of a 12ft. fall in the Mistassini, and saw the fish go over the fall with fly and line; and in a moment jump up the fall to the pool again. It was well hooked fortunately, and saved. I have yet to learn of a trout or bass doing this.

In fact, enough cannot be said in favor of the ouaniche, and as far as I can see nothing detrimental to its fighting qualities or to the fish itself. The best proof is to catch the fish in his native waters (Lake St. John), and I trust that others will try it and have the same unequalled sport that I have had. EUGENE McCARTHY.

### THE WAYS OF THE SALMON.

SAN FRANCISCO, Aug. 9.—I see I am called upon by our mutual friend Judge Greene to give my experience and observations on the question of whether salmon feed after entering fresh waters en route to their sources to deposit spawn.

The Judge evidently believes they do; but I am sorry to be obliged to differ with him, so far as my observations have gone in that direction.

The only instance wherein I have given the subject any special attention was on the last occasion when I fished in Navarro River, when I was led to investigate by the remark of a seedy old party sitting on a saw log watching my fishing, who, after expectorating, said, "What pesky creatures these salmon are to live so long without eatin' nuthin' and be so pe-ert and lively."

I said, "Are you sure they do not feed while in the river?"

He replied, "Waal, I reckon I have seined nigh on to fifty tons on 'em outen this river, and never found a durned thing in any on 'em."

After that and during the time I was fishing there I opened every fish I caught, some thirty-five or forty at a time, but found nothing in their stomachs. Subsequently I fished at the headwaters of the Sacramento River with the same results, with the exception of two instances.

In opening these two fish I found fresh salmon roe; but as several parties were fishing with roe for bait, and this being difficult to retain on the hook, the fish specified may have taken the roe in that way.

On another occasion, when fishing for rainbow trout in the McCloud River, a tributary of the Sacramento, I caught a salmon with salmon roe for bait, and found quite a quantity in its stomach, accounting, as I supposed, for the several baits lost from my hook.

One theory I have heard advanced was that the salmon being a fish remarkable for its rapid digestion, never bites or takes the fly until what it may have previously swallowed is entirely digested, when it begins to think about its next meal. If such is the case its habits are entirely different from our experience with all other varieties of fish, and again, as a case in point is related in an article I saw in the FOREST AND STREAM, I think, where it is stated that a whole trout was found in the stomach of the salmon caught, all of which leaves the question as unsettled as before. The waters of the Navarro River for two or three miles from its mouth are brackish, in fact quite salt at flood tide, and I noticed, when standing on the rocks at the entrance—which is quite deep and narrow, the water rushing in and out with considerable force between rocks—that the salmon came in with the tide and at the ebb went out, playing in and out as it were, and not remaining in the river permanently until the first rise after a heavy rain, after which they ran up, and few were again seen at the mouth. Their time for business had arrived, after which they would not bite at anything and fishing was over for that year. Hence it may be considered a settled fact that salmon cannot be caught with the rod when running, unless they meet with obstacles in the way of dams that check their progress, when they accumulate and occasionally take the hook.

That salmon do not always return to salt water after depositing their spawn is proven by the fact that they are taken during the subsequent months at the headwaters of the Sacramento River in passable condition, having recuperated from the effects of their long run up the river and presumably must have fed on small fish, there being no other food obtainable. All of which proves that all theories as to any fixed rule in regard to the habits of this fish are unreliable.

In driving along the road lying close to the banks of the headwaters of the Sacramento, I have seen whole schools of very large salmon lying close to the bottom, using just

enough force of fin and tail to stem the not over rapid current; but although I have stopped and essayed with my most tempting flies and also bait, could never get a rise. It is only in deep pools and rapid water of this river that they can be taken, and then only with salmon roe for bait.

My theory is, that having deposited their spawn a certain percentage of them remain to recuperate, and do not return to salt water, probably reasoning that it is a saving of labor to remain until the subsequent spawning season, instead of making the several hundred miles trip over again. At any rate, it is an established fact that many do remain all summer in those waters and recover their condition.

In the deep swift pools of the McCloud River, the home of the rainbow trout, a tributary to the Sacramento, salmon are caught all through the summer with roe for bait, and also in Eel River, another deep and rapid stream north of us.

The conclusion I have arrived at is that no fixed rule can be applied to the habits of salmon covering all waters. Their methods are quite at variance in different locations. Their habits in Canada waters, for instance, are entirely different from those in the rivers of the Pacific coast, where they do not take the fly as readily as in Canadian and Maine rivers; but still, it is an error to say that they do not take the fly at all on this coast, as has been, and is, constantly asserted. See, for instance, the statement made in the August number of the *Century* by Mr. Henry A. Herbert, who writes a charming article on salmon fishing. Speaking of the rivers flowing into the Pacific, he says, "The salmon in these rivers have never been known to rise to or take any known description of fly." Presumably an artificial fly is meant. That this is an error I am able to say from my own personal experience, for on several occasions on the Navarro River (my favorite fishing ground) I have caught salmon of from 12 to 20lbs. with the ordinary-sized trout fly. It is true that on occasions I have failed to get a rise to the fly when they would greedily take the feathered spoon. Why they will take the fly one day and refuse to do so the next is one of the conundrums I have never been able to solve. I remember that on one occasion particularly I caught twelve fine fish in succession, using the common brown-hackle, peacock body.

Mr. J. Parker Whitney, who writes a very interesting description of his fishing in Monterey Bay, in FOREST AND STREAM of July 29, describes the method he adopted peculiar to that locality, of sinking his bait 30 or 40ft. below the surface. We troll with a sinker in Lake Tahoe for the large trout of that locality for the reason that the water is so clear and limpid that a ten-cent piece can be seen at a depth of 60ft., hence the fish will not rise to a surface bait. Mr. Whitney's method suggests the experiment of trying the sunken fly for salmon when next I visit Navarro River. I have used a sunken fly with great success in Lake Edward, Canada.

There is one thing that surprises me, and that is, that skilled fishermen persist in using that relic of barbarism, the gaff, which is uncertain and disfigures the fish so dreadfully, when a large oblong landing net is so much more certain and lands your fish in perfect order.

The net should be of a size specially adapted to the size of the fish taken. For salmon it should be of oblong shape, say 20 or 24in. wide and 36in. long, with a stiff shaft or handle 7ft. long, which will reach your fish before he can strike the boat and get loose. I have yet to lose a fish with a skillful man in the boat with me to handle the net. Whereas, before I conceived the idea of using such a landing net, I lost many a fine fellow in futile efforts to gaff him in his struggles. It is little less than butchery to gash and mar the beauty of your fish as the gaff does, and I enter my earnest protest against its use.

I have wondered why manufacturers of fishing tackle have not long ere this turned their attention to manufacturing such a landing net adapted to the handling of large fish. To the best of my knowledge you cannot at the present moment find in any fishing tackle store in New York a landing net suitable for landing a fish over 2 or 4lbs. weight.

I am sorry I cannot bring comfort and solace to the soul of our friend, Judge Greene, in indorsing his views that salmon do feed in fresh waters; and yet I do not assert that they do not. I merely give my own personal experience and leave the question for wiser men to settle; it is about as much of a muddle as that of whether rattlers do or do not spit.

Hereafter, inasmuch as we are all interested in getting at the facts of the case, I shall make a point to hold a post-mortem on every salmon I land in my subsequent fishings, and if I find any ground to do so I will cheerfully go over to the Judge's side. Let us hear his views and reasons for his belief. The Judge has the floor.

PODGERS.

### A Tale of a Tailboard.

MANCHESTER, N. H.—The approach of the opening of the hunting season calls to mind my last experience in that line. It was last March, a snowy day, when Old Probabilities said the morrow would be clearing, that Warren F. Wheeler, Henry Parsons and I got together and arranged a rabbit hunt for the following day. Warren was to furnish dogs, of which he had two of the best; Henry was to be guide, being acquainted with the locality where "they haven't been hunted and are thick," and I was to put up transportation. The morning dawned bright, and the recent storm had given us six inches of snow; in fact, it was an ideal morning for our sport. An early hour found me with a team and two-seated pung sleigh at the engine house, from which Warren and Henry "run with the machine," and with a complete outfit for the purpose of our hunt we were soon started on our long drive in high spirits. Everything necessary was in our favor—dogs, snow for excellent running, sleighing, team, all were to our liking. Not a stop or scarcely a thought of else but rabbits occurred until we pulled up at the house of Henry's friend, in Candia, where the team was to be left while we slaughtered our game.

Warren led the horse to the stable, Henry showed him the way, and I was supposed to carry along the halter which I was sure I had taken from the livery stable, but could not then find. "Never mind," said Henry, "we will borrow from our friends." Our horse having been

comfortably quartered, shooting jackets and guns were our next needed articles, and they proved to be our weak point. We ransacked the pung in vain, and were at our wits' end to account for their absence, when my eye fell on the tailboard of the pung swinging loose beneath the end, when we were all immediately dumbfounded, too much disappointed to say anything, and we all saw there was but one thing to do—not shoot rabbits. All we possessed of the full equipment was one lunch basket and the dogs. Four hundred dollars worth of the balance had been strewn between us and home.

With a solemn funeral mien we began retracing our route so recently and so light-heartedly covered, and luckily when within one mile of home, then 11 o'clock, discovered the whereabouts of the last missing gun, but have never seen the other things. Suffice it to say, we did not find another day during the remainder of the season for rabbit hunting; if we had, the tailboard of the sleigh would have been firmly in its proper place when we arrived on the grounds. As the joke was solidly on us, we have never refused to "settle" when the matter has been mentioned by our knowing friends.

Sportsmen whereabouts seem to be keeping very quiet, doing but little fishing—simply waiting for the open season for game, Sept. 1. PAYSON.

### SALMON AND PORK BAIT.

Editor Forest and Stream:

Like most sportsmen who read the papers I was wrought up to a high pitch of excitement by frequent reports of the large number of salmon being "caught on the fly" during June and July in the Hudson River at Mechanicville. The first article of the kind which came to my notice was printed in the *Times*, and the "sporting" editor of that paper told of how a local fisherman had taken two "speckled beauties" of large size on a silver-doctor. Then followed at regular intervals article after article in other metropolitan dailies, until I finally got into such a state that my slumbers were nightly disturbed by visions of speckled salmon bobbing up all around me, and while standing on their tails begging me to come up to Mechanicville and bring some silver-doctors, Jock-Scotts and such other dainties as salmon are popularly supposed to hanker after.

Along about July 20 I could stand the strain no longer so borrowing a brand new 15ft. salmon rod from my friend A. D. Higham, Esq., than whom no finer sportsman lives, and providing myself with a supply of imported flies and leaders, I took the Exposition Flyer at 1 o'clock one day, doing the 150 miles to Albany in exactly 165 minutes. At Albany I changed cars for Mechanicville, arriving at my destination in time for late supper. I was met at the station by a fine turnout which Captain Campbell, of the Hotel Tallmadge, had sent for me. Mr. Clute, the assistant postmaster, had kindly made all arrangements for me, including securing a guide and boat, so that I had nothing to do after supper but listen to the wonderful stories of the large salmon that were taken the week previous. My spirits began to fall when I was informed that no salmon had been taken for four or five days; and they kept going down, when by degrees the facts came out that while flies had been used, so also had pork!

I went early to bed and had visions of salmon as large as tarpon sitting at the table with napkins tucked under their chins, dining on pork. Before daybreak my guide called for me, and by the time it was light I had begun whipping the pool with a silver-doctor; and although I fished every square rod of water from fifty rods below the State dam to two miles below, never a rise did I get. I tried it a few hours next day, but with no better success.

From all the information I could gather, twenty-eight of the twenty-nine salmon killed at Mechanicville this season were taken on hooks baited with small pieces of salt pork. The only exception was one taken by a Dr. Bloss, of Troy. The Doctor claims to have taken his salmon in sportsmanlike manner, with a fly and without the superior inducement of pork. The local "Kanuck" (he claims to be a Frenchman from the banks of the Seine between St. Cloud and Sevre, in which stream he used, when a boy, to see Knights of the Legion d'Honneur catch salmon), says that Dr. Bloss admitted to him that he had also used pork. The weight of evidence, as between the Doctor and the Kanuck, is decidedly on the side of the former; but circumstantial evidence is as strongly against him, as he had been known to use pork as bait on a previous occasion, and it is even said that he had a supply of pork with him when he made the capture.

The subjoined article is from the *Albany Telegram*. The "fish editor" of that paper, it will be noted, calls them "golden salmon," getting his idea as to their outward appearance presumably from a can of Columbia River salmon. I heard nothing whatever about gang hooks, and the *Telegram* is evidently mistaken in saying that such tackle had been used. The bottom of the river, where the salmon were taken, is covered with a dense growth of eel grass, and the use of gang hooks would have been an impossibility. The *Telegram* is also mistaken in asserting that the fish were taken in the deepest water. On the contrary, the water was nowhere deeper than ten or twelve feet at the point where the salmon were taken. Just there the river is as sluggish as a mill pond, and the water is dull and lifeless, as unlike a typical home of salmon as one could imagine. The small volume of water injected into the warm water of the river by the small spring which empties into it there has no appreciable effect upon the color, but doubtless does lower the temperature, or the fish would not congregate at that particular point.

For fear that some one will accuse me of inconsistency I may as well admit that I also put a piece of pork on my hook, and sinking it to the bottom tried my luck with the other pot-hunters, but only once, and then for a few minutes only. I couldn't conscientiously continue such a reprehensible practice, particularly as the salmon were no hungry for pork and flies just then. Hear what the *Albany Telegram* has to say. NOAH PALMER.

From the Albany Telegram.

### On Salmon Sand-Bagging.

The salmon have been seen in a pool in the river at Mechanicville just back of Captain Campbell's Hotel Tallmadge. All along that side of the river are numerous springs from which flows cold and sparkling water. Near the hotel the overflow from various springs have been brought together and piped to the river. The spring water flows through a large pipe and enters the Hudson in a solid stream as bright as crystal and as cool as can be. A few feet from the shore the

rushing spring water forms a small pool, and on the bottom the golden salmon congregate to spawn. The coolest water is nearest the bottom and here the noble fish refresh themselves. It is at this spot that 36 of the 29 salmon were caught, not by casting the fly, but by trapping the salmon or striking them foul by the use of snatch hooks or a rake hook combination. The Mechanicville fishermen have caught the salmon in a crooked way in this pool, and in a way that would be ludicrous if it was not so foul and infamous. They take an ordinary rod and line and equip the line with an array of hooks, one hook being placed above another. Sometimes several groups of hooks are fastened on the line. Each group of hooks is called a gang, and a gang embraces from 6 to 18 hooks, all in a group. Several of these gangs are attached to a single line. The tops of the hooks are covered with a piece of fat pork. Then the line thus equipped is thrown into the pool and it sinks to the bottom. Into this pool the fish come to spawn, or to refresh themselves, and they move close to the bottom, where they throw their spawn or where they get the coolest spring water. The big salmon, when moving about close to the bottom, catches the golden salmon in the belly. One hook or a dozen hooks may thus strike the salmon foul in the belly, but the noble fish at once makes a great struggle for life. The salmon sand-baggers have often been an hour landing fish thus foully impaled.

This method of fishing has long been a source of law, we are greatly in error. At all events it is an infamous way. Some noted sportsmen who love fishing visited the Mechanicville pools last week, and when they learned of the crooked fishing done there they were simply dumb-founded and left the river in disgust. We found dead large salmon floating in the river, having been fatally hooked by the rake lines, but not firmly enough to land the salmon. The fish escaped only to die. So far as we can ascertain but three salmon have been taken in this way since the first of the season, and they were landed by W. E. Hagen and Dr. Bloss, of Troy. About all the others taken were murdered by the sand-baggers. On some of the hooks used by these malefactors flies are used, but one of the sand-baggers on Wednesday last bragged that the flies were a fake, that the pork as bait was a humbug, but the real scheme was to hook the salmon foul on the belly as they moved about in the pool. The salmon hooked by the sand-baggers had no chance of escape, and the sportsman who sportsman is willing to give a fish, be it the lordly salmon or the insignificant "pumpkin seed." The salmon murderers do not fish from a boat as a rule. They stand or lay beside or over the bed of the spring that flows into the river, and after casting their line to the bottom of the pool hold their "pole" until a salmon runs on to the hook. Then the sand-bagger rakes the salmon's belly with his aggregation of hooks and if the strike is effective he jumps into the water, rows out into the river and in open water the salmon struggles for his life, with every chance closed against the salmon.

A couple of days ago a Telegram man went to Mechanicville to see the salmon sandbaggers at work. The sight he witnessed at the pool just in the rear of the Hotel Tallmadge was comical and ludicrous, at least the sight would have been of that kind if it was not so awfully brutal. About forty alleged fishermen congregated there, every one of them being in a space about fifteen feet long and about six feet wide, waiting for salmon to enter the pool; but the salmon came not. The tactics were of a curious and varied description. There were all sorts of arrangements baited with pork, and frequently flies were noticed constructed of hen's feathers with a body of tin foil taken from a package of chewing tobacco. Wire lines were also in use, being stronger, and some poles were equipped with lines that could almost be used for bed cord or a clothes line. There were also a number of men, and a motley crowd of people, sitting in the hot sun waiting for the fish which never came. Not a strike did the sandbaggers get. Even the salmon must have, by intuition, become acquainted with the brutal methods in vogue, because they deserted the pool. In an entire day only one salmon was seen to jump for air. Ten days ago the price of fat pork was way up in Mechanicville, but now it is very cheap. Flies, however, which are the same as the flies for, came high, costing about four times as much as they do in Albany.

## BOSTON AND MAINE.

BOSTON, Aug. 19.—Fish Commissioner Henry O. Stanley, of Maine, was in Boston last week, at the St. Margret Hospital, where he has had a morbid growth successfully removed from his lip. He is much pleased with the success of the operation. Concerning the game in Maine, Mr. Stanley says that the deer have increased wonderfully, even during the past year. At his own town, Dixfield, scarcely a day passes but what somebody sees a deer. The same good report comes from all the towns where dogging and illegal hunting is not practiced. There is less hunting this year out of season than has been the case for several seasons. The more the people become informed and the more they look rationally into the work of the Commission, the more willing and anxious they are that the game laws shall be respected. The Commission has brought a number of visitors from out of the State to justice for killing game in May and June. These have been glad to walk up quietly and pay their fines, and request the wardens to "say nothing."

D. H. Blanchard returned from his salmon river last week. Since Mr. Richard O. Harding came out with his 29-pound salmon, an account of which has already been published in the FOREST AND STREAM, Mr. Blanchard has taken 26 salmon, the largest weighing 27lbs. This is a very good score, indeed, and Mr. Blanchard's friends are congratulating him. This catch, with the five that were taken during Mr. Harding's visit, makes 31 salmon for Mr. Blanchard's river, the northwest branch of the St. Marguerite, this year.

Mr. Henry C. Litchfield, with Dame, Stoddard & Kendall, a gentleman very well known in the fishing tackle trade, went Saturday on his vacation. He goes to an island in Lake Champlain, where he will doubtless do some fishing and a good deal of resting.

Mr. Herman T. Stranger, a boatman at Wareham, has had some good luck with squiteague this season. He took the other day, off Four Buoys, eight big fish.

Dr. Bradbury has returned to Boston after an absence of five weeks in the Maine woods. He spent a good part of the time in the neighborhood of Eustis and the lakes and ponds further back. Dr. E. B. Kellogg, of Boston, who intends to take a fishing trip every year, has just returned from a trip to the World's Columbian Exposition, where he has spent his vacation with his family. Mr. George T. Freeman has also given up his annual fishing trip to Richardson Lake this season, for a trip with his family to the World's Fair. He returned last week, much pleased with what he had seen, but after all, the old longing for a trip to the woods is there. Mr. G. N. Smally, of Boston, has recently made a second trip to the Rangeleys with a party of friends. He made his usual spring trip with his friend Bassett, of Appleton & Bassett, and had the excellent sport already reported in the FOREST AND STREAM. On his second trip he found only moderately fair fly-fishing.

The pet deer belonging to Mrs. President Cleveland got away on Sunday a week ago. It was at their beautiful home at Buzzard's Bay. It ran down the road at first and then took to the woods, with about all the dogs in town after it. Though fairly tame, it was so frightened by the dogs that it was given up for lost in the woods of Bourne. But later a dispatch to the daily papers says that it has been secured. This is the deer that was given to Mrs. Cleveland as a little fawn three or four years ago, I believe.

SPECIAL.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

## CANADIAN ANGLING NOTES.

THOSE salmon fishermen who remained on their streams until the end of the season are now returning. Mr. David H. Blanchard, of Boston, passed through here last week on his way home from fishing his pools on the northeast branch of the Marguerite, well satisfied with his season's sport. He took twenty-six salmon in twenty-eight days, or an average of rather better than a salmon a day for every day he fished.

Dr. H. F. Hamilton and Mr. J. S. Mason, of Boston, returned some days ago from Lake St. John, having made a magnificent round tour in the country north of the lake. They descended the Grand Discharge to the River des Aulnaies, which enters into the Saguenay over very high falls, some twelve miles above St. Anne, opposite Chicoutimi. This river they ascended as far as Lac des Isles, driving the first fifteen miles on buckboard in consequence of the wild character of the falls and rapids, of which the stream is here composed. Lac des Isles they found just swarming with small trout, and then passed by various short portages into and through Lake Ray and Bear Lake, and by way of the River Blanche into Tschotaguma. In Lac Brochet, which they also visited, they took red trout up to 3½ lbs. in weight. From Tschotaguma they returned to Lake St. John by way of the Peribonca River.

A party of six Buffalo sportsmen passed through Quebec on Thursday last on their way to Lake St. John, whence they take six canoes, with twelve guides, tents, provisions, etc., for a three weeks' camping tour. It was their intention to ascend the Peribonca to Lake Tschotaguma, and perhaps somewhat higher still in search of bears and ouananiche, and they will probably also visit the fifth falls of the Mistassini. The party consists of Messrs. C. M. Daniels, M.D., M. Benson, C. A. Brunn, superintendent of the Erie Railway; C. T. Sloan, N. C. Recktenwalt, Prof. A. Miller.

Chief Justice C. W. Andrews, of the Court of Appeals of New York State, has recently returned home to Syracuse, charmed with the sport enjoyed in his ascent of the Mistassini with his wife and son. At the fifth falls the Judge took forty ouananiche in one day. At the same locality Mr. R. R. McCormick, stock broker, of Lake Worth, Florida, and his son Wm. F. McCormick had also splendid sport last week with the ouananiche, and have made arrangements to return next year.

The Messrs. Bruce, of Scotland and Philadelphia, returned last week from a magnificent fishing trip of some ten days' duration. From Roberval they ascended the Ashuapmouchouan River to Lake Jimme, and thence portaged through intervening country into a chain of small lakes that led to the Mistassini River. They had good fishing at the Fifth Falls, but experienced the best sport of the trip at Lake Jimme, where one of the party, among other fish, took two 6-pound ouananiche in one morning. They also took several good-sized doré.

There has been good fly-fishing on the larger streams up the Lake St. John country within the last few days, notably on the Triton tract and the Ouatahouan, some of the best waters on the latter being now controlled by a Quebec club. Last week a speckled trout weighing 5½ lbs. when it reached the city was taken there. Among those who have enjoyed splendid sport on this river within the last few days are A. J. Turcotte, M.P., C. Panet-Angers, L. Stafford and Martel.

By next week the fall fishing for trout in the larger lakes ought to be almost at its best. The water is already growing cooler in consequence of the decreasing temperature and increasing length of the nights. The guardians of the various American fishing clubs in the territory north of Quebec are preparing for the visits of several of their members.

In the St. Lawrence, below Quebec, the fishing for striped bass, locally called "bar," has commenced, and good catches of fish 12 to 20 in. long are reported from the vicinity of Madam Island.

E. T. D. CHAMBERS.

QUEBEC, Aug. 15.

## CHICAGO FLY-CASTING CLUB.

THE first annual scientific angling tournament for the World's championship, open to all, will be held at the World's Columbian Exposition, Chicago, Sept. 21.

The tournament will be held at the Walton House, on the North Lagoon, commencing at 9:30 A. M. Thursday, and continuing until all events are finished.

Entries to all events close Sept. 16. Three gold medals, emblematic of the World's championship, will be awarded in the expert class, and the same in the amateur class, and one gold and one silver medal in the light rod competition. The medals are made from original designs by Mr. Geo. W. Strell, president of the club, and represent a trout and creel for the fly-casting, and a bass and creel for the bait-casting events, in gold, connected with silver straps and suitably inscribed.

In addition to the championship medals in the amateur and light rod classes, merchandise prizes will be awarded. Others than those mentioned here will be announced publicly in the programme on the day of the contests.

Three judges shall be appointed and their decision shall be final. The captain, who will be the executive field officer of the day, shall start and close all events. He shall signal the judges with a flag, and call time to the contestants.

### EXPERT CLASS.

Conditions.—Open to all. All casting shall be single-handed; rods over 11ft. long barred, and rods shall be unconfined in casting. Three flies, of a size not larger than No. 5, allowed. Leaders shall be single gut and not longer than 10 or less than 6 ft. Knotting of lines, or any device to lend weight to the cast, prohibited.

Event No. 1.—Long-Distance Fly-Casting.—Entrance fee \$10. Prize, gold medal emblematic of the World's Columbian Exposition Expert Long-Distance Fly-Casting Championship.

Rule to Govern Contest.—Five minutes shall be allowed each contestant. No cast shall count when the stretchier fly is missing. No time allowance shall be granted to replace a fly; it must be done within the five minutes. The length of the cast shall be measured from the score line on the pier to the spot reached by the stretchier fly. Contestants whose scores are tied shall compete three minutes longer.

Event No. 2.—Fly-Casting for Distance and Accuracy Combined.—Entrance fee \$10. Prize, gold medal emblematic of the World's Columbian Exposition Expert Championship for Distance and Accuracy Fly-Casting Combined.

Rule to Govern Contest.—Three buoys shall be placed as follows: The first, 75ft. from the score line, but 5ft. to the left of a direct line; the second, 80ft. distant, but 5ft. to the right of a direct line; the third, 85ft. distant, but in a direct line from the pier stake. Any part of the leader falling across the object buoy shall be counted perfect, viz., 100 per cent.; one point shall be deducted for every foot distant the leader or nearest fly shall be from the buoy. Five casts shall be made at each buoy; thirty seconds shall be allowed at the start to extend line, and cast one shall be called on the back cast at the expiration of

the thirty seconds, or sooner if the contestant calls time. The distance of the leader from the buoys at each cast shall be added together and divided by three (3); the total shall be deducted from 100, which shall be the percentage. The one having the highest percentage shall be declared the winner. Ties shall be cast off at the 85ft. buoy, five casts, thirty seconds to extend line, time called on back cast.

Event No. 3.—Black Bass Bait-Casting for Distance and Accuracy Combined.—Entrance fee \$10; prize, gold medal emblematic of the World's Columbian Exposition's Expert Championship for Black Bass Bait-Casting for Distance and Accuracy Combined.

Rule to Govern Contest.—The casting shall be done on land, in a straight court 30ft. wide, a tape line running the full length equidistant between the boundaries. All casts shall be made single-handed, and the weight cast shall weigh ½ oz.; weights shall be furnished by the tournament committee. Each contestant shall make five casts, three trial casts being first allowed; if the contestant desires he may call time on any one of the three casts, after which the four following casts shall be counted. The average of the five casts shall constitute the record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then 138 shall be credited; if 15ft. away from the 140ft. mark, then 136 shall be credited, and so on, the foot to be counted nearest which the weight lies; no fractions allowed. The record, to be determined as follows: If the weight falls within 1ft. of either side of the tape line full measure shall be counted; for every foot over 1ft. away from the tape line one point shall be deducted from the length of distance cast; thus, if the weight lies 3ft. away from the tape line at the 140ft. mark, then

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

CLAYTON, N. Y., Aug. 16.—On the 11th inst., a party from the Hubbard House, Clayton, viz., Messrs. T. G. Jordan, J. W. Gibson, S. W. Pickering, G. A. Milne, J. R. Garside, S. G. Hopkins and Dr. J. L. Reese, landed 250 black bass weighing over 1lb. each. This party who fish daily, make it a rule to throw back every bass they catch less than a pound in weight. J. G. FRASER.

HUGUENOT, Staten Island, Aug. 15.—Mr. Andrew Beasley and Gus Wichman caught 17 weakfish which weighed 45 lbs.; caught on the last two hours of the flood tide. GUS WICHMAN.

THREE LAKES, Wis., Aug. 16.—Mr. J. R. Albrint and Chas. French of Three Lakes, caught 436 black bass at Butternut Lake. Largest 5 lbs., total 870 lbs.; 23 lunge have been caught at my place during the week, largest 38 lbs. F. R. FRENCH.

STATEN ISLAND.—Tottenville, Aug. 18.—No fish during the last week. A few were taken on ebb tide yesterday. JOHN T. HAWKINS.

### Cayuga Lake.

CORTLAND, N. Y.—*Editor Forest and Stream:* I was about Cayuga Lake a good share of last week and while at the present time angling isn't a rose-colored success on that beautiful sheet of limpid blue, the season up to a few weeks ago has afforded better fishing than for several years past. In the vicinity of Union Springs a great many fine pickerel have been taken. The same statement would apply also to Kidder's Ferry and Sheldrake, with the exception that a good many very gamy, black bass have been caught in the neighborhood of the two latter named resorts. At Lagoda Park, on the east shore, bass fishermen have had great sport. The fish have not averaged large, but they have been great fighters. North of the Park, at the mouth of Salmon Creek, the visiting angler will find some nice bass. On the west shore from Frontenac Beach to Glenwood and for a couple of miles beyond, bass may be taken. A number of carp, some of them 7 and 8-pounders, were caught in the overflow waters on the Tompkins county fair grounds, at Ithaca, early the present season. Local fishermen say it's a great season. M. C. H.

### A Bass for a Prize.

BRIDGEPORT, Ill., Aug. 17.—I send you a note from the Vincennes Commercial. It is one that will set the anglers to thinking:

"Treasurer Moorhouse, of White county, while bass fishing at Oak Dale, landed a black bass weighing 7½ lbs. It took two hours and twenty-seven minutes to tire out the fish, and Moorhouse himself was exhausted when the work was done. The bass has been sent to the Cincinnati Fishing Club, which has a standing reward of \$100 for a black bass weighing 6 lbs. or more." W. McB.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y. Entries close Aug. 31.  
Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park, Cranston, R. I. D. C. Collins, Sec'y. Entries close Sept. 4.  
Sept. 25-30.—Kansas City, Mo.  
Sept. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec.  
Nov. 21 to 24.—New Jersey K. L. at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. R. J. Gallagher, Sec'y, Winnipeg.  
Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### THE TRAINER'S MASTERPIECE;

OR,

### The Wonderful High-Class Dog.

(With apologies to Dr. Oliver Wendell Holmes.)

#### A PRACTICAL STORY.

HAVE you heard of the high-class dog, I say,  
That was trained in such a practical way?  
He won every trial till he grew gray  
And kept on winning, but "alack-a-day,"  
I'll describe his performance in my poor way—  
Turning poor Avent with envy green  
Rose and Barker were sight unseen  
Have you ever heard the story, hey?

Eighteen hundred and umpsty-eight  
Johannes Davidson was on the slate  
(Gallus old boy from Michigan State)  
That was the year when Elizabethtown  
Saw birds as plenty as thistle down,  
And Avent's dogs were done so brown  
By the boys from a Virginia town,  
The great Futurity entries closed  
As this high-class dog was "finished" by Moses.

In training trial dogs, I tell you what,  
There is always somewhere a weakest spot—  
In range, or pace, or nose, or style,  
Bird sense, obedience (well, I should smile),  
In pointing or backing—willy nil,  
Some fault is discovered by John or Bill  
In head or in body, in legs or in tail.  
The handlers chaff and reporters rail,  
Your dog gets beat when he should not fail.

But Moses swore (as trainers must,  
With a "Blame your eyes, I'll make you dust.")  
He would train one dog to win every stake,  
From Derby to Champion, and all they'd make;  
If he didn't do it, "by gum," he'd break.  
"Cause," said Moses, "'tis mighty plain  
That the weakest point is whar I must train;  
An' the way to work him so he will gain  
In this particular, is only jest  
Never to give his weak p'int a rest."

So Moses looked the authorities up  
As to where he could find the most likely pup,  
With natural qualities for winning the cup;  
That wouldn't be gun-shy or blink or bolt,  
Range like a coyote and run like a colt,  
Beautiful action and elegant style,  
Nor run to a standstill in deuce of a while;  
Strong in the pasterns and strong in the loin,  
Shoulders well sloped till the blades nearly join.

Hocks well let down and stifles well bent,  
Wide, roomy chest and short ribs to rent,  
Elbows low and feet closely knit,  
Head carried high and neck that looks fit,  
Tail never carried above line of back,  
(To a dog with his tail up Moses sure'd give the sack)  
Courage and character without a flaw,  
Fine disposition as you ever saw;  
That was the kind of a pup Moses found.  
"Tell ye," said Moses, "he ain't no hound,  
Had him a week and put him through,  
Well," thought Moses, "this pup will do."

Do! I should think so. I tell you what,  
He was the "Joe" of the whole blessed lot,  
Won his first Derby, and got there to stay,  
Won the All-Age Stake the very next day.  
Ran in each trial held during that fall,  
Entered each stake and won them all.

Eighteen hundred and umpsty-nine,  
Moses and Clinker still in the line.  
Eighteen hundred and umpsty came,  
Got there, the winners, just the same.  
Eighteen hundred and umpsty-two,  
Mose and old Clinker ran her through.  
Umpsty-three, four, five and six,  
Moses and Clinker still taking the tricks.  
Eighteen hundred and umpsty-seven,  
Avent said "Clinker should be in heaven."

Very few dogs that we hold dear  
Win at the trials in their tenth year  
Without folks thinking it's rather queer.  
"Strange fatality," it has been said,  
"That most great winners so soon go dead—  
Their records forgotten, life's short span sped."

First of December. Champion day,  
"There are traces of age in Clinker," they say,  
"The old dog soon will pass away."  
Moses, too, is turning gray,  
But Mose and Clinker are just as per  
As when in the Derby they made their spurt  
In eighteen hundred and umpsty-eight,  
When Clinker's fame first grew so great.  
He still is perfect in every part;  
He must be, surely, for Moses's art  
In training the youngster had mad' him true  
In running gear and bird sense, too;  
So never a fault to find had you.

His "back" was just as staunch as his "point,"  
His body was strong in every joint,  
His range and speed were equally good,  
He'd find more birds than other dogs could.  
He'd find the coveys, and point 'em, too,  
To his scattered birds he would stick like glue—  
With never an error, never a flush.  
Over the crowd fell a solemn hush,  
As champion Clinker led the way  
On this, his hundredth, field trial day.

First of December in umpsty-seven,  
This time the starters number eleven.  
Now, small pumpkins, get out of the way,  
Here comes Clinker to win the day,  
Braced with a roached-back, cow-hocked jay,  
"Let her rip," said Moses. Off went they.

To a standstill Clinker had run his foes,  
He won by superior pace and nose;  
And to the third series by rule he goes.  
All at once the dog stands still,  
Close by the snake fence up on the hill;  
First a shiver and then a thrill  
Runs over the crowd and all is still,  
For poor old Clinker, alack-a-day!  
Had sprouted wings and flown away  
To a field trial higher than this, they say,  
Where competition would be more gay.

What do you think that Clinker found  
When he got there and looked around?  
Field trial handlers in spotless white  
Hunting the stars through clouds at night,  
Field trial dogs with blue belton wings,  
Judges and handlers living like kings.

End of the wonderful high-class dog,  
If nobody wants one, no one's a hog.

BROKEN-BOW, Nebraska.

HUB.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

### The Kansas City Bench Show.

CHICAGO, Aug. 19.—Mr. James H. Whitfield, of the Kansas City Star, made a pleasant call on the Western office of FOREST AND STREAM this week. He informed us that there would be a bench show at Kansas City, from Sept. 25 to 30, in connection with the fair, and that about \$2,000 in prizes would be offered for competition. Application for membership has been made to the A. K. C. The matter of judges is now receiving the club's attention.

### In Memoriam.

For some weeks FOREST AND STREAM has forecast the fizzle of Mr. Buchanan's show.

The World's Fair dog (?) show, after a most fitful lingering has breathed its last. Too many *accoucheurs*, who were each intent on advancing their selfish interests at the expense of the national bantling, hastened its demise. There was too much willingness on the part of the *accoucheurs* for the public to furnish the expense, while they personally reaped directly and indirectly all the material benefits possible.

FOREST AND STREAM, from the inception of the World's Fair show, frankly and fully pointed out errors of management and errors of policy. It in no manner sought to make the World's Fair show an advertising billboard, as did some others. It asked for no discrimination in its favor in a journalistic way, for the best of all reasons, namely, it did not need it, nor does it ask for any unfair advantages.

The mismanagement from the start was against the success of the show, but the "fake list" of judges published by a contemporary was what aroused the most widespread and indignant resentment among the dog fanciers. That a dog show of international scope should be confined to the narrow channel of favoring the private business interests of one journal was bad enough, but when that paper in its nervous haste to publish news in advance of its facts, published a fake list, its "news" was met by an indignant and vigorous protest, such as was never before known in the kennel world. It got Mr. Buchanan into tangles, from which he never could extricate himself.

Nor have the managers of the dog show been quite candid in the matter. In June there were not entries enough to hold a respectable dog show, hence, perforce, it was necessary to make a postponement. In my opinion, there was a very wide lack of interest since the "fake list" event, and a most serious though silent resentment engendered.

The A. K. C. fee for a certificate of registration was most unpopular. The question in this connection has been diverted in a manner from its real purport. The A. K. C. says it was but meeting the requirements of the World's Fair show in furnishing the certificate of registration. The World's Fair show said it had nothing to do with the price charged by the A. K. C. The fee of fifty cents for a certificate of registration is the real grind. That is the point. There was nothing to justify such exaction. The mere filling out a blank form with the statement that such and such a dog is registered in the stud book is not worth fifty cents. It was particularly objectionable when said dog had already been registered at a fee of one dollar. Ten cents for a certificate would have covered all clerical effort and the expense of blanks. A few years ago fifty cents paid the fee for registration, postage, clerk hire, composition, presswork and binding.

Is there any cause for wonderment that the World's Fair dog show had so few entries?

The management was ill advised by its advisers, and was awkward in itself. It is useless to go into minor details now, such as appointing judges without consulting them, etc.

The failure of the show, however, ought to carry some wholesome lessons with it. The sycophant and the parasite are not the wisest advisers, nor are they the most trustworthy in their friendships. It is well sometimes to heed the wishes of the public, particularly in matters in which it is concerned. The day has gone by when any one man holds the world or part of it in his hand. The day has gone by when a man can take what belongs to the public and hold it as his private possession. In respect to news of the World's Fair show, news which should have been given alike to every journal throughout the land, it was demonstrated that the press of the land is too powerful to permit selfish personal interest to corner it. It demonstrated, too, that there are forces in action in journalism which cannot be ignored. The modern demand, judging from the signs of the times, is for men who are equal to their pretensions, and can get what they want in fair, open competition. The man who by energy and alertness can furnish news to the public at the earliest possible moment is justly deserving of praise. The man who furnishes the public news by prostituting his own or some one's else official position, is not deserving of any praise whatever. The time is steadily coming when the public will demand fairness in its news matters as well as in all other matters. This is not advanced in a pleading spirit. FOREST AND STREAM is perfectly able to get what news it deems worthy of effort. But on the basis of fair play to the public, one can justly question the fairness of running a public affair to subserve a private interest.

It is a source of much regret that the World's Fair show was killed. Under proper conditions it could have accomplished immeasurable good for the canine interests of America. As for its international character, that was largely fictitious from the start, except in the narrowest and most limited sense. But with the large variety of breeds of real merit which are owned in this country and could be entered in the competition, and with the throngs of visitors in attendance at the World's Fair, whose interest would be engaged more or less permanently, the advancement of canine interest would have been great. But it was meddled to death by selfish interests. Mr. Buchanan in a contemporary says: "I am mortified that all my work goes for naught, and that yours is also in the soup with mine; but such is fame and fickle fortune."

It is consoling, that even at this late day, the two gentlemen have a true perception of "where they are at." They have unconsciously been in the "soup" some weeks.

In the circular Mr. Buchanan issues announcing the abandonment of the show the matter could have been more concisely and frankly stated by saying that mismanagement had killed the interest in the show, and that one of sufficient importance therefore could not be held for lack of entries and judges.

### Field Trial Matters.

Mr. Thomas Johnson, Winnipeg, Man., under date of Aug. 14, writes me, in regard to chicken prospects, as follows: "I went out on Saturday evening with a few dogs and found three beavies within two miles of the city. This means lots of birds for the trials. I leave for Edmonton to-day, a little over a thousand miles northwest of here."

"On my return, in a week's time, I will take a holiday and do some dog breaking by way of exercise. I saw three splendid buffalo heads a few days ago from Peace River district, so that all the buffaloes are not killed yet. Ducks are fairly plentiful this year, and snipe will be thick if Mr. Hough will put up his gun in the spring."

In the St. Landry Clarion, of Aug. 19, there is mention of the presence of Judge Perrault, Messrs. Laurent Dupré, Arthur Déjean, J. J. Perrodon, Allen Delarue, of Opelousas, and Dr. J. H. Parker, of Ville Platte, La., at the Columbian Exposition. No land can boast truly of a better game section or finer sportsmen than those of Louisiana.

Field trial men have suffered a material loss in the action

of the American Field Trial Club in declaring its trials off for this year, a loss which is due to the lack of support of the aforesaid. It cannot justly be said that any one is to blame in the matter, but it can justly be said that field trial men are neglecting their own interests when they neglect such opportunities as those offered by the American Field Trials Club. The membership is made up of enthusiastic sportsmen. There was no desire to make the trials a money-making affair. A keen love of sport was the impelling motive. Their earnest efforts should have met better appreciation. It is not right that, in addition to their personal efforts, they should be called on to pay a club deficit out of their pockets. Let us earnestly hope that they have but suspended their interest for this year only. It is by such organizations and such membership that field trial interests have true and good advancement.

The following interesting news item was received from Mr. Thos. Johnson, Winnipeg, Man. He says: "We have always had to suffer delay in starting trials on Monday. We shall have the draw on Monday evening, and the first brace must go down at 7 A. M., sharp. There is quite a lot of dogs in training here. Tom Sheldon is at La Salle with a dozen including King of Manitoba, bought by Manitoba's dry goods king, R. J. Whittaker Spearly, for a nomination in these trials. Tom Hallam is at Dominion City with a string of over a dozen owned by T. G. Davey; J. Spracklin is also at Dominion City with eight owned by W. B. Wells and four by Eddy D. Armstrong, of Detroit, which includes the International Derby winner, J. M. Avent is at Manitow with about sixteen. Sefton Hallam is at Union Point with a Heywood-Lonsdale's dogs which arrived here last week from England; L. W. Smith, of Morrison, Ill., with eight, is located about ten miles from Winnipeg. W. Pickering is at his old stamping grounds, near La Salle, with quite a number. Besides the above professional trainers there must be at least a hundred dogs undergoing preparation by amateurs. Capt. McMurdo is expected here in a day or two and will locate at Union Point. Mr. Tway and the three Richards brothers are also expected, so with such an array it would be hard to pick the winner."

909 SECURITY BUILDING, Chicago.

### The Fox-Terrier.

BY THE TYKE.

FEW breeds of dogs have grown so rapidly in public estimation as fox-terriers. Twenty-five years since a dog of this breed was only known as an adjunct to a pack of hounds, and at the present time there is no more fashionable breed. It is a most difficult thing to trace the precise origin of the fox-terrier, but there can be very little doubt that they sprang originally from the old English terrier, in which the black and tan predominated. Many people will say that the modern fox-terrier is a manufactured article; now, to a certain extent this is true, and that many of the show, aye, and even of the big prize winners, have a stain in their pedigree, is a fact greatly to be regretted. However, these happily are exceptions which prove the rule, and in fox-terriers, as in every other animal, man not excepted, the bar sinister is always observable and the old adage that "breeding will tell" is verified again and again. Many examples of this could be proved, but if I mention Trap, Buffer and Rattler I think that will suffice.

Trap's pedigree was shrouded in mystery, but the belief was that he was descended from a black and tan, and most assuredly many of his puppies bore this theory out, as his puppies were all colors. Buffer's stock were characterized by the beagle ear, which descended to the third and fourth generation, and as for Rattler, my candid opinion is that no one (not even Bill Hulse or Jack Terry, to say nothing of the astute "Garge" of Sheffield) actually knew how he was bred, no dog had a better chance than he had, but he was a total failure, Mr. J. S. Shepherd's Young Rattler, out of old Lill, being the best he ever got.

Almost the first mention of the terrier is in Dr. Keys' book, in which he describes "Terrarii as small dogs used for chasing the leper kind of vermin, and pursuing them underground." Mr. H. G. Gibson (one of the best judges of fox-terriers that ever walked) has often told the writer that he remembered quite as good-looking fox-terriers thirty years ago as exist now, and I well remember a couple of bitches the late Capt. Percy Williams gave my father twenty-five years ago, that could have held their own with the best at the present day. Fury and Wasp, as these two were named, were white with black ticks on their ears, which were perfect, beautiful legs and feet, and really good coats, and as game as pebbles, as they would sooner fight than eat any day.

The first era in the history of show fox-terriers was the old Jock era, in which may be included Old Tartar, Trap, Grove Nettle, Hornet, Grove Trimmer, Gadfly, Ruby, etc. Much might be said for and against many of those mentioned, and although they might not be up to the present show standard, they were, with few exceptions, thorough workmen. Now, it is a well-known fact that old Jock was not a really game dog, and it was averred that when owned and exhibited by the Hon. Thomas Fitzwilliam he used to be allowed to have a rough up with Old Tartar, you could hardly say a fight,

"If that's a fight indeed,  
Where you fight on and I stand still and bleed,"

to give the appearance of having been at work; this, of course, may be taken with a large pinch of salt, though my authority was very good. Tartar was a white dog, with a black spot or two on his head, and was bred by Mr. Donville Poole, a well-known hunting man, in Cheshire, and a rare good man with hounds, he was one of the sort immortalized in Edgerton Warburton's hunting songs, as a man

"To whom naught comes amiss,  
One horse or another, one country or this,  
Spite bad falls and bad horses, undaunted still  
Rides up to the motto, be with them I will."

Mr. Poole sold Tartar to Stephenson, of Chester, and he was after this owned by Mr. Fred. Sale, of Derby, Mr. Wootton of Mapperley, the Hon. Thos. Fitzwilliam (for whom he begot Tyke) and Mr. Cropper. Tartar was as game a dog as ever went to ground, in fact, he was too game, as he would sooner murder a fox than bolt him, and he was very chary of throwing his tongue. Tartar's best son was undoubtedly Tyke, who, however, showed the bull-terrier cross unmistakably in his fine coat and stern. Poor Tyke met with a sad end, as after Mr. H. Gibson had purchased him for \$800, he was killed one night in the kennel at Brokenhurst by the writer's Boxer. Old Trap's pedigree could never be ascertained, but there was no doubt that he had a large admixture of black and tan blood in his veins, and it is my opinion that breeders should be most careful about using this blood indiscriminately; murder will out. When Trap was put to Violet (by Old Jock) she had, I think, five puppies. Three of them had more black and tan than white, and the only dog in the litter worth rearing was an all white dog named Tyrant. Now, this dog's stock were all noted for their long, lean heads, and as a rule for their very ordinary legs and feet. Grove Nettle was a big, long-backed bitch, but with a goodish stamp, and was the dam of some good terriers, her daughter, Cottingham Nettle, taking perhaps more after her than any other. Grove Trimmer was from the same strain, and when I knew him, as the property of my friend, the Rev. De Castro, was a rare good stamp and as game as a pebble. Hornet was bred by the Hon. Thos. Fitzwilliam, and was a corky, nice sort of dog, but his actual pedigree is

shrouded in mystery, as it was always said that he was out of a common kennel terrier, and put on to old Grove Nettle as a puppy, and sent out to the world as her reputed son. How far this may be correct I do not know, but my authority was old Cross, who was at Wentworth at the time looking after the terriers, and who was afterward with Mr. F. Sale at Derby. Certain it is, however, that, although he had all the chance in the world he was a total failure at the stud.

After the old Jock dynasty came the Trimmer era, which included Trimmer, Bellona, Pincers, Femosa, Celt and several more of the same ilk, all of which were tarred with the same brush, viz., no legs, feet or substance to speak of and very little coat. Then came a very different stamp of terrier that erred on the other side, inasmuch that they were too big, with lots of bone, but bad shoulders. Among others that may be mentioned were Vandal, Diver, Jester, etc. and were dogs that were as capable of running with hounds or going to ground to a fox, as a pig is capable of flying. Vandal was, if I am not much mistaken, shown under more than one pedigree and never got one worth its salt. Diver was also a failure, although when Mr. Wm. Allison had him and also Mr. Hopkinson, he had every chance. Diver's sister, however, Mr. J. S. Shepherd's Patch, produced champion Lillie, Guilty and Careless, all big prize winners. Jester was sold by Cropper to John Holmes, of Beverley, and resold by him to Mr. Allison; with a parti-colored nose, he was a coarse, common dog, but undeniably game, and few dogs were tried as he was; his stock were never really first-class and his pedigree more than doubtful. To speak of Buffer, is to speak of the sire of possibly the best terrier that ever looked through a collar—Buffer. This dog was sold by his breeder, Mr. H. G. Gibson, to Chas. Littleworth, huntsman to the Hon. Mark Rolle, for \$10, on the understanding that he was not to be sold. When the dog was about fifteen months old Littleworth showed him at Nottingham and, as he thought, put a prohibitory price on him, viz., \$125. The writer on seeing the dog at once made up his mind to buy him, although he was in awful condition, covered with mange and full of worms, and on going to the secretary's office met Mr. Joseph Shepherd coming out. "Hello, Shepherd, been buying?" "Yes sir," was the answer, "the best poor dog I ever saw." "Who is he?" I asked. "Littleworth's, come and see him." "What will you take for buying him?" was my next question. "A hundred to you," was the reply, but as money was not as plentiful as it might have been I very reluctantly had to miss the opportunity that I had waited for years—that of owning the best fox-terrier in the world. Shepherd kept Buffer for some time, and after a most successful show career sold him to Mr. Gillett, of Hull, for \$500, who in his turn sold him to Mr. Hyde, of Warwick, for \$1,250, being the largest price ever paid for a fox-terrier. Buffer was as nearly perfect as it is possible for a dog to be, his only defect being that his ears, although carried perfectly, were just a shade large and his feet were, perhaps, not as good as they might have been, but take him all in all I very much doubt whether "I'd'er shall look upon his like again." His stock were disappointing, as they one and all took after old Buffer, especially in the ear, and this has been shown even to the fourth and fifth generations.

Just about this time Mr. H. Gibson bought Foiler of Mr. T. Wootton, and he was a nailer in every way, and if I were to commence breeding fox-terriers again, would get all the Foiler blood I could lay my hands on, as I consider it almost the most valuable blood that is to be got. After these cracks mentioned above came a rage for the Belvoir blood, but although they have as a rule great bone and good coats, are apt to be thick in their shoulders and too broad in the chest, too very essential points in a terrier, although Brokenhurst Joe, who was imported to this country by Mr. Prescott Lawrence, was remarkably good in these respects. Mr. Luke Turner, of Richmond House, Leicester, who is one of the oldest exhibitors and breeders in England, has done more for the Belvoir blood than any one else, and such animals as Brokenhurst Joe, Belvoir Joe, Richmond Joe, Burbidge's Nettle and Olive are among some of the cracks from his kennels.

And now to come to what a true fox-terrier should be. Authorities differ very much as to size, for my own part I think that the best size for dogs is from 17 to 19 lbs., and for bitches from 15 to 17 lbs., but there can be no hard and fast rule, as so much depends on the conformation of the dog himself; for instance, I have seen terriers of only 16 lbs. weight, that had thick, clumsy shoulders, that could not go to ground, whereas one weighing 19 or 20 lbs., with really good shoulders, could do so with ease. The head of a fox-terrier may be divided into three parts, viz: Skull, jaw including mouth, and ears. The skull should be flat and not too narrow, no stop or indentation being visible between the eyes, the jaw should be long and powerful, the lips perfectly tight, nose as black as ebony, the teeth perfectly level, neither one that is undershot, or pig-jawed being allowable, the eyes should be small, dark, and if I may be allowed to use the term (and it probably expresses it better than any other) full of devil; ears small and V-shaped, and of such texture as to stand thick covets, thorns, etc.; a fox-terrier's neck and shoulders should be like a race horse's, the latter being oblique and well into the back, and the former a good length with no "neckcloth" at the setting on of the head and neck; back strong as a castle, with long quarters; the legs should be as straight as arrows, no deviation being permissible either at shoulders, elbows or knees, and hocks very near the ground. With regard to feet, the round cat-like foot is the most in favor, and it certainly gives the dog the most taking appearance, but from experience I am inclined to think that a foot of this description is the most liable to give way, and many huntsmen have told me that hounds' toes are more liable to go down when they have the cat foot so much prized, than when the foot is more of the hare shape. The stern should not be fine but of a fair thickness and carried gaily, but not curled over the back. The coat is a most important item, and one that for long was sadly neglected. It should be strong and harsh, though perfectly smooth, and when a terrier has a coat of this texture, he can I think stand more wet and exposure than his wire-haired congener, as when a smooth-haired terrier gets wet, he dries himself in a brace of shakes, whereas let a wire-haired one get thoroughly soaked, it takes him a long time to get dry, and in the meantime if in winter his coat probably freezes. As to color, white should predominate, with markings of black, and various shades of tan; liver, red or brindle markings being decidedly objectionable.

Few breeds of dogs alter more from puppyhood to maturity than the fox-terrier. Therefore, I should strongly advise breeders, whenever practicable, never to part with puppies until it can be ascertained what they are really likely to grow into. I have frequently seen as many as forty and fifty puppies from seven to thirteen months old at Mr. H. Gibson's, at Brokenhurst, during the months of April and May, having just come in from the various cottages and small farmers. He was then in the habit of publishing his sale list and had a good idea of the value to put on each.

Now, one word on entering fox-terriers to their work. Never begin too early; let them take their time, as very often puppies are utterly spoiled by being entered too young, as many never really tackle to work until they are a year or a year and a half old. One notable instance may be given, viz., that of old Cottingham Nettle, as when John Holmes had her prior to selling her to Gibson she would not look at a rat, although eighteen months old; but about a month afterward went to ground to an old badger of her own accord in the New Forest, and ever afterward was as game as a pebble.

The writer owned her grandson Boxer (by Bitters out of Brokenhurst Nettle, by Hornet out of Cottingham Nettle), who always seemed to be more inclined to play with rats than to kill them, but when any big game was on foot he was all there, whether it was badger, fox, cat or a bit of scrapping. The best way is to let puppies see an old dog kill a few rats, and they will soon follow the good example. One of the worst faults a terrier can show is indecision, because as sure as ever he does, be it a badger, cat or a martin, he will get more than he bargains for. To give an instance of really game terriers, an intimate clerical friend of mine put two of his to ground to a badger about 7 o'clock one morning, and as it was a most difficult earth to dig, on account of old tree roots and rocks, it was after dark before they were got out, with one dead badger, another just alive and two young ones dead. Of course both dogs were fearfully punished and could barely stand. However, they were carried home through the woods, it was a beautiful moonlight night and almost as light as day, and as they were crossing a ride two badgers were seen and the terriers put down; they tackled one and after some hard fighting held him until secured. Venom never got over this, and died shortly afterward from the effects, but Pickle, although his jaws were literally laid bare, lived to fight many a good battle. About this time Pickle's owner was at Magdalen College, Cambridge, and the Marquis of Huntley was there at the same time. Now, the latter had just given \$300 for Tyrant, to Wootton of Nottingham, and after some talk about the fighting qualities of Tyrant and Pickle, a match was made for \$500 a side, half forfeit; however, two or three days before the match was to have been fought the Marquis paid forfeit, and it was a lucky thing for Tyrant he did so. The following is rather apropos of gameness, or rather the want of it. When Bellona was shown at Portsmouth she was awarded the champion prize. The bitch happened to be chained at the end of the bench, and in close proximity were the prize rabbits; one of the lop-eared ones escaped from his pen and came hopping along among the dogs. Bellona catching sight of this monstrosity, attempted to commit suicide by hanging herself, and when Mr. S. W. Smith (alias Big Smith) found her, she was nearly dead. There is little doubt that fox-terriers are growing in favor in this country, mainly owing to the enterprise of the Messrs. Rutherford, Belmont and Thayer, who have spared neither trouble nor expense in procuring the best blood obtainable. I sincerely hope that they may have the success they so richly deserve, and that their good example be followed by others, and that the hardy, game, companionable and beautiful little dog may ere long be as fashionable as the wretched little toy dogs that command such large figures.

### Field Trials of 1893.

PREDICTIONS were rife last field trial season that the notable boom in field trials during last year would be even excelled in 1893. All signs pointed that way, but the best laid plans of mice and dogmen "aft run aglee." The default of the Central Field Trial Club, owing to the lamentable fact of Mr. Tracy's death, seems to have started the decline. Then the New England men went short on birds and now the American Field Trial Club are short on entries, and with the cold prospect of a "squeeze" in the financial department cry Hold, enough! before they are hurt. This is good policy. Some fellows might say "It were better to have loved and lost than never to have loved at all," but these are the men who haven't had the grim experience of pulling out their cold dollars to pay for the other people's fun. The American Field Trial Club can still live in anticipation that they may yet hold trials in the future that may be a credit and a pleasure to all concerned, and this is much more pleasant than the memory of a dead failure. The energetic secretary, Mr. Beck, is to be sympathized with, but we trust he will still hold on to the rudder.

With the diminishing entry in the Eastern field trials, the present collapse of the Central, the abandonment of the American and the New England trials, it behooves the field trial men to draw up closer and support those clubs which are still willing to take the risks. One important fact these clubs should bear in mind, the avoidance of any postponement of announced dates for closing of entries. As we pointed out some weeks since, this will be prejudicial to their interests if persisted in.

### World's Fair Dog Show Abandoned.

OFFICE OF THE DIRECTOR GENERAL, WORLD'S COLUMBIAN EXPOSITION, Chicago, Ill., Aug. 14.—*Editor Forest and Stream:* Referring to the Exposition Kennel exhibit, which was postponed from June to Sept. 19, 20, 21 and 22, I beg to advise you that in view of the fact that the dates assigned for this exhibit in September come in conflict with dates assigned for the Providence, R. I., show, and the fact that in trying to meet the request of the American Kennel Club, officially requesting this department to change the dates named, as they did not desire dates to conflict with shows held under their rules, I have endeavored in every way to find some time other than the dates mentioned that would be available in which to make the exhibit, but have been unable to do so owing to other exhibits arranged that cannot be moved. In presenting the matter fully to the Director-General and to the Council of Administration, I have to inform you that in view of all the circumstances, the executive committee, acting on the recommendation of the Council of Administration, has decided to entirely abandon the Kennel exhibit. Very respectfully yours, W. L. BUCHANAN, Chief Dep. of Agriculture (in charge, Dep. of Live Stock.)

### The Primitive American Dog.

*Editor Forest and Stream:* "When they had ordered themselves in the order of a single file, and marched about the space of a mile, by the Sea they espied five or six people with a Dogge, coming towards them, who were Savages, who when they saw them ran into the Wood and whistled the Dogge after them, etc." The foregoing from "Monet's Relations" of the pilgrims of the Mayflower at Provincetown, Mass. (1620), would seem to establish the fact of the presence of dogs in America before the white settlements. C. HALLOCK.

HADLEY, MASS.  
[This must have been a Boston terrier.]

### Hamilton Kennel Club.

*Editor Forest and Stream:* At the last meeting of the executive committee of the Hamilton Kennel Club the following resolution was unanimously carried: "That the heartiest thanks of the committee be tendered to the editor of FOREST AND STREAM for his great kindness in publishing notices of the club's drawing." WM. J. TULK, Ass't. Sec'y.

### American Field Trial Club Trials Declared Off.

Mr. W. J. Beck, the secretary of the American Field Trials Club, tells us that the board of governors, at a meeting held Aug. 14, declare the trials of this fall off. But a few more than one-third of the Derby dogs nominated are now in with second forfeit. Even should two-thirds (a good proportion) of these and the same proportion of the All-Age nominations pay starting fee, the club could not possibly meet the purses, to say nothing of the expenses of running the trials. The board saw nothing but disaster ahead and adopted the only course which to it seemed wise.

## DOG CHAT.

### Lexington (Ky.) Dog Show.

The Blue Grass Kennel Club ask us to announce the following additional classes for their coming show; although the information arrives too late for our issue before entries close. Shaggy foxhounds, pack of not less than 10, \$25. Open dogs, \$10 first, medal second; open bitches, \$10 first, medal second; novice class, dogs, medal; novice class, bitches, medal; puppies, dogs, medal; puppies, bitches, medal. Black and tans, kennel not less than 4, \$10; open dogs, \$5 first, medal second; open bitches, \$5 first, medal second; puppies, dogs, medal; puppies, bitches, medal. Maple Grove Kennel offer service of Metchley Wonder, Jr., to best collie bitch in open class.

The indications are that there will be over 500 entries. All express companies will return dogs free. All railroads will sell round trip tickets for single fare from any point in the State of Kentucky, and the Chesapeake & Ohio and Louisville and Nashville railroads will sell round trip tickets at one and one-third fare from all points on their road. The exhibition hall has perfect ventilation, with fresh earth floors, the benches and cages are new, never having been used, and there will be less danger of dogs suffering from heat or sickness. The exercising ground is an inclosed two acre plot of blue grass, where dogs can run at will. They also inform us that dogs arriving either during the day or night will be taken direct from the trains to the exhibition hall and not delayed as is usual in depots and express offices. It would not be a Kentucky show if the comfort of visitors were not made a special feature, smoking, writing, lunch and storage rooms being provided.

"A private room for reporters furnished with desks, chairs, writing material and a sure cure for rabies will also be a new feature." We are doubtful as to the efficacy of the "sure cure," and although the information is "straight" it must be taken with a certain amount of "pepper."

### The World's "Fake" Show.

Exhibitors and every one else remotely connected with this show in anticipation must heave a sigh of relief that the agony is over. At the same time, it is lamentable that an undertaking so fraught with pleasurable and important possibilities should have fallen to the ground through lack of proper and even ordinary common sense methods of management. There has been altogether too much wire-pulling, and it is better that things have turned out as they have. The show, if held on the dates advertised, would not have been a representative one in the least sense, and what should have been an international gathering would have been little more than a good local show. Through the fearless expression of opinion in *FOREST AND STREAM* the causes of failure have been made plain. The "fake" list of judges started the lack of confidence; listening to the advice of self-interested people and ignoring that of practical dogmen familiar with the working of these events did the rest. In its conduct toward the affair *FOREST AND STREAM* finds nothing to regret; it has consistently upheld the rights of the dogman. Again we advance the opinion that the certificate of registration which, in the interest of dogs and dogmen, should have been given free by the A. K. C., instead of mulcting their friends half a dollar for something already paid for, is responsible for a fair share of the lack of interest and the paucity of entries. It was a mistake—and the A. K. C. retains the only memento of this gigantic farce in the shape of a book containing about 1550 blank certificates. This volume should be framed and set among the archives of the club and labeled—"What might have been."

### The Rhode Island Show.

The Rhode Island State Fair Association has an energetic secretary in Mr. Collins, and if the coming dog show and fair is not a success it will not be the fault of the man who pulls the ropes. The fair promises to be attractive in other ways than the mere collection of good dogs that is sure to be there, as Charles Kinzer, of Wooster, O., is coming with his four trotting dogs, and in addition a number of whippets will provide some exciting racing. We are pleased to find that this branch of sport is becoming recognized by fair managers. In the few instances where they were held the races have been looked forward to by the visitors with, in many cases, more interest than the ordinary trotting events. It is something new, and the average American dearly loves a change, be it in sport or diet. All is plain sailing now for the Cranston event, and though it will be a "scurry" to get down from Toronto we trust that the weather conditions will be favorable and that exhibitors will use a little common sense in crating their dogs. It is easy enough to have shipping crates made which even the most inveterate dog-hating baggage smasher cannot possibly render dangerous.

### Rustic Beauty.

Mr. Reick, the owner of the New York St. Bernard Kennels, returns from his visit to Europe with another good St. Bernard. As usual, he has made a wise purchase, and it would seem as if he had thought better of his intention to restrict his kennel to stud dogs. The present importation, Rustic Beauty, is well calculated to help the breed along. We have good dogs enough, but are sadly in want of good breeding winners. This bitch is by Scottish Prince out of Hespsey, both of which it will be remembered found their way to this country, and indeed we believe there are some bitches of their breeding owned here already. Mr. Diffenderfer having imported Hespsey in help to Scottish Prince before Col. Rupert bought the latter; Mr. Smyth, if we mistake not, having bought one Princess Hespsey. Rustic Beauty was whelped Sept. 24, 1890. Mr. Sidney W. Smith is the breeder and she was purchased from Messrs. Smith & Baker, of Leeds, England. Mr. Reick's new purchase has won numerous prizes including first and special at Edinburgh in 1892, and will make a pleasing and valuable addition to his show team.

### Dogs for the Trials.

Mr. John Lewis, of Ramseys, N. J., well known as a popular man in field trial circles and a good handler, has a nice string for the Eastern Field Trials this year. He will run three English setters in the Eastern All-Age Stake. For Mr. Gardner, of Mt. Vernon, N. Y., he will run Roger's Spark, as its name denotes, one of the celebrated Roger's progeny. Mecca will run in the interests of Mr. E. Shrieve, of Washington, D. C., and for Mr. Fuller of New York city, the pointer Pasco. For the Philadelphia Kennel Club Trials he takes down two pointers for Mr. Baker, the architect, of New York; Zoe by King of Kent out of Westminster Ina, and another, a recent purchase, by Lad of Kent out of Juno, we believe. With this lot we trust our Ramseys friend will bring back some of the plums.

### Bedgebury Lion.

The air around Morristown seems to have agreed with the bulldog Bedgebury Lion. He is now, we understand, in excellent condition, and can negotiate a 3ft. fence with ease. Mr. Mortimer will probably have the pleasure of running his hands over him at Cranston, R. I.

### The St. Bernard Marengo.

This is what the *Field* (London) has to say of the new St.

Bernard, Mr. J. F. Smith's Marengo, whose sensational debut we mentioned last week: "And then came Mr. J. F. Smith's new puppy Marengo, competing in the division for non-winners of a first prize. He is a fine, well grown young dog with nice markings and an immense head; at present the latter seems a little long and hound-like in muzzle, but this appearance will no doubt disappear with age; at any rate, St. Bernard breeders say such will be the case. He moves well, is of full size, has nice bone, and his debut could not have been more favorable." This may be taken as a rather more conservative view. *Stock-Keeper* (Eng.) in its report says: "In the open class the good-bodied Marengo won from the heavily marked white Don Giovanni." Certainly a rather curt and ordinary criticism on a dog that the Rev. Mr. Carter spoke so enthusiastically about. In "Whispers," however, we find a little more warmth.

### Kennel "Specials."

It will be hard if a man on the lookout for a canine bargain cannot find it in our "specials" this week. H. Northwood offers some very good English setter stock; C. G. Stoddard some cracking bred pointers; H. L. Kreuder over fifty grown beagles, not a cull in the lot; E. E. Truitt, English setters and beagles; James McAleer, pointers at panic prices; T. L. Tinsley, three pointers; Dr. E. L. Spencer, pointer broken on chicken; W. H. Hubbard, Toledo Blade pups; T. Willis, beagle pups; W. Kirby, Irish setters; C. F. Kent, trained fox and rabbit hounds; J. Feulner, Breeze Gladstone pups; James Wrinkle, The Corsair pups; W. B. Palmer, cocker pups. H. W. Smith wants a clever coon dog; H. Anderson will train dogs for field.

### An Otter Wanted.

Now that Mr. Brooks has his otter hounds, the question is, Where's an otter? Mr. Brooks would like to know so that he can put the hounds on, you know. If any of our readers in the New England States have come across an otter this summer and will inform us of the exact locality, Mr. Brooks will soon be in the vicinity. His hounds have been entered and know their business.

### Cribbage.

We give this week a picture of Mr. Smith's new wire. His late owner, Mr. Clare, was down to judge this breed at Darlington, but finding Cribbage in the competition he declined

MR. SMITH'S NEW WIRE-HAIR CRIBBAGE.

to make the awards and Mr. Maxwell was called upon to do it, and put champion Prompter over Cribbage, the latter being drawn too fine. Until he comes over Cribbage will stand at stud in London.

### Spaniel Club Meeting.

An executive committee meeting was held at 874 Broadway, New York, Aug. 16, President A. C. Wilmerding in the chair. Others present were E. M. Oldham, F. W. Kitchell, A. E. Foster and R. P. Keasbey, secretary. In regard to offering specials at Newark show, it was decided that if the N. J. K. L. adopted an official judge and one of their classifications the club would offer the usual money prizes accompanying such classification. The field trial committee reported progress. The World's Fair show being abandoned the W. F. trophy is laid on the shelf.

"Mr. J. F. Smith is in luck with his favorite breed. His Darlington pup is calculated to turn the head of the fancy. This pup is by Keeper, and actually beat his sire for the special. In the opinion of many good judges who saw the dog in the North, he is the best St. Bernard that ever his owner accorded kennel room."—*Stock-Keeper*. Though the day for sensational prices for St. Bernards from buyers in this country is past, and no doubt just now it would be a long figure that would tempt the owner of this smoothie; we know our St. Bernard men are anxious for every particular regarding the new star. Now that this new dog has come out, Mr. Reick, who has always had a longing to own champion Keeper, may find it easier to get him if he still feels that way.

Dr. Mulcahey is earnest in his fight against the new dog ordinance in Newark, N. J. The other day he obtained a writ of certiorari. Through his counsel the Doctor contended that discrimination in the tax between male and female dogs is unjust; that the ordinance does not conform to a law passed by the last Legislature; that the creation of the office of dog warden is unwarranted, and that in other respects the ordinance is bad. The judge in allowing the writ stated that it did not operate as a stay, as he did not want to interfere with the city government in their efforts to decrease the worthless curs that infested the streets. The fight has begun and will be watched with interest by many anxious owners. We understand that Mr. Peshall is also interesting himself in the protection of dogs in Jersey City, where they can be shot at sight if unmuzzled.

Those who attended the Brooklyn show last November will remember the performing dogs owned by Professor Fred Weissman. We are sorry to say that the "Professor" has been playing a rôle that has landed him behind the bars. He is supposed to have been one of a gang of burglars that had been doing a thriving business in Brooklyn and vicinity, using Weissman's store as a shelter and blind. The gang is now in jail and attention was again drawn to the fact by a daring attempt of their friends the other night to rescue them from duress vile.

Mr. McEowen, of the Retnor Kennels, placed a poodle with Weissman to be trained, and when he heard of the trouble felt anxious about his dog. He went to Weissman's former home and luckily found the dog there, but the whole concern being in charge of the authorities he had considerable difficulty in recovering his poodle. He eventually suc-

ceeded in this, only to find his dog was as ignorant as the day he sent him away.

The bull-terrier Cordona, mention of whose purchase was made last week, will enter the Royal Bull-Terrier Kennels, over whose destiny Mr. Frank F. Dole presides.

John Stokes, so long with Mr. Hearne when his invincible St. Bernard kennel was at its zenith, has cast in his fortune with Mr. Huntington, owner of the Marlborough Kennels, Lawrence, L. I. "Andy" McGregor has been tempted to return to Mr. N. Q. Pope's big kennel at Poland Springs, Me., by a five years' contract and greatly increased emoluments. Both kennels are fortunate. All who knew John Stokes in the old days know that his dogs were generally in the pink of condition and he was not afraid of work, while "Andy," though he doesn't say much, keeps up a lot of thinking, and it's about the dogs most of the time, too.

Mr. William Phillips, well known in toy spaniel circles and who has a store on Broadway, has had a notable increase to his charges. Lieut. Petich, Italian Minister to Peru, Bolivia and Ecuador, did not know what to do with his ten Chihuahuas while paying a visit to the World's Fair. The hotels would not have them, but they are in good hands now. It is very unusual to find such a number of these delicate canines owned by one person, and Mr. Phillips will doubtless have his hands full during the next three months.

Mr. Phil Daly, Jr., it is said, will now sell his kennel of setters at auction. The only reply he received from his advertisements was an offer from a man to sell him a Newfoundland. Mr. Daly should "bank" on the *FOREST AND STREAM* another time.

The "eminent" St. Bernard king, Col. Reick," is the way *British Fancier* refers to the modest owner of the New York St. Bernard Kennels. By the way, his Young Bute and the new purchase, Rustic Beauty, are the parents of a notable litter, which includes La Prince and La Princesse, and the no less celebrated Goldfinder, just sold for a large price.

Mr. H. W. Smith, owner of Cribbage, advertises this week for a "coon" dog and says he will give \$100 for the right one. We do not envy our Worcester friend for the next week or two. While coon dogs at \$100 a piece will be like flies in summer, \$100 "coon seekers" will be scarce, we fancy.

It is stated in an interesting article on Mr. Stretch and his collie kennels in *British Fancier*, that last year 236 bitches visited his kennels.

The only black and tan that could beat Rhodes's Oban, Prince Eric, from the same kennels, Lieut.-Col. Dean's, of Birkenhead, England, is dead. Good specimens of this breed are scarce, and now that the crack has passed away perhaps Oban will receive a little more attention, as, according to report, he is not at all in the shape he used to be shown.

Mr. Rawdon B. Lee, of the *Field* (London), and the well-known author of several books on dogs, has a versatile pen. He is now contributing some very interesting articles on the "gentle" art in the *Sporting Mirror*, but we fancy our Mr. Cheney will question the statement that Americans call their rods "poles," and their flies "bugs." This isn't Dog Chat, we know, but one likes to cast a line in other waters sometimes.

The National Greyhound Club would hold a show in Brooklyn this fall if some one would come forward to attend to the preliminary work and guarantors were more plentiful.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

### BRED.

Prepared Blanks sent free on application.

Lorna—Triton. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Lorna to their Triton, March 5.

Venom—Triton. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Venom (Dusky Trap—Belgrave Viola) to their Triton, March 21.

Tenny—Triton. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Tenny to their Triton (Raffle—Warren Dainty), March 9.

Florence—Gem. M. J. Flaherty's (Providence, R. I.) English setter bitch Florence (Roi d'Or—Nellie Bly) to T. M. Aldrich's Gem (Druid—Ruby), July 31.

Lady Lomond—Alton, Jr. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Lady Lomond (Alexander—Bessie) to E. H. Moore's Alton, Jr. (Alton—Judith), July 9.

Clara Barton—Alton, Jr. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Clara Barton (Sir Bedivere—Judith) to E. H. Moore's Alton, Jr. (Alton—Hera), July 8.

### WHELEPS.

Prepared Blanks sent free on application.

Dimity. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Dimity, July 21, six (four dogs), by their Triton.

Tenny. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Tenny, May 5, five (three dogs), by their Triton (Raffle—Warren Dainty).

Lorna. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Lorna, May 7, six (three dogs), by their Triton (Raffle—Warren Dainty).

Venom. Lansdowne Kennels' (Lansdowne, Pa.) fox-terrier bitch Venom (Dusky Trap—Belgrave Viola), May 18, four dogs, by their Triton (Raffle—Warren Dainty).

Philadelphia Belle. A. E. Cook's (Germantown, Pa.) fox-terrier bitch Philadelphia Belle (Dobbin—Blenston Bedlam), May 23, three bitches, by Lansdowne Kennels' Desperado (Rosador—Desperate).

### SALES.

Prepared Blanks sent free on application.

Roscoe—Lady Velma whelp. White bull-terrier bitch, whelped July 16, 1892, by Lansdowne Kennels, Lansdowne, Pa., to W. E. Shallington, Columbia, N. C.

Triton—Lorna whelp. Fox-terrier bitch, whelped May 7, 1892, by Lansdowne Kennels, Lansdowne, Pa., to T. W. McGill, Philadelphia, Pa.

Lansdowne Pepper. Tan ear, body white, fox-terrier dog, whelped June 30, 1892, by Triton out of Dimity, by Lansdowne Kennels, Lansdowne, Pa., to T. C. Steelman, Germantown, Pa.

Desperado. Black and tan head, body white, fox-terrier dog, whelped May 18, 1891, by Rosador out of Desperate, by Lansdowne Kennels, Lansdowne, Pa., to H. H. Carlton, San Francisco, Cal.

Miss Miggs. Fox-terrier bitch, whelped June 30, 1892, by Triton out of Dimity, by Lansdowne Kennels, Lansdowne, Pa., to Dr. W. G. A. Bonwill, Philadelphia, Pa.

Dick and Susie. White bull-terrier dog and bitch, whelped July 16, 1892, by Roscoe out of Lady Velma, by Lansdowne Kennels, Lansdowne, Pa., to D. W. Kolbe, Jr., Philadelphia, Pa.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

Dixie.—Lady Dixie's number is 5748 (Vol. IV., Part I.), whelped April 4, 1888, by Pride of Dixie (3497, Vol. III.) out of Fairy Bell (3554, Vol. III.).

L. H. Flatbush, L. I.—You have the pedigree twisted. Your cocker bitch Beauty Bell is by Nigger out of Nell, and they are by Hollis Wildair out of Nellie. Nigger took vhc. and Nell c. at the Brooklyn show of 1892. We cannot help you to trace the pedigree a neither are registered. Ask Mr. Rodger.

# Hunting and Coursing.

## FIXTURES.

Oct. 3.—International Coursing Meeting at Huron, S. D. J. Herbert Watson, 26 Court street, Brooklyn, N. Y. (chairman).  
Oct. 17.—Kennore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.  
Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.  
Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.

## New England Beagle Club Trials.

### Editor Forest and Stream:

As I have received several communications from various parties relating to the so-called "string" attached to the prizes offered by the New England Beagle Club, I beg leave to inform all concerned that at our next executive meeting, to be held on Aug. 17, there is every likelihood that the clause, requiring that at least ten entries be received before a class is started and the cash prizes previously offered awarded, will be repealed, and that the prizes will stand as voted, viz., \$75 to first, \$50 to second and \$25 to third in the 15-inch class; the same prizes in the 13-inch class, and \$50 to first, \$30 to second and \$20 to third in the Derby.

Inasmuch as our cash prizes are double those offered by any other club devoted to the breed, and as the best judges obtainable will be secured, as well as superior grounds and hotel accommodations, we hope to receive the unstinted support of every owner of a fine beagle and to make the competition at these trials the keenest of the keen, in which the North, South, East and West shall meet and strive for the title of field trial champion, which will be awarded the winners of first in the champion classes. These stakes will consist only of those dogs which have won first at the trials of the National Beagle Club in previous trials and the winners of first in the trials of the New England Beagle Club this year. The champion classes will be run after the other classes, and the winner in the 15-inch and the winner in the 13-inch stakes will represent the best field dogs, large and small, in America—yes, or in the world, as these trials are open to all.

A special feature of these trials will be the class for basset hounds and dachshunds, which, although the prizes will be on the percentage plan, will give the owners of these breeds an opportunity to show whether their dogs are fielders or fit only to be classed as lapdogs. There are many of these dogs owned in New England, and their owners should now come forward and second with entries the effort being made in their behalf. Full particulars of the trials, together with running rules, entry blanks, etc., can be obtained of the secretary, Mr. Winfield S. Clark, of Linden, Mass., or the president, F. Willis Chapman, Malden, Mass. F. W. C.

MALDEN, MASS. Aug. 16.

## N. E. B. C. Meeting.

### Editor Forest and Stream:

A meeting of the executive committee of the N. E. B. C. was held at 266 Washington street, Boston, Aug. 17, and called to order at 2:15 P. M., the following members being present: F. W. Chapman, H. S. Joslin, Henry Hanson, F. W. Cliefeld and W. S. Clark. President Chapman in the chair. Minutes of last meeting read and approved. Communications were read from several in regard to judging the coming field trials, and Mr. A. C. Krueger, of Wrightsville, Pa., and Geo. F. Reed, of Bartow, Vt., were unanimously chosen. In regard to place for holding the trials Mr. Chapman reported Oxford, Mass., the best place he had seen, and it was voted the trials be held at Oxford. The vote passed at last meeting, where a certain number of entries were required or the money would be divided on the percentage plan was reconsidered and it was unanimously voted to offer the prize money as follows in the open classes: Dogs and bitches, 15 to 13in., first prize, \$75; second, \$50; third, \$25. Dogs and bitches, 13in. and under, first prize, \$50; second, \$30; third, \$20. It was voted the Derby entries close Sept. 16 and the All-Age Oct. 14. Mr. Joslin was chosen a committee of one to see after hotel accommodations, kenneling of dogs and barges to carry those present to and from the grounds. Voted that basset hounds and dachshunds be run together. The secretary was instructed to correspond with railroad and steamboat companies in regard to carrying dogs to and from the place of trials. The following gentlemen were elected field trial committee: F. W. Chapman, H. S. Joslin, Henry Hanson, F. W. Cliefeld, B. S. Turpin, H. V. Jamieson and W. S. Clark. It was moved the club apply for admission to the A. K. C. After some little discussion it was voted to postpone application till the next regular meeting. It was voted to change date of trials from Nov. 6 to Nov. 7. Adjourned 3:50 P. M. W. S. CLARKE, Sec'y-Treas.

## The Beagle Field Trials at Nanuet.

### Editor Forest and Stream:

As many inquiries are being made relative to coming field trials of National Beagle Club of America, I ask for a little space in your reliable news distributor.

The trials will be held at Nanuet, N. Y., beginning Oct. 30. The earliest date for closing entries for any class will be Oct. 5. A meeting of the executive and field trial committees will be held in New York, Aug. 28, and as soon thereafter as possible the premium books and entry blanks will be ready for distribution. In addition to regular class prizes, which are clearly fixed, there will be an interesting lot of special prizes. It is also expected that a Consolation Stake for non-winners in regular classes will be created during week of trials.

Parties desiring to enter their dogs in trials of New England Beagle Club, which are to take place at Oxford, Mass., in the week following, will find ample time and easy facilities for reaching the second trial in due season.

As these trials are open to all comers and everybody is welcomed, it is hoped that the many throughout the country who have heretofore had it on their mind to see the "merry little hound" on the chase in trial races, will avail themselves this year and help to make it the largest gathering of "beagle lovers" ever seen together. H. L. KREUDER, President National Beagle Club of America.

NANUET, N. Y., Aug. 19.

## Beagles.

Mr. Krehl, one of the judges at Spa (Belgium) show, says that the beagles were worth a journey to see, and in his report writes: "Beagles were such a grand entry that the judges asked to have the sexes divided. Reader is a sweet little hound of the purest beagle type, and stands on legs and feet that would make a foxhound envious. He did not win too easily from Mandarin, a grand little compact hound of much character. Lonely II. won in bitches, a smaller and even better edition of her brother, Reader." etc. Mr. E. Gerry Roberts wrote over to England for something to beat Lonely and the other stars on this side, but nothing could be had at the time. According to this report there would seem to be a chance for Mr. Roberts to get what he requires, if he is willing to go the pace.

## The International Coursing Meeting.

There are probably several men who, while not owning good greyhounds themselves, would like to take a "flyer" in a coursing meeting. There is just such a chance now for the

International Coursing Meeting at Huron, S. D. Any one can nominate a dog before Sept. 1 for \$25, even if the dog be not just at hand; he can be found afterward. Mr. James H. Watson, of Brooklyn, has one or two that he is keeping for late meetings but would allow to be run at Huron. Then Mr. Whiton, we know, has a fast one, and Mr. Lowe, of Lawrence, Kan., has a few in his kennel that he would allow run at a fair figure. The prizes in the Columbus Cup Stake are well worth winning, besides the Purse and the Plate for those who are beaten in the first rounds and ties of the Cup. The winner in the Cup gets \$2,000, second \$1,000, third and fourth \$250 each, four dogs \$80 each, eight dogs \$50 each.

## National Beagle Club Meeting.

A FIELD trial and executive committee meeting of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, New York, Monday, Aug. 23, at 3 P. M. sharp. Members of the committee are earnestly requested to attend.

Mr. Harry L. Means, secretary pro tem of the proposed National Fox Hunters' Association, sends out the following circular: "On Aug. 31, at Lexington, Ky., a meeting will be held to organize the National Fox Hunters' Association. It is especially desired that you be present, but should your business be such as to prevent it, you will confer a favor by sending in your name and that of any other sportsman of your acquaintance for membership. The dues will not exceed \$5 per annum, which will be collected later. The meeting will be held at the building of the Blue Grass Kennel Club.

For some time past our readers have now and again urged FOREST AND STREAM to add a hunting and coursing department to its other features. Recognizing the great interest that is taken by a large number of sportsmen in fox hunting, hare hunting and coursing, we have concluded to devote space to the doings of these branches of sport in a department to follow the Kennel. As our friends have repeatedly promised support in this event we trust that they will bear this in mind when matters of interest occur.

Mr. A. O. Bradbury, manager of the Maybrook Kennels, Dover Plains, N. Y., will start about Sept. 1 for Huron, South Dakota, with a team of greyhounds to prepare for the International Coursing Meeting. This is a wise move on his part, and as, we believe, he is willing to take other greyhounds for those who wish to enter, the opportunity is one that should be taken advantage of. Mr. Bradbury says his dogs are all well and in good shape.

Mr. L. C. Whiton has entered his well known greyhound Lord Neverstill and will, perhaps, enter another. Mr. Lowe reports Neverstill as a much improved dog on his spring form.

Those who intend nominating dogs for the International Coursing Meeting at Huron, S. Dak., should bear in mind that they must do so by Sept. 1 with J. Herbert Watson, 75 Downing street, Brooklyn, N. Y.

At the Ballard, Kan., coursing meeting Mr. E. H. Mulcaster will handle the flags and Mr. J. R. Cochran will slip.

The judge at the Goodland, Kan., meeting will be Mr. Wm. Greene Hastings, Colorado.

# Yachting.

10. Cor., San Fran., Closing Day.

## Newark Bay Boat Club.

THE Newark Bay Boat Club of Bayonne, N. J., held its annual regatta on Aug. 19, the programme including sailing, rowing and swimming races. The sailing race was over a ten-mile course on Newark Bay, sailed in a fresh N. E. wind, the times being as below. The corrected times of Duett and Our Own tied, and the two will probably sail off at a date not yet decided.

SLOOPS.			
	Length.	Elapsed.	Corrected.

## Mattapoisett Annual Regatta.

Saturday, Aug. 12.

THE open annual regatta for prizes presented by the summer residents of Mattapoisett took place on Aug. 12. The classes were as follows: First class, cats between 24 and 30ft. waterline; second class, cats between 20 and 24ft. waterline; third class, cats between 17 and 20ft. waterline; fourth class, cats between 14 and 17ft. waterline; fifth class, yachts under 14ft. The courses were 13½ miles for first and second classes; 11 miles for the third class, 6 miles for fourth and fifth classes. As there was only one entry in the first class I decided not to go over the course. In the second class 6 boats entered: Mist, Myrtle, Anonyma, Rustler and Gymnote. They started in the order named, course was handiapped and withdrew. Myrtle, the new boat built by Crosby Bros. of Osterville, soon took the lead and finished first, a minute ahead of the Mist; Gymnote third.

In the third class 11 boats started; the Gilt Edge and Mizpah leading, the others following in a bunch. The run between Gilt Edge, Nobska and Tycoon to the windward buoy was very close, but on the run home Nobska increased her lead, finishing first, with Gilt Edge second and Tycoon third.

In the fourth class 8 boats started, their course was three times around the harbor and made a pretty sight. Guest finished first, followed by Mariana, Squall and Charming in the order named. Guest's measurement was protested, and on remeasurement she was found too large for her class, giving Mariana first prize.

In the fifth class there were 4 jib and mainsail boats and one catboat. As the boats drew away rapidly from the others. It was a very close race between the two boats, but unfortunately on the third round, Axe lost her centerboard while only one length astern of Raccoon, she consequently won the race by five minutes, with Kid second and Waskite third. A protest was entered against Raccoon by Kid for fouling the judges' boat. Konungo, the only catboat, was sailed by Miss Alice Stockpole and made the course in good shape. The times were:

SECOND CLASS.			
	Length.	Elapsed.	Corrected.
Myrtle, D. Crosby.....	23.02	2 49 48	2 30 43
Mist, G. H. Lyman.....	23.09	2 53 43	2 34 54

Konungo, Alice Stockpole.....	11.00	1 29 45	1 05 21
Axe, L. Bacon.....	11.03		Lost centerboard.

Judges, R. Cunningham, Ellis Mendel and Abner Harlow. Regatta Committee, E. C. Stetson, J. L. Stackpole, Jr., and R. L. Barstow Jr. L. Bacon, Measurer.

## Tacoma Y. C. Regatta.

TACOMA—PUGET SOUND.

Saturday, August 5.

THE Tacoma Y. C., of Tacoma, Wash., sailed a race on Aug. 5 under the rules of the National Yacht Racing Association, the classes being: Class 1. Over 35ft. and not exceeding 50ft. corrected measurement, standing ballast. Class 2. Not over 35ft. corrected measurement, standing ballast. Class 3. Over 25ft. and not over 45ft. corrected measurement, shifting ballast. Class 4. Not over 25ft. corrected measurement, shifting ballast.

The prizes were: Class 1. First, brass binnacle; second, brass barometer. Class 2. First, brass cannon; second, ship's clock. Class 3. First, galvanized anchor and chain; second, brass side lights. Class 4. First, silver tankard; second, marine glasses.

The general conditions were by Rule 11 (N. W. I. Y. A.): The measurement of yachts shall be their load waterline, with one-half of all overhang, fore and aft, added. The time allowance for each class shall be 3 seconds per foot of corrected measurement per nautical mile. By rule 5 (N. W. I. Y. A.): Sec. 1. Yachts in classes 1 and 2 shall during a race keep their doors down and bulwarks standing, and trimming a race weight shall be allowed up to time of the starting signal but not after. Sec. 2. Yachts in classes 3 and 4 may use shifting ballast, but no ballast shall be shipped or unshipped during the race, or after the measurement has been taken. Sec. 3. Each yacht, in all classes, shall bring back all persons she started with, and no outrigger ballast shall be allowed on any yacht in any class.

The weather was fair, with a southwesterly wind and ebb tide.

FIRST CLASS.			
	Length.	Elapsed.	Corrected.
Grace Felitz, A. M. Towle.....	38.11	2 40 23	2 39 57
Margery, G. H. Heilbron.....	36.07	3 04 00	3 02 15
Rainier, W. C. Heilbron.....	39.06		Did not round buoy.

SECOND CLASS.			
	Length.	Elapsed.	Corrected.
Xora, J. Wall.....	33.11	2 55 40	2 55 40
Venture, E. G. Griggs.....	18.02	3 07 46	2 55 58
Dores, J. Nelson.....	26.10	3 14 12	3 08 58
Bremerton, V. Hensel.....	15.03	3 23 39	3 00 39
France, J. Leach.....	30.04	3 21 07	3 18 26
Constance, F. W. Snow.....	33.11	3 28 31	3 21 01
Belle, E. S. Hall.....	19.00	3 34 12	3 23 42
Rose Henley, N. Henry.....	27.00	3 44 58	3 29 17
Mermaid, J. E. Farr.....	14.03	3 53 12	3 57 42

Winner in class 1, Gracie Felitz and Margery; class 2, Xora, Venture and Dores. All yachts entered are standing ballast. Regatta committee, H. Hurley, E. Irving Halstead and F. M. Caldwell. Judges, Stephen Holbrook, Geo. W. Delamater and W. F. Sheppard.

## Jamaica Bay Y. C. Annual Regatta.

THE annual regatta of the Jamaica Bay Y. C. was sailed on Aug. 13 in a fresh N. E. breeze. Lillie S. carried away her maststep, and Teaser sailed wrong course. The times were:

CLASS A—SLOOPS.			
	Start.	Finish.	
Rheingold, Louis Bossert.....	12 17 15	5 02 45	
Doctor, Com. Hewlett.....	12 19 00	Did not finish.	
Pavonia, Mr. Sper.....	12 17 30	Did not finish.	
CLASS B—CATBOATS.			
Lelsure, Wm. Scheer.....	12 28 30	2 21 00	
Lillie S., O. L. Schweinke.....	12 28 45	2 23 45

CLASS C—CATBOATS.			
Mosquito, F. H. Hagler.....	12 31 25	2 30 00	
Flirt, C. W. Simmons.....	12 28 30	2 35 00	
Mary Jane, Geo. W. Brown.....	12 28 50	Broke rudder.	
CLASS D—CATBOATS.			
Mattie, S. G. Landmann.....	12 30 30	2 46 00	
Teaser, J. C. Fitzmaurice.....	12 31 00		

## Navahoe.

NAVAHOE has sailed in several races lately, but with no better success than in those before reported. Capt. Charles Barr has left her, and Capt. Tom Diaper, her pilot, has temporarily taken his place. Mr. Carroll cabling for Capt. Aubrey Crocker, who sailed Puritan in 1885 in the Cup races. Capt. Crocker, who has been for years in the employ of Dr. John Bryant in the old Shadow, was very unwilling to go, but the whole matter was discussed aboard the flagship at Vineyard Haven by the officers and members of the New York Y. C., and as the result he sailed on the Majestic on Aug. 16. The task that he has undertaken in succeeding Capt. Barr is a difficult and by no means a pleasant one. A very unpleasant story has been called from the other side of a quarrel between Mr. Carroll and one of his crew during a race, in the course of which Mr. Carroll had struck the man and ordered him in irons, which order, however, was not executed. After the race the man left the vessel and threatened to prosecute the owner, who, as the story goes, finally compromised the matter by paying \$74 and his passage home. Wilson & Silsby are making a new mainsail, fully as large as the present one, for Navahoe.

## NEW YORK Y. C. ANNUAL CRUISE.

Although the fleet this year has been a large one, and has kept together longer than usual, the annual cruise hardly be set down as a success. Under ordinary circumstances the weather might have been considered fairly good; bright sunny days, not too hot or sultry for comfort, and with wind enough to make all passages from port to port. This year, however, the main feature of the cruise was the racing, that of the four new yachts in particular, and this part of the program has proved a failure through the vagaries of the weather. The Golet cup race was a mere waste of time that gave pleasure to no one, the cup defenders played but a small part in the runs, and two of the most important of the special races were spoiled by light weather. The one bright spot of the whole cruise is the grand battle for the first Astor cup on Thursday last; the sight of such a fight to windward went a long way toward consoling all who were fortunate enough to see it for the many disappointments of the cruise.

Apart from the racing the cruise was a pleasant one, and so far as the management goes the only fault to be found is in the delays at the start, which were always annoying to the sailing men, and in several cases interfered with the successful finish of the races. While there are always a few laggards in the racing fleet, the sailing men as a rule are out early and ready to start with the first appearance of wind, but early hours are not to the liking either of the guests ashore or the members of the steam fleet; and as a consequence the racing is often sacrificed to the picnic features of the cruise.

The matter of carrying out a fixed programme in which so much depends on the wind and fog is a very difficult one, and the very first consideration is to use the wind when it is to be had. The first thing toward carrying out the programme punctually is to start as early as possible in the morning provided there is any wind, as the middle of the day in August about Long Island Sound is likely to be almost calm. Both in the runs and races the rule should be for a start at 9 A. M. when there is a breeze at that hour which gives little promise of holding; a very frequent case in summer is to have a start at 9 A. M. instead of 11:35, the Golet cup race would have been finished before dark, and though it might have been a slow race, the yachts might have been back at the finish instead of off Hen and Chickens when the wind died out. In the same way an early start from the Vineyard on Monday would have brought the fleet well into Vineyard Sound before the breeze fell, giving them the advantage of the tide over the latter part of the course.

Our story last week carried the fleet down to the Golet cup race of Friday and the fog of Saturday, merely the summary of Monday's run being given. Early on Sunday morning the steam yacht Cosette, Mr. C. H. Osgood, dragged under the bows of a large coasting schooner and nearly killed the latter, she had a tow of five and both gaffs, her awning and a large portion of the port rail and nettings. The orders in the morning were to lie at anchor and to dress ship at noon, but a large number of yachts were tempted out by the fine breeze and clear weather, and left the fleet for Vineyard Haven or for a sail up Narragansett Bay. Of the racing boats only Pilgrim went out, starting at the morning and sailing for several hours. In contrast with its crowded condition on the previous days, the harbor looked almost deserted by night. The orders called for an early start for Vineyard Haven; returning on Tuesday to Newport and sailing the first race for the Astor cup on Wednesday.

## Fourth Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Monday, Aug. 14.

AFTER two idle days all were rested, and ample time had been afforded for preparation before Monday morning, but by dint of the usual avoidable and unnecessary delays, the most valuable part of the day was wasted, and a good race partly spoiled. The wind in the early morning was fresh from the north, a good clutspoint breeze, though only jibhead was allowed for the race in "cruising trim." With two days of making time, the fleet had a tow of five and both gaffs, her awning and a large portion of the port rail and nettings. The orders in the morning were to lie at anchor and to dress ship at noon, but a large number of yachts were tempted out by the fine breeze and clear weather, and left the fleet for Vineyard Haven or for a sail up Narragansett Bay. Of the racing boats only Pilgrim went out, starting at the morning and sailing for several hours. In contrast with its crowded condition on the previous days, the harbor looked almost deserted by night. The orders called for an early start for Vineyard Haven; returning on Tuesday to Newport and sailing the first race for the Astor cup on Wednesday.

In the morning an order was distributed, changing the mode of starting; instead of starting head to head, the four big cutters were to start last, from the gun, the smaller cutters after them, and the first gun, a time start, the schooners from the second also a time start, and the cup defenders last, with a one gun start.

Pilgrim alone remained at anchor, the other three being out in good season under lower sails and with jibhead set in stops; Vigilant was attended by the ever faithful Hattie Palmer, which was about the line for a time and then started off to jog over the 37 miles to West Chop. Many sailing yachts, the first of which was the first of the three steam yachts Intrepid, Golden Fleece and Barracouta started under canvas, the former in particular presenting a fine sight. The other steam yachts waited at the line to see what promised to be a fine start—Conqueror, Sapphire, Clermont, Jeane, Monita, Rival, Susquehanna, Katrina, Allegre, White Layde and many others.

The start of the three steam yachts was a sight to be seen. The whole fleet lay to windward of the line, the wind being then N.N.E.; the smaller singlestickers were near the flagship, on the weather end of the line, with jibheaders sheeted home and second jibtopsals in stops, and when the gun fired Hildegarde rushed over smartly, followed by Bedonia and Wasp. Queen Mab came next, under the lee of this pair, and with Huron on her weather quarter, then Carmita and Katrina. Harpoon and Wayward were very late, and Jessica managed to get in with the leaders of the schooners.

With the second gun Ariel went over close to May, with Jessica just to windward. Lasca was close on Ariel's weather quarter, then came Volunteer a little distance astern, with Ramona hanging close to her weather. Alcea had a clear space to cross in near the middle of the line, and Dauntless followed her. But Palmer crossed close to the May. The start of the three steam yachts was a sight to be seen. The whole fleet lay to windward of the line, the wind being then N.N.E.; the smaller singlestickers were near the flagship, on the weather end of the line, with jibheaders sheeted home and second jibtopsals in stops, and when the gun fired Hildegarde rushed over smartly, followed by Bedonia and Wasp. Queen Mab came next, under the lee of this pair, and with Huron on her weather quarter, then Carmita and Katrina. Harpoon and Wayward were very late, and Jessica managed to get in with the leaders of the schooners.

With the second gun Ariel went over close to May, with Jessica just to windward. Lasca was close on Ariel's weather quarter, then came Volunteer a little distance astern, with Ramona hanging close to her weather. Alcea had a clear space to cross in near the middle of the line, and Dauntless followed her. But Palmer crossed close to the May. The start of the three steam yachts was a sight to be seen. Queen Mab came next, under the lee of this pair, and with Huron on her weather quarter, then Carmita and Katrina. Harpoon and Wayward were very late, and Jessica managed to get in with the leaders of the schooners.

As the time for their start approached the three big yachts neared the line, and the fleet moved toward the westward, while Jubilee, after running to leeward, came up over the line, meeting Vigilant near the flagship and tacking under her lee. Jubilee had started her jibtopsail up the stay, but was obliged to lower it and hoist it a second time. She was at the line a little too soon, and Vigilant ran by and crossed the line on Vigilant's weather quarter, while Jubilee was a little slower in starting, and fell in a hundred yards astern and nearly in Vigilant's wake.

The start was timed:

Start.....	10 15 00	Alcea.....	10 20 57
Hildegarde.....	10 15 43	Lasca.....	10 21 02
Huron.....	10 16 10	Volunteer.....	10 21 21
Wasp.....	10 16 13	Ramona.....	10 21 30
Bedonia.....	10 16 21	Dauntless.....	10 21 40
Queen Mab.....	10 16 22	Palmer.....	10 22 05
Carmita.....	10 16 29	Constellation.....	10 22 36
Eclipse.....	10 16 35	Neaera.....	10 22 55
Harpoon.....	10 16 38	Mayflower.....	10 23 45
Wayward.....	10 16 55	Miranda.....	10 25 00
Handicap.....	10 20 00	Vigilant.....	10 35 00
Jessica.....	10 20 00	Colonla.....	10 35 00
Ariel.....	10 20 15	Jubilee.....	10 35 00

With a good breeze the first two divisions were well away before the start of the Cup defenders, with large jibtopsals and mainposts staysail drawing on the schooners. As the three big boats crossed the attendant fleet of steamers opened out to follow, and every one was pushed to the utmost, a number of incidental brushes resulting. Close to Vigilant's quarter was the little steamer Katrina, with John B. Herreshoff on board, the designer, N. G. Herreshoff, sailing on Vigilant.

From the start Vigilant moved the fastest, springing away a little, but unable to work clear of Colonia, perched in an advantageous position on her weather quarter. Jubilee was hardly holding the others, but soon began to luff out across Colonia's wake, her jibtopsail shaking.

There was now wind enough to test the stability of the three, though they were only under jibhead; but none displayed any special tenderness. Jubilee had a trifle more heel than the other two, but still carried her sail easily. There was little to be seen of the fleet ahead, but plenty to entertain the spectator in the work of this trio.

To judge from the steam fleet, the racers were doing over 13 knots in smooth water, and with a fresh breeze just before the beam. The first half hour brought them up with Wasp, and the first of the three in the original positions, except that Jubilee had worked well out to windward and was doing better than at first, while Vigilant had got out slightly from under Colonia. Palmer was passed here, having given up the race and headed westward.

At 11:30, when the tail of the fleet was picked up well beyond West Island, the wind had fallen to a light breeze, which had been left behind were now able to overtake and keep up with the fleet. Harpoon, Carmita and Wasp were close together, the former some 200 yds. in the lead, having more than made up a very bad start. Wasp soon drew ahead of Carmita and left her, the first of the fleet finally failing to finish.

At noon Lasca was leading the fleet, having passed Sow and Pigs Lightship. Ramona was some distance astern of her, then Alcea and Constellation. Dauntless, Volunteer and Huron, with Queen Mab, Ariel and Hildegarde astern. The wind fell until a little after noon the

main body of the fleet was becalmed off the lightship, Volunteer and Dauntless being close abeam beside the ship. Ahead under the Outly- ing shore was the Ramona, Constellation, Alcea, Katrina and Intrepid, all with little way on and the latter slowing her case and Nearing the lightship was Vigilant, now well clear of Colonia for the first time. Jubilee and Colonia were still close together a few hundred yards astern of Vigilant, and with them were Bedonia, Huron and Queen Mab. All racing had stopped for the time, but Vigilant was slowly increasing her distance from the others, passing Dauntless and Volunteer, while they lay almost motionless.

It was nearly 1 o'clock before the new breeze came in from S.W., inducing some of the smaller boats astern to set spinners to starboard. The leaders after jibing set their spinners in stops, but none were broken out. Light as the breeze was, Vigilant was sailing, and when near Gay Head she had worked out a lead of some two miles over the others. Colonia worked by Jubilee and was about half a mile in the lead of her, all having now lowered their working headsails and set balloons, the spinners being taken in while still in stops.

Lasca still held a good lead, and at 2:45 was inshore just beyond Tarpaulin Cove, Ramona being out in Vineyard Sound, with Constellation and Alcea following Lasca inshore.

Vigilant, working along the Vineyard Haven shore with spinaker set, was now the second boat of the fleet, and astern of her was Katrina. Colonia and Jubilee were still a couple of miles astern.

There was a good breeze blowing by this time, but a bad head tide. Constellation began to wake up and went by Ramona and Vigilant into second place. The fleet, spread out over the length and breadth of Vineyard Sound, with the green wooded shores on either hand, bright blue skies and clear water, made a beautiful sight. When Lasca passed the buoy off West Chop it was losing and boiling in a furious tide, but with kites drawing before the breeze, now fresh and steady from S.S.W., she went by like a steamer. Vigilant went by a little later, having run through Constellation's lee. She carried spinaker and balloon jibtopsail, both belling and tugging at the sheets, while the green water rolled along in front of her big bows. Jubilee was lashed the buoy off West Chop it was losing and boiling in a furious tide, but with kites drawing before the breeze, now fresh and steady from S.S.W., she went by like a steamer. Vigilant went by a little later, having run through Constellation's lee. She carried spinaker and balloon jibtopsail, both belling and tugging at the sheets, while the green water rolled along in front of her big bows. Jubilee was lashed the buoy off West Chop it was losing and boiling in a furious tide, but with kites drawing before the breeze, now fresh and steady from S.S.W., she went by like a steamer. Vigilant went by a little later, having run through Constellation's lee. She carried spinaker and balloon jibtopsail, both belling and tugging at the sheets, while the green water rolled along in front of her big bows. So far as the real merits of the yachts are concerned, the times show nothing, the boats being practically even when the fluking began between the Hen and Chickens and West Island.

The fleet, increased by a number of sailing and steam yachts which had run out from Newport to see the finish, worked into the harbor, and though there was nothing like the muster of the preceding week, there was still a goodly assembly for the end of the cruise. Many yachtsmen waited over longer than they intended in the hope of seeing one fair trial in the regatta, but the interest of the spectators increased instead of diminished by the various meetings since the cruise began, not one of which was at all conclusive as to the merits of the boats in good sailing weather.

Vigilant was at anchor in Brenton's Cove, having arrived early in the day. A very handsome new hollow boom made by her builders was shipped, and another mainsail bent, being taken from the tender and hoisted on board in its place. Mr. Gilbert Wilson, of Wiscasset, and Griffin, who made her sails, were on board during the day and stayed with her for the first race. Jubilee was anchored near Vigilant, none the worse, from all accounts, for the grounding off the Vineyard. She was completely stripped, a large shore boat being used to lighten off the stuff, some eight tons being taken out, representing the difference between her racing and cruising trim. Her canvas was not at all wet, but the same sails were used throughout the cruise. One of the boats in the fleet, the *Yampa*, which was the slight accident of Thursday being repaired, a new hollow footyard made by Lawley, and of suitable length, being obtained of the Thetis. Colonia, lying just above the harbor, was also in readiness.

Thames street and the wharves were lively during the evening, yachtsmen, skippers and jack tars gathering in little groups and discussing the work of their favorite boats and the probabilities of the morning. The amount of feeling involved in the wide interest of the new boats is evidenced by the excitement over each meeting; on the attendant steamers and club boats excited groups would gather and watch every move closely, a shout going up from one group as Vigilant or Jubilee gained a slight advantage, the demonstration being received with a cold silence from the partisans of the other three, each of whom awaited the time when it would be his turn to start.

The divisions and sub-divisions of the various factions ran into the most complicated ramifications; New York, although represented by Eastern built boats, is fighting Boston with a revival of the old feeling which rather prematurely dubbed Puritan a "brick sloop," and led to the painting, months in advance, of a picture of the New York yacht leading Puritan around the Lightship in the trial races of 1885. Stopped for a time by the prominence of the East in the defense of the Cup, the old feeling has again awakened.

Opposed to it, however, is a widespread sympathy, by no means confined to Boston or the East, with Gen. Paine, as representing more than any other one person the success of America in the contests of 1885-6-7. This feeling is found everywhere, regardless alike of local jealousies and technical points.

Among Colonia's adherents are a large part of the Herreshoff following, and the Wasp and Gloria, and also a number who have deeper motive than personal friendship or admiration for Mr. Rogers and Captain Haff, each of whom holds an enviable place among American yachtsmen, amateur and professional. Rear Com. Rogers' reputation in the old Bedouin, and the promptness with which he had a Cup defender under way on the first acceptance of the challenge, have won much sympathy for Colonia, even from those unknown to the start, who by the work of Captain Haff in Volunteer, to say nothing of his skillful handling of *Fancy* and *Titania*, have made his name familiar to all American yachtsmen.

One broad line of division shading into many minor ones is drawn at the bulb fin-keel; this innovation, as represented by Pilgrim and Jubilee, is praised by many as a substantial advance in designing, and as heartily denounced by many others as a mischievous machine comparison. The former is defended by those who stand by the deep fin, while others uphold the more moderate draft and increased range of use of the centerboard fin.

Naturally the Herreshoffs, after *Gloriana*, *Wasp* and *Dilemma*, have a very large personal following, divided into keel and centerboard, but all looking to see Bristol beat Boston. The pluck and enterprise displayed by the two young Boston designers, Stewart & Binney, in not only providing a fast and efficient defender for the Cup, but in carrying the fin keel to a practical test has won them many friends throughout the country, while those who have seen the result of their work as displayed in their drydock have nothing but praise for it. Taken altogether, the issues this year, national, local and technical, are infinitely more complicated and no less sharply contested than in the old cutter and sloop controversy.

### Astor Cups, First Race.

NEWPORT, WINDWARD AND LEeward.

Thursday, Aug. 17.

The official announcement of the conditions of the Astor cups was as follows, some slight changes having been made from the original announcement earlier in the season:

Capt. J. J. Astor, N. Y. Y. C. offers two cups, \$600 each, to be sailed for by sloops, cutters and yawls belonging to the club, under the following conditions:

The winner of the first day's race is to take one cup, and the winner, second, third and fourth boats shall compete in the second race for the other cup. In the event of the second cup being won by the boat which was second, third or fourth in the first day's race, there shall be a third race between these two boats, and the winner of the third race shall take both cups.

Time limit for each race is six hours. Hauling out to clean not allowed after commencement of the cruise. Wind and weather permitting, the race will be sailed on consecutive days. Entries must be made in writing. They will be received on board the flagship up to 8 A. M. Aug. 17.

Sailing directions for Aug. 17.—The start will be made at 11 A. M. Should a signal gun miss fire, a prolonged blast of the whistle will be given. Starting signals (one gun start): Preparatory, a gun will be fired and the club signal lowered and the blue peter set in its place; 10 minutes later a second gun will be fired, the blue peter lowered and a red ball hoisted on the frigate stay, and this will be the starting time for all contestants. When they have crossed the line the club signal will be reset and the ball will come down.

Course: From an imaginary line between the May and Brenton's Reef Lightship, to and around a float displaying a large red flag 15 miles to windward or to leeward, and return, finishing over a line drawn at the start. The boat which is left on the starboard hand in rounding. It will be marked by a tug, a short distance beyond, displaying a large club top signal. The compass course will be signalled before the preparatory signal is made.

The fact was not generally known to the spectators until after the race, but shortly before the start the regatta committee gave notice to each of the four yachts that the one-gun start would be replaced by a time start, with an interval of two minutes, in which the yachts might cross before being handicapped. As it was, every one was looking for a one-gun start, and the opening maneuvers were generally misunderstood by the onlookers.

Thursday was the first approach to a stormy day encountered on the cruise. Tuesday had been cool and cloudy, and during the night the wind came in fresh from S.E., light in the harbor but a good working breeze outside. The racing contingent was awake and on deck by 5 A. M., and the eager yachtsmen who flocked in by train from Boston and other points had turned out quite early, so far as the racing was concerned, the start might have been made by 9:30. There was much more than this to be considered, however. Newport society had delayed to take an interest in the races for the Astor cup, and so the early hour of 11 A. M. had been set for the start. It was well on to that time before the last launch load had been landed aboard the Newport division of the steam yacht fleet—May, Nourmah, Reva, Electra, Intrepid, White Layde, Conqueror, Iuna and Magnolia.

The four racers, with a large attendant fleet, were at the Lightship by 10 A. M., sailing and steam yachts, tugs, catboats, launches, and the monitor Miantonomah and the torpedo boat Cushing. On board of Pilgrim were Messrs. Geo. A. Stewart, Arthur Binney and Captain Edward Sherlock, Messrs. Adams, of Harpoon; E. Palmer, Bayard Thayer, of Concord; Mr. Otis was still ill ashore, having made his accident on Thursday. On board of Colonia were Mr. Rogers, Capt. Hank Haff and his son Harry, mate; Capt. Rhodes, of Lasca, and Berry, of Wasp. Mr. N. G. Herreshoff, the designer of the yacht, was this time on board, having sailed on Vigilant in most of the previous races. On Jubilee were Gen. Paine and Mr. John B. Paine, Capt. John Barr, Messrs. Richards, Fay, Bryant and Wood. Mr. Adrian Wilson of Wiscasset, and the Boston sailmakers who have canvassed the *Colonia* and Pilgrim, were on board, while the *Yampa* carried Vice-Com. W. Butler Duncan, C. Oliver Iselin, E. A. Willard, Herbert C. Leeds, Randolph Hurry, Mr. Wilson, the sailmaker, was also on board, and Capt. Hansen was in command.

On the wind as they worked about the line the racers were about plankshire to under clubtopsails. Jubilee had trouble with hers, resetting it; Vigilant was carrying her smaller clubtopsail. The *Yampa*, and the *Colonia*, and the *Pilgrim*, were all under reefed N. E. of the Brenton's Reef Lightship, in line with Brenton's Point. The preparatory gun was fired at 11:25, and the four soon began to work for positions. While Jubilee ran over the line the other three lay to west of the lightship. About four minutes before the gun Jubilee stood back over the line to the starting side, and tacked between the lightship and Colonia, Pilgrim being under the latter's lee while the *Yampa* and *Colonia* were to windward. The *Yampa* was a little before the gun and bore away, so that she was in the leeward berth near the middle when she crossed. Jubilee went over promptly on the weather end, close by the lightship, with Colonia just astern, Vigilant waited until all the others had gone and then shaved by the lightship and made a shoot to windward to get well clear of Colonia's wind. She luffed a little too high, the headsails flattening, but filled away, and the first time the four cup defenders were fairly started in a good race, the times for the start were: Jubilee 11:35:21, Pilgrim 11:35:26, Colonia 11:35:58, Vigilant 11:36:10.

As they settled down to real windward work all carried clubtopsails and baby jibtopsails, though Jubilee did not break hers out at first. In the matter of canvas, Jubilee was at a disadvantage, her clubtopsail sitting badly and the mainsail being inferior to the others. Her sails, with those of Colonia and Pilgrim, were made by Messrs. Wilson & Griffin, of New York. Colonia and Pilgrim showed better sitting sails, especially the club topsails. The lacing on Jubilee's topsail parted before the start, but the damage had been repaired.

The first quarter of an hour served to place the boats, such sailing as has since been done in this and later races merely confirming the position of the boats, and those who were in the lead remained so fully. Though to leeward, Pilgrim sprang away at first, and opened a little from under Jubilee and then even ran clear. Colonia in the latter's wake was about holding her, while Vigilant was not footing with the others.

The friends of the fin-keel were jubilant, but only for a minute or two; she was carrying sail well, though heeling a little more than any of the others, and she was just coming up, but Jubilee began to heel, and when the stern between the beam and beam widened perceptibly, the deep fin sliding off. Colonia and Jubilee were making a fine race, the latter a hundred yards astern, but neither losing nor gaining.

Five minutes had hardly gone before Jubilee pulled up and then slipped clear of Pilgrim; then Colonia drew across the fin boat's wind and stood to pass her as Jubilee was just coming up, and she was from the stern. As the *Yampa* was on her weather quarter, Pilgrim made a tack to starboard, heading off shore to the southward and passing just under Colonia's stern.

All this time Vigilant had been steadily weathering out to windward, pointing high and holding where she looked, and though further astern than at the start measured as the boats were heading, she was well to windward of the other two.

The four boats were now on a straight line, Colonia midway between Jubilee and Vigilant, the former well ahead of her lee bow and the latter well to windward of her weather quarter. The steam fleet ran but a short distance to leeward of the racers, holding abreast of them, and it was possible to note every slight gain or loss. The wind held fresh, and Jubilee was now heeling the most, she had footed well ahead, but was not getting to windward with Vigilant, Colonia being astern, and the *Yampa* was just coming up, and Pilgrim was holding off at some distance from the others, but in about the same wind.

Colonia was the first to go on port tack after Pilgrim at 12:10; Vigilant cast about at once and found herself well placed on Colonia's weather bow. When Jubilee went about a couple of minutes later, she was to windward of the others, but a long distance astern. Vigilant was carrying her baby jibtopsail, the others having stowed theirs to starboard. At this point, when the *Yampa* was about half a mile from Vigilant's lee quarter, while Jubilee was about half a mile from her weather quarter and not holding this place. Pilgrim, off to the S. W., was visible indistinctly, a light rain beginning to fall, she having just gone on starboard tack to close in with the others.

She had certainly improved her position, since leaving the fleet, for as she and Colonia neared it was clear that she would go by easily, and at 12:47 she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on starboard tack, and when they met after another twenty minutes, Pilgrim, on the wrong tack, was compelled to go under her stern. Colonia stood across and weathered Jubilee, tacking at 1:15 on the latter's weather bow. Again Pilgrim came in with the others, and this time, about 1:30, she crossed the point of the light, and the *Yampa* was close by her stern, and the *Colonia* was well astern of Vigilant, but ahead of Colonia and Jubilee. Her gain was of short duration, Colonia went on star

**Hobbs Hole Y. C. Annual Regatta.**

PLYMOUTH—MASS.  
Tuesday, Aug. 14.

The Hobbs Hole Y. C., of Plymouth, sailed its annual regatta on Aug. 15 over a 6-mile course inside the harbor in a light N. E. wind. The elapsed times were:

FIRST CLASS.			
Sigrid, Watson & Loothe.	1	51	51
Future, William F. Whitman.	1	51	56
Amie E., Hartford.	1	54	54
SECOND CLASS.			
Sachem, Frothingham.	1	45	48
Old Homesty, Melbourne McDowell.	1	50	22
Puritan, C. D. Craig.	1	51	17
Gypsy Girl, W. Steele.	1	52	26
Mystery, T. S. Dimon.	1	55	18
Maj. D. S. Drew.	1	55	08
Spray, C. F. Bradford.	1	59	09
Alice, Horace Drew.	2	02	54
Hoyer, Besse.	2	05	27
THIRD CLASS.			
Aggie, Frank Rogers.	2	01	51
Jessie, I. Morton.	2	07	51
Pilgrim, A. Bartlett.	2	09	32
Grace Weston, Henry Jordan.	2	09	35
S. B. S. Holmes.	2	13	18
Clytie, A. B. Rogers.	2	19	30
Cock Robin, S. L. Thurston.	2	20	02
Hustler, Nathan Burgess.	2	22	10
Vigilant, Charles Rogers.	2	22	54
FOURTH CLASS.			
Aphrodite, A. G. Fay.	1	50	55
Two Stars, Henry Jones.	2	00	23
Mignon, Damon Bros.	2	01	36
Gertrude, I. S. Brewster.	withdrew.		

**Mobile Y. C.**

MOBILE BAY.  
Saturday, July 22.

The Mobile Y. C. sailed a race over a 15 knot triangular course, with fair weather, S. E. wind and flood tide. The times were:

FIRST CLASS SCHOONERS.			
Length.	Start.	Finish.	Elapsed.
Native.	2 08 24	5 30 42	3 22 18
Mexican Gulf, W. Mickle.	2 07 43	5 58 50	3 51 07
Sam Jones, T. Mitchell.	2 11 20	6 11 03	3 59 43
Gertie.	2 09 21	Withdrew.	
SECOND CLASS CABIN SLOOPS.			
Agnes, A. Mehle.	2 09 11	.....	
Zephine, W. B. Curran.	2 07 09	5 19 23	3 10 12
Ocean, Jno. Wallack.	2 15 20	5 37 55	3 20 46
Siren, H. L. Pettus.	2 11 50	5 40 20	3 25 00
Nellie, G. H. Fonde.	2 11 45	5 44 35	3 32 45
Maud, C. E. Vincent.	2 05 23	5 46 10	3 40 42
THIRD CLASS OPEN SLOOPS.			
Maggie P.	2 08 30	5 35 00	.....
Clara D.	2 12 52	5 43 05	.....
Sissie.	2 09 21	5 45 30	.....
Teaser.	2 09 00	5 49 11	.....
Frank L.	19.00	Withdrew.	
FOURTH CLASS CATS.			
Phantom.	2 22.00	5 47 03	3 25 03
Falcon.	2 11 05	6 02 30	3 51 25
Winona.	17.06	6 09 15	4 00 30

Winners—Class one: First, Native; second, Mexican Gulf. Class two: First, Agnes; second, Zephine. Class three: First, Maggie P.; second, Teaser. Class four: First, Phantom; second, Winona. Regatta committee: Ted Peterson, C. A. Hall and Thos. Mitchell. Judges, Chas. O. Fulton, W. A. Oates.

**Oriole Y. C. Annual Regatta.**

CANARSIE—JAMAICA BAY.  
Saturday, Aug. 12.

The Oriole Y. C., of Canarsie, sailed its annual regatta on Aug. 12 in a fresh northeast breeze, the times being:

CLASS A—CATBOATS OVER 20FT.			
Calla.	Elapsed.	Corrected.	
Calla.	1 09 50	1 10 50	
Maggie.	1 10 45	1 10 55	
Farewell.	1 09 50	1 10 00	
Lottie Tudie.	1 09 10	1 09 00	
Aggie M.	1 10 05	1 11 20	
Hebe.	1 10 30	1 11 10	
Hurry.	1 10 25	1 11 05	
Pell.	1 09 55	1 11 05	
Sea Gull.	1 10 10	1 11 10	
Quack.	1 10 50	1 11 30	
CLASS B—CATBOATS UNDER 20FT.			
Catac.	1 19 30	1 20 30	
Duck.	1 23 50	1 24 50	
Fly.	1 28 20	1 28 00	
Bea.	1 23 20	1 29 00	
Maxey.	1 28 10	1 28 10	

**Seawanhaka Corinthian Y. C.**

OYSTER BAY.  
Saturday, Aug. 19.

HANDICAP RACE.—The course: Starting from south to north of line between two marks south of Moses Point, thence to Cold Spring Light, keeping it on the port hand, thence to Center Island Buoy, keeping it on the starboard hand, thence to Lloyd's Point Buoy, keeping it on the starboard hand, thence to Cold Spring Light, keeping it on the starboard hand, thence to finish, crossing line from north to south,

keeping to north of Black Buoy at mouth of harbor going and coming. Start at 11:35:

Trinket, T. S. Young, Jr.	Finished.	Elapsed.	Corrected.
Folly, Geo. Bullock.	2 31 45	2 58 45	2 45 45
Meteor, Wm. Trotter.	2 26 42	2 51 42	2 51 42
Dodo, E. M. Townsend, Jr.	2 32 20	2 57 20	2 52 20
Nameless, C. W. Wetmore.	2 33 24	2 58 24	2 51 24
Nadly, A. F. Montaut.	did not finish.		
Scarecrow, C. J. Stevens.	2 42 50	3 07 50	2 54 50
Pilgrim, E. M. Townsend.	2 24 50	2 49 50	2 43 50

First prize, Pilgrim; second prize, Trinket. Judge, W. Emlein Roosevelt.

**Patchogue Annual.**

PATCHOGUE, Aug. 19.—The first annual regatta of the Patchogue Y. C. was sailed this afternoon. Twelve of the fastest boats in the club started, and much interest centered in the sailing qualities of the lately built narrow-waisted boats as compared with the old broad-beamers. In the sloop class the Charles F. Dayton, an oldtimer, and nearly as broad as she is long, was the favorite. She led to the turn, but was afterward compelled to draw out on account of an accident to her topsail. The Rose Silsbee then took the lead, and won by five minutes over the Twin Brothers. In the second class for sloops, the little Southern yacht Alice M. Newton ought to have won, but she fouled the stake boat, and the race was awarded to the Odell.

In the class for first-class catboats the Carola won easily. She was sailed by her owner's son, Fred Thurber, who is under 30 years old. The Dolphin, winner of many races in New York harbor, was easily beaten by the Beulah, a new narrow boat. The course was a twenty-mile angular one. The Patchogue boats ran nearly to the stakeboat of the Sayville Club, whose regatta was sailing at the same time, and they gave a long line of canvas as pleasing as it was unusual.

**Meteor-Thistle.**

Wassersport, the enterprising and wide awake yachting journal of Germany, has placed yachtsmen under great obligations by the publication in the issue of July 27 of the last competitor for the America cup, which we here reproduce. Whatever defects Thistle,

now Meteor, may have possessed, there is much about her to admire in beauty of form and harmony of design. We are not able at present to discuss at length the points of the design, but it is clearly evident that Thistle is in model a centerboard boat, and that only with the aid of a centerboard could she compare to windward with the American centerboard craft.

**Sayville Y. C. Annual.**

The second annual regatta of the Sayville Y. C. took place in Great South Bay, Long Island, Aug. 19, with a fresh S. E. breeze. The special race between the sloops Bonnie Doon and Berkley occasioned a great deal of interest on account of the Berkley having been queen of the bay until the Bonnie Doon defeated her in a recent race at Bayshore. Bonnie Doon won easily, her time being 3:02:35. Berkley was nearly 10m. behind. The Sayville Club has bought a club house, and the future of the organization is bright. The races to-day were timed as follows:

Special class, sloops: Bonnie Doon Arthur Gibb, 3:02:35. Class 1: Berkley, Alden S. Swan, 3:12:21; Annie Florence, E. Tuttle, did not finish; Louisa, Edmund Terry, did not finish; Flyaway, Bert Rogers, 3:21:55; Triton, S. V. Rogers, 3:17:17; Edna B. Daniel Bishop, 3:21:09; Willard Hall, Charles Rogers, did not finish; Margie Brown, George Anderson, did not finish. Catboats, Class 1: Dom Pedro, E. Ketcham, did not finish; Loretta, Otto Kahler, 2:13:53; Edward Preston, Syms Baker, 2:17:28; Lottie Throckmorton, Percy Collins, 2:31:41; Reliance, Westlake Brothers, 2:15:03. Catboats, Class 2: Undula, John L. Lawrence, 2:34:34; Lisa, John R. Suydam, 2:27:05; Edith, W. K. Post, 2:37:24; Mennie, Edward E. Winters, 2:40:42; Emelie Isabel, Elmer Murdoch, 2:38:03; Sparks, F. G. Bourne, 2:35:46; Columbia, John Cassidy, 2:47:25; Whiff, Arthur K. Bourne, did not finish.

**YACHT NEWS NOTES.**

The special race of the Atlantic Y. C. for the Banks cup, for yachts built this year to defend the America's Cup, will be sailed on Aug. 31, starting off Sandy Hook. The tug Mutual will follow the race.

The Seawanhaka Corinthian Y. C. has offered prizes to the amount of \$250 for a race of oyster boats on Labor Day. The course will be a triangle of eleven miles, off Oyster Bay. There will be two classes, over 25ft. and not over 25ft.

The nineteenth open regatta of the South Boston Y. C. will be held off club house, Marine Park, City Point, South Boston, Saturday, Sept. 9, 1898. Classes, 28 to 35ft., 24 to 28ft., 21 to 24ft., 15 to 18ft., and under 15ft. sailing length. Special class under 22ft. waterline. Cash prizes approximate \$300. A cordial invitation to all.

**Canoeing.**

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

**FIXTURES.**

AUGUST.

11-26. A. C. A. Meet, St. Lawrence River.

SEPTEMBER.

2. Orange An., Arlington, N. J. 16. Red Dragon, Delaware River.  
4. Ianthe, An., Passaic River. 16. Toronto, International Paddling Trophy Race.  
4. Holyoke, Fall, Holyoke, Mass.

**Glenwood—"Electra."**

CANOEING has always been regarded as a particularly clean sport, free not only from all taint of professionalism and mercenary considerations, but in particular from all unfair and dishonest practices. It is then with great regret that we are obliged to borrow from the vocabulary of the turf a fitting term to describe a recent occurrence, which has already been alluded to in our columns. In racing parlance a "ringer" is a horse of known reputation, which for dishonest purposes is disguised in some way and entered under a false name, usually in a distant locality where he is little likely to be recognized. The canoe Glenwood is one of the best known of American canoes and is unquestionably one of the fastest racing canoes ever built. She was built last year to the special order of Mr. T. S. Oxholm, of the Yonkers C. C., her designer and builder being Capt. George W. Ruggles, of Rochester, N. Y. Glenwood was sailed through the entire season by Mr. Oxholm, and with great success, winning many prizes. At the end of the season, Mr. Oxholm being about to give up racing, she was advertised for sale, and during the winter she was sold, one of the conditions of the sale being that the name of the purchaser should not be made public, and to this Mr. Oxholm agreed, as such a stipulation is in no way unusual.

Our readers may remember during the spring several communications from a special Western correspondent in regard to the Mahanawauk C. C., in each of which a new canoe, to be named Electra, was mentioned as building by the Davis Boat and Oar Company for Mr. A. W. Friese, of that club, and also a member of the Western Canoe Association. The canoe was present at the recent W. C. A. meet, as reported in the FOREST AND STREAM, and sailed very fast. Since the report was published the rumor reached us that the so-called Electra, built by the Davis Boat and Oar Co., of which firm, by the way, Mr. Friese is the Milwaukee agent, was no other than the Glenwood, having been shipped to Milwaukee and the name plates removed and a new name painted.

We have been at some trouble to verify this report, and find that it is unquestionably correct. At the same time we find that the entire matter was from the first fully known to the special correspondent who sent us the different reports from Milwaukee already mentioned, and who has imposed both upon us and our readers. In justice to our Chicago correspondent, Mr. E. Hough, we may say that though present for a short time at the W. C. A. meet, he was imposed on by the perfectly plausible reports there circulated concerning the origin of the canoe, and further, in his absence a portion of the report was written by the special correspondent before referred to. These are the facts. Further comments are unnecessary, as all gentlemen sportsmen will draw their own conclusions from them.

THE racing of the new yachts has monopolized so much of our space during the past two weeks that we have been able to give no attention to the A. C. A. meet, which is progressing very successfully at Long Island Park. Next week, however, we hope to give very full reports of the camp and the racing.

WE must ask the indulgence of our correspondents just now, as absence from New York with the yachts and canoes has prevented the acknowledgment of a number of communications and the answering of various inquiries.

**The Original "Kelpie."**

CAMP OF THE KINGFISHERS (in a rain), Platte Lake, Mich., Aug. 16.—Editor Forest and Stream: My attention has been called to a statement by Mr. George B. Ellard, made at a meeting of the W. C. A. and published in your issue of Aug. 5, in which that gentleman claims originality in the use of the word "Kelpie" as a *nom de plume*. He seems to attach a good deal of importance to this, and as I had heard something of the sort before through friends of his (from whom I got the impression that he had given up his idea of original proprietorship), I think that it can do no harm if I state the following facts. In the summer of 1859 my friend Mr. S. C. Hatheway, a lawyer long

METEOR-THISTLE.—FROM "WASSERSPORT."

resident in Boston, made with me a cruise in a canvas canoe, starting at Lancaster, Mass., on the Nashua River, and following that stream to the Merrimack, thence down this river to Newburyport, or until the water became decidedly salt. This canoe was the Kelpie, the name having been painted on her the previous winter, when I had constructed her without assistance or previous knowledge of such matters except what I could gather from birch canoes or common boats. I have never used a canoe which suited me as well, and she was in good order when stolen from me five or six years later. Since this my favorite boat for the time has always been called Kelpie.

When I first wrote for the FOREST AND STREAM I signed my articles with an "X," but as some one else afterward did the same, I changed my pen name to "Kelpie," naturally enough, as she figured in most of my proceeds published in those days. I cannot say when this change took place (though the editor could, if he chose), but if Mr. George B. Ellard's use of the name antedates my own, it must have been begun some dozen years ago. If the editor thinks him better entitled to use this signature than myself I am quite ready to substitute another whenever the condition of my eyes shall permit me to write for the papers with comfort to myself.

In 1860 I was accompanied in some of the long cruises which I made on Lakes Squam, Winnepesaukee and other New Hampshire waters in the Kelpie by Prof. E. H. Kussell, of Worcester, Mass., and in no case did Mr. Russell, Mr. Hatheway or myself, while on these trips, behold a canoe of any sort, except one heavy birch, which was chained to the dock at Lowell, Mass.

I may add in conclusion that I cannot feel that any apology for my use of the name "Kelpie" is due from me to Mr. George B. Ellard. He is, however, at liberty to offer one if he chooses to.

KELPIE.

### Cincinnati.

CINCINNATI, O., Aug. 13.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores as appended. Conditions 200yds. off-hand at the standard target: Dr. L. O. Rodgers, 41st; first class, C. Thierbach, 42d; second class, D. Faktor, 43d.

Dr. Rodgers spoilt his score by accidentally scoring a clean miss on his 16th shot. The club, however, enjoyed a potation at his expense when he made the following run in his 9th, 10th, 11th, 12th and 13th shots: 24 25 25 24 25—123, out of possible 125.

ROELL.

### Greenville Rifle Club.

The weekly rifle shoot of the Greenville Rifle Club at headquarters, No. 112 Cator avenue, Greenville, N. J., on Friday night, Aug. 18, had its usual attendance. The following scores were made by the members present, 10 shots, possible 250, distance 35yds.: Plaisted 240, C. Boag 239, Collins 238, Chantant 237, F. Kussell 236, Dodds 233, Robt. Lutz 233, Spain 230, Hill 215, Becker 211. The weekly outing on Saturday, Aug. 19, had its usual attendance of regulars. The weather conditions were favorable for good scores. That old veteran of the butts, Mr. Dorrier, gave the boys an exhibition of good holding by making a score of 232 points in ten shots on the German ring-target.

In an individual match of 30 shots between Messrs Dorrier and Plaisted the following scores were made: 25 25 25 21 24 18 25 23 19 22—255

Plaisted (38-55 Bal., 390 lub.)..... 25 24 23 23 19 20 22 20 24 23—219-444

Dorrier (38-55 Bal., 225 patch)..... 25 20 20 23 19 21 21 24 23 19—215

21 24 19 22 23 23 23 22 17 21—215-430

In regular practice the following scores were made, 10 shots, German ring-target, etc.: Mr. Dorrier (38-55 Bal., 225 patch)..... 25 23 24 21 23 23 25 23 24 22—332

Ch. Chantant (38-55 Winch., 390 lub.)..... 21 23 24 21 23 25 20 21 21—221

Plaisted (38-55 Bal., 260 lub.)..... 21 23 21 24 18 23 22 24 23—221

W C Collins (32-30 Bal., 125 lub.)..... 15 17 24 20 21 14 18 21 24—206

O C Boyce (40-60 Bal., 390 lub.)..... 24 22 15 16 23 22 14 23 19—201

J Spahn (32-40 Winch., 105 lub.)..... 17 18 16 16 23 22 17 15 18 16—178

J Dodds (38-55 Bal., 225 lub.)..... 18 17 14 14 18 16 19 12 22 20—170

### Bisley Rifle Club Meeting, 1893.

The Bisley revolver competitions were a great success, there were more entries than ever before and the shooting of a much higher class than formerly. A Dutch revolver shot competed but did not get up into the prize list. During the second week, when Mr. Walter Winans was leading in all the fourteen revolver competitions, he heard that there was an opinion among the other revolver shots that the reason he was ahead was because he could have several tries for each series (they being unlimited entry competitions), and that he could not shoot a target straight out. To dispel this idea he told the champion revolver shot of Ireland, Mr. Joynt, that he was willing to shoot him a revolver match on any terms Mr. Joynt preferred. Mr. Joynt said

he preferred 30 shots at a stationary target at 50yds. The terms agreed to were \$50, Mr. Winans leaving that also to Mr. Joynt to decide. It was shot before a large crowd of spectators, the betting ruling in Mr. Joynt's favor. He shot a Webley and Mr. Winans a Smith & Wesson. The match can be described in a few words, Mr. Winans took the lead in the first few shots and gradually adding to his advantage, finishing 5 points ahead, his backers making a good thing on the odds offered against him. The shot for shot score is as follows on a 4in. bullseye, counting 7 points, the next ring counting 6, being 6in. in diameter. Mr. Winans, except for an accidental "let off," did not get outside the "4" ring.

Walter Winans.....655657765476763757464674464766—168

W Joynt.....567757455557345573456657554467—163

The next day the return match was shot, the same distance and number of shots, only Walsrode smokeless powder and military revolvers were used. Mr. Winans had two bad cartridges for his first two shots, and Mr. Joynt getting on the bullseye his first shot he got a lead of 11 points when the match was half over, and it looked as if it was hopeless for Winans to continue. He shot very carefully, however, and Mr. Joynt missing the target in one of his last shots, Mr. Winans won by two points.

The revolver competitions resulted as follows:

Military revolvers, Series 1 (sliding target): First, Walter Winans, 38; second, Green (professional), a worse 38.

Military revolvers, Series 2 (disappearing target): First divided by Walter Winans and Haig with an equal 40.

Military revolvers, Series 3 (rapid-firing): First, Walter Winans, 38; second, Haig, 35 (a worse 38).

Military revolvers, Series 4 (50yds.): First, Walter Winans, 38; second, W Joynt, 38 (a worse 38).

Military revolver aggregate: First, Walter Winans, 153; second, Haig, 147.

Target revolvers, Series 1 (sliding target): First, Walter Winans, 39; second, Capt. Lamb, 35.

Target revolvers, Series 2 (disappearing target): Walter Winans and Green (professional) divided first with 41 points.

Target revolvers, Series 3 (rapid-firing): First, Walter Winans, 38; second, Major Mackerell, 34.

Target revolver, Series 4, 50yds.: 1st, Walter Winans 40 (the best on record score for 50yds.); 2d, Lieut. Heath 39.

Target revolver aggregate: 1st, Walter Winans 157.

Revolver grand aggregate and gold vase: Walter Winans 313 (no body else within 30 points of him). Smith & Wesson revolver prize: A. Haig, 147.

Walsrode, for smokeless powder in a revolver at a disappearing target: 1st, Walter Winans 38, 2d, Andrews (professional) 36.

Walsrode, 50yds.: Walter Winans and Lowe 37 points each, the 5 being at the end of Winans' score and in the middle of Lowe's score, the latter took first prize on what was really a divide.

It will be noticed that Mr. Winans won in each by only as much as was necessary to do so, except in the gold cup which required the revolver championship of Great Britain and which he therefore was not inclined to play with. At the prize distribution he therefore went up for 13 first prizes, which is the best on record, the former best being the 10 he went up for last year.

It is a great pity that M. Joru did not appear at the ranges, as the English daily papers made remarks about it, he having expressed his determination to compete this year.

LONDON.

### International Columbian Prize Shooting.

SHARPSHOOTERS' PARK, West Pullman, Ill., Aug. 13 and 14.—It was very lively on the range. The youngest shooter who ever appeared at the range was Master Clarence Long, from Lafayette, Ind., 10 years old, passing 14 shots and making his first bullseye for the Columbian medal; he was in care of his father.

The following shooters shot for the medal at different targets: Jas. Braun, Jr., Joliet; F. W. Burk, Davenport; Alois Woerner, Indianapolis; W. H. Korn, Davenport; Frank Bedaro, Davenport; Dr. C. Mathey, Davenport; Aug. Mende, St. Louis; N. Burk, St. Louis; H. Black, St. Louis; L. J. Sehring, Joliet; John Spelter, Joliet; H. Sehring, Joliet; G. A. Martin, Joliet; Anton Wagner, Joliet; T. Bentmuller, Joliet; H. F. Piepenbrink, Joliet; C. Brau, Joliet; Ezra Gould, Elgin; F. Karlen, Jr., Monroe, Wis.; H. Berg, Sr., Davenport; Anton Kaiser, Chicago; N. M. Platke, Chicago; H. Miller, Chicago, and Master Clarence Long, Lafayette.

King Target.—Fred Ingersoll 20, H. Berg 204, J. Karlen, 203, P. H. Dalahunty, Pittston, 197, H. F. Piepenbrink 197, R. Helmdorf, Chicago, 195, Anton Wagner 191, R. Helmdorf 189, A. Woerner 189, Jas. Braun, Jr., 187, Dr. C. Mathey 186, Frank Bedaro 184, Wm. Boehmer 178, F. Martin 174, Wm. Ott 172, N. M. Platke 169, H. Sehring 164, F. W. Burk 151, W. H. Korn 151, Aug. Mende 150.

Columbia Target.—F. Bedaro 66, F. Karlen 65, Aug. Mende 64, W. Boehmer 64, Alois Woerner 64, Jas. Braun 61, J. H. Burk 61, N. M. Platke 59, J. Helmdorf 59, E. Richter 63, P. H. Dalahunty 57, F. A. Martin 63, H. Berg 51, N. Burk 50, H. F. Piepenbrink 47, A. Wagner 46, H. Sehring 44, Dr. C. Mathey 44, H. Black 41, W. H. Korn 36, W. Korn 39.

Bullseye Target.—C. A. Johnson 29 flags out of 100 shots, John Spelter 26, F. Bentmuller 24, L. J. Sehring 22, J. A. Kelley 22, Frank Bedaro 22, Jas. Braun, Jr., 20, F. Ingersoll 18, E. Richter 15, A. Wagner 14, R. D. Carroll 13, F. A. Martin 13, H. Berg 11, A. Woerner 11, J. Karlen 11, Dr. C. Mathey 10, H. Sehring 7, F. W. Burk 7, N. Burk 6, H. F. Piepenbrink 5, A. Mende 4, H. Haagen 3, W. E. Korn 2 and Master Clarence Long 2.

People's Target.—Jas. Braun, Jr., 71, L. J. Sehring 70, R. D. Carroll 68, F. A. Martin 67, E. Richter 67, A. Woerner 66, C. A. Johnson 65, H. Sehring 62, F. Bentmuller 62, J. Karlen 61, F. Ingersoll 59, N. M. Platke 59, H. Berg 56, J. Spelter 53, W. E. Korn 54, A. Mende 47, Clarence Long 42.

Man Target.—J. P. Dalahunty 89, J. Spelter 91, W. H. Korn 89, Jas. Braun, Jr., 87, W. Boehmer 85, L. J. Sehring 85, W. Haagen 82, H. F. Piepenbrink 81, E. Richter 81, H. Miller 76, N. M. Platke 72, Wm. Haagen 66, H. Black 64, A. Mende 56, Clarence Long 48.

Standard.—Jas. Braun, Jr., 44, L. J. Sehring 42, J. Spelter 41, P. D. Carroll 39, Wm. Ott 36, C. M. Weinberger 36, A. Mende 33, N. M. Platke 32, E. Richter 32, H. Miller 29.

A. BOESE.

### Independent New York Corps.

The monthly shoot of the Independent New York Corps, in Washington Park, on Friday, Aug. 18, did not receive its usual attendance. The cracks of the corps were on hand as usual and entered into the competition with vim.

On the ring target the honors for high score fell to Wm. Hayes, with a total of 117 for 5 shots out of a possible 125. On the man target Gus Zimmerman was high with a score of 59 out of a possible 60. On the point target Zimmerman was in the lead for the best ticket with 19 out of a possible 20 points.

Ring target, 5 shots, possible 125: Wm. Hayes 117, Geb Krauss 103, Ignatz Marten 106, Fred Simon 105, F. Bittschler 105, M. Griner 101, M. Hermann 77, M. Kuhn 58.

Man target, 3 shots, possible 60: Gus Zimmerman 59, Alex Stein 58, Wm. Hayes 58, Geb Krauss 53, Ignatz Marten 54, F. Simon 51, F. Bittschler 51, M. Kuhn 42.

Point target, 5 shots, possible 20: Gus Zimmerman 19, Aug. Begerow 18, F. Bittschler 17, Geb Krauss 17, Ignatz Marten 16, Alex Stein 15, M. Bauer 15, Dr. Herald 14, F. Simon 14, Wm. Hayes 13, M. Griner 13, M. Baab 12, M. Kranzberg 12, H. Weiler 10, M. Kuhn 10, M. Kurtz 10.

### RIFLE NOTES.

Some of our riflemen have signified a strong desire to see an individual match or series of matches between those two experts Messrs. M. Dorrier and F. C. Ross. These two men are considered to be the best in the country and a match between them would create a great deal of interest in rifle circles. After these two have decided the issue between them perhaps some of our other would be champions will enter the list and help to keep the ball in motion.

While a visitor to the practice shoot of the Independent New York Corps, at Washington Park, last week, we had the pleasure of meeting that veteran rifleman and inventor of the champion American target, Wm. Hayes, calling his attention to Mr. Farrow's remarks concerning the above target. Mr. Hayes requested us to say to the shooting fraternity that they were at liberty to make whatever use of the target they saw fit. Now if the riflemen of the country want to adopt this target here is their opportunity. Those who are too poorly stricken to pay for the cost of printing have only to restore the lead pencil and string, the corner grocery will, no doubt, donate the paper. The price of powder and lead is at ebb tide, now why not have a boom in rifle shooting?

That the management of the International Columbia shooting festival in Chicago would extend the festival for a week continuous was hoped for, but hardly expected by the fraternity throughout the country. The notification of the extension has come at such a late period that many of our Eastern riflemen find themselves unprepared to take advantage of the situation, and the consequence is that many of our riflemen will lose the opportunity of visiting the Fair and the honor of competing for the many prizes at the International shooting festival. But we would caution all our experts to keep their rifles in good trim for 1895, when New York will give them a festival the equal of which has never been seen in America. Its coming sure!

The club house of the Hudson Rifle Club is about to undergo an extensive change and several new additions are to be made for the com-

fort of the visitors and members. The house committee who have it in charge promise a satisfactory showing. The shooting committee, consisting of Messrs. Hansen, Boddey, Middleton, Steuber and Bird, have a large and elaborate programme ready to submit to the club at the September meeting. It will probably take place in October. All arrangements have been completed for the great "Hudson vs. Greenville" match at 20yds., on Labor Day, Sept. 5, at 3 o'clock, for a purse of \$50, the team will consist of 10 men, and already several large amounts have been wagered. The favor seems to be with the Hudsons, but the farmers think they can do the trick once more. Wait and see.

The post office address of many of the New York experts on Friday and Saturday of this week will be Greenville, N. J. The third annual festival of the Excelsior Rifle Club is said to be the cause of the exodus.

We hear rumors of extraordinary results made with the new American (smokeless) powder (Leonard's), and the Smith Brown wire gun, at the government proving grounds, Sandy Hook, last week. It is reported that with 20lbs. of Leonard powder, a velocity of 2,865ft. per second was given to a 32lb. shot. If this report is true it is certainly wonderful, and all Americans whose raiment of patriotism is properly adjusted will extend a happy greeting to our American inventors, over the result of their labors.

In last week's issue Mr. Milton Farrow comes to the front again with another letter under the heading of the "New Army Rifle." In his last communication he accuses the writer of "Rifle Notes" of carelessness and lack of patriotism. To his charge of carelessness we are constrained to plead guilty. In the winter of 1893 we are compelled to what is called with a desire to do a little soldiering and forthwith proceeded to enlist, and on the morning of May 6, 1894, we found ourselves mixed up with the mob that was trying to drive Lee out of the wilderness. From this time to the following April, when Lee gave up the struggle, we were more or less "in it" in the many arguments that occurred from time to time between Grant and Lee. It is from this experience that we made the assertion that the soldier in active service cares but little what his rifle was manufactured or who was the inventor, provided it was the equal of that in the hands of the soldier on the other picket line. Mr. Farrow's query as to whether the soldier in active service would carry his rifle open and empty, leads us to infer that he has never been in such a situation himself. Under extreme excitement the best drilled soldier will handle his rifle with the sure care and forethought that Mr. Farrow handles his with service cares but little what his rifle was manufactured or who was the inventor, provided it was the equal of that in the hands of the soldier on the other picket line. Mr. Farrow's query as to whether the soldier in active service would carry his rifle open and empty, leads us to infer that he has never been in such a situation himself. The house is commodious and the services of an excellent cook having been engaged patrons may be assured of considerate attention. Particulars, apply to S. M. HOLWAY, Machias, Me.

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price \$2.50, postpaid, by the  
FOREST AND STREAM PUBLISHING CO.,  
318 Broadway, New York

Mr. Grinnell's Indian Books.  
BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

NEW EDITION.

Lancaster's Famous Book,  
THE ART OF SHOOTING.

LONDON, FOURTH EDITION, 1892. PRICE \$3.00.

AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

The most desirable and the most attractively located of all the Adirondack hotels. Fine hunting and fishing. Open till Oct. 1. Send for circular.  
HARLOW H. CHANDLER, Manager,  
Wawbeek, Franklin county, N. Y.

HIAWATHA HOUSE.

Located on southerly end of the Indian Carry, on the first of the three Ponds, sometimes called Spectacle Ponds, leading through Stony Creek to Raquette River, on direct communication from Blue Mountain and Tupper's Lakes, to Saranac Lakes. Unexcelled fishing and hunting. Rates per day, \$3.50 per week, \$10 to \$14. Correspondence solicited. W. W. HALE, Proprietor, Post Office address, Axton, Franklin county, N. Y.

RUSTIC LODGE,

Upper Saranac Lake. Daily mails and telegraphic communications. Superb hunting and fishing. Rates \$10 to \$14 per week; \$3.50 per day. Now open for guests.  
J. C. LOCKLIN, Proprietor.

Hotel Sagamore,

Long Lake, N. Y.

Situated on the borders of the wildest and best hunting and fishing section in the Adirondacks. Superior accommodations. For circular, address  
EDWARD BUTLER, Prop.

LAKE HOUSE,

Long Lake, N. Y.

New management. New furniture throughout. Rates from \$8 to \$12 per week. Send for circular. Best of fishing and hunting.  
ANDERSON & MOYNEHAN, Proprietors.

Hotels for Sportsmen.

Adirondacks—Continued.

RAY BROOK HOUSE,

Ray Brook, Essex Co., N. Y.

Within ten minutes' walk of the best trout fishing in the Adirondacks. Fine deer hunting and good dogs. Send for circular. D. CAMERON, Prop.

IN THE ADIRONDACKS.

Taylor House and Cottages.

TAYLOR'S-ON-SCHROON, N. Y.—In a charming location among the pines, on the high banks of Schroon Lake. Fine mountain scenery, good fishing, boating and driving. Table the best and supplied from hotel farms adjoining. Electric lights in hotel and on grounds. Billiards and bowling. Pure mountain spring water. Sanitary arrangements perfect. Send for circular. C. F. TAYLOR & SON,  
Taylor's-on-Schroon, N. Y.

ADIRONDACKS.

WATCH-ROCK HOTEL,

ADIRONDACK, N. Y.

Hotel delightfully situated on Schroon Lake. Excellent cuisine, pure water, as good deer hunting, brook and lake fishing as in the mountains. Experienced guides, boats, outfit, etc. Send for circular.  
GEO. CECIL, Prop.

Pyramid Lake House

Is situated on one of the best fishing waters in the Adirondacks, controlled exclusively for the benefit of its guests. Brook Trout, Black Bass, Deer, Partridge and small game in abundance. Approached from Ticonderoga, Crown Point, or via Schroon Lake. For circular address  
ORRIN HARRIS, Proprietor,  
Paradox, Essex Co., N. Y.

Adirondacks.

LELAND HOUSE.

Excellent bass fishing, deer hunting and partridge shooting. Superior accommodations. Send for circular. L. E. & E. D. LOCKE, Schroon Lake, N. Y.

ADIRONDACKS.

THE ONDAGA HOTEL,

Schroon Lake, N. Y.

First class fishing and hunting. For circulars address  
O'CONNOR BROS.

HUNTER'S HOME.

Best of trout fishing, partridge and rabbit shooting. Eleven deer killed last season. Good dogs and experienced guides. For particulars address ALLEN & WILLIAM LAVERTY, New Russia, N. Y.

ADIRONDACKS.

CHATELAIN HOUSE, Chestertown, N. Y.

Accommodates 150. Best bass fishing in the mountains. Fine partridge shooting in season. Open all the year. Send for circular.  
H. S. DOWNS, Proprietor.

ROOT'S HOTEL.

Best of trout fishing in seven streams, including the Schroon River. Fine deer hunting in September and October. A large and roomy cottage to rent. For particulars address A. CARSON & CO., Proprietors, Schroon River, N. Y.

POTTERSVILLE HOTEL,

Pottersville, N. Y.

Located in the village of Pottersville, on Trout Brook, one-half mile from Schroon Lake. First class partridge shooting and fishing for trout and bass.  
JOHN B. WELLS, Prop.

St. Lawrence River and Neighboring Resorts.

HOTEL ALGONQUIN,

Thousand Islands,  
CAPE VINCENT, NEW YORK.

Black Bass Fishing. Season opens June 21.  
Rates:—Transient, \$2.00 to \$3.00 per day; weekly, \$12.00 to \$21.00. Special rates to families.  
For information address  
F. D. MIDDLETON,  
182 Duane St., New York.

1,000 ISLANDS.

St. Lawrence Hotel,

ALEXANDRIA BAY, N. Y.

\$2 per day. Special rates by the week.  
Also HOTEL COLUMBIA in connection, on European plan. Houses accommodate 150.  
FRED. D. HOWELL, PROP.

Thousand Islands.

River St. Lawrence.

IZAIAK WALTON HOUSE,

T. M. ESSELSTYNN, Manager.

CLAYTON, N. Y.

BASS AND PICKEREL IN ABUNDANCE.

The Largest and Best Located Hotel in Clayton.

1000 Islands.

St. Lawrence River.

FINE VIEW HOUSE,

One of the best points on the river for Bass and Pickerel. Next dock below Thousand Island Park. House newly furnished.  
Terms, \$2.00 Per Day.  
Open until Oct. 1. Post office address, Fine View, via Thousand Island Park.  
G. W. BRETSCH, Proprietor.

Thousand Islands.

River St. Lawrence.

Jefferson House,

Alexandria Bay, N. Y.

Enlarged and refurnished; everything new. Location and hotel service first class. Bath room for guests. Headquarters for fishermen. Rates, \$2 per day.  
J. A. BICKELHAUPT, Prop.

THOUSAND ISLANDS.—THE COLUMBIAN, 1000 Island Park, N. Y. Second season of the finest and most thoroughly equipped hotel on the River St. Lawrence. Special rates by the week or season. The finest bass and pickerel fishing on the river are most easily reached from this house. Send for pamphlet.  
INGLEHART & HADDOCK, Proprietors.

Hotels for Sportsmen.

St. Lawrence River Resorts—Continued.

DOLLINGER HOTEL,

REDWOOD, N. Y.

On the R. W. & O. R. R., one of the best fishing grounds in the State for bass, pickerel, pike and trout. -Hotel first class in every respect.  
Rates, \$2 Per Day.  
The veteran guide John Dollinger with his boat livery is connected with the house.  
ZOLLER & SPRINGER, Proprietors.

FARLEY HOUSE,

REDWOOD, N. Y.

This hotel has been thoroughly overhauled and newly furnished throughout. It is located in the best of fishing grounds, and is in first class condition to accommodate the public; is in easy reach of five of the most beautiful lakes in Northern New York. First-class oarsmen in attendance. Has hot and cold baths. Rates, \$1 Per Day.  
M. W. FARLEY, Proprietor.

Thousand Islands.

River St. Lawrence.

THE NEW WINDSOR

Sportsmen will find this hotel first class in every particular. All modern improvements. Good boats and experienced guides always in attendance. Send for circulars. W. F. HAWES, Clayton, N. Y.

THOUSAND ISLANDS.

Grand View House,

Grand View Park, N. Y.

In the midst of the far-famed fishing grounds. It has the only bathing beach on the river.  
M. HOLKINS, Manager. E. M. CHILDS, Prop.

HUBBARD HOUSE,

Clayton, N. Y.

Headquarters for fishermen. Located in the center of the world renowned fishing grounds of the St. Lawrence River. Bass, pickerel and masacalonge in abundance. MRS. E. M. HUBBARD, Prop.

LAKE VIEW HOUSE, Edwardsville, Jefferson Co., N. Y.

Situated on the beautiful shores of Black Lake. No better spot for bass and pickerel. Easily reached by stage from Hammond. Boat livery connected with house.  
R. E. CAPRON, Proprietor.

FRONTIER HOUSE,

Morrisstown, N. Y.

This house, located on the St. Lawrence River, is but a short distance from Black Lake, so long known for its celebrated bass and pickerel fishing.  
JAMES F. CULLIGAN, Proprietor.

Thousand Islands.

River St. Lawrence.

MARSDEN HOUSE.

Good bass, pickerel and masacalonge fishing. House pleasantly located. Rates, \$2.00 per day.  
G. A. MARSDEN, Proprietor.

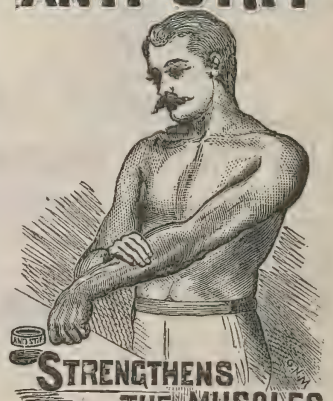

EARL HOUSE, Sackets Harbor, N. Y.

Accommodates 40. Excellent bass fishing. One of the best points for duck shooting in season. Located on line of Rome, Watertown & Ogdensburg R. R.  
R. H. EARL, Proprietor.

## CUP DEFENDERS FROM A BUSINESS ASPECT.

The popular verdict as to the success or failure of the new class of yachts, indefinitely spoken of as the "90-footers," "85-footers" and "Cup defenders," is likely to hinge solely on the one issue of the retention or loss of the trophy, as decided by the coming races with the British boat Valkyrie. As these boats were built solely for this purpose, such a test may be the true one; but there is a much broader aspect of the question, and one that is worthy of serious consideration at this time, when yacht racing in the larger clubs is in a very unsatisfactory condition.

The new class represents a larger outlay of money than has ever before been spent in any one year, in round numbers upward of half a million dollars, for construction, alterations and running expenses up to the end of the season; and the deduction which may be made from this sum for the future value of the boats will be comparatively small. Whether the difference is or is not too much to pay for the probable successful defense of the Cup is a question that each of the members of the various syndicates can decide for himself after the races are over; but so far as the general advancement of yachting is concerned, the results thus far are so disappointing that even the defeat of Valkyrie can hardly make the class as a whole anything but a failure.

With the races of the present week the yachting season in the large clubs is practically over, the only remaining events being the trial and Cup races and one or two minor club races. The racing in the standard classes, as shown in the regular regattas, has been dull and lifeless in the extreme, a fact due to several other causes, but in part to the centering of all interest in the Cup defenders. Even without these new boats the season would have been a dull one, the main feature being the schooners; but with the Cup defenders to absorb the entire attention of yachtsmen the other racing classes have fallen very flat. With such racing of the big singlestickers as was seen in 1886 for instance, this would be a small matter; but the sad fact is that while the new boats are larger, more pretentious and far more costly than Puritan or Volunteer, they have really done no racing throughout the whole of the regular season; and now that the season is over yachtsmen must wait for the trial races and the Cup races to know exactly how good or bad they both are.

True, the public has been regaled by stories, now proved largely fabulous, of the tremendous speed of each of the four boats, but it was not until Aug. 7 that any attempt at racing was made by them, and in the time that has since intervened there has been just one race which was worth the trouble of going out to see, the other abortive attempts being merely disappointing. The possibilities of the trial races are hardly more promising, and it is now uncertain whether two, three or four boats will start, and whether any thorough and conclusive test of the merits of the whole four will result.

In contrast to the empty results of the season on this side, the racing abroad stands out in bright colors. Beginning in the latter part of May, the quartette of big new racers which parallel the Cup defenders has raced steadily and persistently, from the Thames around the south coast to the Mersey and the Clyde, across St. George's Channel, and back for a month's hard racing off the Isle of Wight. True, there have been mishaps and breakdowns in abundance; in many cases only two of the four have been able to face the line at gun-fire, the others being in the dock or at the spar yard; but taken from first to last, the British racing season of 1893 not only puts to shame the work done here this season, but surpasses in number and importance the races in all previous seasons in America.

There would be no justification for pointing out so prominently such unpleasant facts if no conclusions were to follow and nothing could be learned; but in our opinion there is one important conclusion that is indisputable, namely, that American yachtsmen, in the confidence begotten by past triumphs, and with the national ambition to excel all creation, have lately gone ahead far too fast. The material evidence of this fact is found in the many

delays attending the new boats in construction, fitting out and working up. Not only has the demand for material exceeded the supply in many cases, but a very large part of the work has been of an experimental nature, involving delay and an expense hitherto unheard of, as in the case of the main booms.

As all yachtsmen know, the mythical and nebulous "90ft. class" had its excuse in the length of Genesta, the challenger of 1885, necessitating the construction of a defender of the same waterline. Contrary to the views of many experienced yachtsmen, we have from the first held that the class was too large for the best interests of American yachting, even from the standpoint of international competition, and we have repeatedly urged the acceptance of the various opportunities offered for scaling down the size to 80, 75 or even 70ft. Again and again we have been met with the answer that the "90ft. class" was the finest ever produced, and that it was destined to become a permanent fixture in American yachting.

Thus far the facts have borne out the truth of our predictions—the old Cup defenders have disappeared in the schooner class, no new ones have been built in five successive seasons; the boats built this year are produced to meet a special emergency rather than to meet a legitimate demand of yacht racing; so far from realizing the long promised limit of 90ft. they are but 85ft., and even at this size they have obviously overtaxed the abilities of designers and artisans.

Should the Cup be lost, the class must rank on all hands as an utter failure, and even should it be retained by the one yacht which now seems the inevitable choice of the committee, it must be classed as a brilliant and partially successful spurt rather than as a steady advance in design and construction.

In the estimation of those foremost in the Cup defense of recent years, the larger size of yacht has always been considered to give an advantage to America. We have never fully agreed with this view in the past, and at the present time we are convinced that if the Cup should be lost it would be mainly because of the ambitious attempts to do too much, to advance too rapidly. The opportunity which has been so fully utilized abroad for thorough trial, working up and alteration, has been entirely lost here, and now, with the Cup races barely a month off, the Cup defenders are hardly where they should have been by the end of June.

There is a fruitful field for thought in the enormously increased expenses of yachting due to bronze bottoms, built spars, steam tenders and other costly items which will be essential to success in the future; and also in the development of the syndicate in place of the individual owner; but passing them by for the present we would point out that yacht racing can never be totally disassociated from the plain common sense principles of ordinary business, and that extravagance or unwise expenditure at one time involves certain unpleasant consequences sooner or later.

While it may be presumptuous for outsiders to criticize the manner in which the many owners of the present boats have spent their money, with a full appreciation of the spirit they have displayed, we venture the opinion that the final good to national yachting, the end presumably in view, will be by no means proportionate to the unprecedented outlay. The standard of size and quality set this year, is so high that the attendant expense must debar all but the wealthiest yachtsman from building in the future, and must encourage the syndicate at the expense of the individual owner. This is bad enough, but in view of the certain disappointment which awaits three out of every four boats built for Cup defense, it is possible that the difficulty of making up new syndicates may be materially increased, and that, especially in view of the present business depression men will be unwilling to repeat next year the vast outlay of this.

At the present time it is impossible to forecast the course of yachting next year, whether assuming that the Cup will be kept or lost; but so far from the prospect of any marked revival in yachting there are good grounds for the belief that the legitimate growth and progress of the next two or three years have been heavily mortgaged to produce a special class of boats, several of which must be classed as utter failures, and the best of which will be practically worthless after the Cup races are over.

The year has been prolific of game and fish legislation, the current issue of the *Game Laws in Brief* noting changes in twenty-five States, Territories and Provinces,

## AN OLD STORY IN MAINE WOODS.

In the *News* of Bangor the other day was printed the diary of a man who had made a canoe trip from that city to the Northwest Carry, and in the eleven days of the trip claimed to have seen no less than twenty dead deer and one dead moose which had been killed by August butchers. We have been at some pains to learn the authenticity of the diary, which is printed in another column, and as a result of our inquiries we are disposed to accept the report as a truthful picture of what may be found in summer in some parts of the Maine woods. The author of the diary, we have ascertained, was Benj. Atwood, a game warden, of Winterport, and in addition to the details given in the *News*, we are told that he discovered the identity of some of the butchers and has warrants for their arrest.

Such a report as this of the midsummer destruction of game in Maine, of moose and deer shot down in pure wantonness, and of carcasses abandoned to rot at the water's edge, has come to be an old story. It has been told by a host of witnesses summer after summer for years; and recently, as the supply of deer has increased, as greater provocation has been offered, and as it has become easy to commit such outrages, they have increased in number and flagrancy. There are more of them to-day than ever before. The game commissioners have not begun effectively to cope with the evil.

## SNAP SHOTS.

In old times the gunners who followed the shore for bay-birds used to look about the last of August for an easterly storm, which should bring along the flight, and usually they were not disappointed. Sometimes an easterly wind with a dense fog and heavy spatters of rain would visit the coasts of New England and New York and land on those shores many thousands of dough birds, golden plover and dowitchers and other shore birds, and for two or three days the shooting would be wonderfully good. Often at the end of a few mild still days the wind would shift to the northwest and blow hard, and then the birds would disappear, but from that time on they would be found scattered along the coast from Long Island to Virginia, in such numbers as to make the shooting good. Within the last two weeks we have had two easterly storms of great violence, causing many wrecks and great loss of life at sea and much damage on the land. Such storms in old times would have been thought likely to bring great flights of shore birds, but in these two cases we know that the storms, instead of coming from the northeast where the birds have been summering, were tropical cyclones which came from the southeast, and thus we should not expect to find beach birds coming with the storms, or following in their wakes. It would be interesting to learn from gunners who have been out since August 24 whether they have found any considerable number of shore birds, what their bags have been and what kinds of birds were most plenty. We hope that our readers will report to us on these points.

SALMON fishermen the world over owe a debt of gratitude to Mr. J. Parker Whitney for his extremely interesting accounts of sea fishing for salmon on the Pacific coast. Though that fishing has been known for years to a limited number of anglers, and though the FOREST AND STREAM has in past years given mention of the taking of salmon by trolling in the Pacific, Mr. Whitney, as the first one to exploit the sport in an adequate description for the benefit of the guild, may fairly lay claim to its discovery. Others may have known of it as the Norsemen knew of America; Mr. Whitney has been the Columbus to proclaim his discovery to the world, and to command for it the attention it deserves. Another season will see a host of salmon anglers at Santa Cruz and other points; and in time the Pacific coast devotees of salt-water fishing for salmon may outnumber the necessarily restricted company of those who have opportunity to seek the fish in the fresh waters of the East.

The congress of fishculturists, fishermen and anglers, which is to convene in Chicago next month, gives promise of bringing together a notable assembly of men from all parts of the world. The scope of the discussions, as planned, is wide and comprehensive; leaders in the respective fields have been invited to participate; and it is probable that the conference will give a decided impulse to fishculture in this country and abroad.

## The Sportsman Tourist.

### IN THE HEART OF THE SIERRA.

My outing for 1893 is a thing of the past. Its incidents are duly labeled and pigeon-holed in memory's safe, along with those of the many, many by-gone years. Just how many years outings are thus stored away I dare not acknowledge, even to myself, lest I grow melancholy. I only know that to take them out, brush the dust off, and overhaul their contents, constitutes a pleasure that never palls upon repetition. And I also know that when the year comes, as come it must, when increasing age and infirmity shall prohibit the usual summer holiday, that upon these past memories must philosophy depend to argue me into reconciliation.

This was my eleventh consecutive annual trip to Echo Lake, in the heart of the Sierra, where every mountain peak and valley, tree and shrub, rock and cliff, lake and cliff, lake and stream, pleasure and hardship, have become doubly dear by force of association. My old partner B. and two friends from Sacramento composed our party; and from the day we joined forces on the train, on the way to Truckee, till we parted, we had a royal, roaring good time, albeit we caught but few fish, and drank no whisky.

We went in too early, for such a cold, backward spring has not been experienced in the Sierra for years, and too much snow and too cold water spoiled the fishing. Our boatmen, who preceded us by several days, said that the ice did not break up until June 27, and as we started on July 9 the water had not lost its icy chill, and no fly-fishing was to be had. And be it known that our party were all fly-fishermen and despised the catching of trout by trolling. Of course we caught some, enough to keep our table supplied by the latter method, as it was a case of "groundhog or no meat," but it "went agin the grain."

I am going to give no detailed account of our trip, but just some disjointed notes upon that, and other subjects, that have occurred to my mind since my return.

Lake Tahoe is considered one of the most beautiful of the whole world's most beautiful lakes. Its waters are as placid and sparkling as the diamond, as purple as the amethyst, as blue as the sapphire and as green as the emerald—just as you may chance to view it. But no tongue can tell or pen describe its glories. It is like a beautiful woman, its charms must be seen in order to be realized. Its devotees this season did not let hard times or Chicago's "big show" deter them from their annual visit, but instead came themselves and brought their friends. And as a reward the lake has never yielded such an abundance of trout for the past fifteen years as it has done this season. Tons upon tons of trout have been shipped away to the cities by professional fishermen, besides those caught by tourists, and still they continue to bite as freely as ever, even up to this present writing, as I am informed.

A Tahoe trout cannot be caught upon the fly, however, and so I have never taken one from its waters. I prefer Echo, where, if the angler is lucky and strikes it just right, he can have some of the finest sport in the world. One or two such occasions I will mention.

In the summer of 1888 my friend B. and myself went out on Upper Echo Lake, during a thunder shower, and caught 76 trout that weighed, in all, 48lbs. They were all caught upon the fly, with 8-ounce rods, and the work was all done in one hour and a half. Two, three, and on one occasion four trout were secured at one cast. The occasion was worth waiting a month for. In the summer of '91 my friend had to leave three days before I was willing to go out; and on the morning of his departure I went down the lake early to see him off. After he had bid me good-bye I returned to the boat, and as a nice ripple was upon the water, requested my boatman to row me slowly around the outlet (this was in Lower, or Big Echo) while I made a few casts. My flies had scarcely touched the surface ere I had hooked a 2-pound trout, and in just one hour and twenty minutes I had captured 21 trout that weighed 45lbs, and then I quit—had to, in fact, because I could not get another bite. That was the fastest and most furious fishing that I ever did in the same length of time in forty years of fly-fishing—and I never expect to equal it. The fish were all about the same average size—a little over 2lbs.—and were fighters from the word "go;" and when the fray was over I sat down exhausted from the strain and excitement, and was glad the fight was ended.

I have a sad tale to tell about the doings of a chipmunk. I had always held a very high opinion of a chipmunk's morality and general good behavior, but now I suspect the whole tribe. I caught one of the race in *flagrante delicto*, and all his kin must suffer suspicion on account of his disgraceful crime.

One day while walking across the strip of land separating Upper and Lower Echo, while our boatman pulled the boat up through the shallow connecting stream, B. and I came upon a couple of juncos in sore distress. Their chirps of grief and anger were loud and incessant, while they made constant threatening descents among some low brush by the lake shore. We suspected snakes and went to the rescue, when, much to our amazement, a large red-headed chipmunk, of the kind known as Townsend's chipmunk (*Tamias townsendii*) ran out of the juncos' nest with a half-grown bird in its mouth. We gave active chase and the little scamp was very loth to drop his prey. We got too hot upon his trail, however, and he had to leave it behind. The bird was dead, bitten through the brain. We hunted out the nest and found that he had eaten one or two of the others, and there was still one left in the nest untouched. The next day the nest was empty and the old birds had left the vicinity, so I suppose the little bloodthirsty scoundrel had returned and completed his murderous work. I did not think it of "little stripy!" I did not, indeed.

Owing to the prohibitory law upon the killing of deer during the past two years, this game has greatly increased since the destructive winter of '88-9. I noted at that time in FOREST AND STREAM the fearful loss of life in the Sierra Nevada among the deer and plumed quail. They

have both recuperated considerably, but the prohibition on deer shooting ought to have been extended another two years at least. Of course the law was continually broken by campers and residents in the mountains, but still it stopped the slaughter by the despicable skin butchers, which was decimating our deer at a fearful rate. Even for the respite they have had, the deer might say to the California Legislature of '91:

"For this relief much thanks; 'tis bitter cold,  
And I am sick at heart."—Hamlet.

After spending two weeks at Echo our San Francisco friends returned home, and B. and I remained for another week. The fishing improved a little, but still the trout did not rise freely, and we gave it up for this year and came down to Sugar Loaf, on the old Placerville and Carson grade. Here we had some excellent stream fishing on South Fork of the American and its branches, and spent another very pleasant week. The trout had just begun to rise freely in the streams, and we made fine catches every day.

I know that it takes considerable hardihood for any man to offer a new fly to the fraternity in this age of fly-fishing, and yet I have had such success with one of my own device that I feel as though I must describe it. Preliminary to that, though, I must tell how I came to think of it. It was in the summer of 1886 that I found myself, along with my friend B., on the headwaters of the American. We had both whipped and whipped in vain, and were sitting by the water eating lunch and discussing the "cussedness" of the ways of trout, when I saw a good one rise and gather in some floating object. Several times I noted a like occurrence while we sat there, and I wondered what bait he was rising at, but could not determine. I noted, however, that it was a reddish brown object with a hint of gold in it. I tried cow-dungs, brown-hackles, cock-y-bondhus, red-ants and everything else of like nature that I had in my book, but without much success. At last I secured one of the floating objects, and found it to be a somewhat hairy caterpillar, with a salmon-colored body, black head, and brownish hairs. This I placed upon my hook and immediately caught a trout. "Aha! my dainty beauties, that is what you want, eh?" said I. "Well, I'll try and accommodate you another year if I can study up a combination to suit." Now, I am not much of a fly-tyer myself, but when forced can make a stagger at it. I therefore kept the matter in mind, and was on the look-out for suitable material, and at last struck it.

This I found in the outer vane or web of the primaries of the red-shafted woodpecker or flicker (*Colaptes cafer*). This I stripped off the feather, wound it upon the hook, put on a head of peacock herl, and there was my "bug." I made two or three in my rough way, and the next season found the composition very killing. I then sent to J. S. Benn, of San Francisco, our crack fly-tyer of the coast, for a supply, and have kept them in stock ever since, and have supplied many of my friends with samples, and have almost always received good accounts of them.

I call the fly the golden caterpillar, but think the name of "flicker" would be better. Benn calls it the — bug, putting my name in the blank space, but I don't like it and object.

A laughable thing occurred at my expense, in procuring the first supply of feathers to send to Benn, which I think I must relate.

After testing the flies of my own manufacture and finding them successful, I determined to secure some flickers on my return from the mountains. It was late in the summer, and but a few of the birds were to be found round my house, and I hired a boy, who was quite a dove hunter, to procure me two or three, promising him half a dollar for them.

One day I had been absent on professional business, and on my return in the evening I sat down to dinner. There was a covered dish placed in front of me, and upon raising its cover I found seven dark-colored, scrawny-looking birds of some unknown species lying therein.

"Great Scott, wife, what are those creatures?" I exclaimed.

"Why, they are the birds Jo. S. shot for you," she answered, "and I paid him half a dollar for them, which he said you promised him."

Comment was unnecessary. It was my own fault. I had not thought to mention it to my wife, and when the birds came she paid for without seeing them and the servant cooked them for dinner, having first carefully scalded the feathers off and thrown them into the refuse barrel, where the bodies soon followed.

For the last five years I have observed a pair of evening grosbeaks at a point on the Carson and Placerville grade, at an elevation of about 5,500ft. They were always to be seen around the same locality, in the month of July, and I was satisfied they were breeding there. I had no opportunity of stopping to investigate, so paid no particular attention to the fact. This summer, upon my return, I saw the birds in the same place, accompanied by two of their young, which were just out of their nest and scarcely able to fly. The locality where they breed is on the north side of the cañon of the American in a heavy growth of pines and firs. If the nest and eggs of this species still remain unknown, as I believe they are, I am satisfied that specimens could be procured in that locality next summer.

On my return home I found my accumulated numbers of FOREST AND STREAM awaiting me. In them I note some articles upon salmon fishing in Monterey Bay which are very interesting. I was informed of this fishing ten years ago by the late W. P. Willard of San Francisco, a gentleman who was well known on this coast during his lifetime, but who has now joined the great majority. Mr. Willard was an enthusiastic fisherman, and a true friend to all brothers of the angle, and when he had found a good thing was free to impart it to his friends. He informed me of this fishing and advised me to go there if I wanted some exciting sport. I have never availed myself of his advice, I am sorry to say.

It was in the latter days of June, 1883, that Mr. Willard caught his salmon at Monterey, and he caught them on his 10oz. Leonard rod, with an ivory squid bait.

Every year since that I have intended to go there and try the king of the Salmonidae, but then 'tis said that "Hell is paved with good intentions." I suppose mine form part of the pavement.

AUBURN, AUG. 15.

### WAYS OF THE RUFFED GROUSE.

"Partridge they call him by our Northern streams and pheasant by the Delaware."—Bryant.

THERE is not in existence perhaps a bird that knows more of the surroundings in the places he inhabits than the ruffed grouse. He hears, he sees everything. Nothing escapes his notice. This is his home; he lives about here through all the seasons of the rolling year. Seed time and harvest, winter and summer. He knows well also every wood, every covert, thicket and stream in the vicinity. When compelled to leave this place he has several select spots to which he flies for refuge. One of these retreats may be in a dark and gloomy nook under the umbrageous foliage of the woods, or it may be in a clump of dense and impenetrable evergreens or among the witch hazels or amid the innumerable and inaccessible saplings of the gentle sloping woodland, or it may be in the open wood. The sportsman will soon come to learn the location of these spots by carefully watching the flight of the bird, but the grouse also will soon become aware of that fact after he has been disturbed a few times and will go no more there, but direct his flight elsewhere. The grouse never flies without knowing exactly where he is going; and when he starts on his way nothing will turn him from his course, for in my experience I have seen but one bird change his line of flight. I once saw a grouse crossing a field fly directly over a man and a team of oxen plowing.

But the ruffed grouse practices at times a mode of flight that is extremely deceptive as to his destination. In the hollows he will fly straight ahead through the middle of them for 200 to 300 yds. and then take a wide turn of about 40 yds., and coming back the same distance, alight on the brow of the hill. He is now in a position where he can see the sportsman approach and can watch his movements, and where he would scarcely be looked for. If discovered, however, he flies along the top of the hill, keeping well out of gunshot. Such birds are hard to find again, and the mystery is where they go.

As the grouse resorts to strategy to escape from man, he is also compelled to do the same to save himself from his other enemies. I recollect being in the woods one morning on a pleasant day in October and seeing a hawk sailing above a large hemlock tree. Approaching the spot, I discovered near the top on a limb, about four feet from the body of the tree, a ruffed grouse. The hawk continued for some time his circling movements, when he began gradually to descend. The grouse seemed lost, when as the hawk passed near, and to the opposite side of the tree, the grouse like a bolt shot from the limb, and flying only as a grouse can fly, made for the dense cover, which he reached in safety. When the hawk came round and found that the bird had flown, he rapidly ascended and was soon lost to sight.

SCHENECTADY, N. Y.

### DANVIS FOLKS.—XIII.

#### The Shoemaker's Ghost.

SOLON BRIGGS heaved a contented sigh when he had established himself in his favorite seat, with his back against the wall and his left knee nursed in his locked hands.

"What was 't you was a-goin' tu tell 't other night, Uncle Lisher, when we was discoursin' consarnin' speerits an' apperagotions an' Antwine come a-protrudin' in his Canady stories?"

"Lemme see," said Uncle Lisha, stimulating his brain with the point of an awl. "Oh, yes, I've got a holt on 't."

There was an expectant lull in the conversation, while Uncle Lisha meditatively splashed a tap in the little tub beside him. At last he said:

"I scase ever wet a piece o' luther in that aire tub 'thaout thinkin' o' ol' Uncle Ebenezer Hill, Jozeff's uncle, 'at it useter belong tu. He was a shoemaker, an' a terrible hones' man, as shoemakers mos' gen'ally is, Ann Twine."

"Sometam dey was be," Antoine laconically commented.

"Most allers, an' he wan't no exception tu the rule. When he died an' his things was sol' off tu vandue, I bid off his kit an' this aire tub 'mongst 'em, an' it most allers makes me think o' Uncle Eben." He let the tap soak while he scraped out the heel of his pipe with a crooked awl and filled it with a fresh charge of tobacco, with a deliberation painful to his audience.

"Wal, there was a man 'at undertook tu cheat him arter he was dead. Ye see, the way on 't was, Uncle Ebenezer had got tu be tollable well off when he died, an' when his 'state come tu be settled Bijer Johns begun tu sarch raound tu see 'f he couldn't bring some claim agin Uncle Ebenezer fer hides 'at he'd sol' him."

"Wal, when the commissioners sot, he kerried it in 's prompt 's a major an' the commissioners said they guessed they'd hafter 'low it. When he come hum, his womern wanted tu know where he'd been an' what arter, an' he hed tu tell her. 'Why,' s' she, 'I didn't 'spose Eben owed you nothin'.' But he said womern didn't remember nothin' an' didn't allers know all 'baout ev'rything though they consaited they did, an' he went off tu feed his hawg, a shooin' the hens off 'in the swill barril an' a-dippin' 'out the swill an' a-puttin' on the kiver kinder keerness, bein' 'at he wan't altogether easy in his mind."

"Bimeby it come dinner time an' he soddadown an' eat his dinner 'thaout no gret of a appetite 't eat, an' then he went an' lay daown on the settee clus tu the open winder, but he couldn't git a nap on 'caount o' them hides that wa'n't never raal ones, a risin' up continual afore his eyes when they was shet er open."

"Bimeby he heard a 'nise, julluk sloshin' luther in a tub, kerslosh, kerslosh, kerslosh, an' then whack, whack, whack, julluk hammerin' a tap on a lapstun."

"'Hopy Ann,' says he tu his wife, a liftin' up his head an' harkin' julluk a hawg in a cornfiel, 'what's that aire 'nise?' 'I don't hear nothin',' says she, a stoppin' clatterin' the dishes an' his'nin', 'what is 't?'"

"'It's a shoemaker tu work,' says he, 'an' there it comes agin.' An' up he got, scairt 's a strange cat. 'Hopy Ann,' says he, 'hev you ever hearn tell o' spirits walkin' in broad daylight?'"

"'Bijer, are you clean aouten your head?' says she.

"'No, I haint. But if ever I heard Uncle Eben Hill a sozzlin' a tap an' hammerin' on 't, I hear it naow.'"

"'Haow can he do dat, Onc' Lasha? Dat hol' shoemaker don't keep for do beensness w'en hee'll be dead, ant it?'" interrupted Antoine.

AREFAR.

"Wal," the old man continued, "he put on his hat an' kwut an' off he went up tu Uncle Eben's haouse where the commissioners hedn't goddone a settin' an' tol' 'em 'at he'd made a mistake, which he'd faound out the 'state didn't owe him nothin', an' his 'caount must be hove aout, which the commissioners didd heave aout, an' he went home turribly relieved in his feelin's."

"He sot tu duin' up some o' his chores 'fore supper, an' the fust thing he done was tu feed his hawg, an' as he got nigh the swill barril he heard that same kerslosh, kerslosh, whack, whack, agin, on'y not so laoud as afore, an' all kinder muffled as ef it come aouten the airth ondenaeth, an' he groaned aout laoud, 'Ebenzer Hill, can't you lemme 'lone when I ben an' ondone what I done?' An' he was so scairt he couldn't scacely take the kiver off'm the swill barril, an' jest as soon as he did, kerslosh, kerslosh, kerwhack, whack, come the same ol' n'ise laouder'n ever, an' right under his nose. An' what ye s'pose it was?"

Uncle Lisha swept a slow inquiring glance around his audience. Only Antoine ventured an answer.

"Ah do' know 'f he ant probly dat hol' shoemaket come back for get col' off in de barril swill, hein?"

The old man glowered upon him a moment between his bushy eyebrows and the upper rim of his spectacles before he said:

"It wan't nob'dy ner nothin' but a hen 'at had tumbled int' the barril an' th' not bein' swill 'nough in 't tu draound her, she kept a-sloshin' an' a-floppin' the hull endurin' time."

"Bijer h'isted her aout an' hove her away so spiteful 'at he nigh about killed her, an' went a-mumpin' raound feelin' wus 'n he did when he thought Uncle Eben's ghost was a-hauntin' on him."

"He'd withdrawn his 'caount an' the wa'n't no help for 't naow. 'Seben dollars,' says he, 'an' fifty cents in money 'at I might jest 's well had 's not, gone to thunder. I wisht that dumb'd-ol' hen had died 'fore ever she tumbled int' that swill barril, con-sarn her.' An' that's haow thankful he was tu hev her savin' him f'm committin' a sin."

"He had certingly ortu ha' ben thankful that it was a mortal hen stid o' the apperagotion of a defuncted man 'at come tu save him from committin' a greivous crime," Solon Briggs commented as he dropped his right leg from across the left and with both hands lifted the left to the uppermost place.

"Dat mek me tink rembler," said Antoine, who had for some time been impatiently awaiting an opportunity to speak, "'baout one man Canady—"

"One man Canady," cried Uncle Lisha, "I wisht the hedn't never ben but one man in Canady, an' he ha' staid there."

"O, Onc' Lisha," said Antoine, in a grieved voice, "spose dat was me, haow lonesick you'll was be some tam an' what troublesome Ah 'll was gat for ta' care all dat beeg country all of mahsef."

"Wal, wal, go ahead an' tell yer story, Ann Twine," said Uncle Lisha. "It 'll be a lie, but you 'll have tu tell it."

"It was 'baout a man dat was gat save hees laf by one hol' hen. Yas, sah, probly two of it, one for be keel, tudder for be hang up for keel de man. 'F you 'll ant b'lieved it Ah can' tol' you hees nam, bese of it, but 'f you 'll ant goin' b'lieved it, Ah 'll ant goin' tol' you."

"I guess we c'n stan' it. Go ahead."

"Wal, sah, boy," Antoine rapped the ashes from his pipe and laid it upon the stove, "dar was one hol' man Canady, nem Pierre Gautier, Ah guess so, an' he'll get more as hondred acre lan' an' he pooty good up. An' he leeve all 'lone wid hees waf. Wal, sah, one tam he'll go on de wood market to La Prairie an' sol' up hees wheat an' tree, four, probly sax fat hol' peeg, an' he'll brought home lots o' money for it, probly more as mos' two hunderd dollar."

"Wal, sah, dar was fellar, nem of Gabriel Sa' Michel, was verree bad, do-noting fellar was be on de market an' see hol' man Gautier gat all dat money, an' he 'll mek off hees min' he 'll goin' gat dat heesef 'f he 'll had to keel Bon Homme Gautier."

"Good airth an' seas, Ann Twine, you jest said his name was Pear, an' neow you're a callin' on him Burnham."

"O, bah gosh, dat ant be hees nem of it, more as Onc' was you nem. Dat mean jes' de sem lak Onc', honly it mean good man; dey too polite for call it you, hein?"

"Wal, wal, go on wi' yer Gaushy, er yer Burnham, er yer Gauby Cawlshell," cried the old cobbler, prodding the air with hisawl in Antoine's direction.

"Wal, seh, dat hugly-ant-fit-for-be-decent Gabriel, he 'll went dat naght for robber Bon Homme Gautier, stinkin' long in de darks jes' lak skonk goin' for robber some negg on a hen rouse."

"Sneakin' 'long, you mean tu say, Ann Twine, skunks don't go stinkin' 'long on sech business."

"Sneakin' den, ef dat was please you more better, but Ah b'lieve Ah 'll was tol' dis storee, me. Wal, le' me see where Ah 'll was be."

"Gabriel was goin' 'long cawly all stoop daown close up bah hol' Pierre hees haouse, an' seh, fus' ting he know it he walk almos' top of a skonk. An' seh, zhweetz, dat leetly causs preffume heem raght on bese hees heye of it, an' mek it so bline he was mos' can' see for swear, an' hurt heem so for crazy heem."

"He 'll can' tink for robber, he can' see for robber, all he tink was for fan' brook for wash off hees heye, an' den go home. An' den he go stinkin', Ah bet you head, Onc' Lisha."

"Proberbly."

"An' he 'll tink le Bon Dieu was sen' dat skonk, for kept him from robber poor hol' Bonhomme Gautier, an' dat was de true. An' dat was de way a skonk keep one man from be keel, an' one man from be hang up." Antoine waited for applause in a blank silence, wherein his audience waited for the conclusion of his story.

"Why, Ann Twine," Uncle Lisha said at last, "ef that's the hull on't, I don't see 's there was no hen had nothin' tu du with 't."

"O, bah gosh," cried Antoine in unwonted confusion, clutching his head with both hands.

"You'll mek me so bodder wid tol' me haow Ah 'll tol' it, Ah 'll gat two story all twis' up. Ah b'lieve Ah 'll tol' wrong story."

"I haint no doubt you've tol' a wrong story, Ann Twine, you're allers a-tellin' wrong stories."

"Antwine's julluk a haoun' pup," said Sam, "'at goes off on the fust scent he comes tu 'at crosses the track he's on."

"Ho, Sam," cried Antoine, turning toward him, "Ah 'll glad for he heard you spoke. You 'll ant say noting but smoke all de evelin'. Ah, Ah 'll be 'fred you loss you vowse."

"I do' know as that was the way on't," Joseph Hill said as he came to the stove to light his pipe with a splinter, "but mebbly the skunk eat the hen 'fore Antwine could git to 't."

"An' Zhozeff can spoke," cried Antoine in feigned surprise, "Ah 'll aint tink he was mek off hees mine so quick."

"Well, go on, Ann Twine. You promised us a story

FIG. 3. RUFFED GROUSE.  
(*Bonasa umbellus*.)

wi' a hen in 't, an' a hen we've got tu hev. Naow patch up your lie an' go ahead."

"Ah tol' you 'f you 'll ant trouble me all up an' mek me fregit for rembler de story Ah 'll was beginn," said the Canadian when the laughter of his companions subsided, and as they promised no further interruption, he began:

"Wal, seh, dat Gabriel S' Michel, he 'll goin' 'long jes' sem Ah 'll say, honly he 'll ant walk on top of skonk. He was very fon' of cheekin' hesef. An' gret many tam de folks loss dey hen an' lay it to skonk an' wezil an' chat sauvage, w'en dey 'll ant to blem."

"Dis tam he feel inside of hesef, he was be drefle hon-

FIG. 4. BLACKCOCK.  
(*Tetrao tetrix*.)

gry, an' he tink haow good was tase one of hol' Pierre fat chickens, w'en he 'll gat finish hees job of robber de money."

"He 'll tink it was bes' way for gat hees chicken fus, so he be all ready for go wen he do dat job. So he crept in de hen rouse an' beginn felt raoun' in de darks, and de firs' hen he touch hol' of it was de beeg hol' rouser."

"He be hurry, so he pull de hol' rouser off de rouse, an' fore he can stop off hees win' dat hol' rouser holler lak eveyting, 'keraaw, keraaw, keraaw, keraaw-uk, wen Gabriel shut hees neck."

"De nowse wakin' up de hol' whomans of her sleep an' he 'll punch hol' mans of hees rib an' holler, 'Woke up. Skonk on de hen rouse.' An' hol' mans jump off de bed an' gat hees gaun an' shove de winder an' look on de darks."

"It was be darks, but no so very darks, for he can see mans creep it off de hen-raouse, an' hol' Pierre he'll shot off hees gaun over hees head of it, an' Gabriel so scare he trow de rouser an' run more as t'ree mile, probly

two, fore he 'll stop for gat hees breeze, an' den he give up all hees plan for robber."

"Den he very glad for tink he 'll ant do so weeked an' every year datsem day he take de pries' beeg fat chicken, an' hol' Pierre eve'y year dat sem day he took de pries' a beeg fat chicken, so you see dat hol' rouser he 'll do great many good. He 'll save hol' Pierre from be keel, he'll save Gabriel from be hang up, probly. On he 'll mek de pries' more fatter as he was."

"Why, Ann Twine," cried Uncle Lisha, while the story-teller looked from one to another in expectation of approval, "your hen's turned aout tu be a rustler arter all. Haow be you goin' tu fix that up?"

"O, Onc' Lisha," cried Antoine as a triumphant grin swept the shadow of perplexity from his face, "haow you spose dat Gabriel was goin' tol' what he touch hol' of in de darks. Ah 'll ant to blem 'f he 'll touch hol' of rouser wen he 'll meant for git hen, ant it?"

"Wal, Ann Twine, you got aout on't pooty well," said the old man, laying aside his tools and the boot he was at work upon, "an' naow it's gittin' toward 9 o'clock, an' I move we close the meetin' afore the critter thinks up another lie tu tell or about another man in Canady."

ROWLAND E. ROBINSON.

## Natural History.

### MOUNTED GAME BIRDS IN THE U. S. NATIONAL MUSEUM.

BY DR. R. W. SHUFELDT.

(Continued from page 181.)

EUROPE possesses in its avifauna a magnificent game bird, which I believe has not as yet been successfully introduced into the United States; I refer to the famous blackcock or moorcock—*Tetrao tetrix* of Linnaeus and naturalists generally. Until very recently the museums have had no first-class mounted specimen of this bird, at least no male, which is a very different-appearing bird from the female. This is the case no longer, however, for a most beautiful example has been obtained and preserved in the manner shown in Figure 4, which is a photograph of the specimen itself. This gives its form most perfectly, but no photograph or reproduction of the same can ever convey any idea of the superb plumage of this the truest of all the grouse in the world. Black to be sure, but so glossy and iridescent, that the reflections of the same have actually taken white in his picture. There is nevertheless a pure white bar across either wing, while the remarkable recurved feathers of the tail are almost a dead pure black. Female blackcocks are known in Great Britain as "grayhens," and the species has a wide range on the continent. It is more or less nearly related to that giant of the grouse family, the capercaillie, a live pair of which have just for the first time been successfully brought to this country for the purpose of breeding and introducing them to our own avifauna. The family to which it belongs is extensive enough with us, for any one at all interested in our birds knows that we have a great many species of the *Tetraonidae*, but it is certainly well to introduce this desirable stranger for sportsmen and other purposes.

Occasionally the taxidermist instills more or less activity into one of his subjects, and in large scientific museums that can be done with advantage in three or four per cent. of the specimens on exhibition. It should be confined, however, to those birds which are given to assuming peculiar attitudes, or to performing odd antics in nature. Grouse during the courting season, when in the presence of the hens, behave, as do others of the same family, in a most remarkable manner sometimes. They have also a very animated appearance when anything specially attracts their attention, which may cause them more or less alarm. Wolf, the famous animal portrayer and painter thus drew our ruffed grouse (*Bonasa umbellus*). He is made to stand upon a slightly inclined bough, lateral aspect on, and from his appearance something in his neighborhood has evidently startled him, and the object is either being looked for or else closely surveyed by the bird. The attitude of a specimen of this species in the collections of the National Museum has been very successfully copied after this figure of Wolf's, but in having it photographed for illustration here, I had it taken direct front view on, and the result has given us the pleasing figure seen in Figure 3. No severer test for the work of the artist than this could have been made, but it meets it most successfully.

The bird is seen to be all inquisitiveness, and yet has a thorough look about him of possessing ample means in his powers of flight to escape the danger, whatever it may prove to be, just so soon as he makes up his mind to go. His tail is widely and horizontally spread; his "ruffs" are extended to their fullest extent, and stand out from his neck; his body is horizontally disposed, and, finally, to keep his balance, he has instinctively lowered the wing of that side which, on account of the inclination of the bough, requires it.

Representatives of this genus, by one species or sub-species or another, are found distributed pretty much all over the United States, and are great favorites with sportsmen everywhere. According to the Check List of the American Ornithologists' Union, the type species or *Bonasa umbellus* proper, is found throughout eastern United States, south to North Carolina, Georgia, Mississippi and Arkansas. In the densely timbered portions of northern Maine and the British provinces, west to eastern Oregon and Washington, its place is taken by the Canadian ruffed grouse (*B. u. togata*), but on Bendire's authority I learn that in the New England States north of Massachusetts it intergrades with *Bonasa umbellus* proper, "the majority of the specimens found throughout southern Maine, New Hampshire, Vermont and northern New York being scarcely referable to either form, birds found in the high lands approaching the Canadian ruffed grouse, while those in the valleys are nearer typical *Bonasa umbellus*."

Then in the Rocky Mountain region of the United States and British America north to Alaska, we meet with a third form, the gray ruffed grouse (*B. u. umbelloides*), and lastly, throughout the coast mountains of Oregon, Washington and British Columbia, we have the Oregon ruffed grouse or the *Bonasa umbellus sabini* of naturalists. This is the darkest and handsomest sub-species of the entire genus, while the gray ruffed grouse represents the palest of them all, and the one, in so far as coloration goes, the

least to be admired. Specimens of all of these varieties are in the collection of the Museum, many of them being made up into skins, and a select number of mounted ones in the exhibition cases. In the department of oölogy also, there exist in the same institution a fine series of their eggs, which are highly instructive and interesting to the student of that subject.

[TO BE CONTINUED.]

#### Mammals of Lower California.

An interesting paper, by Dr. J. A. Allen, taken from the Bulletin of the American Museum of Natural History, has just been issued. It treats of a collection of about 250 specimens of mammals collected in Lower California, chiefly during the month of May, 1893, by Messrs. E. C. Thurber and A. W. Anthony. The greater part of the specimens were collected in the San Pedro Martir Mountains, but some were taken at various points between San Diego, California and San Pedro Martir. This last locality is about 150 miles south of the United States boundary. Much of the region is very arid, but about midway between the Pacific Ocean and the Gulf of California is a territory about 60 by 20 miles in extent, which consists of an elevated mesa rising to a height of 8,000ft., from which spring low mountain ranges to a height of more than 11,000ft.

The collection embraces twenty species and subspecies, several of which are new. A very large proportion of the specimens belong to the genus *Sitomys*, and this is treated as a whole, several northern forms being considered. The paper is one of unusual interest.

### Game Bag and Gun.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

#### SHOOTING OUTLOOK IN MAINE.

Editor Forest and Stream:

Tourists, vacationists, fishermen and business men who have lately returned from northern Penobscot county and from protracted visits in Aroostook, Washington and Hancock counties all unite in saying that deer are very plentiful and tame this year, and that the hunters will have fine sport and plenty of it when open season begins. During the past three weeks more than a hundred residents of the backwoods towns have called at my office and all tell the same story—deer and plenty of them everywhere. That wise old hunter from the wilds of Patten, Greenleaf Davis, says deer are more abundant around his camp than they have been before in ten years. "Sock" Darling dropped in last week and said Nicasious is alive with them. His mild-eyed and handsome brother "Jed" Darling, the Izaak Walton of Maine, tells the same story about Enfield, and George Archer, of Amherst, trump their tales with the biggest yarn of all. Right here in Bangor deer have been seen in the fields often, and out in Holden, four miles away, I have a patch of peons that is badly damaged by a pair of deer that have remained near by all summer. Only yesterday I saw a pair of hounds chase a small buck across the Bar Harbor railroad track, less than three miles from Bangor. So on the whole you can safely wager that the "woods are full of them."

Of caribou and moose no such hopeful forecasts can be made. Deep in the woods beyond Katahdin Iron Works and thence up around the head of Moosehead Lake Game Warden Atwood tells me he finds traces of moose. In fact, he saw several while on his journeyings, but they were not so plentiful as they were three or four years ago, and the chances are that the monarch of Maine forests is dying out. Maine still has a vast expanse of wilderness to patrol and protect which would take all the time of a thousand watchful men. Indians, Canadians and not a few Yankees make an annual practice of crust hunting them, winters for their hides. It is illegal to be sure, but few, if any, are caught. So the moose is going. Regarding caribou reports are more conflicting. Matz Sjørdet, who for years kept a sporting camp beyond Katahdin Iron Works, says that caribou are practically extinct. He is a thorough woodsman and the soul of truth. From northern Washington and Hancock counties report comes that caribou are fairly plentiful. Jack Taylor, the crack shot of the Boston Globe, says so, and a half a dozen equally truthful men agree with him. Jack Darling has seen one or two around Nicasious; Smiley, of Patten, also finds a few, and Harlow, of Greenville, says he can shoot caribou enough in open season to keep the Kineo House supplied. My own opinion is that caribou are both scarce and shy. If a man wants to shoot one he must go deep into the woods and hunt long and patiently.

Thomas D. Wentworth, the new fish and game commissioner, appointed to fill the vacancy caused by the death of E. M. Stillwell, is a jewel. Every day shows that he is the right man in the right place. But the poachers and expressmen hold him in mortal terror, and that several poachers who have been running their deer meat through to Boston in close trim, have gone out of the business, all on account of Commissioner Wentworth's "pernicious activity." This is said to cast no slur upon Mr. Stillwell of blessed memory, or upon Commissioner Stanley, who lives in Dixfield and seldom comes to Eastern Maine except to care for trout and salmon fry.

Early this week two leading men of Eastern Maine were pulled up for illegal killing. They pleaded guilty to the arresting officer and promised to settle out of court if their names were "kept out of the papers." One of these men is a member of the newly organized Fish and Game Protective Association of Maine, so the warden who makes the complaint assures me. Last week a guide who lives in Greenville received a letter from Boston parties, saying they would arrive at Moosehead early in September, and asked him to hire two other good guides, one of whom must know how to call moose. Why they want to call moose in close time does not appear on the face of the returns. Those parties show as little knowledge of Maine game laws as another Boston shooter did who came to Moosehead last year, and having heard about moose calling, went out and began in his

most persuasive tones to call: "Moosey, Moosey, Moosey."

Of Maine birds, partridges or ruffed grouse are not over plenty and very shy, snipe and woodcock are about the same as usual, while upland plover are very scarce, so that the crows are actually getting fat upon the grass-hoppers that belong to the plover.

TOM FORD.

Bangor, Me., August 26.

#### PENNSYLVANIA DEER HUNTING.

BUSHKILL, Pa.—As the well intended effort of the Fish and Game Association in Pennsylvania to pass new and much needed laws has utterly failed in its object, the thought arises in the mind of old sportsmen, can or will there be any steps taken this fall to have the present law enforced?

My remarks are intended to apply directly to the hounding of deer. The law is clear on this point, and yet is a dead letter. Those engaged in this business can be counted on the fingers of one hand, as far as Pike county is concerned. They are well known in this section, have no fear of the law—boast of the fact, brag of their exploits and take to the market each fall 10 to 15 deer each. No less than 80 deer were killed last fall by this gang of pot-hunters in Pike and Monroe counties.

The facts can be proven. One can find these men on the stands every day in the week, and no one seems ready to act.

What do the sportsmen of this great State intend to do? Judging from the past, one word would seem to give the answer—nothing. In my recent driving tour through a large part of this county I took much trouble to ascertain any facts regarding the prospects of game for fall shooting.

The heavy fall of snow last winter did not seem to have any direct effect disastrous to grouse; in fact the snow holed the foxes for much of the winter, thus preventing one cause of decrease; a dry spring and summer, with few forest fires until very late, has been of great benefit to the birds, which seem plenty, the young being well grown and healthy. By one of the best woodcock hunters I was informed that few birds were found this year. The extreme drought lasting for four months had driven them into the bog meadows, where the rattlesnakes had gathered, and hunting was decidedly unpleasant in consequence.

Passing along the turnpike my driver informed me that the man in the road ahead of us was one of the best fishermen, belonging to one of the large associations in this county, and as he was at the head of the fish department he would no doubt show a fine creel of trout. I must confess my astonishment at the contents of the creel. Thirteen trout, the size such as I never saw taken from a stream in this State. It was indeed a sight, a healthy looking man carrying a large creel containing such fish, which I later on was told weighed undressed 10oz. to the lot, less than 1oz. per fish. Oh, ye gods and little fishes! Let us hope that there are few such among us, i.e., fishes.

EDGECLUMB.

#### AN EARLY MORNING EPISODE.

In the gray October dawn, when the gaunt body of the dead cottonwood was penciled against the eastern sky, I rolled my blankets round me "injun fashion" and sat motionless as a carved image amid the rocks and bluffs of the creek bank. Benie, my partner, had another niche on the other side of the trail; and we were waiting and watching for deer. There is nothing in the whole sporting calendar which makes a man's nerves tingle, nor lends the excitement to deer shooting, like this lying in wait, where you can see and not be seen, and watch your game leisurely approach. If you are the least bit excitable then look out for "buck fever," for you will surely have it.

The chill air of the morning made our position uncomfortably cool, but we had to remain or perhaps expose ourselves to the vigilant eye of the game. The day was still too young for steady shooting, when we took our position, but the even tone of gray was soon broken by a faint pink flush on the mist overhead, and a crimson gleam shot athwart the sky, giving us plenty of light for good aim and lighting the monumental peak of grand old Kara with a flood of color long before the valley knew it was yet day. A few late birds began to chirp and flutter among the willows, a "camp robber" jay splattered the shallow water of the creek into spray and started little rings across the pool in ever widening circles. A belated muskrat rasped among the cat tails and tules of a little spring pond across the stream, dived and reappearing swam to a half sunken branch of driftwood and combed and oiled his silken coat to his entire satisfaction before taking the water again for home. A couple of coyotes sneaked along the hillside, looking back with their peculiar sidelong glance, or stopped to listen to the grouse that clucked and hooted above us on the hillside. A fresh, new smell was in the air, and the little creek droned its rippling song in a quiet monotone which furnished a fitting melody for the birth of a new day.

A black spot on the trail! Yes. No. Y-e-s, it is a deer. Two. Now we move a little, drop our blankets and "clear for action." They do not appear to be in much of a hurry, but come slowly down the trail, nip a bunch of grass here, taste a killikinick bush there, stop a bit to look and listen, then come on. Our eyes see nothing save the noble pair, whose antlers we fain would win to grace our hall. Every nerve is tense, every muscle strained, as we wait their coming. The sweat beads gather on the forehead and still we wait. Oh, how slow they come! Don't they know the sun is up? Why don't they scud for the timber instead of munching among the tules? Ah! Out of the pond; on the trail; among the willows. In a moment now. Behind the shoulder "where the red and the white meet." The first one is down. Away goes the other with great leaps that are the poetry of motion, his white flag waving defiance as he clears a little plum thicket at a single bound. In a minute he is clear of the fringe of willows and running like the wind up the long slope of prairie foot-hill toward the mountain. Two Winchester's commence to throw lead with clock-like regularity. Ounce balls purr and hum all around him, throwing little dust patches up in front, behind and at his sides, and still he runs. The hills echo back the reports until the sound is like a volley of musketry. Buzz! Hum! Pur-r-r! Thud! Down goes the flag; he stumbles, stops, staggers a little and braces his feet far apart. His head sinks lower and lower, his body sways a little, then a spasmodic leap and he goes to grass all in a heap—dead!

Away we rush like Indians, Benie for one and I for the other. Our keen blades have bled them and we leave them where they lie and go after the pack horses to bring them in. Soon we have them hanging in camp dressed, and sit down to a hunter's breakfast which Harry has prepared, and have to then tell all about the whole thing for his benefit.

Every time I hang up my hat I gaze into the glass eyes of one of these same bucks and I see a bird making rings on a quiet pool, a muskrat smoothe his shining fur and an old whitetail buck racing for life up a long prairie hillside with the Winchester singing his death chant, and feel again the breath of morning, pine-scented, on my cheek. A thrill of keen enjoyment and self-satisfaction pervades my animal being, and the thought crosses my mind that it is well to have lived for that morning among the gypsum buttes of the Black Hills. What a flood of memories these things bring, ransacked from the cobwebbed pigeon-holes of our minds!

EL COMANCHO.

#### MY FIRST WING SHOT.

Editor Forest and Stream:

The accounts of notable shots in several recent numbers of your valuable journal impels me to write an account of my first "wing shot."

When I was a boy, almost no wing shooting was done in our section of northern Ohio, and the ambition of most boys was to become good rifle shots. This I succeeded in, and was very proud of my skill. I also used a shotgun a little, a single gun with a very long barrel with which very good shooting was done, but my pride was the rifle. Sometime in the late '50s we had some visitors from the South, who were sportsmen, full of stories of wing shooting; and the ambition of some of the boys—myself among the number, was excited to a high pitch. We were determined to try wing shooting. When our visitors went away, they left a double-barreled shotgun, muzzleloader, cylinder bore, 10-gauge, what would now be called a cheap gun, then a very fine one. This was loaned around, and kept pretty warm for a time.

A custom with the boys of our neighborhood then was, to club together on Christmas and other holidays and have a grand hunt or rather a grand frolic, as usually very little was obtained, because of the noise we made. However, we enjoyed it. On the Christmas of which I write, I planned to get possession of the double-barrel shotgun. When we started in the morning I killed a squirrel with my rifle, then exchanged it for the shotgun, and my first shot with it was at a rabbit on the run, this I killed, but that was not thought much of. Wing shooting was what we wanted. After our noonday lunch, we went to a dense thicket, known to be a favorite resort of partridges (pheasants we called them) and rabbits, but the noise made by boys and dogs was enough to frighten most of the game away. However, I passed through the thicket as much in advance as possible, and took a position in a corner of a field that was cleared down into the thicket, partially dividing it. I stood back from the corner a good shotgun range from each fence. The dogs were giving tongue to my left. I turned facing the sound when I heard the whirr of a partridge's wings and the sound of alighting on the fence on the other angle, now behind me. I turned to the right as quickly as possible but the bird did not wait for me, it started across the corner of the field, I kept on turning until I was facing the same way I was when I started, having turned clear around before I got sight of the bird; fired, and it fell dead against the fence. I have made many wing shots since—some very good ones—many poor ones, have killed turkeys, geese, ducks and grouse, but never since have I made a wing shot that I was so proud of as that my first one, and I doubt if I ever made a better shot after years of practice.

F. B.

OTTAWA, Kan.

#### BOSTON NOTES.

It has come to be almost an axiom that when Governor Russell goes on an outing he goes a-fishing. The Governor last went to Buzzard's Bay, where he was met by Senator John Simpkins, himself a fisherman, and is the guest of Joseph Jefferson. The party was made up of President Cleveland, Governor Russell, Joseph Jefferson, Senator Simpkins, Dr. Bryant, Dr. McBurny, of New York, and A. H. Woods, of Boston. It is reported that they tried the fishing in Peter's Pond, in Sandwich, near Marshpee, as well as the salt-water fishing.

Mr. Harry Whitmore, of the Boston Herald news staff, with his wife, are the guests of Mr. Hal Haskell, son of E. B. Haskell, of the Boston Herald, at Allerton Lodge, on the shores of Mooselucmaguntic Lake. There are also some other people in the camp, including a Mr. and Mrs. Webb, of Portland, I am told. This is Mr. Whitmore's first visit to the Rangeleys, and it is expected that, with Mrs. Whitmore, they will be charmed with the region.

The easterly storm of Monday, a week ago, drove in large flocks of shore birds, and the gunners were there to meet them. Some good bags were made at Chatham, where there are a number of Boston and other gunners. A. H. Smith is reported to have killed 40 birds in a short time Monday morning. The sudden and peculiar disappearance of Capt. Gould from the hotel at Chatham is still the subject of conversation among the sportsmen who have so many times stopped at his house. He was a favorite with the sportsmen who have visited Chatham. He is reported to have sent some letters since his disappearance stating that he shall never return. His friends are satisfied that he is suffering under some mental trouble.

Mr. Claude H. Tarbox, with A. P. Aldrich & Sons, grain merchants, of the Boston Chamber of Commerce, has had great success with shore birds. He is living in a cottage at Plum Island, off Ipswich Bay, with his wife, and they delight in entertaining their friends. He was on hand after the storm of Monday. He was satisfied that there would be a big flight of birds in the morning, and with his gun he took to the meadows about as early as he could see. He did not bother for decoys, but somehow he enjoyed the benefit of the decoys of another gunner, who reached the meadows at about the same time. His friend had placed his decoys in a likely spot and was hidden behind a stack of marsh hay, whistling for the birds, when our friends cautiously approached within reasonable distance, hoping to get a shot as soon as the owner of the decoys had emptied both barrels. Mr. Tarbox ambushed behind another stack of hay. Soon a big flock of birds hove in sight and made directly for the

whistler and the decoys. They went straight on until within easy gunshot, when they wheeled, making a handsome poise in the air, almost in a bunch. Mr. Tarbox expected to hear his friend's double shots in quick succession, and to see a dozen at least of the birds fall. But much to his surprise the other gun did not speak at all. The birds came pretty close to Mr. Tarbox's ambush, but not in so good a clump as they had appeared to the other gunner. He let them have both barrels and secured seven. Then he shouted to the other fellow: "Why, in the name of all that is great, didn't you shoot? You had a beautiful chance!" The other man rather sorrowfully replied: "I was expecting them to light!" Mr. Tarbox kept on shooting that morning with a result of 53 birds. The bag was mostly summer yellowlegs, though there was a sprinkling of ringnecks and black breasts. Only a few peep were in the number.

On Friday morning, after the great storm and blow of Thursday, Mr. Tarbox was on the shooting grounds again. But the wind was still so severe that he got no birds. The sportsmen will many of them spend Labor Day, a legal holiday in Massachusetts, September 4, among the shore birds.

Black bass fishing is reported to be good in Maine. The best report come from Maranocook, Annabessacook. Cobbessee Contee and the lakes around Winthrop, Monmouth and Augusta. Judge W. P. Philbrook, of Waterville, is reported to have had some excellent black bass fishing at Maranocook one day last week. With his friend, Mr. Ryder, he took 40 bass, the largest weighing 4lbs. They are said to have hooked three on one line, and to have landed them all, the three weighing 8lbs. Mr. Eugene E. Patridge, of Patridge & Macaular, has been at his camp in Annabessacook, where he has been enjoying the black bass fishing. But old associations are strong. Mr. Patridge has visited the Rangeleys annually for many years. This year, through the advice of his physician, he decided early in the spring to give up his Rangely fishing. But Friday his Boston partner had a letter from him saying that he was off for the Rangeleys. Mr. Edwin C. Stevens, of Stillman Kelley & Co., and well known in the New England molasses trade, is spending a couple of weeks fishing in the vicinity of Saulsbury, Vt. He sends home an account of a handsome string of 200 trout in one day, and mentions the taking of pickerel weighing 4lbs.

SPECIAL.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Chicago's New Warden.

Aug. 19.—Mr. M. R. Bortree, late game warden of Chicago, has been supplanted, under order of Gov. Altgeld, by Mr. Chas. H. Blow, who has entered upon the duties of his office with a disposition for results which augurs well for his future. Mr. Blow has already made several seizures, notably one of eleven prairie chickens of the Mayer Poultry Co., who have quarters in the A. Booth Building, State and Lake streets. For these he collected a fine of \$70. He also has a case set for next Monday before Justice White. This past week I gave him the names of two restaurants reported to me as selling prairie chickens, and he said he would go search them at once. That reminds me that I must telephone him again, for to-day, when I stepped into a certain restaurant near here, I saw prairie chickens openly and brazenly offered on the bill of fare.

Mr. Blow's address is 1,178 Milwaukee avenue, Chicago, and his telephone is West 476. He requests that any one knowing of or suspecting the presence of illegal game shall telephone him, giving him the street number of the suspected place, which he will search at once and without parley.

#### Nebraska Chickens.

Dr. H. S. West, of Council Bluffs, Ia., a long time reader of FOREST AND STREAM, made this office a pleasant call this week. Dr. West says that the chicken crop in Nebraska this year is good and that there will be plenty of birds in certain sections, even though the market-shooters are now at work. He lately was out with some puppies which his handler was breaking for him and found numbers of coveys, in fact, an abundance of birds if they were treated rightly at all. This was not far from Neeley, Neb., in Wheeler, Holt and Antelope counties, about 150 miles west of Omaha, I believe. The birds were the pinnated grouse. The sharpies have not migrated into that country for two or three years, as they formerly did. They used to come along about frost time in the fall.

Dr. West also says that if I have a friend who wants elk or mule deer he can give the address of ranchmen who have taken him to a fine big game country last year and before. He thinks elk would be a certainly.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

#### Notes from Rochester.

ROCHESTER, N. Y., Aug. 27.—*Editor Forest and Stream:* Notwithstanding the stringency of the money market, many residents of Rochester have been enjoying their annual outings during July and August.

Dr. E. M. Scranton has lately returned from the Muskoka region, and John Barnhite, with two friends, is now there. Geo. W. Aldridge, prominent in the city government, returned last Friday from the Adirondacks, where he enjoyed the trout fishing and also killed a fine buck. J. B. Davis put in four days last week on the Niagara River with the black bass.

Fedor Willimack and party lately returned from Clear Lake, Canada, where they enjoyed two weeks with the bass and muscalonge.

Earlier in the season Mr. Willimack and Mr. Judson spent part of two days at Clear Lake and brought home 68 bass. Such a trip as they make covers only three days and costs only \$8.50, and still some of us are "chained to business" so closely that we have to read it in FOREST AND STREAM.

Dr. Brownell and party enjoyed a ten days' outing at Rice Lake, Canada, last month, and although the residents of that section declared that the fishing was very poor they caught all the fish they had lost and a few more. Supervisor Edward English caught a wall-eyed pike that weighed 4lbs. in Irondequoit Bay last month, these fish are rare in that water.

Local fishing has not yielded good results this season, very few catches of game fish being reported. The hunt-

ers have been out in full force since the season opened, but birds are very scarce, grounds dry, but heavy, however, yesterday, and to-day will freshen things some.

C. C. M. Hunt told me the other day that he had killed more partridge than woodcock this season, but both were scarce in his section.

The bird question is about settled in this vicinity, rabbits are all there is left, and in a few years, if one must own a dog, we might as well own a pug as a hunting dog. However, I will take that back, as I prefer the beagle or cocker, even as kept as a pet.

O. S. BEE.

### DEAD DEER IN MAINE WOODS.

It is very certain that the headwaters of the Penobscot are again infested with outlaws and poachers, who wantonly kill deer and moose for the sake of seeing them die, and who care no more for the laws and the game wardens than they do for the winds that blow.

A prominent citizen of Waldo county, a man who is a dead shot with the rifle, and a man who has killed many deer and moose in his day and who now has many trophies of his hunting at his home, was in Bangor Wednesday. He has just returned from a trip with canoe and camera. He camped in many places, went into the deep woods and saw the scenes of which he tells. To a reporter who saw him he gave the following extracts from his diary that make excellent reading. Here it is:

Aug. 2.—Left Bangor, and went by rail and water to North East Carry.

Aug. 3.—Went up to Lobster Lake outlet. Passed three dead deer on the shore and saw two live ones in the stream. On the shore saw six live deer and one caribou, all very tame.

Aug. 4.—Started at 5 o'clock A. M. In the forenoon saw five deer on shore of Lobster Lake and one deer carcass on North Lake. Also saw signs of beaver and moose tracks. It began to rain at 8 o'clock and I returned to camp. While in camp I heard the report of a rifle near the outlet.

Aug. 5.—Saw six deer on west shore and outlet. Got back to camp at 2 o'clock, having seen four dead deer and the legs of another and the disemboweled carcass of yet another which had just been killed. Left camp again at 3 P. M. for Blood Pond stream, getting back at 8:45, having seen signs of moose, caribou and bear. Saw four deer, all in easy short range, so a man could shoot at least 90 per cent. of them.

Aug. 6.—Sunday.

Aug. 7.—Went to Russell's Pond. On my way saw three deer and found one carcass. Also found one moose hide and part of the body newly killed and sunk in the water half a mile from the West Branch. Then traveled up toward North West Carry. Saw three deer on the road above Sebomook Falls. On Russell stream saw two families of beavers.

Aug. 8.—Broke camp and came down to North East Carry; from here went to Moose Brook. Saw one deer. Also found a small party that had no guns.

Aug. 9.—Went to Caribou Pond. Saw one moose, one caribou and three deer on my way. Also saw two carcasses of deer untouched, and intestines of a third. Camped at Moose Horn.

Aug. 10.—Went to Pine Stream Pond and from there to Ragged Lake. Saw six deer on Moosehorn and Pine streams. Also saw bull moose. Found five dead deer between Lobster Lake and Moosehorn.

Aug. 11.—Back to Lobster Lake, and passed two parties camping with ladies. Left Lobster Lake for Russell Stream, and camped at 8:30 P. M. Saw eight deer. No dead ones.

Aug. 12.—Canoeed up to Russell's Falls. Here took the Caucomago road and traveled eight miles to Jackson camp, where I found there had lately been a terrible slaughter of deer and moose. Could not tell how many. There were certainly five; perhaps ten. The camp site smelled so bad of carrion that I had to gather it up and burn it before I could stop in the camp. Saw a big bull moose and two deer near the camp, and one cow moose and calf and three deer coming down. Caught a few fine trout near Jackson camp.

Aug. 13.—Sunday.

Having used up all my plates, left for Northeast Carry and Kineo, and thence for home.—Bangor News, Aug. 20.

#### Mississippi Quail.

MR. S. N. AYRES, of Blue Mountain, Miss., in a letter to me dated Aug. 14, writes as follows:

"Ten weeks to-day since we have had rain. Upland corn is ruined. Bottom corn is sorry. Cotton is about one-third ordinary size and poor. I think that the quail have done well this dry time, though some people think that they have perished for want of water in some sections. I have seen several bevs about full grown, numbering each from fifteen to twenty.

"I made a discovery of which I never saw nor read. A friend and myself saw a leech swallow a fishing worm as long as itself. After it had swallowed the worm, my friend switched it with a twig and it disgorged two worms, and the worms crawled off. Is it known that leeches eat worms?

"I will some time write you a plan I have adopted to keep negroes on my place from molesting quail nests. I think it will work to great advantage. I think your reference in FOREST AND STREAM to the negroes and their dogs was sound and without exaggeration." B. WATERS.

#### Adirondack Notes.

KEENE VALLEY, N. Y., Aug. 28.—Owing to the Adirondack Reserve's prohibition of hunting on its 30,000 acres, deer are very abundant in the neighborhood of Keene Valley at present. During the warm nights of June this year, it was no unusual thing for parties formed for that purpose to see from twenty to thirty deer feeding on the lily pads around the Upper Au Sable Lake and Inlet. It is not probable that in any other part of the Adirondacks could so many wild deer be seen at one time.

Aug. 20 a deer was seen in a cornfield between Beede's and Keene Flats, and a few days before that one crossed the road near the "River Bridge." Still another was seen by one of the servants of Dr. Adler, of New York, who lives at the foot of Noon Mark.

Louis Tiffany, of New York, and Dr. Roosevelt, came on a bear while in the neighborhood of Chapel Pond. The meeting was wholly unexpected, and neither party stopped to exchange greetings.

J. R.

#### Connecticut Otters.

HARTFORD, Conn., Aug. 25.—Mr. Brooks can find otters at Chaplin, Conn., 10 miles from Willimantic on the New York and New England Railroad, judging from the inclosed clipping from the Hartford (Conn.) Post. It reads: "Samuel Chappell, Jr., of Chaplin, has captured an otter in a steel trap and will endeavor to keep it alive. The animal is thought to be about six months old, and more of them are in this vicinity." A. C. COLLINS.

#### New Hampshire Big Game.

MANCHESTER, N. H., Aug. 23.—Mr. Samuel Annis says he saw a young moose, much bewildered, in the adjoining southerly town of Londonderry the 18th; it was also seen by a Mrs. Jones. Deer have been seen during the summer in Goffstown, on our western boundary. Why should we go to northern Maine hunting when moose and deer stalk almost at our very doors? PAYSON.

#### A NEW YORK GAME LAW MUDDLE.

THERE appears to be widespread misinformation respecting the New York season for woodcock and ruffed grouse shooting.

The Game Code of 1892 contains a chapter relating to Long Island, for which seasons are provided differing from those which prevail in the rest of the State. Thus, while the close season for woodcock and grouse in the State at large is prescribed in Sec. 74, the close season for these species on Long Island is prescribed in Sec. 164. In the Code as originally enacted the general State law (Sec. 74) made the close season between Jan. 1 and Aug. 15; and the Long Island law (Sec. 164) made the close season between Jan. 1 and Nov. 1.

In the 1893 session of the Legislature the State law on woodcock and grouse (Sec. 74) was not changed. The close season still remains between Jan. 1 and Aug. 15. Both grouse and woodcock are now in season in the State at large, except where supervisors' ordinances prevail in the counties of Chenango, Columbia, Dutchess, Madison, Otsego, Sullivan, Wayne and Yates. These were given in our issues of July 29 and Aug. 9.

The Long Island law (Sec. 164) was so changed by the last Legislature as to make the close season for woodcock between Jan. 1 and Aug. 1, and for grouse between Jan. 1 and Nov. 1. The amendment was promulgated as "Chap. 547—An act to amend the game law, relating to woodcock and grouse," and it reads: "Section 164 of the game law is hereby amended, etc." The section applies only to Long Island. Amending Sec. 164 only, it did not affect the season elsewhere.

#### Prairie Chickens in South Dakota.

MITCHELL, S. D., Aug. 18.—*Editor Forest and Stream:* County Judge John T. Kean of Woonsocket county, this season declared that the game law of this State was null and void, and says that prairie chickens (which are so plentiful this year) may be shot and killed at any time of the year without trespassing on the law. The last Legislature while attempting to amend the law, repealed all law on the subject.

To show the manner in which the birds have been slaughtered this season, two Eastern hunters are reported to have bagged thirty-five dozen prairie chickens in one day's time, in the fine game land in the neighborhood of Mitchell.

In a few years our Eastern hunters will be complaining of the scarcity of this game which has held its own so long in this section of the country, and of which this year there is said to be a great increase.

This style of extermination will soon cause our Eastern sportsmen to be less and less kindly treated by our farmers and local sportsmen every year.

Our law will evidently be remedied at the next meeting of the Legislature. Yet this butchery cannot be shut off until after next season.

H. G. NICHOLS.

[We do not understand how the situation can be as described. The law as amended by act of Feb. 21, 1893, forbids killing prairie chickens and other grouse between Jan. 1 and Sept. 1.]

#### Not Much Encouragement for a Conscientious Sportsman.

VERMILION, S. D., Aug. 12.—Inclosed please find 25 cents in postage stamps for *Game Laws in Brief*. I want to keep posted on the game laws. I never hunt until the law is out, and the result is that I never get any game near home. By the time the law is out there is not a full covey of chickens to be found within twenty miles of Vermillion. There are a good many chickens here this fall, and the quail are thick, but not many ducks; it is too dry. I think that if more of the hunters would take FOREST AND STREAM and read it there would be less law-breaking, but I can not get them to read it. It shows them up too much. VERMILION.

#### New Hampshire's Foolish Hawk Law.

MANCHESTER, N. H., Aug. 23.—The State pays a bounty of 25 cents on dead hawks. For the first time this year, in this city, advantage was taken of it last week by Alice Roby, the little daughter of Frank Roby, and who was the center of considerable interest among the city officials while making the collection. The law is sadly abused by boys and gunners of near boundary towns in Massachusetts, on the sea coast especially, they bringing many hawks over the line for the bounty, their State not paying any. One party smuggled in sixteen and got his money, then telling of it has probably injured the business for his imitators. PAYSON.

#### West Virginia Quail.

I CANNOT say as regards the plentifulness of quail in West Virginia, but during the summer the music of his whistle was heard as usual, and I think I flushed in my walks about as many as formerly. Thus I think the shooting will not be altogether poor. WEST VIRGINIAN.

FAIRMONT, W. Va., Aug. 20.—In this vicinity quail will be very scarce during the coming season in consequence of the extremely tough winter, but there will be a goodly number of ruffed grouse. C. W. W.

#### New York Woodcock Season.

FRONTENAC, Jefferson County, N. Y., Aug. 22.—*Editor Forest and Stream:* It is the universal opinion of sportsmen all over New York State, so far as my acquaintance extends, that our season opens at least a month too early. Have not been out myself, but have seen birds only about half-grown brought in. H. W. B.

#### Fulton Chain Bucks.

BALD MOUNTAIN HOUSE, Old Forge, Herkimer County, N. Y., Aug. 19.—Our guests killed 3 large bucks last week within two miles of our camp, floating on Third Lake, which is one of the best salmon trout lakes on the justly celebrated Fulton Chain. CHAS. E. THOMPSON.

# FOREST AND STREAM IN THE WORLD'S FAIR.

As Seen by Our Staff Correspondents.

## The Alaska Exhibit.

In the northwest corner of the United States, extending through about 1,200 miles of latitude and 2,000 miles of longitude lies the province which Seward purchased, and on account of which we have recently survived an attack of arbitration. Similarly, in the northwest gallery of the Interior Department space in the U. S. Government Building, is displayed the unique exhibit from Alaska, arranged by and in large measure belonging to Lieut. G. S. Emmons, U. S. Navy.

Lieut. Emmons has lived in southeastern Alaska long enough to have become thoroughly acquainted with the Indian tribes, their mode of life, methods of making clothes and ornaments, implements of hunting and fishing, artists' materials, medicines, and in general everything pertaining to their domestic economy. Among the results of his patient and intelligent research are the 2,700 objects shown in the Alaskan exhibit.

These include articles made of wood, grasses, fibers, animal substances, stone, minerals and various metals. The museum idea has never been forgotten in forming the collection, so that one sees, not a heterogeneous mass of curiosities, but a scientific representation of the arts and industries of the people, beginning with the raw materials and carried through the various stages of preparation to the finished products. Having been on a friendly footing with the natives, Mr. Emmons has enjoyed their confidence and profited by their assistance with great advantage to his undertakings.

The dugout canoes, implements of stone and copper, devices for games, wood carvings, household utensils, articles of bone and horn, and the engraved silver ornaments are conspicuous for their number and quality.

The Eskimo collections were obtained chiefly by Capt. Healy, of the steamer Corwin, and his associates. A fine series of water color paintings of Alaskan landscapes, natives and their dwellings, and glaciers was lent for exhibition by Artist Richardson. The wild flowers of the Sitka district are illustrated by the color paintings of Miss Jackson.

One of the trading companies sent a case of furs of sea otter, fur seal, foxes, mink, wolf, wolverine and bear. The minerals and ores of the territory are well represented in the collection, and also some of the oils and fertilizers derived from herring and other fish.

Visitors are universally surprised by the display of forest trees and their applications. The skill of the Indians in canoe building and wood carving is well brought out by the many fine products of their hands.

Alaska is, perhaps, the best known through its fish and game, and it was to be expected that Lieut. Emmons would bring together a striking assortment of species, and particularly of the fish, because he is an enthusiastic fisherman. On account of the difficulty and expense of preservation in alcohol the collection includes chiefly mounted skins. These were prepared by Mr. F. E. Froese of Sitka.

They represent nearly forty kinds and most of them are edible. There are the five species of salmon, Gairdner's trout, red-throated trout, Dolly Varden trout, capelin, cod, pollock, halibut, skate, dogfish, several kinds of "rock trout" or "sea trout" (*Hecagrammus*), a large number of so-called "rock trout" (*Sebastes*), one of which is the "black bass" at Sitka, three forms of sculpin (*Cottus*, *Aspicottus* and *Hemilepidotus*), the sand lance, two blennies (*Lumpenus* and *Delolepis*), several foundlers, a "miniature sturgeon" (*Podotheus acipenserinus*), the cultus cod and the beshowe or "black cod," known in Sitka as the "candle-fish."

The invertebrate series contains heart shells, scallops, abalones, mussels, clams, barnacles, ship worms, rock crab, kelp crab, spider crab, hermit crab, sea urchins, starfish, sea cucumbers and a sponge.

A remarkable blenny (*Delolepis virgatus*) is called "eel" at Sitka; it grows to the length of 3 ft., and is pronounced by Mr. Emmons delicious for the table. He says it is found at Edgecombe and can be caught there at any time.

The trout fishing in southeastern Alaska ought to satisfy the most exacting angler. During a morning's fishing in a mainland stream seven miles from Wrangell, Mr. Emmons caught 78 black-spotted trout ranging from 1 lb. to 1 1/2 lbs. in weight. This was in May. The bait was a strip of salmon belly showing silver on the under part and red flesh above.

The common trout of Alaska are the red-throated or black-spotted, the Dolly Varden and the Gairdner's trout, sometimes styled "steelhead." The redthroat is the same form so widely distributed in the Rocky Mountain region, extending as far south as the Sierra Madre of Mexico.

T. H. B.

## Fair Visitors.

Aug. 17.—No one will every know just whose mind conceived or whose hand executed this or that beautiful view, or vista, or group, or decorative bit of the gloriously and perfectly beautiful White City. See it at any hour, especially after dark, when you will only see a little at a time, you feel a thrill of delight at the beauty of any of a hundred views or ornamentations. You know it is beautiful, but you never will know who made it so. Of course you know that prominent in the great corps of master artists of all kinds was F. D. Millet, journalist, war correspondent and artist, who was chief in the color decorations and did much besides that. One day this week Dr. C. S. Millet, of Rockland, Mass., came into the FOREST AND STREAM exhibit and told me he was a brother of F. D. Millet and a reader of FOREST AND STREAM. He was accompanied by his wife and also by his mother, who seemed very proud of her boys and also of the grandson, Ralph, who added his name to the FOREST AND STREAM register. Mr. W. P. Whitman, of Campello, Mass., who perhaps guided them to the FOREST AND STREAM corner of the world, was also present with his wife. The ladies insisted that if FOREST AND STREAM were not made so good they would have more time with their husbands. The entire party above are stopping at the cottage on the Wooded Island and having an enormously good time at

the Fair. They borrow firewood and garden sauce of Billy Hofer at the Hunters' Cabin.

This reminds me that I slept two nights this week at the cabin myself. The first night Billy was away and it really seemed like old times in the mountains to find an unoccupied cabin, belonging to I didn't know or care whom, to go in and to throw down my blankets and make myself at home until the owner came or until I got ready to leave. The owner didn't come that night and I slept alone in the very heart of the White City. It was apparently also the heart of the wilderness. The fire flickered on the log rafters, and all night the wild geese honked, and in the morning the birds sang, and there was the pattering of small feet of some kind on the roof. At 7 o'clock or earlier a countryman and his wife, getting an early run for their money, opened the door, which I had left unpeeped for Billy. "Oh!" said he, spying my form on Billy's rawhide sofa, "the gentleman in charge hasn't got up yet." "Sir," I said, "I am not in the least certain that I am a gentleman, and I know I am not in charge, but if you will shut that door I will get up." He shut the door then. The Fair can wait when it comes to the spoiling of a morning reverie; and besides, there should be realism when it comes to showing the life and customs of a tired hunter.

Dr. R. R. Braxton, of Loogootee, Ind., leaves his footprint on the sands of the FOREST AND STREAM register this week. So does Mr. Irving D. Haskell, news editor of the *Daily Signal*, of Ashland, Ky. Both of these gentlemen I should have liked much to see.

Mr. J. Hervey Stout, of Stoughton, N. J., I was fortunate enough to meet, and we had a pleasant chat. You know there is a great deal of discussion over the question whether or not New Jersey is in the United States. I asked Mr. Stout about this, and he assured me that New Jersey is not only in part but wholly within the United States. This matter can therefore now be regarded as settled. I am glad I met Mr. Stout, not only for this reason, but also because he is a very pleasant gentleman.

Mr. Jas. H. Whitfield, of the Kansas City *Star* staff, and one of the best known sporting editors of the daily press, is in the city this week and next enjoying the Fair, and looks as though it was agreeing with him.

## Come Now.

Come now to the Fair. Do not wait. Do not wait for special attractions. The attractions are far more now than any one can convey. An attraction which seems big away from the Fair is very small at the Fair. The Fair is now at its height. The nights will soon be so cool that some of the pleasure of the pleasantest and most beautiful part of the day will be lost. Come now to the Fair.

## Norway's Exhibit.

Aug. 18.—Commissioner Chr. Ravn, of Norway, is very much pleased. Norway, it seems, withdrew her exhibit from all competition, not being satisfied with the system of awards. Her display, however, is so complete and admirable that Dr. Henshall, of the jury, moved for Norway a special complimentary award, which was given her on full vote. The Norwegian display I have mentioned often. It is perhaps the best in the main Fisheries.

## Military.

Aug. 19.—The entire corps of the U. S. Cadets arrived from West Point yesterday, about 300 strong, with the post band of 40 pieces and a field corps of 15 pieces. The boys will remain ten days. In drill they are a relief after the numberless militia bodies of this summer, and by the time they are through West Point they will, I trust, have a better style in the saddle than the lumbering English cavalry seat which has been so much in evidence all summer at the so-called English military tournament. The latter disbands to-day.

A very neat body of soldierly looking fellows are the Louisiana cadets, militia, who have been in camp for some days on the green near the head of the Midway. They lark a little more than the French marines, or the quiet United States troops, who are encamped at different points on the ground, or the crews of the Spanish caravels. The latter complain of ennui, and want to get ashore and have some high jinks.

## Fishermen's Day.

Aug. 20.—The authorities promulgate the following in regard to Fishermen's Days. The dates have had earlier mention in FOREST AND STREAM:

"September 19 and 20 have been set apart as 'Fishermen's Days' with the object of affording to all the fishing interests of the world a special opportunity to assemble in a congress at the World's Fair. A special programme of entertainment will be provided, one feature of which will be a procession of fishing boats of all kinds, from the skin cayak of the Eskimo and the dugout and catamaran, to the whaleboat and New England dory. An important feature of the occasion will be the reading of papers concerning fish, fishing, and fishculture."

E. HOUGH.

## In the Angler's Pavilion.

The Anglers' Pavilion was gotten into complete finish for public inspection when the installation of the Brazil exhibit was completed, some weeks ago. It is now one of the chief attractions.

The exhibit of the St. Lawrence River Skiff, Canoe and Steam Launch Co., in the Anglers' Pavilion, is a most interesting one. There are seven boats all told, the largest of which is the Vol-au-Vent, sloop rig. It is fixed fin-keel, non-capsizeable, graceful in design. There is also a racing canoe, a pleasure boat, a sailing canoe and oars of fine workmanship.

Close by is one exhibit of Thomas Kane & Co., consisting of a duck boat, a combination row and sail boat, staunchly built and handsome; a racing canoe, a livery row and sail boat, and a linenoid seamless canoe, 10 ft. long and 27 in. beam, weight 50 lbs. For the linenoid (a material made of linen threads, canvas, etc.) the manufacturers claim that it cannot be broken, that it is light, tough, waterproof, durable and takes a nice finish. This company also has three boats in the eastern gallery of

the Fisheries Building, one of which is a fishing boat, one a Lake Michigan row boat and the remaining one a St. Lawrence skiff. As mentioned in a previous issue, the company has also a large exhibit in the Transportation Building.

In the latter building will be found many interesting illustrations of transportation besides those enumerated in previous issues. Mr. Edward Bedloe, U. S. Consul, Amoy, China, has a very complete lot of models showing the peculiar makes of Chinese large and small craft, for river and ocean transportation, and their manner of use.

Messrs. DeGrau, Aymar & Co. have on exhibition a variety of oars of different kinds.

The Essex Institute and Peabody Academy of Science exhibit a variety of marine and other pictures which comprehensively illustrate different kinds of transportation, from the most primitive to the most modern. Those portraying transportation in the early days of the Far West are specially interesting.

The Maine Board of World's Fair Management has utilized its space by exhibiting numerous models of ships, which are placed on the wall. Two canoes are placed in the foreground. An old cannon, wrinkled with age and apparently as dangerous as a big frog sitting on end, had a place of honor in the middle of the exhibit. A placard informed the curious that the cannon was used on the British man-of-war, the brig Boxer, in the war of 1812, in an engagement in which both commanders and nearly two-thirds of each crew were killed. That showed a fair degree of fighting vivacity, but with better cannons they could have done much more execution in less time.

A most novel exhibit is that illustrating the different kinds of craft used in India. The models are numerous, comprising all the vessels from a crude, small dugout to the largest freight boats. One model showed a number of men on either shore of a river towing the bulky boat while the rest of the crew was rowing.

But the most primitive of all was that where a native was shown lying on his stomach across an air-tight vessel, his feet and head projecting over the sides. The vessel was much the same shape as would be two large saucers placed face to face. On such romantic craft the native rested prone on his stomach and fished or paddled across rivers with his hands.

The Truscott Boat Manufacturing Co. has a large exhibit on the main floor consisting of a skimmer catboat, an oil-burning launch and about a dozen rowboats of different kinds.

In the Canadian department, main floor, is a large exhibit of canoes, about 17 in all.

This covers in the main all the features in the Transportation Building of transportation pertaining to water, but there is an endless array of models, pictures, motor power, machinery, steering apparatus, tackle blocks, anchors, pyrotechnics for vessels' use, etc. Hours can be profitably spent in studying such a great collection of object lessons.

## Gillott's Pen Exhibit.

"The pen is mightier than the sword" is an old and true saying in its figurative sense, that is, the power of mind over matter, but the World's Fair visitor can see, in the exhibit of Joseph Gillott, in the Department of Great Britain in the Manufactures Building, a pen and holder of majestic proportions, fit literally to do battle with warrior bold. It is a finely finished piece of workmanship, and set perpendicularly forms the center piece in the upper part of the large case, which is itself a heavy piece, tall and wide, of quiet elegance; for either side of the mammoth pen, clearly seen through the plate glass, are numerous cunningly worked designs, on the cloth background, in pens of different styles, sizes and colors. The colors are more numerous than one would suppose—gold, white, red, brown and numerous metallic shades. The effects were most artistic. In the lower case in infinite profusion are pens in gold and steel, large and small, wide and narrow, with every imaginable shape of point and most delicate finish. There were pen holders in elegant pearl, and in ebony and rare woods, beautiful in design and workmanship. In another case were a bushel or so of pens in boxes, showing them ready for market, and also loose in bulk. It is said to be the largest pen exhibit ever made.

The chief motive power at the World's Fair, in the launches which ply to and fro on the lagoon, is electricity, but a few boats have steam power. I notice that Capt. Symonds's official boat, the Aloha, is propelled by steam and is furnished with a boiler made by the Roberts Safety Water Tube Boiler Co., of New York. I was informed that that company had fitted with boilers the steam yachts Oneida and Okoboji, which run between the naval pier and Chicago. The different motive powers are quite a study in themselves, comprising all the different mechanisms pertaining to naphtha, steam and electricity.

Aug. 24.—The committee of judges of awards of the Fisheries Department of the Exposition were tendered a banquet this week at the Victoria Hotel by Andrew Weber, of the committee. An address on the fisheries industry was made by Capt. J. W. Collins, Professor L. Whitman, of Berlin, and Dr. J. A. Henshall talked about angling.

B. WATERS.

## Some Who Found the "Forest and Stream" Corner.

TOLEDO, O., Aug. 21.—I visited your exhibit at the World's Fair the other day, and must say that nothing in the White City interested me more.

B. A. C.

LOUISVILLE, Ky., Aug. 21.—I have just returned from Chicago. I was delighted with your exhibit and hope the photograph which was taken while I was there will do it justice. It will be of incalculable advantage to the paper. My only regret was at not meeting Mr. Hough, to whose department I always turn when I open the paper.

F. J. H.

BOSTON, Mass., Aug. 11.—I called twice at the FOREST AND STREAM office in the Fisheries Exhibit in Chicago, and duly admired and examined everything at your exhibit, though my time for it was short.

C. H. A.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

THE FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### SALMON IN SALT WATER.

MONTEREY, Cal., Aug. 20.—*Respite finem.* The salmon have gone. The tens of thousands of salmon which have frequented the coast for several weeks, from Santa Cruz to Carmelo Bay, 27 miles in extent, have taken their departure for the Sacramento River, where they appeared almost simultaneously with their disappearance from the coast, showing quite conclusively they are those of that locality, and where they are now being seined in the usual manner. Prior to their departure, notably at Santa Cruz and about Monterey Bay, large schools of grilse came in, making fine sport, being from 5 to 10 lbs. in weight and in numbers far exceeding the salmon.

On July 30 the salmon almost entirely left Monterey Bay, although still plentiful at Santa Cruz and Carmelo. On the 31st, I visited Santa Cruz, where I found the taking to be almost wholly grilse; this continued for several days, until the 5th, when the fishing about ceased. After that I visited Carmelo Bay, twenty-seven miles south, where the fishing still remained good, the fish running larger than at any time during the season, averaging fully 30 lbs. without any grilse. Numbers were taken running from 25 to 30 lbs., evidently representing the school of autumnal fish. This prime fishing continued until the morning of Aug. 9, when a large school of killers came in (*Orea gladiator*), which put an immediate stop to all fishing, and there has been none since. It was 6 o'clock and I had taken four salmon, and was trolling with the several boats containing Monterey market fishermen, who had come down for fish, and who had all taken more or less salmon, when in came a prodigious pack of killers, I should say fully 200 or more, wild and frantic as a pack of wolves, leaping from the water as porpoises, and going down for salmon and other fish and effectually putting an end to further strikes, for although I fished industriously and so did the other boats for several hours, not a salmon was caught, nor has there been since up to date, excepting an odd one or two caught at Carmelo Bay. They may come in again, but probably will not.

These killers, although given as frequenters of the northern seas, are most plentiful on this coast, and are indeed the terrors of the sea. They come fearlessly about with their enormous dorsal fins projecting from 4 to 5 ft. above the water, and slashing about with their most powerful tails in a most threatening manner, and I felt rather nervous at times as they came within short distances of my boat, although they have never been known to attack boats or men, although they could easily flop a boat over with their tails or rend it into pieces with their frightful jaws. These killers run from 15 to 30 ft. in length, and from 2,000 to 6,000 lbs. in weight. They have a large and most capacious mouth, set with sharp tusks closely set, from 2 to 3 in. long, and from 1 in. to 2½ in. in diameter, 24 in lower jaw, and 26 in the upper. When one considers the immense amount of food which a pack of 200 or 300 killers requires, each one capable of cutting a porpoise apart at a single bite, and swallowing in two mouthfuls, some idea may be formed of the devastation which is continually going on in the sea. These killers will take an ordinary seal at a mouthful, with scarcely an effort at mastication, and one lately taken here was secured when almost choked to death with an extra large seal stuck in its throat and with five other seals in its stomach. They will rend a sea lion into pieces in short order, and have no hesitancy in attacking any living creature in the sea, save the sperm whale, which boldly attacks in turn. The ordinary whales of the coast, the right, bowhead and gray, most timid animals, which are often driven frantic by the playful chase of the porpoises, are pursued by the killers until exhausted, when their tongues are literally eaten out of the huge leviathans while alive. I have the statements of several old whalers, now reduced to the position of market fishermen in the bay, Capt. M. Gonzales and Capt. Freitas, who for years pursued the business of whalemens in the harbor before the decay of the business, that they have each in several instances secured the whale bodies, for blubber, off the harbor, which had been destroyed by killers, and Mr. Michael Noon, a most trustworthy old whaler, now in charge of the only wharf used in Monterey, assures me that he has in two instances secured whales alive, but dying with their tongues eaten out by killers.

Mr. Noon also says that upon one occasion, when with his comrades he had made a large raft of blubber cut from a whale near the harbor, and was engaged in towing with two boats, the raft was suddenly attacked by a pack of killers and the whole of the blubber stolen away in quick order, although with his men he prodded them with lances to their utmost.

The disappearance of the salmon in sections from the coast would seem to show that they do not act as a whole, but in separate schools, and I have noticed in the fishing that the runs were not similar in size of fish, on some days running large and on others smaller, which would indicate that schools of varying size of fish came and left, most likely working north toward the Sacramento River, ninety miles distant. The canning pack of the season from the various rivers on the coast, which was expected to be less than the average, turns out to have been larger than any, amounting to about 1,700,000 cases of 48 lbs. each, or over 80,000,000 lbs., representing over 6,000,000 salmon, in fact more, for a large portion of the pack from the upper waters were of bluebacks (*O. nerka*), which average but 8 lbs., perfect salmon, and of the desired deep pink color.

I find it difficult to estimate satisfactorily the age of the salmon which have been about this locality, for if but few return from the Sacramento and San Joaquin rivers after spawning, where have the salmon which we have been catching passed their lives and of what age are they? If as parr they remain in their native streams a year, or possibly two, and after a year in salt water as grilse, grow up to a weight of from 5 to 10 lbs., did they in a following year grow to the average of 16 lbs., and in extreme cases up to the exceptionally large fish of 40 lbs. and even over? Or were the large fish those which had survived the fresh-

water spawning season? And if so, why have they not shown the usual features so characteristic of river fish—the deformities of jaw or head, body or fins? I have seen none but fresh and perfectly formed. The young salmon show equally with the grown the full development of the generating organs, and in this respect are fully matured. It may be that the bulk of young salmon do not ascend far in the spawning season, and they are found in San Francisco Bay about the whole of the year. There are those who claim that all the salmon do not ascend the rivers at all, although there is nothing in experience or reason to substantiate such a conclusion.

That a grilse will grow, from one year in salt water, from 9 to 20 lbs. is not at all improbable, but it is improbable that it will gain 20 or 30 lbs. in a year. Again, if young salmon run to milt and spawn, as they undoubtedly do, and ascend rivers, why will not a few exceptional salmon show the river life features which are so evident? or do those features disappear after the return to salt water? These questions are not yet settled. I find among the canners a general belief that all salmon do not spawn annually. They claim that they do not get annually the same runs in quantity, but every third or fourth year an exceptionally large run. That this feature is regular and uniform. It may be that all salmon do not annually conform to the reproduction stage, but have periods of irregularity in this respect. We have yet to gain information upon this point. We all know the black salmon, the left-over fish, sometimes blind and always worthless. These fish, exhausted by the prolonged fasting incidental to river life and reproduction, are comparatively helpless in condition. If examined, the stomach and auxiliary glands (*Pyloric cæca*) and all internal organs will be found so diminished, compared with the usual normal conditions when fresh from the sea, that it may well be conjectured if the stomach, so reduced will it be found and not of sufficient size to hold the smallest minnow, may ever resume its normal condition?

It is questionable if the blind black salmon ever revives in the sea, although it may succeed in reaching it. It is questionable if it has sufficient power, or acquires it, to successfully hold its own again. It is also evident that the average salmon returning to the sea from the spawning river, must to an almost complete extent discard the features which it has acquired in the reproduction period. Upon entering the fresh water the salmon steadily deteriorates, not essentially from the fresh water contact, but as the season of generation advances the distinction becomes more marked as the season goes on. The premaxillaries and lower jaws of the males become lengthened and often extravagantly hooked, and often the mouth cannot be closed; the teeth on the vomer and tongue fall out, and the front teeth grow abnormally long. The body falls in and thickens at the shoulders, and the scales fall off along the back, and a spongy skin appears. Red and black blotches follow, and the curdy flavor between the flakes is wanting, and the flesh becomes worthless for food. The fins and tail wear away, and complete blindness often results. The stomach and digestive organs shrink almost away, and the once royal and gamy fish becomes a lifeless and pitiable object. From the upper waters of the Pacific Coast, I am sure it never becomes again the bold denizen of the sea. The salmon of this summer's visitation about here, I should estimate to be of three, and in some instances, four years of age. I do not believe that any of them have had any experience excepting possibly limited, of fresh water life, beyond that of their earlier fingerling existence. Nor do I believe that any of the adult growth which have been about this year, excepting in a few limited instances, will ever return, but will be succeeded by the fresh growth from the grilse. It would seem almost that there had been an omission in those provisions of nature, which are so perfect, in the instance of the salmon, and that the period of generation to the adult salmon was one from which there was only an exceptional survival. From the large salmon which I have seen, and the casts in museums and collections of large fish, and particularly in the large collection of casts of large salmon made by the late Frank Buckland, and in the casts shown at the Fisheries Exhibition in London a few years ago, I have observed that the large salmon were invariably marked by the distortions incidental to those shown in the fresh water spawning life. Among the millions secured at the Columbia River for canning, an occasional hundred-pounder has been found, and one of 82 lbs. has lately been forwarded frozen in ice, to the Columbian Exhibition.

One thing is evident, that the salmon are yearly present on this coast, extending over an extent of thirty miles, from Santa Cruz down to Carmelo Bay, in full life and high condition, and will afford to the sportsman and fairly good angler an average of half a dozen salmon a day during the season. The season may fairly be computed at six weeks, so far as my observation has extended, and should place it from June 10 to Sept. 1. Last year the fishing continued fairly good from June 10 to the middle of September. There are a few lost salmon still about but not plentiful enough to inspire exertions. I have been out several times, without a catch, although an occasional salmon is secured in the fishermen's nets. I have received quite a number of inquiring letters from fishermen since my articles in your paper, but I cannot add much more than was contained in the articles, excepting that I would suggest Santa Cruz in preference to any other place. It is an open sea resort, and supplied with fairly good hotels, straight on the sea, where boats can be obtained more readily and more cheaply than at Monterey, and nearer to the fishing grounds, which are, in fact, directly adjoining the front, and where the sea is quieter than at Monterey or Carmelo. The fishing has been as good there this year as elsewhere, although the fish have not run as large as further south. The salmon have been there yearly, most undoubtedly, but it has not been a yearly fishing station of any importance until this year, compared with Monterey and other places, and in fact, excepting the rod-fishing of Mr. Tubbs, referred to in my previous letter, there has not been any rod-fishing for salmon anywhere on the coast, until my fishing in June, which receiving considerable notice, occasioned a good deal of fishing at Santa Cruz during July, more than had altogether before been done on the coast. Not more than two or three rod-fishermen have wet lines here this season, while perhaps a dozen or more have at Santa Cruz, but it is likely that next year will witness a great deal more salmon fishing, as it is destined to receive an attention hardly estimated

at the present time, for it unmistakably presents a field for the highest class of fishing, all things considered, that is presented anywhere in the world—that of taking salmon in salt water, in the highest possible condition in which the royal fish is ever found, with the open sea for its vantage ground, on a tackle even lighter than can safely be used over a river pool, and where the fighting qualities of the salmon are more keenly evinced than can be exhibited in any stream, and where the surroundings are of the highest possible cast, those of the yielding waves, tinted with the reflecting hues of the varying light, the open sky, and at home with the sea birds and many strange fish, and with the consciousness that a myriad of bold, unrestricted salmon are cleaving the translucent waters below.

During the whole past fishing season there has not been storm or gale on the coast about, which is the usual condition; and the sea, although at times accompanied with something of a swell, has not at any time been so rough but a small boat could take the outside fishing, although at such times one sensitive to seasickness would experience the ills, which, however, I am not afflicted with. At Santa Cruz there has hardly been a day when the sea has been troubled, and ladies have gone out to the fishing with impunity. For experiment, in one of the late day's fishing I brought my trout hexagonal of 7 oz. in play with a light, almost thread, silk line of 600 ft., with a light hook, and brought in after a protracted play a salmon of 20 lbs.; but the tackle is too light and the rod impracticable for bringing to gaff. In fact, no bamboo is efficient compared with the 10-ounce steel, two of which have answered for over a ton of salmon, and which are in good order for another year.

One can have a variety of fishing at Monterey, and north and south of it, for the Pacific waters teem with life. Mackerel and sea bass have come in, but are not yet striking freely, as the bay is literally crowded with bait in the form of squid, anchovies and sardines. The sardines are apparently identical with those used in tinning, but large, weighing from ½ to 1 lb. and in schools of acres in extent. With Mr. Noon and two assistants I shot and harpooned a large grampus, of half a ton in weight, a few days ago, and brought it to beach in a few hours, but it seemed dull sport compared with salmon fishing and I pitied the poor animal in its wearisome efforts to escape, dragging the boat aimlessly about while exhausting from the bullet and harpoon wounds, and vowed I would have no more of it.

J. PARKER WHITNEY.

### HEART LAKES.

BOSTON, Mass., Aug. 24.—Fifteen miles by trail up Bear Creek Cañon from Colorado Springs, Col., and five miles from the summit of Pike's Peak, are a series of lakes at the summit of Bald Mountain, known to the dwellers of that section of the country as The Seven Lakes. Heart Lake, or the largest of these lakes, covers, as I was told when there eight years ago, about forty acres, and has been plumed 80 ft. in the center and no bottom touched. There are seven of these lakes, the smaller being a good-sized pond.

A most beautiful stream empties out of these lakes and courses its way down Beaver Cañon. I have traveled all over this country from the Atlantic to the Pacific Coast, and to my fancy no place has ever proved so grand for scenery and health. Now the point I am getting at is this: In these lakes and in the stream emptying out of them there does not exist a single trout, at least during the time I spent a summer there, or fish of any description, but there is in the lakes a peculiarly-looking animal or possibly a fish, which is black, has four legs, a head similar to that of a catfish, and tail like a lizard and no fins.

The name it goes by there is "devilfish" and there are great numbers there, especially in the two larger lakes. The water seems to be of the purest, is clear as crystal and cold really as ice; and the lake is said to be 11,800 ft. above the sea level. What I would like to know is, why are there no trout in such a grand small body of lakes? Is it on account of the altitude or is it because they possibly have never inhabited the waters?

The Seven Lakes are also reached by wagon going by toll road entering the mountain at Cheyenne Cañon. The distance by toll road is said to be twenty-five miles and difficult to travel; accidents such as buggies tipping over often occur. Tourists often leave Colorado Springs in the morning by carriage or light wagon for Seven Lakes, arriving about five o'clock in the evening, where they stay over night, take an early start on horseback, or burro-back, for Pike's Peak, and see sun-rise, which is a sight long to be remembered.

What I have written may be of interest to some of your readers who might have something to say regarding the inhabitants of these lakes.

L. D.

### Rainbow Trout in North Carolina.

HIGHLANDS, N. C.—*Editor Forest and Stream:* The communication of my friend to Mr. Brown in regard to the capture of the rainbow trout impels me to defend the iridescent beauties against all aspersion of cannibalism. The fact is that these fish are so enterprising that they won't stay where they are put, as the *fontinalis* will, but go meandering over all creation. I put 2,000 fry in Richland Creek seven years ago, and they have gone down the French Broad River and have been caught below Asheville, where the natives call them salmon. They have gone down the Tennessee many miles from my waters, and some put in the Tuckasee have gone the same way. This explains why a few only are found in the headwaters of the Culaseye, where some thousand eggs have been planted by me. For gameness they surpass every kind of fish I have tackled, and a two-pounder gave me an hour's work this summer with a 7 oz. rod, and then I got him only by his leaping into my skiff. The *fontinalis* have been fished out by poachers, but this kind of piscators cannot get the rainbows, and thus the former are so scarce. By protecting the fish, however, they are becoming more plentiful. Two years netting the streams has done the mischief. I am glad to know that my statement of the earlier spawning of the rainbows made in FOREST AND STREAM three years ago has been corroborated, as I was the first to notice and mention the fact, as well as their crossing with the *fontinalis*. This, however, has not been seen of late because of the migration of the former

H. STEWART.

## HARDSHIP OF THE MACKEREL LINERS.

MACKEREL fishing with hand line and jig is exciting sport if one gets fish, and to professional fishermen it is lucrative, too. But if a boat comes back empty, it is more than hardship—it is misery. If one gets no fish throughout the entire season, penury is involved, if not absolute starvation.

I have just returned from a brief cruise off the Atlantic shore of Martha's Vineyard in a mackerel sloop, and as we returned with barely two barrels of fish, when we ought to have had twenty, while the seining vessels at the same time picked up from 80 to 150 barrels each, my sympathies are with the liners.

Seven or eight large schooners are constantly quartering the mackerel grounds day and night, and they scoop up all the fish, so that the seventy or eighty smaller craft which comprise the hook and line fleet are left absolutely destitute. Occasionally one of these will pick up a barrel or so, but all invariably come back light, and many of them utterly empty; and inasmuch as they are obliged to return to port every afternoon their labor and hardship are enhanced.

So serious has the stress become at length, that the fishermen are conspiring now to arm their centerboards with scythes and so destroy the seines by crossing them, just as they did some years ago in Jamaica Bay. As most of them depend upon this vocation for a livelihood, it is a groundhog case of a desperate character obviously.

It is a grand sight, indeed, to see these many white-winged craft swooping down into port together, like a flock of gulls, of a sunny afternoon, with their canvas flashing in the light. Every day about 12 o'clock they appear in the offing and by 3 o'clock they run into Edgartown Harbor, in time to split and salt their catch and ship by the little narrow gauge railroad which runs to Cottage City and there connects with the New Bedford boat for a market. The wind is generally fair from the southward at this season, and the trim little catboats and sloops look gallant and jaunty as they bunch up in the narrows between Katamu and Chappaquiddick Island, in close sailing order, each one with a bone in its teeth and the foam piled high under its forefoot.

I was fortunate enough to see the vessels of the New York Y. C. bear down into Vineyard Haven the other day, but no more beautiful sight was presented than the incoming fishing fleet of Edgartown affords every day. Scores of cottagers and summer visitors flock to the wharves always to view them as they come in. Sometimes they bring a swordfish, and perhaps a sawfish, mighty with their armatures, which have been harpooned from the surface of the deep when the sea was smooth; and strangers as well as friends are always interested in their commercial success. One of these quaint monsters is esteemed a goodly prize to its captor.

To go mackerel fishing on one of these craft one has only to go down to the wharf and pick out the skipper he fancies best, make his arrangement and be on board at 3 in the morning. Any one of them will be pleased to have help to handle the fishing lines and will charge nothing. The trip, however, involves a rusty suit of clothes, or better yet, "an ile suit," for fishing is wet and somewhat dirty work. When the fish bite smartly one has all he can do to tend three or four lines and slap off the fish as they come aboard, and much sea water comes up with the lines into the sleeves. The early rising before day-break, the unwonted phenomena of the dawn, the exhilarating salt sea breeze, the run out into the ocean, and the continuous "bait, heave and haul," as the metal gigs go out and the mackerel come in, comprise about all there is to the trip. But the experience is invigorating to such as enjoy this sort of thing, and it is one of the stated sports of the Vineyard.

There are few places which afford more novelty or surer relief from summer heats than Martha's Vineyard, and I could perhaps indite a letter more in the spirit of a seaboard yarn, but there is a moral to my fishing story which I fain would point, and that is contained in the caption of my contribution. It is the hardship of the liners resulting from the operations of the seiners. There is an economic consideration, too, which should be regarded in this connection, for the fish are diminishing rapidly in numbers. Besides being conspicuously unfair to methods which it handicaps so seriously, seining terrorizes the mackerel and drives them from suitable spawning places which are accessible to remote regions which are unnatural to reproduction, so that the spawn does not mature and the results are lost. One observer here who is employed in mackerel fishing declares that the fish have become so sagacious that they not only seek localities where seines cannot be used except with difficulty, but they actually sink out of reach of the seines when the vague noise is made, whereas, before seines came into vogue they came alongside of vessels without fear and boldly, and were taken with lines no more than 10ft. long. The immense quantities of bait, comprising minced fish and clams, which were thrown overboard to attract them, taking the place of food which they were obliged to forage for, helped to improve their size and flavor. Not only had the hook-and-liners no terrors for the mackerel, but on Sundays, when fishing and baiting were suspended, as was the early pious custom, the fish persistently followed the vessels, expecting to be fed as on the ordinary week days!

One serious objection to the use of seines is that they capture large quantities of baby mackerel which are thrown back into the sea when dead, and wasted. And besides the unfairness of monopoly and the detriment to the fishing interests, seining glutts the market at times when many vessels arrive together. Use of hook and line alone as in the old time, equalizes the catching of fish, rendering supply and demand more even, which is more comfortable and in the end more profitable to both the consumer and producer. Yet, in spite of obvious detriment and injustice, men not only persist in employing seines and fast sailing vessels to facilitate destruction, but there have recently been put afloat two steamers! *Cui bono?* Business has its limits to be profitable. Devices cannot go beyond them without confronting the laws of cause and effect. Consequently when causes and effect are known it is wisdom to obviate folly. A national law which would afford a system of equalization in the catching of fish would not only preserve the fisheries, but increase the supply a hundred fold faster than artificial methods of propagation, and that without cost.

Demand for food grows with increasing population. Therefore, methods which tend to deplete and exterminate

the fish supply should be supplanted by a conservative and rational system whereby all may profit and be made glad. This question will soon become as serious to the dwellers of Massachusetts shores as it has become to the natives of western Alaska.

It is gratifying to know that the U. S. Fish Commission under Col. McDonald is now engaged in a systematic investigation of the life history of both the mackerel and menhaden, and that facts are being obtained which will have an important bearing upon the protection and regulation of these fisheries. I have it direct from the Chief Commissioner, who is now in the vicinity, that he hopes soon to present for the consideration of the States in which the power of regulation inheres, the plan of a national code based upon a knowledge of the food, spawning habits and conditions of environment of the two species referred to.

CHARLES HALLOCK.

## ANGLING NOTES.

## Puffer Pond of Long Ago.

PUFFER POND in the Adirondack wilderness will always have a place in my affections, for in it, twenty-six years ago last June, I had the best day's fishing for trout that I ever enjoyed. I told all about it ten years ago in "Fishing with the Fly," and the events of that day are ever fresh in my mind, for I caught 85lbs. of trout in two hours time, fishing with a fly, and saved them without a landing net. My guide at that time has since become demented, and on the rare occasion that I meet him now he does not know me. He comes out of the woods once in a while and walks the streets of the town in fantastic dress, attracting the attention of men, women and children by his harmless antics, but his mind is blank. The fly that I used had no name when I cast it on the waters of Puffer Pond, but it was the one fly that my book contained that the trout were eager for above all the others. I saved one of the half dozen that I possessed and when new ones were tied from it the fly was christened "The Puffer." From that day to this the "Puffer" fly has been of no earthly or watery use to catch fish. These two facts have caused me to think in my later and maturer years that if I had not taken so many trout in the two hours that I had to fish before leaving the pond, poor Frank Harris would not have gone crazy and the Puffer fly might have proved killing for trout in other waters. Nearly a dozen years after that bright particular June day I was wading the upper Hudson, just below the mouth of the Boreas River, fly-fishing for trout with Dick Birch, a well known Adirondack guide, and when we went on to the bank for our noon lunch and smoke we talked over the fishing and shooting of the past. I said: "Dick, how is the fishing in Puffer Pond?" "There is no fishing in Puffer now, but you can walk across the pond dry shod on the backs of the bullheads that have filled up the pond since the trout were fished out." This was another reproach to my conscience, although every one of the trout that went to make up the 85lbs. that I took out of the pond was taken with the set purpose of taking them home to friends. Still other years, later, I learned that there was good trout fishing in Puffer Pond. Having had a long rest in consequence of the bad name given to it the fish had increased in the water. Puffer Pond is so easily reached that on several occasions I have recommended that particular region to angler friends. One of these friends, Mr. J. E. McDonald of Troy, N. Y., fished in the pond very lately, and the following is an extract from his letter, telling me about his visit and the fishing.

## Puffer Pond of To-Day.

"I have just had a little outing which did me a great deal of good. Frank Church and I spent a week at Moxam's, on Thirteenth Lake, and there I had my first experience in fishing with the fly, and I now probably have as supreme a contempt for bait-fishing as you have. We arrived at Moxam's at 6 o'clock P. M., Monday, June 26. After eating supper we walked over to the lake and fished at the inlet and caught seven nice trout, averaging about 1lb. each. Tuesday morning we again tried the inlet, but got only six trout, as they were not rising well. In the afternoon we tried deep water for lake trout, and did not get a bite; and then went to the inlet for speckled trout and got about as many as in the morning. Wednesday we tramped five miles through the woods to the Sacandaga River, but as we got a late start we did not fish until nearly 12 o'clock. It was a very hot and very still day, not at all favorable for fly-fishing, but we caught thirty-six trout—good ones—the largest being 1 1/2 lbs. after it was dressed. I think we would have had a fine catch if the day had been cloudy or if we had had a little wind, for on Monday (a very cloudy day) a gentleman of the name of Steele, from Rutland, Vt., with his guide, caught sixty-eight trout at this place, and one of them weighed 2 1/2 lbs. 10oz. Thursday we planned to go to Puffer Pond and camp. This is six miles from Moxam's, but our plans were knocked in the head by the failure of our guide to appear. Friday we started for Puffer with team and sledge to carry provisions, blankets, etc., and reached the camp at 1 o'clock. Dr. Spencer, of Rutland, went on to Puffer with us. In the afternoon we three fished, Spencer and Church from a boat along the shore and I from a raft. We got about 12lbs. of the handsomest trout I ever saw; no very large ones, but the average weight was about 1lb. Saturday morning, Church, Moxam and I started at 4 o'clock to see the famous Twin Lake trout. This lake is literally alive with trout, and the largest ones in the Adirondacks, so they claim, but they will not take a fly. We whipped the lake for three hours and got but three trout, and then gave up in disgust and returned to camp. We remained at camp until late on Sunday afternoon and then walked into Moxam's and left there at 4 o'clock Monday morning for home. We could only bring out 10lbs. or so of the trout last caught, as we had no ice in camp." Twin Lake, mentioned in Mr. McDonald's letter, is a new name to me for an old lake. On Stoddard's map it will be found as one of the Siamese ponds, and so these ponds have been called as long as I can remember, and they are on middle ground between "Thirteenth" and the Kunjamuck. One of the charms of the Thirteenth region, which includes Puffer Pond, is that it is so accessible, and that sportsmen pass it by to go further into the woods and perhaps fare worse. To reach the Thirteenth take the D. & H. R. R. from Albany to Saratoga and then the Adirondack Railway to North Creek. A daily stage connects with all through trains, taking passengers to North River P. O.,

5 miles, and from there it is only a few miles to Thirteenth. Moxam's is the farm of the Freeman Lumber Company, and this is the same company that operates on the Kunjamuck, the camp on the latter being Schedin's headquarters.

## "It Beats the Record."

On the eleventh of this month I received a telegram from a brother, Geo. A. Cheney, dated at the Vancouver Hotel, Vancouver, British Columbia, which read: "Sent you to-day largest salmon ever caught in British Columbia." The fish came last Friday and proved to be a red salmon (*O. nerka*) from the Fraser River, that weighed 85lbs. It was a magnificent fish, in splendid condition, and by magnificent I mean it was finely formed, every scale in place, a shapely head and a bright fish. From a Vancouver newspaper which followed the fish to me I learn that even in Vancouver this big salmon when exhibited at Winch & Bowers's it attracted widespread interest. I exhibited the fish in one of the home markets, but was obliged to leave town that day. The next day the marketman told me that he thought 2,000 people had been in to see the salmon.

A. N. CHENEY.

## AN IDYL OF BARNEGAT.

BARNEGAT CITY, N. J., Aug. 25.—I have found a place which fills a quiet corner in my heart, where I can take my household gods and leave them in restful ease, so that when business cares permit, I can in two hours, by rail, rejoin them; and when the northeast wind does not vex my soul and Skipper Paderewski-Peckworth's spirit (because when a northwester makes Barnegat shoals white with the breaking billows, no sane fisherman ventures out of the inlet while the harbor bar goes moaning), in plainer words, when the condition that confronts us means a south wind, a wind sou'west—then I feel sure of a reasonable day's sport; otherwise not.

The place I have disported myself in for two summers is Barnegat City, N. J., where a dress coat is unknown; at least I have never seen one; and where the real joys of summer for a tired man can be found, living in a cottage and taking one's meals at the Oceanic Hotel across the street. If I wake up at 6 A. M. and see the cold gray waves of the sea climbing and combing over each other and dashing their white crests high in the air, I know that my friend, the Skipper Paderewski, who owns the Minnie, a pretty cat-rigged yacht, at my service, will "not wake and call me early." I confide in his judgment implicitly as to the propriety of hunting bluesfish that day, and I quietly wait the incoming mail, which brings me the New York *Sun* and mayhap my weekly delight, *FOREST AND STREAM*. *Ennui* is a word never mentioned on our cedar "palace" by the sea.

My little cottage has eight rooms all neatly furnished, but we are only three—my daughter, J. M. S. and "Bebee," my little grandchild and one servant. We miss sadly one gentle pure spirit, who sanctified our home one year ago. She left this earth for the heavenly when the "May sun shed her amber light the new-leaved woods and lawns between," and, like Dante's Beatrice, so great was her virtue and her humility and her truth, that life was not worthy anything so pure or so excellent. And now our children, her constant companions; and Love and I, alas! are left alone.

The two best known fishermen here are Paderewski Peckworth (so called for his skill on the fiddle at country dances) and Captain Morse, and as I have a new name for all the skippers, I call him Cap Mossbunker, and it is only a week ago we made a friendly bantering match whether Cap Mossbunker or Cap Paderewski could bag the most bluesfish on a given morning, each boat to carry three bluesfish lines and no more. As to weakfishing it is a lost art; where I used to catch, four of us, 400 a day, in Barnegat Bay, it is now good luck to bag 10 in five hours, and the fish pounds and the menhaden pirates are to blame for it. The bluesfish match came off, and we fished side by side after Paderewski had sailed down to the bell buoy where the tintinnabulation of the bell can be heard all day and all night, sounding like the cry of a lost soul in pain. By the bell buoy we caught 200 sea bass, and when the four hours' contest was over Paderewski had 90 big mackerel and Cap Mossbunker 113. The time we lost after the "loggy" black bass was put to use by Captain Mossbunker, but the battle was a draw, for Peter Seidel, of the Oceanic, decided that Paderewski had the most fish in number and in weight; that as Cap Mossbunker had thirteen more mackerel than Paderewski the battle must be fought over again. This was agreed to.

Young Patterson, of the *Record*, recently criticised some of my late letters to the *FOREST AND STREAM* on the ground that they lacked "a brilliant thread of connection," and were not "compact enough." I replied to Mr. Patterson that I was not reporting facts for the *Record*, that in August a nation of fishermen from Buzzard's Bay to the great White City were not clamoring to any appreciable extent like Dickens's Mr. Gradgrind, who said, "What we want is facts." And I finally silenced my brilliant young feuilletonist and critic by reminding him that when that genial and kindly essayist, Montaigne, was tracing the annals of chivalry back to Charlemagne, he injected the information in that essay that most of the Montaigne family had, at one time or another, suffered from gravel. Plimmer did to Dixon what this did for critic Patterson.

Civilization runs riot at the fashionable seaside resorts. Not so at Barnegat City, where we take our ease at our inn. I owe my magnificent health to living twelve of the best years of my life, till I was 22, in the woods, riding forty miles on horseback, or, rifle in hand, with half a pound of crackers in a school satchel for lunch, roaming over twenty miles of beech woods in pursuit of the fugitive gray squirrel. It was a bad day when I didn't bring home twenty-five gray rodents with their scalps on—mostly hit in the head with a rifle ball at 100 yards, up a big oak or beech tree, and lying very much "perdu" on a limb.

My plea is not so much against the *jeunesse dorée* of swell civilization sucking Manhattan cocktails with a dash of absinthe in them—that's their idea of enjoyment, but I plead for nature in her various moods, the early morning bath in old ocean "in the buff," regardless of flannel. Take the billows' kisses as they come, stay in ten or fifteen minutes, then go to bed and sleep until 8 o'clock, and even if an invalid you will find healing underneath the wings of the sea.

My day at Barnegat City is something like this. Out of my cottage window I can hit the sea with a stone, and like the gleam of my childhood's joys seem the pulsations or heart-beats in this wild watery realm. I joy at the sight of the sea as little "Bebec," my much loving, much-beloved little baby grandchild, does, when, night-tired, she crawls into my lap and says: "Babab, 'oc put me to seep," and I do.

The sea puts me to sleep with some sweet, invisible, restless spirit, that drives away creditors and care, as the Arab folds his tent at daybreak and silently steals away.

But how I put in the Barnegat day is the question before the house. It is 5 A. M. Bathing "in the buff" is allowed at that hour. I catch up little Bebec in her silk night shirt, and half asleep, throwing on my own bathing robe, loose, a morning study wrapper, I skip to the beach—a half dozen steps. Bebec is wild with happiness and claps her hands with joy as every little billow, kissing its mate, breaks into white sea foam.

In ten minutes we are out and in the cottage. Bebec, rubbed down with a coarse towel, is asleep in one minute. Then I turn over and dream of scooping in big fees.

At 8 o'clock I eat a good breakfast and saunter down to Paderewski's wharf, near the Sunset House. Herr Paderewski always offers me a "whack" at his never-full, half-empty gin bottle, but as I have joined Ben Archer's Temperance Society, William T. Bailey, Secretary, I mildly but firmly refuse.

This morning I saw a fight between a 14ft. shark and a he dolphin. The sea was incarnadined with blood. The equal battle raged because each scavenger of the sea had been predatorily feeding or poaching on the other's moss-bunker preserves. It takes four bushel baskets of moss-bunkers for one he dolphin's breakfast. The fight raged 15 minutes. The shark has to turn over to use his mouth. I know some lawyers who make profitable and golden use of the mouth in debate and don't turn over at all. When the shark was trying to get in its fine work the dolphin eviscerated the sea scavenger and that ended the fight, and the porpoise danced up and down and leaped over the body of its dead foe, as a New York lawyer does when he gets an extra \$250 allowance for costs or counsel fees!

We read the *Sun* or *FOREST AND STREAM* till dinner time, when the Oceanic cuisine teaches us the truth of the aphorism that "there are many sweethearts and only one dinner." After dinner we take a nap one hour, write some blood-curdling fishing experience for *FOREST AND STREAM* and then go down and tell Paderewski to saddle his yacht, and then for two hours all alone we sail the ocean blue and with a single shining squid and a cotton-laid twine line 100yds. long trailing behind us we hook 20 bluefish before the gentle god of day has taken his bath behind the western star, the fish ranging from 3 to 15lbs. Then supper of Spanish mackerel and frogs' legs and young mud hens.

Then I discuss the cause of temperance with Brothers Archer and Bailey; then come the glorious nights on the piazza of the cottage. The young and sickle moon looks down on you softly as a maiden's prayer, and overhead the stars look like "patines of bright gold," and the very balm of Gilead seems to be coming in with the soft, health-bearing south wind, and as dear little Bebec lies asleep in my arms I softly murmur, "Alabama! here we rest."

JAMES MATLOCK SCOVEL.

## FISHING TACKLE AND TACKLING FISH.

MANCHESTER, N. H., Aug. 23.—Suggested by a criticism which Mr. Cheney pays to another of your correspondents for a technical error in naming a rod, and thereupon proceeds to, schoolma'am-like, give him a "pointer" on the propriety of titles, is a train of homely thought, supported by personal observation and living examples respecting the matter of tackle.

"A rose by any other name would smell as sweet," so a rod, call it what you please, will handle the fish just as successfully as though properly named, and a man is not obliged to be an adept in tackle knowledge, nor to have a well-stocked retail establishment at his elbow to enjoy fishing. I have often noticed that the man with the most tinsel, extensive and expensive outfit, including a wagon load of fancy flies, leaders, etc., etc., as though a drummer for some wholesale house, elaborate suit of newest design, drinks the best brandy, and tells the loudest stories of his exploits, is not always most heavily loaded (with fish) when he returns from a trip. On the contrary, the simpler the rig, mattering not whether he knows a fly-rod, technically, from a pump handle, the more satisfactory the result.

Understand, I admit that sport is one thing and filling a creel often another. The latter is the subject nearest this thought. The old deacon told his son in reference to getting money, "Get it honestly, if you can, but get it," so I would suggest to sportsmen—use as good and showy a rig as you can afford or care for, that will do the business as near to your liking as possible, and expert manipulation of what you select will easily do the rest.

I have in mind a man whose superior in the art of brook trout fishing I never saw, who never owned a reel or fly-rod in his life, and the four-jointed bamboo he uses has the appearance of having served three generations, and the 8 or 10ft. of line would hold a shark, but his hook always has just such a bend to it, accomplished with a pair of pincers by himself, and each angle-worm goes on it by exact rule, and what probably is of fully as much consequence, he has an easy, stealthy, Indian-like step, that makes no jar, always approaching the stream from the shady side in a low, stooping posture, in the dress of an ordinary farmer, reducing the likelihood of notice by the trout to a minimum, and I have often watched him with interest and pleasure, not failing to notice the tension of his nerve, and the strict attention he pays to the pursuit, always finding him as hard to "call off" for home as though to leave was death. Another man of the same class is a bait-fisherman specialist from a boat. He never uses any rod, and his line looks suited for a clothes reel, but he is also a crank on design of hooks and mode of adjusting bait. The rapidity with which he takes an unlucky fish into the boat, whether weighing 5oz. or 5lbs., would astonish any of Edison's inventions. A large black bass, for instance, is imparted such a tremendous momentum while in the water that he fairly flies, as though thrown from a catapult, above the water and into the boat. And another, very successful at casting flies and bait, who never had a reel, uses a pole about 20ft. long which perhaps will

weigh as many pounds, made from some sapling, cut, peeled and dried, a line two-thirds as long as the pole, large and of linen, making a derrick-shaped arrangement that no snag is likely to break, and from which fish of any nature or size land on shore or in a boat without ceremony.

Such is catching fish, pure and simple, but the processes practiced will not, in my opinion, allow it to properly come under the heading of "sport," but it only goes to show the practical and utter uselessness of much of the so-called "fishing tackle," for anything but show and pleasure; and the latter being the one aim of a large majority of anglers, we shall all continue to use the class of rig that will require an encyclopedia or a Cheney properly to enumerate.

PAYSON.

## MICHIGAN, MY MICHIGAN.—IV.

LANSING, Aug. 26.—Prof. Cook tells me, that the first edition of 8,000 copies of his book, "Birds of Michigan," is fully exhausted, and that the secretary reports over 1,000 applications for a copy of the book have been received and placed on file. The Board of Agriculture will quite likely order an extra edition. Prof. Cook has accepted a professorship in the College of Agriculture of California, and he has resigned his position in the Michigan Agricultural College, to take effect at the close of the college year. We deeply regret that he is to leave us, as his entire life work has been intimately connected with the educational interests of Michigan, and with us he can do great good, but—money is mighty, and will prevail.

Mr. Frank E. Briggs and Mr. Sedina have just returned from a two weeks trouting excursion to the Little Manistee in northern Michigan. They have had lots of fine sport and great luck. They have remembered several of their Lansing friends by presenting each of them with a nice string of extra fine trout averaging about 1½lbs. each. Mr. Elton Essylstine spent a couple of weeks early in the season at the same place where the Briggs-Sedina party have so successfully laid siege to the trout family, and Mr. Essylstine's good luck was the inspiration responsible for the sojourn of the Lansing fishermen on the charming Manistee. Mr. Briggs is a sportsman to the manor born. This is his second trouting trip to northern Michigan this season, and this together with his regular weekly outings at Pine Lake, Park Lake, and at his great friend Cliff Foster's, ought to keep him in good shape to handle his Parker hammerless to good advantage a little later among the quail and ruffed grouse. He is a good judge of guns and tackle, and nothing in the way of sporting goods is too good for his use or too good for him to buy. The woods and lakes, and streams of Michigan are as familiar to him as his own cozy room at the State Treasurer's Office. The big trout in his far away home, the covery of ruffed grouse in the tangled thicket, the bevy of quail in the stubble, are all well known to him, and when he touches the button at the front door he is sure to find the whole family at home.

A friend of mine at Lansing wished to get a .22cal. repeater, and as he desired to know exactly what to expect of the gun he addressed a letter to the Winchester people, and I inclose their reply, which is sufficiently plain so that any person can understand fully what was asked. The inquiry related to the .22 lon 5, .22 short and .22-7-45 repeating rifle, model 1890. They write:

Your favor of June 29 relating to the .22cal. rifle is received and contents noted. All of those guns weigh very nearly alike. They are sighted to shoot center at 100ft. The term "point blank" does not indicate anything to us. In old brass field pieces, where the line of the metal bore a large angle to the line of the bore, there were two points blank, first where the projectile coming out of the gun passed the line of the metal in rising, and again in falling. Such a state of things cannot be said to exist in small arms, although this term is often used. We are at a loss to know what people mean by it. We have, therefore, stated generally that the guns are sighted to shoot center at 100ft. In going that distance the bullet may rise an inch above the line of sight; it is intended to touch the line of sight again at the target point. Touching your last question, these .22 guns, fired at the height of the shoulder and exactly level, will probably carry 75yds.

He ordered a .22-7-45 Winchester repeater model 1890. When the gun came Mr. C. J. Davis, one of the best rifle shots in Michigan, took it to try at a mark. At 50yds. the ball went true to the center. At 80yds. it did not fall below the center more than 1in., the ball penetrating a 1in. board and a ½in. board, and then went on its way. I am satisfied from this simple test that the Winchester people do not know what the shooting ability of the .22-7-45 repeater really is. It certainly has a far greater range and a much greater penetration than one would expect after reading the above letter. It would seem that the Winchester people would ascertain accurately just what their rifles would do before putting them on the market. In a thickly settled country like Michigan one must know exactly where a ball will go in order to avoid unpleasant complications. I will try to give you actual results at the target of the shooting ability of the .22-7-45 Winchester repeater as soon as a favorable opportunity presents.

While speaking of the .22cal. gun I am reminded of a circumstance that happened at Lansing two years ago that fatally illustrated the penetrating ability of an ordinary BB shot. A small lad and his sister were shooting with a breakdown wooden gun, with one BB shot in the magazine. The gun accidentally went off, sending the shot into the chest of the little girl, and she died in a few hours. Another circumstance, equally as remarkable, occurred the same season. A gentleman with the same style of a wooden gun and one BB shot fired at a yearling Jersey heifer. The shot struck the Jersey near the eye and killed it on the spot. It is quite essential that one who is to shoot so powerful a gun, even as the .22cal. rifle, should know exactly what the gun is going to do.

This morning as I was riding through a swampy piece of ground bordering a shallow pond, I noticed that the blackbirds, of the crow variety, were flocking together preparatory to their fall southern journey. It recalled an amusing fishing scene at the same place last spring. One morning early I was just nearing this same little pond, when I noticed a large flock of crow blackbirds busily engaged about something that seemed to interest them greatly. I stopped my horse, and after waiting a while to feel assured that I was not going to disturb them the birds began to dive into the water and were soon catching tadpoles by the score. The water was 5 or 6in. deep and the bottom of the pond was covered with tadpoles. The birds would dive into the water, in many cases going in all over, and they would come out with a tadpole in

their claws or beak almost every time. I have often seen blackbirds steal young sparrows from their nest and tear them to pieces and eat them, but I never before saw blackbirds fish for tadpoles. By the way, did you know that a nice broiled crow blackbird, on a well-browned bit of toast, was a mighty dainty dish?

Yes, we have quite a crop of rattlesnakes this year. Mr. Philo T. Daniels killed a couple of dozen nice fat fellows last week while cutting hay on the Chandler Marsh. One day last spring, a lady who lives in the edge of our city put her milk pans out in the sun to dry. In a little while she thought she heard something drumming on the pans, and on looking out she discovered a big rattler coiled up on one of the pans and apparently amusing himself by rattling. One of Mr. Daniels's fellows had ten rattles, but the milk-pan rattler had only seven. We have a rattlesnake catcher who lives at the big marsh. He seems to have a faculty of getting along with the snakes without trouble, and usually has half a dozen quite tame rattlers as pets.

The new law creating the Michigan Naval Reserve is to include all yacht clubs, vessel men, sailors, tug owners, and all men who are employed about harbors and such as from their familiarity with our lakes and rivers can be of service in case of war. The bill was gotten up by members of the Detroit Yacht Club, and quite likely the State organization will be more or less controlled by the club. Col. McComas, of Lansing, is an ex-commodore of the yacht club, and he is greatly in favor of the organization. The Navy Department has sent the Governor the necessary blanks and instructions for the enrollment, and the work will be begun at an early date.

JULIAN.

[The rifleman appears to have misinterpreted the manufacturers' statement respecting the range of the Winchester. A gun sighted to shoot center at 100ft. will of course carry its ball further than the 80yds., and when aimed at the mark at that distance, the barrel of a gun so sighted is by no means "held exactly level."]

## ON TILEFISH GROUNDS.

THE U. S. Fish Commission schooner Grampus returned to Wood's Holl yesterday noon after having survived the recent hurricane which caused so many disasters to vessels off our coast. She was on the tilefish ground, 95 miles S.E. by S. from Sandy Hook, during the storms of last Monday, Tuesday and Wednesday, lying to an anchor with 165 fathoms of hawser out.

On Monday morning it began to blow, increasing to a gale N.E. to N., from 19 A. M. to 1 P. M., and moderating about 3 P. M. On the evening of the 23d it breezed from 7 to 9, when it blew a gale and increased to a hurricane by midnight. This continued until 5 A. M. on the 24th, when it gradually decreased during the forenoon.

The Grampus was anchored, but struck adrift early in the evening of the 23d. Between 10 and 11 P. M. a Collins drag was put out by a new 4-inch manila warp, and this parted at once, with the loss of drag and line. She was then dragging her anchor, which brought her up to the wind occasionally until 3 A. M. on the 24th. Then she shoaled the water and came head to it. Oil had been used freely both forward and aft with good results in breaking the force of the seas.

At 4:30 A. M. a heavy sea broke high over the bow and swept the deck, breaking the main rail, smashing hatch covers, wrecking the wheel-box and carrying away the stern boat; it actually stripped the brass from the after part of the rail. Water poured into the companionways as big as a barrel and stood in the cabin and forecabin more than a foot deep.

The hawser parted with a snap and this saved the vessel. The first officer, Mr. Hand, was fleeing the hawser when the sea came aboard, and the second mate, Mr. Conley, was tending the oil bags. Mr. Hand saw the sea coming and jumped into the rigging as high as he could, but the sea broke 5ft. over him, loosened his hold and carried him back to the house stunned and bruised. Mr. Conley stooped under the rail and escaped the force of the blow, but was washed back and forth, bringing up finally against the break of the quarterdeck.

The men on watch jumped into the main rigging and saved themselves from injury. The Grampus was described by Capt. Adams as all in a tremble, and she must be badly strained. On Thursday morning she was kept off before the wind under a reefed storm trysail and fore-staysail, and sail was gradually increased on the run home. The vessel lived in the very heart of the storm, and, considering that she is small and heavily sparred, it is wonderful that she came out of it so bravely.

The tilefish ground has been visited twice by the Grampus during August. The depth ranges from 70 to 75 fathoms, and the bottom temperature is about 52°F. The fish were taken on trawl lines baited with menhaden. On the first trip, in two and a half days' fishing, 24 fish were caught weighing from 7 to 35lbs. Three of the females had their ovaries partly developed. The eggs are said to be about as large as those of the cod.

Other fish taken in company with the tilefish were skates, little dogfish, conger eels and hake. The hooks also brought up sea anemones and starfish. On the first trip a shark and a small swordfish took the hooks while the men were hauling the trawl. A large squid was taken nearly in perfect condition from the stomach of one of these fish and a slender species of eel. The fish as a rule come up with the stomachs turned inside out.

The second trip was broken up by storms and the trawl was set only parts of two days. Twenty fish were taken, the smallest about 1½lbs. and the largest 35lbs.

On the fishing ground were seen a few phalaropes and porpoises at the surface. During the first trip eight or ten large swordfish were seen and a school of supposed bonitos.

The tilefish was tried as a food fish at Woods Holl and found excellent either baked or broiled. The flesh tastes very much like crab meat. Specimens in alcohol will be sent to the National Museum, the Museum of Comparative Zoology and to various universities. The species is gradually increasing in numbers and will doubtless re-establish itself on the coast.

T. H. B.

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## THE CHAMPION TARPON.

VISITING the Columbian Exposition in May last I saw for the first time the great tarpon which was taken by Mrs. Geo. T. Stagg, and which is the most prominent attraction of the FOREST AND STREAM exhibit. This magnificent fish, weighing 205lbs., and 7ft. 3in. in length, has held pre-eminence among captives of his species since May, 1891. Prior to that date Mr. J. G. Hecksher, with his 184lbs. fish, held the championship of tarpon taken with rod and reel. Mr. A. M. McGregor nearly broke the record last spring with a fish of 196lbs. Mrs. Stagg, however, still holds the belt, or cestus, or girdle, or whatever should be the appropriate decoration for her sex. The fish was a surprise to me, who have seen very many specimens of this grandest of game fishes, and who have struck and played at least fifty of them. An extract from a letter received by me from Mrs. Stagg soon after the capture of this fish may interest the readers of FOREST AND STREAM as briefly describing its capture:

"We certainly had wonderful success for the time we fished at Myers. Twenty tarpon in two weeks. Every day that Dode (the colored boatman) was out with us we caught fish, and had bait been plenteous, we would have caught more. We hooked twenty-five, lost five, three by breaking lines and two by faulty rods. The river was full of tarpon, the weather splendid, convincing us that May is the month, and it appears that the Caloosahatchie is the place. A prettier spot could not be found to angle for and play them. I inclose a scale from *The Tarpon*; I wish you could see him. He is grand! The first run took out nearly 300ft. of line, when Dode told me to strike him, not knowing what it was. On striking, he came out of the water, and then made another run, taking nearly all my line. The fight was a stubborn one, with few jumps, but a steady pull. When we got him in we found the snood nearly in two. It was the only one of the twenty which showed any wear to speak of. We had no idea that we had broken the record until the fish was put on the scales, though Dode said he was longer and larger than my first one which weighed 175lbs."

F. S. J. C.

## POTOMAC NOTES.

SALT-WATER fishing at the mouth of the Potomac River has been fine for two weeks. At Colonial Beach Shannon reports fishing for young bluefish (Tailors) very good. Quite a large number of Washingtonians are stopping at this beach, and not a few enjoy the fishing. Shrimps are used for bait, and there is no trouble to obtain all one wants. The fish, of course, run small for the kind, but they are game and eat well.

Colonial Beach is a good point for woodcock also, one party bagged 16 of these birds in a single day's outing.

Piney Point is having good fishing this season. Rock-fish are plentiful and are biting well. As a matter of course, spots, croakers and other fish are abundant at the mouth of the river. Much fun has been derived from fishing the creeks at night, when they are found full of fishes.

Mr. Mohler made a trip to Farnham, Richmond county, Va., recently and while there went over to the Union Mill pond, which is full of large-mouthed black bass. This pond is near the Chesapeake, between the Potomac and Rappahannock rivers, and at the time of M.'s visit was low and roily, the water having been swashed up on the banks by high winds.

Union Mill Pond is one of a hundred of ponds which teem with large-mouthed black bass in the lower counties of Virginia. Along the Rappahannock are ponds, one at Urbana, so well stocked with bass as to satisfy the cravings of hosts of anglers. They are game fish, too. It is a delightful trip to the Rappahannock by steamer from Baltimore.

In the upper Potomac bass fishing has improved, and from the Great Falls to the headwaters of the river the fish are biting.

Mr. Tom Marion reports a bunch of young willets on flats of the Eastern Branch above the navy yard. One was shot by a boy and taken to the Smithsonian for identification. The occurrence of these birds at this time (Aug. 13) is unusual, as they are rarely seen here during the summer.

A few yellow-shanks have also been seen.

BURT.

## Channel Cat on the Fly.

FAIRMONT, W. Va., Aug. 20.—At this place, in the Monongahela River, about the 1st of August, A. B. McDonald caught a catfish—one of the kind known as a channel cat in this neighborhood—upon an old-judge fly while fishing for bass. A few days after he caught another upon a Montreal. I received the story of these two catches with something of a mental reservation, as I could easily imagine a fisherman scratching for bait who had failed to entice the wily bass with the fly. A few days after that, however, a friend returned from a camp up the river with the report that a channel cat had been caught there on a set line, having in its mouth a fly which had been lost by one of the party the day before. This is the first time I have heard of a catfish striking a fly, and I would like to know if any of your readers have experienced a similar circumstance.

C. W. W.

## Chicago Fly-Casting Tournament.

SECRETARY F. B. DAVIDSON, of the Chicago Fly-Casting Club, writes of the club's angling tournament, which will be held Sept. 21: "We announce as two of the judges Dr. Jas. A. Henshall, in charge of Angling Pavilion, World's Columbian Exposition, and Mr. Wm. C. Harris. Mr. Geo. W. Strell consents to act as the other judge, provided we cannot find some one else who will be acceptable, and we may announce a change later. Since programmes were printed we have secured several valuable additions to our prize list, and many more are promised, which we will announce later."

## He Woke Them Up.

MANCHESTER, N. H., Aug. 23.—A shot from a Kodak pointed at Mr. Frank J. Clark, one of our best anglers, at the time he woke up the nest of hornets while brook trout fishing in the southern part of the State last week would make an interesting picture and one gotten up without regard for etiquette on his part. The hot-footed "birds" are still guarding his rod and several uncomfortable spots on as many different parts of his anatomy he still retains as souvenirs of his sport. He reports but little water in the streams and very few trout. PAYSON.

## "FOREST AND STREAM" FISHING POSTALS

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

OREGON, Long Island (Cutchogue), Aug. 6.—Fishing has been good during the past few days, and large strings of blackfish are being caught. J. Carr 27, J. O'Neil 46, R. Lang 15, F. Sheil 17, J. Smith 21. Mr. O'Neil caught largest, 84lbs. All Brooklyn residents. With good weather fishing will be fine for a long time to come.

JAMES J. SMITH.

THREE LAKES, Aug. 22.—Mr. Albert Young, of Kansas City, caught in two days' fishing, at Butternut Lake, 94 bass, average 2½lbs., largest 4½lbs. Mrs. S. E. Young, of Chicago, caught a 26½lb. lunge. Fishing is good.

F. R. FRENCH.

## Driven Out by Black Flies.

ALBANY, N. Y., Aug. 19.—Our party of three have just returned from the Triton tract, the other side of Quebec, Canada, and we had a rough and tough experience. Weather very hot; water very warm. We caught no big lake trout, as they kept in deep water. Only the mountain trout would rise to the fly, and then only in the rapids in the cool of the morning. The most taking bait was a yellow fly, a Parmachenee-belle. The black flies were out in swarms and so tormented us that we had to leave or be eaten alive. Three days were enough for us. This experience taught me that fishing in Canada is like anything else. It has its drawbacks as well as its advantages.

To-morrow my brother and myself start for Jerry's Ferry in the Maine woods. Will notify you later of our luck.

SILVER DOCTOR.

## Bass at Alexandria Bay.

ALEXANDRIA BAY, N. Y., Aug. 22.—The fishing here is good as illustrated by the catch to-day of F. W. Emery and A. E. Clark off Point Jolly Oaks. The day was fine, and after baiting for wall-eyed pike and waiting a short time for a bite, they had a pull on the rod, and in landing the fish found it to be a wall-eyed pike weighing 8½lbs. In one hour's fishing they caught six more weighing 6, 5½, 6½, 7 and 8lbs. We find the fishing greatly improved this season. We have had a photo of some of the largest, and will send you a print. While in Redwood to-day I saw a black bass taken from Butterfield Lake, which weighed 4½lbs.; and several others of varying weights, 3 to 3½ and 2½lbs. Fishing there is good.

W. H. THOMPSON, Sec. Anglers' Ass.

## Big Basswood Lake.

SOWERBY, Can., Aug. 6.—We were induced to come here by the letters and description in FOREST AND STREAM last fall by the "Kingfishers." We find their account in every description regarding fishing up to the mark. In fact, we find it over and above their statement. There are four of us in camp, Paul Zagelmeyer, Alexander Zagelmeyer, Jack Zedar and the subscriber, all from Bay City, Mich. We find Mr. Dyer a disciple of Izaak Walton, a lover of the gun and a good judge of a dog. He is expecting some of the "Kingfishers" back again this week, for they are not satisfied with the sport they expected at Platt Lake, where they are at present. Any gentleman wishing good fishing may safely be advised to locate her. Trout are just making their appearance.

H. WOGEL.

## Set-Lines in Massachusetts.

FITCHBURG, Mass., Aug. 24.—Six men have just been arrested here, tried and fined \$14.20 each for using set-lines in Whalom Pond, not far from this city. The prosecution was pushed by the fish and game committee of the Fitchburg Rifle and Gun Club. The club proposes to stop the illegal taking of fish and game, both out of season and on Sundays. It is high time that these abuses received attention.

The Whalom set-line fishermen had about 50lbs. of fish, including pouts, perch, bass and pickerel. They had three log trawls out. To these trawls were fastened about a thousand fish lines.

B.

## The Game Channel Cat.

BEATRICE, Nebraska, Aug. 20.—I shall send you an article on channel catfish some time when I can spare the time, and will describe a truly game fish, which is unknown east of the Missouri River, for the benefit of the wielders of the split bamboo "buggy whip." Last week I was out one evening and got nine; and had a four-pounder run out nearly 125yds. of line, three times in succession, before I brought him to the net.

EL COMANCHO.

## The Goggle Eye.

COLUMBIA, S. C., Aug. 21.—In "Answers to Correspondents" in last issue you make me say, "Our goggle eye is a poor fish, etc." If you will refer to my letter you will see that I said pan fish. It is considered a fine fish here, weighing from 1 to 3lbs., and esteemed very highly.

H. E.

## Where to Go.

ANYBODY desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers.

## No Rattler, But a Rattling Good Paper.

HENDERSON COUNTY, N. C., Aug. 13.—Editor Forest and Stream: I have not been able to secure another rattler to send you, but have people on the lookout for one. The change of date of publication of your valued paper is very acceptable to such as live so far off as this. I can now enjoy it the same week as published, which is a boon I could not before realize. Thanking you for the alteration, I am sincerely yours,

GEORGE HOLMES.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## New Publications.

## "CAMP-FIRES OF A NATURALIST."

PERSONS who have visited the Kansas State Building at the great fair in Chicago, cannot fail to have noticed there the large and effectively mounted collection of North American mammals which forms a part of the exhibit of the Kansas State University. There may be seen buffalo and elk, wild sheep and white goats, fighting moose and snarling wildcats, playful panthers and sneaking coyotes, besides many smaller species. In the collection most of our important North American mammals are represented, and the groups are of unusual interest.

A book which tells how these animals were collected has just been written, and, as will be evident to any one who looks at the collection, such a story covers hunting in many fields in the western portions of this continent. Practically, all the animals here on exhibition, besides many more which are not shown, were secured by Mr. L. D. Dyche, who is the Professor of Zoology and the Curator of Birds and Mammals in the Kansas State University.

"Camp-Fires of a Naturalist," written by Clarence E. Edwards, and published by D. Appleton & Co., gives the story of 14 collecting expeditions made in search of North American mammals for the Kansas Museum, and is compiled from the field notes and diaries of Prof. Dyche. The book is simply and well written and gives a carefully accurate picture of one phase of outdoor life. It deals wholly with facts which are true, and is told in a matter of fact way, and in the relation of a story, but the volume gives a very faithful picture of the labors which must be undergone by the hunter, and especially by the hunter who is trying to collect museum specimens.

Usually a book of this kind suffers when it is written at second hand. However well the work may be done, no story of what a man has accomplished can be told as completely by another as by the chief actor or an eye witness; no recital made up from note books and diaries alone can present a picture as vivid as that given by memory assisted by diaries and note books. The facts which are the body of the story may all be set down, but the feelings and impressions of the men who saw and acted are needed to breathe life into that body. Before the reader can see the pictures drawn, as they were seen by him who took part in the events related, Mr. Edwards, however, has succeeded in putting real life and spirit into the story of these hunts, and his work is quite remarkable for its fidelity.

Prof. Dyche is a good specimen of a self-made Western man. From infancy his days were passed in Kansas, and from his earliest years necessity made him a worker. At the age of twelve he could read a little, and by sixteen he had saved enough money to enable him to go to school. After three years spent in the State Normal School he entered Kansas University, then in its infancy, and after five years work graduated at the head of his class, obtaining two degrees. During the course of his studies Prof. Snow became interested in young Dyche, and after his graduation offered him the position of assistant in his department. Later, the chair of Anatomy and Physiology was created and given to Dyche, and again still later, he was made Curator of Birds and Mammals.

It now became Dyche's ambition to make the collection of mounted mammals in the Kansas State University as complete as possible, and in securing specimens for this collection he traveled over a great portion of the Western country. The book tells of killing antelope in Kansas, bears in New Mexico, wildcats and turkeys in the Indian Territory, white goats in the Cascade Mountains, mountain sheep in the coast range, moose in the Northwest Territories, and elk in Colorado, and mingled with the travel and the hunting adventure which constitute the main portion of the book, is a great deal of useful information about the habits of the animals which the hunter was in pursuit of.

The volume is illustrated by thirteen full-page half tone engravings, which are reproduced from photographs of mounted specimens. Among the species so figured are the white goat, prong-horned antelope, two species of deer, grizzly bear, moose and elk. Many of these half-tones are made more effective by vignetting, the background of sky having been cut away. We notice that the titles of the illustrations facing page 21 and 97 have been in part transposed. The figure of a white tail buck is called a mule deer buck, while the plate of a male and female mule deer is called a group of Virginia deer.

The book contains a great deal of information which is worth putting on record in popular and attractive form, as this has been put on record, and it ought to be in the library of every big game hunter and of every one interested in the mammals of the United States.

## The Kennel.

## FIXTURES.

## DOG SHOWS.

Aug. 30 to Sept. 2.—Blue Grass Kennel Club, at Lexington, Ky. Mr. Roger Williams, Sec'y.  
Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y. Entries close Aug. 31.  
Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.  
Sept. 19 to 23.—Rhode Island State Fair Ass'n at Narragansett Park, Cranston, R. I. D. C. Collins, Sec'y. Entries close Sept. 4.  
Sept. 25-30.—Kansas City, Mo.  
Oct. 26 to 29.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec.  
Nov. 21 to 24.—New Jersey K. L., at Newark. Dr. W. F. Seidler, Sec.  
Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

## FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. R. J. Gallagher, Sec'y, Winnipeg.  
Oct. 30.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.

Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

Don't forget that Toronto entries close Thursday, Aug. 31, with C. A. Stone, 82 King street, Toronto.

## Toronto Dog Show.

MR. STONE says the entries are coming in in good shape and the prospects are that the Toronto show which opens Sept. 11 will be the most successful one ever held. They have accommodations for something like 8,000 dogs, and everything will be done to secure the comfort of exhibitors and their dogs. Judging will commence promptly on Monday, Sept. 11, at 2 P. M. Exhibitors from a distance can send their dogs to arrive on Saturday, the 9th, which will give them all Sunday to rest.

Acknowledgment for the amount of the entries will be issued immediately upon receipt, and the identification papers and numbers of dogs will follow later. By these means exhibitors will be made aware that their entries have been received and their dogs entered.

The following additional special prizes have been offered: The association offers a bronze medal for the best skye terrier in the show, and Mr. A. E. Foster, of New York, donates an Obria Camera Co.'s Kodak for best brace of field spaniel bitches.

The exhibition outside of the dog show will be the grandest ever held at Toronto. Over \$100,000 has been expended on new buildings, and the ring attractions will be the best that money can procure.

Remember that the dog show entries close Thursday, Aug. 31. Premium lists can be procured at 82 King street, E.

THE DOG IN THE ART PALACE.

I must say that I found many beautiful paintings and sculptures in the Art Palace which had no reference to dog and gun or fish and rod. Still, here and there were marine, river, field and forest views. The dog appeared oftener in scenes of domestic life than in shooting or hunting, presumably so because artists are generally not familiar with the dogs and his uses other than as seen in everyday life. The dog, too, were not intended, in most instances, to be faithful representations of a breed or type, but merely to produce an effect, to complete an impression of home life or to give animation or action to some scene.

The shepherd and his dog, watching his flock in the solitudes of the wilderness, or gathering them in to an inclosure for the night, appeared to be a favorite theme. One painting depicts the shepherd clad in a heavy fur coat, sitting on the ground cutting a loaf of bread, while he is cutting the wrong way. The flock of sheep is gathered around him, each one looking at him in wonderment. The dog sits by, with head hanging contemplatively, and gazing intently on the loaf with a gravity which denotes more than a speculative interest. He seems to wonder whether any of that loaf will drop for place.

"Requiescat."

A painting which attracted a great deal of attention has the above name, "Requiescat," and is numbered 41, in the section set off to Great Britain. It portrays a knight in full armor lying rigid in death upon a bed richly furnished with a delicately worked counterpane, which hangs irregularly over the side to the floor. The raised visor shows a manly face set in the fixed hard lines of death. The figure is that of a symmetrical yet powerful man who probably had fought once too often. The hand of the dead warrior rests close by the bedside. His dog, a bloodhound, sits with his side to the bed, his head pressed close to his dead master's hand. The dog is the only watcher. In his eyes are a depth of unutterable mournfulness and grief. Dejection marks every lineament. Sitting by the bedside of his dead master with his cheek pressed lovingly to the still hand, he is an embodiment of fidelity, unselfish grief and love. There is a deal of pathos in the picture. The picture itself is most artistically executed. The texture is wonderfully good. The armor shows the blue smooth polish of burnished steel with its reflections of lights. The woven chain at the joints at the shoulders and elbows looks like real chain. The bedpost is hard dried of fine grain wood, with a season crack in it, and it is rich in color. The counterpane had all the softness and fineness of cloth in its look, and the embroidery on it seemed as real as if done with silk by the deft hand of woman. Its coloring is excellent. The coloring of the dog, too, is good. His figure is not bad either, though the anatomy might be better. But the expression of mournfulness and affection which the artist put into the attitude and expression are admirable.

"The New Whip."

This picture, too, is quite good. It is No. 71, in the British section. A four-year old youngster, clad in the too plentiful folds of his father's scarlet cloak and hunting cap, holds a hunting whip awkwardly in his hands. His face shows all the importance of childish authority as he stands in the center of a pack of hounds. The dogs are good-naturedly fawning on him or gazing on him with affectionate looks, utterly ignoring his assumption of authority. They are quite faithfully drawn and colored. The texture of the coats is also well shown.

"Stag Hunting in a Sea Fog."

This picture, No. 307, in the British section, was intended to be a spirited portrayal of dashing action in horses and dogs, in foggy weather, at a deer hunt, but the most robust feature of it, after a horse or two and riders in the foreground, and a hound or two of weird figure, followed by a procession of goblin dogs, is the fog itself. The scene and the ears of the dogs would suggest that they were intended to be hounds. But the procession of dogs can be seen far into the fog, though the second or third dog, close in the foreground, has lost his distinctness of outline. So, too, with the horses and riders. Each horse and dog has about the same action, legs extended fore and aft. It is a funny fog, too, for while it is thick in the foreground the dogs are lost to view chiefly by the distance. It is a poor portrayal of a pack, this string of dogs following by one and twos clear into the distance. It seems to me it is a mistake to attempt to show more in a fog than the fog will permit. There also

"ATTENTION!"  
Judge Mason at the Wissahickon Show.

may be hounds somewhere like the ones pictured, but they probably were hid in a fog. With such hounds and such fog and horses—great sport.

In the British section, No. 406, entitled "Maternity," is a good painting of a lioness and cubs. The figures and anatomy are excellent, and the color and texture is equally good.

Oliver Twist.

No. 419 is called "He Walks to London." It shows Oliver Twist, one of Dickens's characters, walking along a country highway. A lithe, slender boy is he, well made, though with some of the sharp angles of boyhood in his figure, and legs and arms fully 3 in. too long for the clothes, which he has outgrown. A collie of the kind which seldom takes a prize nowadays is frolicking with sheep close by. The boy is so intent on his journey that he gazes not on either dog or sheep.

Daniel.

No. 412 is a good painting of a group of lions, large and small. They gaze on Daniel, some kindly, some fiercely, who is in their den. Daniel appears calmly indifferent.

Herder Assembling His Flock.

No. 99, in the Belgian exhibit, in the gallery, is a pastoral scene, showing a herder with a prick-eared dog at work in a half-hearted manner. No. 91, another picture, is sheep, shepherd and a long-legged, smooth-coated, bushy-tailed dog

with a strong family resemblance to an exaggerated fox. Very few of the portraits of collies in the Art Palace look like the dog show collie, or *vice versa*. Also each artist appears to have his own inspiration of color and type.

In the German exhibit, No. 573, in the gallery, are four panels, paintings of guns of old pattern, crossbows, armor, swords, daggers, gamebags, etc., wonderful in carvings and jewels. The paintings look so real that not infrequently the visitor takes a side view across the surface to see if he is not deceived. The many kinds of jewels on the handles seem real. The metal with its color, hardness of surface and polish appears to be genuine. On the scabbards are pictures of battles, delicate carvings in elaborately fine detail.

A zinc cast of a life-size hunter and dog called "In the Shooting Stand" is a most spirited portrayal of a hunting scene. Dog and hunter seem to have just heard the approaching game. The hunter rests on one knee. With his left hand he firmly holds down his dog. In his right hand he holds a double rifle by the grip of the stock, his finger on the

"AN ANXIOUS MOMENT."  
Wissahickon Show.

trigger ready for instant action. The figure is that of a man in the prime of life, handsome and athletic, clad in full hunting costume, and full of the spirit of the chase. Opposite this is a zinc cast, life size, of an older man in a plainer costume. He is on both knees on the ground, near a badger's burrow. In one hand, he holds in check a dachshund by the loose skin of its back. This cast is called "At the Kennel of a Badger." It is well proportioned and life like.

A bronze eagle from Japan is a masterpiece of fine work. The figure is perfect, and the feathers, corrugations on the feet, etc., are worked out in patient and accurate detail. It is numbered 14.

Breaking the Home Ties.

This picture, from its homely pathos, is never without a group of admirers. It all centers in the common, everyday family life of the people who make a country—the workers. A home, plain in itself and plainly furnished, has become too small for the family, or other places lure the oldest boy away with promise of fame and profit. The boy is an ordinary one. They are all homely, earnest people. The moment of separation has come. The mother, homely of feature and cheaply clothed, but with the love for her son and fortitude to bear the ordeal of separation showing in her face, is giving her boy parting advice, which like many thousands before, is undoubtedly largely wasted. The driver stands by waiting till the final farewells are said. A filled carpet bag denotes that with its contents the boy must begin his life's battle. The father is thoughtful, the grandmother sits at the humble breakfast table in apathy, and the sister sits on a chair with a hand gently resting on the head of the family dog, the latter gazing curiously at his young master as if unable to solve the emotional outbreak in the humdrum life of the home.

The dog, too, is a marvel. It is too bad to find fault with anything, even the dog, so well conceived and arranged is the picture, and with a pathetic story so plain that words are not needed to tell it. It appeals to every visitor, for every man and woman has felt the force of breaking home ties some time in life.

But that dog is a marvel. He has a frank, honest expression, as becomes a dog of good associations, and he is not ungrateful, as shown by his deep and solemn interest in the proceedings; but he is the wearer of a coat beside which that of Jacob would be commonplace. The dog is rough-haired, and in contemplation was a collie. An infinity of tints in his color are used to produce the proper effect. Blue, yellow, brown, black, white, green, orange and some others I could not determine, were mixed in spots around the head, neck, shoulders and hips, probably to produce correct markings, but they made the poor dog look too duds for this surroundings. The sooner that dog can shed that coat, the better. No man can object to it for want of markings, but, somehow, it is wrong.

Training the Dog.

No. 211 in the U. S. exhibit is a charmingly executed picture of a group of bootblacks, each clad in the tattered, odd garments peculiar to them, and each had his box slung to his shoulder. They are gathered about one of their number, who is giving a command to a small cur which he has placed on the head of a barrel. A frayed cord hanging loosely on the dog's neck suggests how the boys led him to the secluded corner where they would be free from interference. The boy holds forth his hand, and the expression of his face denotes that he expects his order to be obeyed. The dog does not understand, looks cowed and apprehensive of harm, holds up one paw and appears so willing to obey did he but know how. The faces of the boys are a study. All have the sturdy look of health and self-reliance, but each one expresses a different emotion. One looks eagerly as if he expected the command obeyed at once; another looks on compassionately; and yet another looks cold and wise as if he knew just how it would all be. The faces are all interesting and intelligent. The artist succeeded admirably in bringing out so many expressions and emotions in so natural a manner. Still, it is hard for the dog.

B. WATERS.

909 SECURITY BUILDING, Chicago.

Puppies at Walk.

How many kennels send their puppies out to walk? Comparatively few in this country. The average dogman thinks he has done the right thing when he has built himself a kennel—ornate or just in the rough—with runs, they must all have runs, where the dogs exercise themselves just about as much as a New York alderman. Many of our kennels are run on too-confined principles. Put a dog of the larger breeds in a run, however large, and spare enough time from your other pursuits to judge for yourself how much exercise that dog will take and you will learn a few things. When the dog turns out in the morning he may take a scamper to the limits of his domain and greet some kennel acquaintance through the railing, but with courtesies exchanged he walks leisurely to a favorite corner and there curls up for a snooze or a loaf, till excited by some passing object or noise he tears round for a minute or so and all is quiet again. This, in many kennels, is kept up day after day, week in and week out. Then the owner wonders how it is that his dogs don't thrive, that the knee joints are enlarged and cow hocks so prevalent, hair falls out and sores appear. Put yourself in the dog's place. What inducement is there to move about, what object in life has the dog, what anticipation, except feeding time? His lot is worse, or as bad, as any prisoner of the old Bastille. Show time comes around and the dog is "fattened up," but little, if any, more attention is paid to proper exercising, the dog is benched and what wonder, when he finds himself one of several hundred other dogs, he becomes so excited that he puts himself into temporary sickness—diarrhoea and other ills the show dog handler is familiar with. We are speaking now of young dogs, tenderfeet in every sense of the word. After the stuffing process, with little exercise and rich food, after being accustomed to plain tack, comes skin diseases, indigestion and their attendant annoyance and horror.

This is roughly the average life of an American dog in a kennel with others. There are good kennel men and bad, the former we have nothing to do with here, they know their business and are scarce—very. It is to the men who having charge of kennels take to the work because it is easy, or they think it is, and do not try to deceive themselves by making it otherwise, that we draw attention. The owner is a business man and perhaps sees his dogs for a short time in the evening or the morning before he goes "down town," and must therefore depend altogether on his kennel man's inclination and veracity. Orders are no good unless they are carried out. Many a time we hear an owner in speaking of his kennel say: "My dogs get so many miles' walking exercise every day." Do they? Not in nine cases out of ten, unless some member of his family is interested enough to see that this is done, and few owners are so happily situated.

This brings us to our first question. The future of American dog breeding depends upon more attention being paid to the "walking" of young stock, whether it be fox-terriers or St. Bernards. Most of our large kennels are in country towns or the suburbs of large cities and so accessible to farming districts. Though it will be probably more difficult here to find farmers or country people willing to take dogs to walk than it would be in England, where the foxhound and fox-terrier element has made this custom so well known and familiar to the country people, still, by judicious selection aided by liberal inducements in the way of cold cash, good results may be obtained. There are many small farmers in every district whose women folk would be glad to walk a puppy or two for the extra pin-money they would derive from it.

There is always something going on at a farm, and the puppies, free from restraint and innocent of collar and chain and with bellies well filled, feel free to take an interest in anything that comes along from following the cows to pasture to chasing the chickens. If only one puppy can be walked, this one will generally find a companion or two in the farmer's dogs, with whom he can have a rough and tumble and a scamper. Then when he is brought in, though his coat may be dirty and in the rough, still ten to one his limbs will be sound, his health good, and he will need no kennel drugs or appetizers. The kennel man then has a rough diamond, that with a little refining is ready for the bench. The dog being vigorous and healthy, other things being equal, he or she will be far more likely to produce sound offspring than kennel-reared stock. The cost of walking puppies, all things considered, is little more than the expense

"HARD TO TELL,"  
Judge Davison at the Wissahickon Show.

of raising at home, and depend upon it it pays double in the end. The simple absence of risk from distemper, when a lot of puppies are kept and reared year after year on the same ground, should alone induce kennel owners to make an effort to get their pups away.

Columns might be written on this subject, but the advantages of the system are so apparent that it is unnecessary. If you cannot find "walks" for all your pups, pick out the best and sell the rest—at any price, you will find this the best plan in the long run. Keeping a pup that you really do not want, because a standard price is required for it, is a penny-wise policy, for you may keep the dog a year and in the end get no better price. Among those we know of who walk their puppies are the Blanton, Rutherford and Hillside kennels, all fox-terrier breeders.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$9).

### Rinada Pointer Kennels.

POINTERS! Yes, it was all pointer. We had pointer on the train, pointer for lunch, pointer during the afternoon with our pump water, and then dinner with pointer as the *pièce de résistance*. And when after hurried good-byes we took our seats in the train for Newtown Creek, the rival of the setter was trotted out again—figuratively speaking—there wasn't room to do it properly. If there is a pointer in this country that has a reputation to swear by and that did not come in for discussion at one time or other during the day we would like to meet him and congratulate him. Sex was no protection, the points of a Lady Gay Spanker were as ruthlessly discussed as Graphic's latest escapade with a mastiff, in which the latter had dispoiled the great champion of several lumps of prond flesh.

The reason of it all was that Mr. Adrian C. Pickhardt, of New York city, having for some time past devoted his spare time and cash to breeding pointers, felt so well satisfied with the result that he thought he would like some of his friends to participate in the general felicity.

A party of several gentlemen more or less interested in pointers accepted the invitation and trusted their lives to the tender mercies of the L. I. R. Co. on Saturday last as far as Massapequa, L. I., where Mr. Pickhardt's kennels are situated on a farm about a mile from the station, and after lunch at the famed Massapequa Hotel, not far away, the dogs were visited and we were introduced to Mr. Edward F. Verity who has them in charge. The party consisted of Messrs. James L. Anthony, Jas. Mortimer, who had driven over from Hempstead behind a cracking pair of horses which are said to be equally as clever over the fences as they are good-looking to the pole, Geo. Jarvis, G. Muss-Arnolt, James Johnson, W. Tallman, Major J. M. Taylor, and the FOREST AND STREAM representative.

The first dog we were shown was a nice-looking pup by Ridgeview Donald out of Miss Arkon. Then we strolled into the barn, where in a stall eleven very young youngsters gambled round Westminster Ina. One of these belonged to Bloomo II., or rather used to, and two to Dauntless, by Chancellor. There are several future champions in this lot, as many of them were visitors, and of course as they were still in their very earliest maturity it was easy enough to predict their future, even to the extent of sundry rash bets. Joking aside, they were a nice lot, and there were three or four that really looked like keeping their heads, though whether they will do as well on their legs is a matter of dim future treatment. One, by Duke of Hessen out of Bloomo II., seemed a general favorite. Moving into a two-acre field, where the kennels proper are, a crowd of pointers greeted us through the wires. The first shown was Solitaire, a 12-months-old bitch by Ridgeview Panic out of Revelation, and she takes a good deal after her dam, a nice stylish-actioned bitch. Then came a rather coarse but active dog, Lad of Beppo, by Ridgeview Dazzle out of Daisy Wooster, showing Naso of Kippen and Beppo III. blood.

After him came Spendthrift, a young dog of which his owner has fond hopes. He is by Pontiac out of Bloom, has a nice head and would be likely dog all round if his hind legs were just a bit stronger. Chancellor was another nice one, by Lad of Kent out of Ridgeview Lass, the very essence of good pointer blood. A bitch we liked was Ridgeview Stella, by Beppo III. out of Bloomo II., 12mos. old, very pleasing head and expression. Jingle Bell, who was seen in New York is barring her rather coarse short head, one of the best made in the kennel, capital legs and fair body. Then there was Lady Scaron, a heavy liver and white bitch whelped Dec. 1, 1891, broken and looks a useful sort. Miss Arkos, by Arcos II. out of Lorle, is a useful breeder, a black and white bitch; Bloomo II., by Lad of Bow out of Bloomo, shows her breeding, and though she was hog fat and bag down, we could see what she is. Mr. Anthony kept his eye on her. There were several other bitches, but they need not be mentioned here, well bred but not show dogs.

The kennels are built of pine and are divided. There is one large room where the dogs sleep on benches arranged round the sides à la foxhound kennel. The floor slopes to a drain in the center. A smaller room at the end is used for chains, collars and the other necessities of a kennel. There are three runs surrounded by wire in an inclosure 150x60ft. wide. The kennel building is about 40x13ft. Mr. Verity evidently knows how to keep his dogs, as there were no sores visible and dogs were in good condition.

By this time a move was made to the orchard, where the pump handle was brought into use to mix things and help along the pointer arguments that were being discussed. Mr. Pickhardt is a genial host and it was unanimously agreed that every one had spent a pleasant afternoon.

The owner of the Rinada Kennels has succeeded in getting some of the most fashionable blood, and with care and judgment he should make his mark still deeper in the pointer world. We wish him the success he deserves.

### Dog News from the Old North State.

Editor Forest and Stream:

We have had a most favorable year in this section for the hatching and rearing of quail. The crop may be considered safe and it brings joy to the heart of the trainer as well as to the man who shoots for sport. I at one time belonged to the latter class myself.

News from my training grounds, which embrace an area of 12 to 15 miles in every direction, are most flattering; the farmers say the fields are alive with young quail, and the biggest coveys they "ever seed."

I make it a rule to stand in with the farmers (I am one myself). I praise the babies and the old lady's cooking and shake hands all around when I leave. The farmers as a general thing are a peculiar lot of individuals, honest and hard-working, but with a special antipathy for the average town and city sportsman, and often with good cause.

Men go out for a day's hunt, they go on a farm without permission, use no discretion as to where and when they shoot, they sting up a plowing mule with No. 8, or perhaps put a shot through the farmer's ear or scatter them around the house. If the owner protests against such usage they swear at him and threaten him with a full load if he says much. This has been done to my knowledge—and one such act will cause a prejudice in a neighborhood that will extend for miles.

But let me tell you what it is that gets clear down to their "innards," and that is to see a man walk off with his hunting coat bulging out with birds. He wants some of the meat, a luxury to which he is unknown, except what few he gets in a trap occasionally. I always made it a rule to give them some, and since I have been training I give away nearly all I shoot.

The best quail shooting is often found eight or ten miles out from town, and one must give up all idea of luxury and even comfort in many places. I stopped at one place last winter, and being much fatigued, slept soundly. When I awoke next morning I beheld a sight which greatly amused me—the old folks being short of bed room, had piled about half a dozen children in with me, and it has always been a mystery to me how we all slept so well.

On another occasion a friend and I went for two days shooting on foot. The first night we stayed with an old farmer whom we knew. It was one of the coldest nights I ever felt—the wind blowing bitterly. After getting supper I made it known that I wished to retire, when I was conducted to the shed room, just large enough to hold a bed and a chair or so, and I found a plank clear off on a line with the bed. I decided to sleep in front that night, and my companion being rather corpulent served as a good wind break for me, and I passed the night in perfect comfort.

The training season is nearly here, and Sept. 1, will find me hard at work yard-training my dogs. I have quite a nice string, and a more promising lot I never saw. Two English setter bitches by Roderigo ex Topsy, belonging to Mr. D. G. Rowland, of Louisville, Ky., are perfect beauties and full of quality. Mr. A. T. Latta, of Denver, Col., is the possessor of a most promising pointer. I will handle these three in the Eastern, Southern and United States trials B.

Mr. F. L. Cheney will come in with several for the Irish setter trials, as he always does. I look for them some time in September, headed by that grand dog Henmore Shamrock. "Rock" had never seen a quail till a few weeks before I ran him in the trials last year; he made a remarkable good showing and it was owing to one of those "off days" when he was in the second series or he would have cleaned the field up, as he was fully capable of doing it. He is as full of quality as a dog can be, chock full of vim, go and dash, has an exquisite nose, endurance in the highest degree and a strong will of his own. I have seen that dog run the most perfect heats while in training, pointing covey after covey, single after single, without an error.

I have another promising Irish setter for the Derby, owned by Mr. C. C. Nutting, of Blacksburg, S. C.

I have trained many Irish setters and I find them to be as easily managed as other breeds, yet the prevailing idea is that they are hard-headed and need a great deal of whipping. Individual dogs of all breeds have their peculiarities.

Teaching a dog to drop to shot and wing, and quarter his ground, is, I am glad to see, growing obsolete; both are useless and an actual detriment to the dog.

I have a pointer that has always hunted on his own judgment, and any one seeing him hunt out a field would never want a quartering dog. His judgment is better than any man's living, he knows just how to take advantage of the wind and where the birds are likely to be. I have found him on as many points in out-of-the-way places, briar patches and thickets, as I ever did in what I thought likely places.

When the fact is recognized that the dog knows more about finding game than the man, a decided step will be made toward his improvement.

MONROE, N. C., Aug. 12.

### A New Jersey Pointer Kennel.

Editor Forest and Stream:

On Aug. 20 I paid a visit to "The Elms" kennels, owned and conducted by Mr. Cyrus P. Wilcox, situated about one and a half miles west of Westfield, N. J., and a more lovely spot for a kennel could not be found anywhere. Plenty of shade, good water, and the kind of care and attention that keeps dogs on edge all the time.

I thoroughly examined my latest purchase, Cadet, a beautiful black, white and tan setter by the grand old champion Gath's Mark ex Blue Ridge Belle, to my great satisfaction, and her litter sister, Minnie's Girl's, I presented to Mr. Wilcox as a slight expression of my appreciation of his splendid care of the many dogs he has boarded for me. I then proceeded to look through his kennels and found about fifty of the best looking pointers that I ever have seen, among which might be mentioned the well-known Ridge View Faust, by Beppo III. ex Lady Norrish II., a very useful looking liver and white dog; also a brother of Faust, who should make a splendid field dog, judging from his actions about the place. Then there was the liver and white Peggy, by Go Bang ex Meteor's Madge, with eight beautiful puppies by Ridge View Faust. This litter I have never seen equaled for beauty, symmetry and pointer character throughout. Miss Lancashire, by Ridge View Faust ex Bess of Lancashire, has seven handsome liver and white puppies by Lad's Boy, by Lad of Bow ex Bloomo; Frivolity II., who is very proud of her five handsome puppies by Lad's Boy; Beryl, by champion Graphic ex Frivolity II., with seven liver and white puppies by Ridge View Faust, and two well-grown puppies by champion Graphic ex Meally's Baby. By way of diversion, I also saw a litter of good-looking Gordon setter puppies out of Queen Bess.

All of the above pointers, with the exception of one, I believe, are the property of Mr. Wilcox, and taken as a whole I doubt if there is a finer lot of young pointers in America to-day. I could not resist the temptation to invest in a liver and white pointer that suited me very well.

If any one who visits "The Elms" kennels cannot please themselves with a pointer, Mr. Wilcox has several dozens of the most fashionable strains of pit games, and it is no trouble to have a little "matinee" while waiting for a train, as Cy is not averse to exercising the young cocks.

GEORGE W. LA RUE.

NEW HAVEN, CONN., Aug. 24.

### Irish Setter Field Trials.

Editor Forest and Stream:

The Irish Setter Club claims the dates Nov. 27, 28 and 29 next on which to hold their forthcoming field trials. Mr. W. S. Bell, of Pittsburgh, is to judge them. The exact location has not yet been decided on, but one will probably be secured in North Carolina. Now that the Irish setter men know when the trials will be held, who will judge, and their probable location, they should at once begin to prepare their entries. The entry blanks cannot be gotten out until we have secured grounds. As to exactly what prizes will be offered it is impossible to tell, but we expect to hold the trials at the above time and trust the Irish setter men will support them. The withdrawal of Mr. Bishop owing to bad health, and the losses suffered by Messrs. Perry and Hamilton through McLin's cruelty, will cripple the club somewhat and renders it more necessary that those who have heretofore not run their dogs should now come forward and help us to make a satisfactory showing. The contest between the native bred and foreign dogs is not yet settled. The latter will receive a valuable addition through the importation of Dr. Jarvis of the famous dog Signal. We will then have Blue Rock, Tearaway, Henmore Shamrock and Signal representing the Muskerry blood, Finglas, Coleraine, Inchiquin and Clarendon Patsy representing the Frisco strain, and various names to uphold the home stock. I shall again endeavor to worry the foreigners with a daughter of old Tim. My two Derby entries are dead. One was a fifteen-months-old bitch; she was by Adonis (a brother to my bitch) out of Silk, who was by Chief out of a Tim bitch which was inbred to Rodman's Dash. This pup had plenty of "go." I brought her to the city and the first time I let her loose she bolted, and after chasing her for about a mile she finally distanced me, and I afterward found out she had been run over and killed. The other pup was a Blue Rock one out of Spinaway. Fitis was the cause of his untimely decease at the age of eleven months. He was promising, not being afraid even of fire-crackers, certainly a good test, and had a nice, lean, long head. To provide against future contingencies I have now three pups by Finglas out of my Currer Bell IV., and if these all die I have two more which I can fall back on, so I live in hopes. I still believe that the Irish setter is the equal of any of the other breeds and trust to see it publicly demonstrated.

G. G. DAVIS, Sec'y I. S. C.

PHILADELPHIA, Pa., Aug. 26.

### Gets There Every Time.

Editor Forest and Stream:

Through my "ad" in FOREST AND STREAM I have sold the pointer bitch Christine (Shenango Chief—Prairie Belle) in whelp to Rip-Rap, Jr. She goes to Mr. J. D. Bush, Peoria, Ill. I have also sold a dog pup by Breckenridge's Nod, to same party. I find an "ad" in FOREST AND STREAM gets there in good shape every time.

EMSWORTH, PA.

FRANKLIN POINTER KENNELS.

### Northwestern Field Trials Entries.

THE following are the entries for the All-Age Stake of the Northwestern Field Trials Club—English setters 16, pointers 13:

#### ENGLISH SETTERS.

MATANE—W. B. Wells's black, white and tan dog (Mark I.—Cambria).

LUKE—W. B. Wells's black, white and tan dog (Toledo Blade—Cambria).

CHLOE—W. B. Wells's black, white and tan bitch (Toledo Blade—Cambria).

DUFF—W. T. Hunter's black bitch (Manitoba Toss—Pitti Sing).

PET—W. T. Hunter's black, white and tan bitch (Roderigo—Florence Gladstone).

KENWOOD—Chas. Proctor's black, white and tan dog (Cinch—Steven's Ruby).

DICK BONDHU II.—John Wootton's black and white dog (Dick Bondhu—Manitoba Belle).

GAMBIT—G. O. Smith's black and white dog.

BRIGHTON TOBE—T. G. Davey's dog (Locksley—Leddersdale).

TOLEDO BEE—Eddy & Armstrong's black, white and tan dog (Toledo Blade—Maggie Bee).

SWAB—H. A. Greely's black, tan and white bitch (Manitoba Toss—Pitti Sing).

WINNIEG—Thos. Johnson's black dog (Manitoba Toss—Pitti Sing).

PSYCHE—Thos. Johnson's black bitch (Manitoba Toss—Pitti Sing).

SUT—Thos. Johnson's black bitch (Manitoba Toss—Pitti Sing).

MANITOBA PATTI—Thos. Johnson's blue belton bitch (Duke of Gloster—Flora).

ATLANTA—S. W. Smith's black, white and tan bitch (Jean Val Jean—Sheena Van).

#### POINTERS.

SAM—Thomas Stone's liver and white dog (Coton—Psyche).

DOGWOOD—A. P. Heywood Lonsdale's liver and white dog (Ightfield Dick—Cowslip).

KING OF MANITOBA—R. I. Whitlas's liver and white ticked dog (Upton—Blithe).

SPOTTED BOY—Chas. Proctor's liver and white dog (Trinket's Bang—Nellie Bow).

GEM—Thomas Johnson's liver and white ticked bitch (Upton—Blithe).

DIAMOND—Thomas Johnson's liver and white ticked bitch (Upton—Blithe).

SAT—Thomas Johnson's liver, white and tan bitch (Coton—Psyche).

JONE—T. G. Davey's liver, white and tan dog (Lord Graphic—Devonshire Fan).

VICTOR—J. B. Kelly's liver, white and tan dog (Coton—Psyche).

BUNTY—Thomas A. Montgomery's liver and white bitch (Ightfield Dick—Polly Peacham).

COTON—J. C. Phillips's liver and white dog (Ponto—Dainty).

LONSDALE—J. C. Phillips's liver, white and tan dog (Coton—Psyche).

LORD GRAPHIC'S JUNO—G. O. Smith's liver and white bitch (Lord Graphic—Patti Iona).

The following have entered for the championship cup. (The winners of the Derby and All-Aged are eligible for this stake).

#### POINTERS.

Musa (A. P. Heywood Lonsdale's) winner English Kennel Club's All-Aged stake.

Spotted Boy (Chas. Proctor's) winner Central Field Trial Club's Derby.

Manitoba Shot (Thos. Johnson's) winner Northwestern Club's All-Aged stake.

Alberta Joe (John Sharple's) winner Northwestern Club's Derby.

#### SETTERS.

Toledo Bee (Armstrong & Eddy's) winner International Club's Derby.

Dick Bondhu II. (John Wootton's) winner Manitoba Club's Derby.

Pitti Sing (Thos. Johnson's) winner International Club's All-Age Stake.

Paul Bo (Chas. Merrill's) winner Southern Field Club's Derby.

### Influence of a Previous Sire.

Editor Forest and Stream:

As doubtless a large number of the readers of the FOREST AND STREAM are interested in the above question, especially any scientific treatment of it, I point to what may have escaped many, that the subject is discussed in its scientific aspects by no less a man than Herbert Spencer, the great philosopher and biologist in a paper in the August *Popular Science Monthly*, entitled "Professor Weismann's Theories." He does not himself lean to the theory, with which among cynologists the name of Everett Millais has been connected, but expresses his own conviction that, "We must take it as a demonstrated fact that, during gestation, traits of constitution inherited from the father produce effects upon the constitution of the mother, and that these communicated effects are transmitted by her to subsequent offspring." I do not know who first put forward this view; but it is the one that I myself suggested in discussing the subject some time since in another kennel journal, as it seemed to me, though not without its difficulties, less open to objection in the present state of knowledge than any other. But the last word of science has by no means been spoken; and there is no room for a positive opinion, much less of cock-sure dogmatism. I trust that out of the vast number of researches now being prosecuted by biologists on cells, including the germinal cells, some new and more certain light may appear.

WESLEY MILLS, M. D.

PHYSIOLOGICAL LABORATORY, McGill University, Montreal, Canada.

### Cruelty to Dogs.

FRANK SCHREIBENSTOCK, of Newark, N. J., is not making a very pleasing record for himself these "dog days." For some time past he has been in the habit (he is an engineer) of throwing stray dogs, which he finds near his place, into his furnace, where all trace of them is soon lost. A summons against him has been granted the owner of one of the cremated dogs. In the meanwhile he has been convicted of cruelty to another dog, Justice Rapp, of Newark, N. J., fining him \$20 and costs.

The case raises an interesting point of which many people are in ignorance. It seems Schreiberstock shot a dog and wounded it badly. The animal managed to get out on South Orange avenue, Newark, where it fell and died in about half an hour. Its howls excited the entire neighborhood. Complaint was lodged with Colonel E. S. Edwards, secretary of the Society for the Prevention of Cruelty to Animals, and he prosecuted the accused on behalf of the society. William B. Guild appeared for the defendant. The right of the defendant to kill the dog on the property of his employer was not denied, but to satisfy the law he was required to kill it in short order. It was urged by Colonel Edwards that although the defendant had every opportunity to kill the dog, having gone out on the avenue while the dog lay howling in the gutter, he did not put it out of its misery. The defendant testified that when he went to look for the dog after having wounded it, he could not find it. Several witnesses testified, however, that the dog lay howling in the street for

from thirty to thirty-five minutes within 200 feet of the front of the slaughter house, and Colonel Edwards contended that it was impossible for the defendant not to have seen it or heard it if he had made any effort so to do.

Mr. Guild contended that the dog was a sheep-killing cur that had gone on to the property of Mr. Maybaum to kill his sheep, and that the engineer had done his duty in the premises, and that he had made every consistent effort to kill it at once. He could not help it if the dog escaped. The point in the case, Mr. Gould said, was, had Schreiberstock tried all he could to kill the dog. He thought the evidence showed that he had.

Justice Rapp thought that if the defendant had looked for the dog at the time he said he did, eight or ten minutes after he shot it, he could certainly have found it on the street, and he thought the law required him to kill it if he could. As it was the dog had been mutilated and left to die, so the Justice gave judgment as stated above.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

### Field Trial Judging.

FROM a gentleman who is thoroughly familiar with field trial matters I have received a letter from which I take the following:

"I expect to see a big change this season in the awards with the new list of judges which have been appointed. I do not think the holding dog, which knows nothing but to run in a wild condition, selecting his own course and doing almost anything he pleases and little that he is wanted to do, will find as much favor as formerly.

"In company with two excellent and practical field sportsmen lately both assured me that unless the practical gentleman's shooting companion was preferred to the wild, uncontrollable, nervous, flighty animal the days of field trials were numbered, or, at least, the general interest in them. Not that they want plugs, but they want the dog with the most qualities for game finding. Not one which possesses speed and range, and is lacking in other more essential qualities, but one which will adapt himself to the work required, fast and intelligent in the open, and hunting to the gun in cover just as lively and quickly, all with the least possible noise or interference by the handler, so that a day's shooting can be a pleasure and enjoyment rather than a day of irritation and dissatisfaction. I often hear that FOREST AND STREAM has a clear lead now."

In respect to the last clause, one hears the same everywhere.

### As Handler's Feel.

The following letter shows a sentiment from the handler's standpoint. It will explain itself. Coming as it does from one of the most noted handlers in the country, it is worthy of consideration:

"I want to talk a little on a subject uppermost in my mind, if, as the boys say, it is only 'through my hat,' I refer to the reference in your notes to a letter received from Mr. J. M. Freeman, in which he says he is a little surprised that the handlers are so slow in contributing toward prosecuting McLin, the dog burner. I do not know how the other handlers feel in the premises, but, speaking for myself, will say I feel no obligation to contribute a cent.

"There seems to be a feeling among some that there is an unwritten law by which the entire body of handlers may be held responsible for the acts of any individual who may feel inclined to advertise as a competent handler and by offering to do first-class work at one-third what it is actually worth, secure the patronage of a class of small breeders who are breeding wholly for profit, and only have a dog trained that they may more readily sell the inferior animal they breed. I consider the reputable handlers in no way responsible for the inhuman act of this person McLin. So long as there are men ready to patronize this class of trainers, so long there will be men to solicit their patronage. I received a letter (which I inclose) from a gentleman that wrote me last January, asking me what I could train his dog for. I gave him my usual fee. For while solicited constantly to give my lowest price, I have found it is just as much work to train one man's dog as another, and in working for the public there is only one honest fair treatment of all, and that is one price to all.

"I get letters from parties who, as a special inducement for me to lower my price, offer to give me a good send off through the sporting papers. They evidently over-value their influence and forget that the same reputation for honest, fair dealing that brought my name to their notice will continue to bring me patronage on my own merits as a trainer without their newspaper puffs. This practice is as pernicious as it is common. But I will venture to say that these articles always bring to the public notice some obscure individual whose advertisement will follow it shortly.

"In my own personal experience figure several individuals who had never trained or attempted to train a dog until they put in an advertisement for dogs to train. One I have in mind got six or eight dogs the first year and the distemper got among them and all died. The next year he got one, and how he has made it since I don't know. Truer words were never printed than what I quote from 'Modern Training, Handling and Kennel Management.' It says: 'A proper training is the result of honest, diligent effort and skill. Any system, professed to be a short, certain system, by which a dog can be taught in a few weeks, by unusual methods, is either the result of a very imperfect knowledge of training, or an utter disregard of facts. Assuming the most favorable conditions, four to eight months at least will be required to complete the education, although as a matter of course every day of that time is not devoted to it. Overwork is as incorrect and as useless as any other erroneous method. Occasionally a dog performs well with a less period of instruction. On the other hand there are dogs that require too full seasons. However, six months can be safely estimated as the average, if the last three months of the training are in the open season.'

"This is a good thing for those who want a dog trained for \$25 or \$35 to ponder over. If they will figure the cost of building a kennel in which dogs can be kept comfortable and healthy (a 9x18 shed, without windows, would not answer the purpose). And feed the dogs good healthy food (a 'kettle of bones' once a week would not be sufficient), and then put in all one's time training and personally looking after the dogs, and I fancy if the handler who attempts it at any less than the usual rates, the figures would soon put him where the boy who attempted to figure how long it would require the cat to get out of the well got the cat.

"My opinion of this McLin matter is that if the State in which the crime was committed, and the men who owned the poor brutes offered up in sacrifice cannot prosecute the man who committed the crime without pecuniary help from outside parties, McLin will have to go without the punishment he deserves. But as for me, poor as I am, if a party tortured my dogs in such a way, I would have manhood enough and sufficient sentiment to put my hand in my pocket for a larger bill than that subscribed by the owner of some of the dead dogs. Charity begins at home, and in this instance the leading parties in the prosecution ought to be those most interested; but from Mr. Freeman's story they have left him in captivity of 'bag holder.' According to the munificent sum they subscribed toward the prosecution fund, it appears that, if they put their own valuation on the dogs in proportion to the amount subscribed, the only thing to deplore is the suffering the poor brutes underwent, as the owners' loss was someone's gain." B. WATERS.

## DOG CHAT.

### Toronto Show.

The following communication has been received from Mr. Stone: "I would like to call the attention of intending exhibitors at the coming Toronto show to the different sweepstakes to be competed for at that time. These sweeps are entirely in the hands of exhibitors, and if understood by them should fill well and make them worth winning. The association does not receive anything, only compelling those competing to enter in the regular classes. The entrance fee is \$2 and are for Canadian or American bred dogs and bitches who have never won public money previous to the show. All moneys so received are divided among those competing, 40, 30, 20 and 10 per cent." The following special has been received from a member of the National Beagle Club: \$5 for best beagle in the show, \$5 for best dog over 13in. and \$5 for best bitch in the show. Last year exhibitors who had shipped their dogs by express, which were unaccompanied by owners had some trouble with the American Customs on returning their dogs from Toronto show, the customs authorities demanding a certificate of ownership. This has now been overcome by making arrangements with the American Customs through the express companies, and with these identification papers exhibitors will find form of certificate with full instructions which will pass and return their dogs without any trouble.

### Important Cocker Transfers.

The Brant Cocker Kennels, of which Mr. Charles M. Nelles is the manager, will appear on the show firmament with added attractions. From being a strong black cocker man Mr. Nelles is turning his attention to the "Reds." No one can deny that cockers of this color are very prepossessing, and we do not wonder there is a good sale for them. It will be seen by the information Mr. Nelles conveys below that his kennel will make a strong showing in this color. He writes: "As an item of news I beg to notify your valuable paper of one of the largest deals in cockers that has taken place in Canada for some time. It is the purchase by our kennels of eight red cockers from Mr. Andrew Laidlaw. They include Challenge Red Roland; the good new dog Golden Rod, by Red Roland ex Dutchess; Red Vic, by Champion Cherry Boy ex Vic; Robina, a red bitch by Roland ex Ula; and four red pups, also by Red Roland. Red Roland was bred by the Brant Cocker Kennels, so he only comes to his own again. We now have largest and best kennel of red cockers in the world, and will make a good showing at the fall exhibitions."

### The Chasers Chased.

John Dunn, of Pittsburgh, Pa., finds there is a difference between hunting wildcats and cats that are tame, and Agent O'Brien, of the S. P. C. A., demonstrated this to him by causing his arrest for cruelty. John had heard of fox chases, and concluded that puss would do instead of reynard at a pinch. He owns two hounds, and securing a cat he hid himself to the grounds of the Eagle Gun Club, where he turned puss loose. The hounds went for the cat, which never moved, but shortly after turned the tables and chased the hounds round the field, till finally they sought shelter behind their master. The latter, disappointed with such a termination of his pleasure, it is alleged, beat the cat unmercifully and left it half dead on the field. A spectator put the animal out of its misery and then informed Agent O'Brien. Dunn, it was expected, would meet with his reward on Saturday last, when the case was set for trial.

### Sale of Desdemona.

Mr. D. E. Packard, Belmont, Iowa, informs us that he has just sold the English setter, Desdemona, by Rodrigo, out of Lady Glendesse, to Pugh & Withey, of Grand Rapids, Mich. He adds: "Mr. Pugh writes me he will breed her to Guths Mark. I look for grand results from this union, as I consider Desdemona one of the finest brood bitches in the United States."

### Probably a Show at Harrisburg.

There is a movement on foot among the local fanciers of Harrisburg, Pa., that may result in a dog show. The idea at present is to hold the event in the Kelker Street Hall, the latter part of September. There is a number of good dogs in Harrisburg and vicinity, field dogs especially. Prizes will be offered and it is expected that the affair will create more than local interest.

### Pointer Arthur Changes Quarters.

The pointer Arthur, illustrated recently with champion Graphic in a field scene in FOREST AND STREAM, has been sold by Mr. Chas. Heath to Mr. Fred Hodgman, Tuckahoe, N. Y., who will use him for private shooting. Arthur is well known to pointer men, winnings at New York and Boston being found in his record.

### Death of Lora.

It is with regret we announce the death of Mr. Pierre Lorillard, Jr.'s Lora, whose sensational run through the trials last fall is in the memory of all interested in field trials and field work. Lora died of blood poisoning after having had a litter of puppies. She was by Gladstone Boy out of Ruby D.

The Blue Grass Kennel Club entries closed with a total of 561. Foxhounds led with 151.

A new journal devoted to poultry, pigeons, dogs and pet stock will be started early in September under the joint ownership of Messrs. Blunk and Drevenstedt. Mr. Blunk is well known to both dog and poultrymen, being president of the association that gave the shows at Gloversville, N. Y. Mr. Drevenstedt, who did so much for the *Fancier's Journal* as editor of the poultry department, will be the editor of the new journal, which will be styled *The American Fancier*, and published from Johnstown, N. Y.

A new building has been erected by the Lawrence, Pa., County Fair Association at Newcastle, Pa., for the dog show which is to take place. The building is 250ft. long, open at both sides and along the center passes a tier of benches. A number of entries have been promised and the show is expected to be a great improvement over that of last year.

The Boston Terrier Club will hold an important meeting Sept. 2, at Young's Hotel, Boston, commencing at 7 P. M.

The Mount Holly show promises well, and we hear of a number of probable entries. It is a pity the show clashes with the Rhode Island fixture, but as wins count many exhibitors will no doubt take advantage of the probable absence of rivals and count one in on the A. K. C. Frank P. Smith, we are pleased to see, will have charge of the kennel department of the fair. The fair itself is always an interesting one and well worth visiting.

An interesting point in the dog licensing question has just been decided in Bridgeport, Conn., by Judge Kane. The question raised was whether the person was liable on retaining a dog in one town on the license procured in another. It seems a Mr. Hurlburt was brought to court for having in his possession a dog for which he had not taken out a license in Bridgeport. His defense was that the dog belonged to his sister, who had already paid for a license, but in another

town, and he was merely keeping it for her for a few days. As he offered to procure the license the judge continued his case for a few days, at the expiration of which time Hurlburt presented the license granted in the other town, and the judge ordered that a record of it be left in the town clerk's office.

Binghamton, N. Y., will hold a show September 19 to 23, in connection with the exposition. Mr. Henry S. Martin is the secretary.

A number of puppies have been lost to futurity lately. Somerset Kennels mourn about a dozen, and H. W. Huntington and Mr. Whiton have had several sudden deaths among the young stock. In Mr. Huntington's case bad drinking water is said to be the cause, dead toads and so forth being found in the well.

Mr. A. D. Stewart is fairly in it, according to an "If you see it in the *Stock-Keeper* it's so" paragraph. He has dined at the Kennel Club, which puts the hall mark on him, and has visited several important London kennels.

We see that *American Stock-Keeper* falls into the error of saying that Messrs. Mortimer and Taylor will judge at Mount Holly. Instead of this Mr. Mason will take all classes. The management should make that correction.

A movement is on foot to have the Pacific Kennel Club hold a show in connection with the Midwinter Fair in San Francisco, Cal. The idea seems a good one, for it would be a better date than the May fixture.

Mr. J. B. Martin, well-known in San Francisco, has taken the opportunity of a visit to the World's Fair to see some of the Eastern kennels. Mr. Martin is one of the principal exhibitors on the Pacific Coast, fox-terriers, we believe, being his specialty. Mr. Martin stands well in his community and we bespeak a welcome to him. Communications to him can be addressed care of FOREST AND STREAM.

### Bright Anticipations in Beagles.

#### Editor Forest and Stream:

While reading FOREST AND STREAM to-day I noticed your remarks in regard to the beagles at the Spa show, and your gentle reminder that I could now probably get suited if I still wanted a "world beater" for a stud.

Allow me to reply to this article by stating that I have met with the greatest success with the puppies I have bred this spring. In contradiction to what the dog press said about my Prudence, together with Gypsie A. and others, being too long cast, sway-backed, etc., last spring, just after the Boston show, and that they should be "weeded" out without delay, I would say that I purchased Prudence on the strength of the fact that she was litter sister to challenge Forest Hunter, champion Butterfly, etc., and is the only one of the litter that is over 13in. high. By this purchase I got a good bitch to breed from at a much less price than I could have obtained her litter sister Butterfly, and circumstances have proven that to such an extent that I would not place a price on her.

I bred her to champion Royal Krueger and I obtained a litter of four bitch pups with which I hope to win first money. Two of these puppies are an exact duplicate of their sire as far as outline, coat, head, muzzle, tail, legs, ears, etc., go, and one of these two is a "dead ringer" for Royal Krueger, color and all, with the exception of her ears, which I think are longer, considering difference in age, than his. Her ears are 14in. from tip to tip; she was whelped June 21, and when drinking her ears are in the water nearly a quarter of an inch. My Romp C. whelped Aug. 4, six pups (four dogs), to my champion Racer, Jr.—of course they are too youthful yet to foretell their career. My Miss Rogers (champion Royal Krueger ex Veira), whelped five puppies (two dogs), to my champion Racer, Jr., Aug. 17; one bitch was since smothered by its mother; I expect some good ones out of this litter, as Mr. C. S. Wixom says his Royal Krueger bitches (and Miss Rogers can get in the money too) always have winners by my Ray (Racer, Jr.).

As I am having such good luck with the beagles that I have, I think I will "let well enough alone" for the present. I expect to enter a beagle in the large and small dog classes, one in the small bitch class and possibly one in large bitch class both at Nannet and Oxford this fall.

Please accept my thanks for keeping the Shrewsbury Beagle Kennels "posted" in regard to the "good things."

E. GERRY ROBERTS.

RED BANK, N. J., Aug. 24.

### Rhode Island Dog Show.

THE judges and the breeds they pass upon are officially announced this week: Mr. John Davidson, of Munroe, Mich., takes pointers, English setters, Irish setters, Gordon setters, bloodhounds, greyhounds, deerhounds and barzois; Mr. A. Wakefield, Providence, R. I., foxhounds and beagles; Mr. J. A. Boutelle, Providence, R. I., Boston terriers, and Mr. Jas. Mortimer, Hempstead, L. I., all other classes.

This arrangement, with Mr. John Read, of New York, as superintendent, and a strong dogshow committee with Walter J. Comstock, of Providence, of chairman, ought to be a sufficient guarantee to owners that the management make every effort to have their show first class in every particular. The new building, 180 by 90, is admirably adapted for holding a dog show. It can accommodate 600 dogs. It is well lighted and ventilated, supplied with wooden benches, and adjoining there are fifteen are cages.

Entries close Monday, Sept. 4, and should be addressed Rhode Island State Fair Association, Cranston, R. I. The entrance fee is only \$1 and the premiums fairly liberal.

Exhibitors should not feel disappointed that there is not a show at Chicago this fall, for though they may not have the opportunity of breaking the monotony by a stroll through the Midway Plaisance, they will find in Narragansett Park much besides the dog show that will be interesting. There is a big trotting meeting, the association having offered \$37,000 in stakes. There are to be twenty-two races, ranging from a free for all to 2:40 class. This is the largest number of races ever trotted in one week on any track in the world.

The fair is comprised of twenty-six departments, each one organized and officered separately, and taken together makes one of the most complete fairs in America.

### KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

#### BRED.

Prepared Blanks sent free on application.

Princess Avon—Milton. Grand View Kennels' (Danbury, Conn.) rough St. Bernard bitch Princess Avon (Prince Barry—Countess Sequa) to their Milton (Tartar—Lady Gair), Aug. 10.

#### WHELPED.

Prepared Blanks sent free on application.

Heather Bee. J. B. Blossom's (New York) imported Gordon setter bitch champion Heather Bee, July 12, seven (six dogs), by his Comus (Doy—Dott).

Elsie. J. B. Blossom's (New York) Gordon setter bitch Elsie (champion Argus—Laura), July 13, two dogs, by his challenge Heather York (Heather Harold—Bellmont).

#### SALES.

Prepared Blanks sent free on application.

Count Vernon—Fan C. whelps. Pointers, whelped April 18, 1893, by

Avondale Kennels, McAlester, I. T., a lemon and white dog to A. B. Snodgrass and a liver and white bitch to Geo. Stephenson, both of Krebs, I. T., and a lemon and white bitch to Richard Gutterman, Louisville, Ky.

*Count Vernon*—*Fan C. whelps*. Liver, white and ticked pointer dogs, whelped April 18, 1893, by Avondale Kennels, McAlester, I. T., one each to J. B. Riley, J. C. Clelland and Campbell Dutchburn, all of Krebs, I. T., and one to Richard Gutterman, Louisville, Ky.

*Furr's Rex*. Liver and white ticked pointer dog, whelped April 18, 1893, by Count Vernon out of Fan C., by Avondale Kennels, McAlester, I. T., to D. S. Lytle, Krebs, I. T.

*Lady Peyton*. Lemon and white pointer bitch, whelped May 2, 1891, by Brown Stout out of Bessie Peyton, by A. F. Hockwalt, Dayton, O., to Avondale Kennels, McAlester, I. T.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. K. Providence, R. I.—Spionia is not registered, so we cannot help you. Better write to Mr. S. C. Bradley, Greenfield Hill, Conn. There is a Spionia registered, by Sir Roger out of Dashing Daisy.

BIRMINGHAM, Ala.—Kindly give me pedigree of the pups Prince and Daddies. They are said to be registered in E. K. C. S. B. They are the sire and dam of Patience. Patience is dam of Drummer (E. K. C. S. B. 32,593). Ans. Neither dogs mentioned is registered in English stud book.

H. G. W., Bethlehem, Pa.—Sir Bedivere's pedigree is as follows: By Nero III. out of Bena, by Bayard out of Freda, by St. Nicholas out of Juno II.; Bayard by Bosco out of Juno; Nero III. by Boniface out of Bessie II., by Bayard out of Hebi; Boniface by Bayard out of Luna. Kingston Regent is by Prince Regent out of Lady St. Gothard, by St. Gothard III. out of Saffron; Prince Regent by Plinlimmon out of Miss Meg, by Duke of Leeds out of Lady Nell; Plinlimmon by Pilgrim out of Bessie II.

J. C. T., New York.—I have a fox-terrier dog three years old and apparently in the best of health; skin does not itch nor seem unhealthy, but his hair comes out very badly. He is washed every week. What can I do to keep him from shedding his hair? Ans. Treat for worms. Wash in a solution of creoline (1 to 60) once or twice a week and give the following mixture:

Maj. sulph. .... 3 iii.  
Ferri. sulph. .... grs. xv.  
Acid. sulph. dil. .... 3 ss.  
Aq. ad. .... 3 iii.  
Mix. Give one teaspoonful twice a day.

S. L. W., Windsor, Vt.—I think my brown water spaniel dog may have canker of the ear. He is always scratching his right ear, and at night he is very feverish, especially about the head. There is also a bad odor about him. He eats well, is well exercised and is playful. I ought to be able to treat him for canker, but unfortunately have not your paper to refer to, as I am not here for the summer, and my copies of FOREST AND STREAM are in Chicago. Ans. Give a purgative and use the following drops for the ear:

R. Liq. plumbi sub. acet. .... 3 iv.  
Acid. carbolic. .... mx.  
Glycerine. .... 3 i.  
Aq. ad. .... 3 i.  
Mix. Lotion. A little to be poured into the ears twice a day. You might also wash the dog in a solution of creoline (1 to 60). Repeat purgative in a week.

W. C. G., Bath Beach, L. I.—A Gordon setter puppy after sleeping or while asleep suddenly breaks out howling as though being severely whipped. This lasts only a minute or two. While in this condition his urine flows freely. After his howls cease he hangs his head and gives short yelps if he turns his head or moves about. Takes sometimes an hour to get him completely over it. He then comes out as bright as a dollar. Rushes round and apparently is as good as new. Pup smoo. old. I might add that about six weeks ago he fell off a step, but showed no signs of injury at the time. Ans. Treat for worms and give the following mixture:

R. Pot. bromid. .... 3 iss.  
Chloral hydrate. .... 3 i.  
Liq. arsenicalis. .... aa 3 i.  
Aq. ad. .... 3 vi.  
Mix. Give two teaspoonfuls twice a day.

## Hunting and Coursing.

#### FIXTURES.

Oct. 3.—International Coursing Meeting at Huron, S. D. J. Herbert Watson, 26 Court street, Brooklyn, N. Y. (chairman).

Oct. 17.—Kenmore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.

Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.

Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.

#### The Festive Fox.

Editor Forest and Stream:

Having been a reader of your paper for a long time and having perused the sporting notes from different parts, I thought perhaps some ardent hunter would like a fox hunt at home as well as I do a bird or deer hunt from your paper, for when I cannot leave my work I have to fall back on the FOREST AND STREAM to help me out.

I have hunted the fox in many parts, but I think that old New England takes the "brush" of them all for fun and sport. Now, the hunt I am about to relate took place in Winchendon, on the northern line of Massachusetts, near Gardner, and any one that loves sport will find no better place in the State, for there are many more foxes this year than have been for a long time.

So to Winchester we went on Dec. 27. The party consisted of my friends and my old hound Ned, who has put in several years for me. Well, we made plans to be up and off by sunrise. My friends I shall call Sam and Will. Sam is in his infancy and a fox looks as large to him as a deer, but many are the "brushes" Will has taken.

Now it was not the best sort of a day, but it was then or never more. What is more exciting than to start out on a hunt at sunrise, with everything covered with frost, which sparkles like diamonds, and your noble dogs waiting to be released. Well, we are off, and late too, as it is every time, and we have not yet arrived on the ground and it is almost sunrise. Where shall we go to? We must get a fresh track and so we try the old stands, the Nineteen Hill, and start him in the swamp, for they must be there by this time, as it is getting late. We are on the hill and a very good trail is there, and old Ned is off like a shot.

Now, the track is fresh, and judging by his baying he will not be long in starting the fox. Will tells Sam to stand by the knolls and ledge, and he will take the lone pine, while I take the road to the top of the hill. Presently Will said the dog had started reynard and is off for his stand, and I place Sam. Sam asks: "How near will the dog be to the fox? Where will he go? How long will he run, and how long will I have to stand up here alone?" And as I went out of sight he lit his pipe and the expression on his face denoted what he thought—that a fox never could come there.

Well, in a very short time Ned was a mile to the north, but he soon turned the fox back, but he went south and it made me feel blue, for he had as good a chance to run my way as any other. In a very short time, however, he was on the hill, and I held my breath, for he would soon pass by Sam, but nothing happened. In a very short time I had all my nerves strained, as I saw him emerge from the spruce trees in my road on his way north once more. Shortly afterward I heard bang! bang! I have heard a man shout fire! but if you can imagine how Sam called that dog any one would have thought he had a dozen or more.

I had not heard the dog for a long time so I went to see after him, and as I came in sight of him I saw Sam with his gun up, and he had Will down by a small pine, and I thought he wanted Will to take a run and see if he could

hit him. "Well, Sam, did you see him?" "Guess I did, the first time my gun was on that rock and he was right in my face. He was larger than any sheep you ever saw, and I wish you could have seen his tail; it was a yard long or nothing. Then I got my Parker and I talked to it like a father to his son. If Ned would only bring him back—and back he came, and he had lost more than 75 lbs. of flesh." "Did you hit him?" I asked Sam. "Can a man hit a delusion? If so, I hit him." It was almost noon now and the fox was playing on top of Line Hill, so over we went, and we had not arrived on the hill when Will said he would cross by Cooks, and down he went, and we waited only a short time before—bang! Then we waited for the dog to come up. He came and in a short time he was still. I told Sam we would soon see his fox, and he told me we might, but he would never make a fox hunter. He thought rabbit or bird hunting was good enough for him. We walked down the road and found Will, and the fox near by. "Well, Sam, is that the one you saw?" "No, that is the third, and the first would weigh 75 lbs., the next one 2 lbs., and this one 20 lbs." It was 2 P. M. now, and home we went to think of the pleasant time we had, and Sam said he would have given \$10 if his gun had got the brush. Then back to our work we must go, but many a time shall we think of Sam's first fox hunt on old Nineteen Hill, Winchendon. C. E. BAILEY.

#### National Fox Hunters' Association.

THE proposed organization of the National Foxhunters' Association at Lexington, Ky., this week, marks an important era in field sport and one fraught with great opportunities to the foxhound breeder and foxhunter. The scope of the organization, it is said, will know no State limit, and is to be representative and national in every respect. The benefits that should accrue to foxhounds from such an organization are manifold. The spirit of rivalry that exists among the owners of different strains of hounds will, under the guidance of this association, find a more practical way of expressing itself than by "paper" cases. Trials are to be held in which it is certain that hounds from the most noted packs will take part, and judge the rank and file of foxhound breeders may be able to judge for themselves and profit by the information thus gained, as to which are the most suitable for work, and the fittest will survive.

In another way we trust that the association will be able to wield powerful influence in arriving at a greater uniformity of type than exists at present. It cannot be denied that as far as type goes the foxhounds of America are of all shapes and sizes. This is probably owing to the limited facilities which the average foxhound breeder has for securing desirable outcrosses and the devoting every energy to breeding an animal that would do the work required in time honored fashion. Type and uniformity, as exemplified in English packs, is in too many cases paid little attention to. If the new association can succeed in bringing owners of foxhounds together from time to time, thus affording opportunities for personal intercourse and exchange of ideas regarding their dogs, much will be accomplished in reality that a few have tried to do by newspaper wrangling.

A standard of points should be drawn up so that those who judge at bench shows would be able to give decisions that would in time bring forward a better and more uniform class of hounds than has been seen heretofore. American breeders say they do not want so much lumber as the English hound carries, at the same time in the framing of a standard no better one can be used than that for the English foxhound altered only to admit of a lighter build. The points lived up to in this standard have by careful work on the part of foxhound breeders in England evolved an animal that is considered the epitome of breeding for type and the purpose for which it is required.

FOREST AND STREAM has always had a tender spot for the foxhound and its owner, and devoted space to reports of all the trials for years past. It is our purpose in future to give the greater attention to this branch of sport which circumstances demand, and in this we trust we shall gain the confidence and friendship of every foxhunter in the country. This journal will be represented at the Lexington meeting by one of its staff editors, and a full report will appear in next week's issue.

#### National Beagle Club Meeting.

An excellent committee meeting was held Aug. 28 at the A. K. C. rooms, 44 Broadway, New York. Meeting called to order at 3:30 P. M. Present, H. L. Kreuder, in the chair; H. F. Schellhass, J. W. Appleton, John Bateman, Geo. W. Rogers and secretary Geo. W. Laick. Mr. Schellhass reported that Mr. W. H. Child would not continue as a member. The committee on special for Mr. Dorsey's Lee II., as absolute winner of trials of 1892, presented a very nice piece of plate which the president was requested to forward to Mr. Pottinger Dorsey. The executive committee then divided into two parties to choose officers for election, and the slates chosen will be forwarded to members for vote. Meeting adjourned at 5:10. A meeting of the field trial committee was then called to order. Voted to have premium list and entry forms printed and sent out to beagle owners. Mr. Wm. Tallman thought it to be to the best interest of the club to decline to act as judge at the field trials, and he strongly advocated Mr. B. S. Turpin. Moved by Mr. Tallman and seconded by Mr. Laick that Mr. B. S. Turpin be invited to judge at our trials. Voted that Mr. Joe Lewis be accepted as judge. Mr. H. L. Kreuder was appointed a committee to see Mr. Turpin in relation to acting as judge. Adjourned at 6:20 P. M. GEO. LAICK, Sec'y.

#### Foxes Shot and Foxes Run Into.

Editor Forest and Stream: I see that "F. J. H." in a late issue of your paper accuses those who shoot the fox of assassination. I think "F. J. H." must belong to that class of sportsmen who think their sport the right one and their way of carrying it out the only one to be recognized. It is one of the privileges of living in this grand country that there is always room for those who are not satisfied with their environment to move on. Because, through traditional associations, the manner of hunting the fox in many parts of the South when country is open and the hounds can be followed in the good old way, is by running into it. It is no reason why we sportsmen of the North may not shoot the fox when it is impossible to get him otherwise. I would like to know how "F. J. H." would circumvently reynard in the hill country of New England States—the country where the last Brunswick Fur Club trials were held, for instance? A lot of fun he would have in following his bounds with a horse or in letting the hounds kill alone. The man who follows the bounds on horseback is often inspired to deeds of derring do by the excitement of companionship and the close proximity to the hounds. It does not prove that he is a genuine sportsman at heart. There is no mistaking the spirit of sport when a man will get up some morning when the snow lies on the ground and the wind whistles cold and raw through the bleak hills. As soon as there is daylight and breakfast has been disposed of the tramp commences and several miles over very rough country may be traversed before a start is made. Then taking our stand, the chilliest and most trying part of the hunt commences. Alone on the stand, sheltered as best you may be by a friendly boulder or tree stump, you await your chance for a shot at the "dog" that stole your wife's chickens. You may stand there for hours with nothing to cheer you or inspire your flagging energies but an occasional bar or two of hound music conveyed on the blast that chills you to the

marrow, or the echoing report of a gun in the hands of a luckier aim a mile away to your right.

It reminds me of the man in the trench under fire and the charge of the cavalryman, and there is just as much difference in the bravery of the two styles of fighting as in the true sportsmanship of the other.

Under these circumstances why should we not shoot the game we hunt on sight? If foxes were scarce there might be some argument against their extermination by shooting. If we New Englanders chose to shoot our foxes in the fair chase we have every right to do so, and there is no more right to call this assassination than it would be had we shot a quail. It is the custom of the country where we hunt and its pursuance will produce as hardy a class of genuine sportsmen as if they had followed the hounds on horseback, jumping only those places we were forced to and skipping the rest. F. W. H.

WORCESTER, MASS.

## Yachting.

The abandonment of the Merced meet in California this fall in favor of the International Coursing meeting at Huron, S. D., is bringing the Californians to a better feeling toward the latter, and it is now probable that a number of the best ones will be nominated. Nominations close Sept. 1.

ONE of the many groundless stories which are just now passing for news is to the effect that one of the Cup defenders had been officially measured and found to be so far over length that the measurement had been suppressed and the other boats induced to refrain from being measured, so that the question of excess might not be raised. We understand on reliable authority that no official measurement has been made of any of the four, and that the story is entirely without foundation.

#### American Model Yacht Club.

BROOKLYN, N. Y.

Clapham Prize, August 26.

THE races for the Clapham prize, under the management of the A. M. Y. C., was sailed in a light southwest wind, the result being that the final race was postponed until Labor Day, September 4, when the three winners in their respective classes of to-day will come together to dispute the ownership of a handsome and appropriate prize in the shape of a model yacht 59 in. over all and about 40 in. l. w. l., 22 in. beam, a representation of the Bouncer boat built by Mr. T. Clapham, of Roslyn, L. I., Mr. G. G. Clapham, his son, being the donor. This model is now at the well house, Prospect Park. Two Connecticut model yachtsmen showed their stamina by entering their yachts and bringing them from their respective owners, namely, Bridgeport and Greenwich. Mr. Fullman, representing the Connecticut M. Y. C. and Mr. Charles Mallory, of steamship fame, representing Greenwich, the last named gentleman's yacht, the Maria, giving the Brooklyn boats a very close shave, she being very ably sailed by Mr. Thomas Clapham, pushing Mr. Townley's Star very close in the third class.

The boats were sailed to windward, the winner in each of their classes to meet in the final as aforesaid. Remarkably good time was made considering the light airs, as the summary will show, the Neola showing that she is invincible in any kind of wind in her class. Mr. De Wolf has offered a handsome prize to be sailed for on September 4.

FIRST CLASS—FIRST HEAT.				
Yacht and Owner.	Length.	S. A.	Elapsed.	Cor.
Neola, J. E. Pfeiffer.....	62.9	3,632.3	9 41	9 22 1/4

Winners of Prizes: First class, Neola; second class, Girofle; third class, Star. Regatta committee: Frank Nichols, Truman V. Brown. Judge: Commodore W. V. Hanson.				

#### Owasco Y. C.

The third race was sailed on Aug. 16, on Owasco Lake, from Dolphin club house to Edgewater, to Long Point, finish at Dolphin club house; distance, 9 1/4 miles. Weather fair. Wind N. E., light.

Yacht.	Length.	Start.	Finish.	Elapsed.
La Flance, J. M. Brainard.....	16.09	1 53 15	5 59 04	3 56 49
Lee, N. B. Burr.....	17.04	1 52 18	5 22 14	3 29 56
Asp, D. Beardsley.....	21.10 1/2	1 52 26	5 16 05	3 23 39
Ideways, F. I. Allen.....	31.02	1 54 10	5 48 28	3 54 10
Mystery, H. B. Lewis.....	22.00	1 52 55	5 33 57	3 41 02
Tamapsa, I. E. Thorne.....	21.10	1 51 45		Did not finish.
Spar Hawk, P. Letenworth.....	31.00 1/2	1 52 22	5 21 35	3 29 13
Bird, W. R. Hopkins.....		1 53 30		Did not finish.
Undine, H. R. Hopkins.....		1 51 50		Did not finish.
Winners: First, Asp; second, Lee; third, Spar Hawk. The Asp was awarded first prize by the committee for the reason that the Long Point Buoy was set so near to shore that she grounded and lost 3 1/4 in. in getting off. Regatta committee—C. E. Thome, F. I. Allen, N. B. Burr, W. R. Hopkins, C. U. Chedell. Judge, W. F. Allen. Timekeeper, H. Jay Case.				

#### Mobile Y. C.

The cup race was sailed on Aug. 20 in Mobile Bay. Courses: W. 1/4 N. (mag.), 1 1/4 miles; S. S. E. 1/4 E. (mag.), 1 1/4 miles; N. N. E. 1/4 E. (mag.), 1 1/4 miles; total distance, 15 miles. Weather cloudy and fair, with occasional rain squalls. Wind N. to W., force 3-5. Tide ebb.

Yacht.	Length.	Start.	Finish.	Elapsed.
Mineloa, A. E. White.....	30.06	2 04 55	4 25 56	2 31 01
Zephine, W. Bluwau.....	37.10	2 05 46	4 05 12	1 58 26
Siren, H. L. Petrus.....	31.00			Did not start.
Commodore, W. E. Vincent.....				2 09 31. Did not finish.
During the first lap, when the last turn and the judges boat, the Zephine became becalmed, and at the end of second lap gave up the race. The Commodore, for some unknown reason, gave up the race before having the first lap.				
Judges—H. D. Smith, G. M. Daniels, John R. Dally.				

Beverly Y. C.

THE 201st race second championship prizes, open to other clubs, was sailed at Marblehead, Aug. 12, in a moderate E. by S. wind and a dense fog. Not over half the entries were on hand, owing to the fog, and all but Ariel of the second class lost their way and withdrew.

Third class sloops apparently did not read their sailing rules, as they sailed the second class course. This race must be resailed. The times were:

SECOND CLASS.			
	Length.	Elapsed.	Corrected.
Ariel, J. Barrett, C. Y. C.	29.05	3 05 59	.....
Black Cloud, Taylor & Armistead, L. Y. C.	29.05	Lost in fog.	.....
Sibyl, E. P. Sharpe, M. Y. C.	26.05	Lost in fog.	.....
Keewardin, S. A. Burnham, Jr., C. Y. C.	.....	Lost in fog.	.....

THIRD CLASS SLOOPS.			
Freak, E. D. Cochrane, B. Y. C.	25.07	3 12 43	3 01 27
Reaper, Com. Benson, B. Y. C.	24.00	3 14 02	3 01 00

THIRD CLASS CATS.			
Magpie, H. G. Otis, B. Y. C.	22.04	2 38 14	1 54 23
Koorali, R. C. Robbins, B. Y. C.	22.04	2 07 52	1 59 34
Arab, W. F. Scott, S. B. Y. C.	.....	2 11 55	.....

FOURTH CLASS.			
Bonita, C. O. Hood, C. Y. C.	20.08	2 02 51	.....
Madcap, C. A. Elwell, C. Y. C.	.....	2 06 59	.....

KNOCKABOUT CLASS.			
Otatsu, F. D. North, E. Y. C.	.....	2 09 39	.....
Jane, C. S. Parker, C. Y. C.	.....	2 12 03	.....
Nancy, John Saltonstall, B. Y. C.	.....	2 15 06	.....
Susan, Henry Taggard, E. Y. C.	.....	2 17 25	.....

Freak and Reaper sailed wrong course; race called off, will be resailed later. Magpie ties Koorali for championship. F. Elliot Cabot, judge.

The 202d Regatta, first open race, was sailed at West Falmouth Aug. 19. The list of entries was exceptionally good, but race was marred by the light and streaky breeze, N. by W. shifting to N.W.

The special class of sloops, 24 to 40ft., sailed a 13 1/2 mile course, first and second classes 12 miles, third class 7 1/2 miles, fourth class 6 miles.

In second class the new Myrtle upheld her reputation as a light weather boat, while Defiance and Come On surprised the fleet. In third class Gilt Edge did exceedingly well, as did Sippican, which arrived late and was handicapped over 7 minutes. Nobska did not show up well.

In fourth class Fin had it all her own way, as usual, while Psyche easily led all the catboats. It is to be regretted that the absence of ocean sloops forced her into the catboat class.

The start of second class was greatly damaged by an outside sloop, which, apparently from pure maliciousness, insisted on sailing across the line before the wind close to judges' boat, just as five of the racing boats came round her stern close hauled for the line. The times were:

SLOOP CLASS.			
	Length.	Elapsed.	Corrected.
Chapaquoit, C. H. Jones, B. Y. C.	29.10	2 35 33	2 25 48
Sistare, J. B. Rhodes, N. B. Y. C.	28.05	.....	.....

Markia, B. Y. C., H. Hayward.	16.06	1 55 11	1 40 43
Oyguet, B. Y. C., R. B. Fenno.	16.10	1 55 34	1 41 29

FIFTH CLASS.			
Coxe, B. Y. C., L. Bacon, Jr.	11.08	1 17 25	1 02 36
P. D. Q., B. Y. C., R. W. Emmons.	12.00	1 18 47	1 04 37
Raccoon, B. Y. C., J. L. Stackpole, Jr.	11.06	1 20 52	1 05 46
Kid, B. Y. C., W. R. Peabody.	12.00	1 23 41	1 07 56
Mah, B. Y. C., F. Beaumont.	12.04	.....	.....

Class one, first, Hector. Class two, first, Myrtle; second, Come On; third, Defiance. Class three, first, Gilt Edge; second, Vivian; third, Daisy. Class four, first, Fin; second, Psyche; third, Dawdle. Class five, first, Coxe; second, P. D. Q.; third, Raccoon. Sloop class, first, Chapaquoit.

Judges, N. W. Emmons, H. S. Carruth, W. Lloyd Jeffries.

Races of the Cup Defenders.

It now appears that the first race for the Astor cups is likely to be the only satisfactory meeting of the four Cup defenders prior to the trial races; while it is even possible that this may prove to be the only race of the year in which all four took part. Vigilant is likely to start in the two races at Larchmont this week, one on Thursday for Com. Coit's cup, and one on Saturday for a special \$600 cup in the fall regatta. Colonia will probably enter, but Jubilee and Pilgrim will be absent. The Atlantic Y. C. has been compelled to abandon its race set for Wednesday for the Bang's cup, as the yachts would not race, and the Seawaka Cor. Y. C. has been unable to get more than two entries for its \$1,000 cup, Pilgrim declining, while one of the four yachts has paid no attention to the letters of the committee. Therace has consequently been abandoned.

The annual Newport sweepstakes of the Corinthian Y. C. was set for Monday, Aug. 21, and though Jubilee had left for Boston the other three were ready. Pilgrim having secured a new gaff. On Monday morning a very heavy N.E. gale was blowing along the coast, and after consultation with the respective managers of the yachts the committee of the club decided to postpone the race until the middle of the week. After the second Astor cup race, on Tuesday, all hopes of a race were abandoned, and the event was declared off.

On Monday afternoon the gale moderated and the wind shifted to N.W. and later to W.

Pilgrim, not having finished in the first race, was not eligible to start in the subsequent races under the original conditions, but Mr. Astor willingly assented to the proposal to admit her in this race, and she was out at the line in good season. Vigilant was also ready, but Colonia was absent, having gone to Bristol, so that there were but two starters.

The wind was light S.S.W. at noon, and Messrs. A. Cass Canfield and F. P. Sands, representing the regatta committee on the May, laid out a 30-mile triangle, the first leg S.S.W., 10 miles, north.

Vigilant crossed on the starboard tack, headed inshore, and Pilgrim crossed on the port tack, the two sailing away from each other. After a long leg Vigilant tacked and finally crossed Pilgrim with a big lead. After a time both stood in along the Narragansett shore, and down to Point Judith, each carrying clubboats easily in the light air, and Vigilant gaining with every tack. The first mark was timed:

Vigilant.....	2 17 33	Pilgrim.....	2 29 25
With spinnaker set to starboard and braced well forward, Vigilant started for the second mark, but when half the leg was covered the spinnaker was taken in and only the balloon jibtopsail carried to the mark, where a jibe was made. The times were:			

Vigilant.....	3 43 54	Pilgrim.....	4 00 17
The last leg a real wind was made with more wind and a favoring tide, the finish being timed:			

Vigilant.....	4 41 39	Pilgrim.....	5 06 57
The full times were:			

	Start.	Finish.	Elapsed.
Vigilant.....	12 35 56	4 41 39	4 05 43
Pilgrim.....	12 36 27	5 06 57	4 30 30

Time made on each leg: First leg. Second leg. Third leg. Whole 10-mile beat. 10-mile reach. 10-mile run. course.

Vigilant.....	1 41 37	1 26 21	0 57 45	4 05 43
Pilgrim.....	1 52 58	1 30 52	1 06 40	4 30 30

Vigilant thus wins the two Astor cups. It is uncertain when the Corinthian sweepstakes will be held, as no date will be open for a long time.

Manchester Regatta.

MANCHESTER, Aug. 15.—At the regatta to-day the weather was fair, wind northwest, fairly strong.

FIRST CLASS—SLOOPS.			
	Length.	Elapsed.	Corrected.

*Kewayden, J. A. Burnham.....	25.00	1 22 08	1 22 08
*Marguerite, Paramour.....	24.04	1 25 07	1 23 31

SECOND CLASS—JIB AND MAINSAIL SLOOPS.			
*Albatross, A. W. Craigie.....	21.00	1 35 01	1 35 01

*Nancy, Saltonstall.....	20.06	1 37 03	1 36 09
*Wraith, A. H. Higginson.....	18.10	1 39 06	1 36 11
Hornet, Chas. Jackson.....	19.11	1 44 07	1 43 08
Yankee Maid, E. P. Stanly.....	18.06	1 48 08	1 42 03
*Freak, D. Cochrane.....	20.10	1 25 01	1 25 01

THIRD CLASS—JIB AND MAINSAIL SLOOPS.			
Bonita, A. M. Jones.....	18.00	1 30 06	1 30 06

Alice, E. Stanwood.....	16.01	1 32 03	1 30 07
Tiny, F. L. Huidekoper.....	18.00	.....	.....
Teal, T. Lee.....	17.03	1 32 08	1 30 52

FOURTH CLASS—CATS.			
Pyxie, G. H. Scull.....	19.08	1 18 04	1 18 04

Marion, Tucker.....	20.08	1 18 09	1 18 07
*Surprise, Crooker.....	21.03	15 10	1 18 00
*Koorali.....	.....	.....	.....

Winners: First class, Kewayden first; second class, Albatross first, Nancy second, Wraith third; third class, Bonita first, Alice second, Teal third; fourth class, Pyxie first.

\*In first class Kewayden and Marguerite each protested the other; protest given to Kewayden. In second class Wraith protested Albatross and Yankee Maid protested Nancy; neither protest was allowed. Pyxie's protest against Surprise was allowed. Freak ruled out for not crossing starting line.

Regatta committee—A. W. Craigie, A. Amory, J. Curtis. Judges—A. N. Rantoul, Gordon Dexter, F. M. Stanwood.

FIFTH CLASS—NAPHTHA LAUNCHES.			
	Start.	Turn.	Finish.

Agnes, J. B. Booth.....	4 30 00	4 35 01	4 50 02
Algeria, A. L. Jackson.....	4 30 00	4 35 01	4 50 00
Nameless, D. Smith.....	4 30 00	4 35 05	4 50 02

The naphtha launch race was, as usual, uninteresting, the Agnes winning by allowance.

Courses: Class 1, from starting line in West Manchester Harbor to Black Buoy off Little Harte, leaving it to port, thence to Buoy No. 5 off Baker's Island, leaving it to port, thence to finish line. Class 2 same as No. 1. Class 3, from starting line to Bowditch's Ledge, leaving it to port, thence to Buoy No. 5 off Baker's Island, thence to finish line. Class 4, same as Nos. 1 and 2. Class 5, to Pride's Rock and return.

The day for the town of Manchester regatta opened with a strong, puffy northwest breeze. In the first class Kewayden took the lead and

in force in this country (England) is held to blame for the defeat of the British sea-going vessel. As to what led to the defeat of the English yacht in the several contests for the cup, authorities disagree; but no matter how divergent the many opinions are at the outset, if allowed to the end it will be found that they ultimately converge to a common point. The late Captain Coffin, a man of rare experience, keen observation and no tainting prejudices, has written it, that the model of the Cambria was superior to that of any of the American vessels entered in the races against her, and that had she carried a modern suit of racing sails she would undoubtedly have beaten the New York fleet. The most intelligent and skillful seaman of our pleasure navy, a gentleman who has witnessed every race of note that has been sailed in American waters during the last thirty years, told me that the overwhelming defeat inflicted upon the Thistle was largely due to the bad treatment which her sails received at the hands of her crew. Familiar with the recoverable powers of British canvas, the captain of the Scotch clipper treated the American cotton to a shaping process that linen may stand, but cotton most unquestionably will not. Consequently, the Thistle went over the line with about as poor a spread of canvas for windward as ever hampered a first-class racing boat.

The unvarying success of our yachts in the races that were sailed against the Albatross and Cambria led to an acute attack of over-confidence—a disease to which the American is peculiarly susceptible—and, in consequence, for several years the designer, rigger and sailmaker stood with their hands in their pockets, and a smile of self-appreciation on their countenances. We believed we had nothing to learn, and nothing to forget. Suddenly the Madge dropped in upon us, and the smile vanished at the moment when the first prize went into her locker. Those who saw the races between the little cutter and our crack Schmeer, will be willing to back me up in the statement that the cut and sit of the Madge's canvas had more to do with the cutter's success than the superior modelling of the hull. If the defeat of the Schmeer woke up the designer, it also gave our sailmakers a rude shaking, and they settled down to regain the lost ground with a will, and to-day, after two weeks' close observation of the canvas spread on some twenty of Britain's crack boats, I must insist that our sailmakers have recovered the enviable position they held in the past, and that in some respects their sails are superior to any that I saw at Cowes. A New York designer, who spent several years in England, said in a lecture a year or two ago, that the reason why the English used the lugsail on their small yachts was owing to their being unable to cut a gaff-sail so as to sit flat. I doubted the statement at the time, although we had proved in several instances that our gaff-sails were superior to the imported lugs, but I am now convinced that there is truth in what he said.

The conclusion that I have arrived at after reading and hearing the opinions of many men more experienced and skilled than myself, and by close observation during a period of some twenty years is, that in almost every case where the vessels of the two nationalities have

"FOROSS."

kept it all round the course, beating Marguerite easily. In the second class Nancy and Hornet took the lead and held it in the first leg; Wraith and Albatross had a luffing match, in which Albatross got the best of things. Freak, which had started last, came up on the fleet very fast and overtook them just after the first mark. The order at the second mark was Freak, Nancy, Albatross, Hornet, Wraith and Yankee Maid. On the last leg Albatross passed Nancy, Wraith and Hornet, and as Freak was disqualified for not crossing line, Albatross won, with Nancy second and Wraith a very close third. In the third class Bonita easily shook off her competitors and won first. Alice and Teal had a close push for second, but the very fine way in which Alice was sailed won her the place. The fourth class was the surprise of the day, for the way in which Pyxie, an old and a small boat, came out was a wonder. She finished within 3s. of the Marion on corrected time, and had the race been one-half a mile longer she would surely have beaten her. This was due to the wonderful cleverness of her skipper, Mr. Richard Boardman, who outailed his rivals on every point.

Foross.

We are indebted to *Le Yacht* for the accompanying picture of the steam yacht Foross, the largest private yacht built up to the launching of the new Vanderbilt yacht Valiant this year. The yacht was designed by Mr. G. L. Watson for Alexander Kousnetzoff, of Sevastopol, Russia, and was built in 1891, being launched on June 9 of that year. She is 246ft. over all, 266ft. l. w. l., 30ft. sin. beam and 19ft. 3in. in depth, her Thames tonnage being 1,085. The yacht was built by Scott & Co., of Greenock; the hull of steel. The engines are 34, 40 and 64x39in., the working pressure being 160lbs. The rig is a barkentine. She carries a crew of 40.

The Cup Races.

VALKYRIE, after completing her fitting out, sailed from Southampton for New York on Aug. 23, weighing anchor at 5:30 A. M. Capt. Wm. Cranfield is in command, with William Harvey, of Wivenhoe, as navigator. We believe this is the same Capt. Harvey who sailed Jessica out here in 1891. The crew numbers 32, while ten more will come out by steamer. All are East coastmen from the neighborhood of Wivenhoe. Lord Dunsraven will sail about Sept. 30. Mr. Watson and Mr. T. W. Ratsey will also come out by steamer. Mr. Ratsey was here with Thistle to look after her canvas, and will perform the same service for Valkyrie. With good luck the yacht may be expected about the middle of September, but it will require a quick passage and very lively work in fitting out to have her at the line off Sandy Hook by Sept. 28. In deference to the express wish of Lord Dunsraven the Cup committee recently decided to change the date of the first race from Oct. 5 to Sept. 28, and Lord Dunsraven has been notified and accepted the change. The first trial race will take place on Sept. 7, and the races will be continued on alternate days, the intention being to sail five if necessary. It is quite likely, however, that two or three will give grounds for the selection of a defender. The cup races will also be five in number, sailed on alternate days, Sept. 7, 9, 11, 13 and 15. All of the races will be sailed off Sandy Hook.

American and British Yachts.

Now, then, to sum up and answer, to the best of my ability and in all fairness, the question you are about to ask! Will Valkyrie get the cup? Before answering allow me to go back into the past for a spell, and out of the old iron at hand shape a new marlingspike wherewith to open the hard knot. During an unpleasantness known as the 1812 war, the Yankee fir-built frigates and privateers outailed the speediest oaken fabrics that England's builders put afloat; thirty years after the American ship outdid the British square-rigger on every point; forty years ago the America won the great trophy with ease; in the seventies the Cambria met with a crushing defeat in her attempt to regain it; and the last battle, with the most advanced specimen of British yacht architecture, ended in what I hope the Clyde men will excuse me for calling a miserable exhibition of misplaced confidence. The historian tells us that the superiority of the early American ship of-war was due to their designers being untainted by the traditions and usages of an ancient naval establishment. The absurd tonnage laws

come together; the contest has been more decidedly a battle of sails than of hulls. The primary object of the American builder and designer has been, and is, to construct a vessel that will go to windward. The powers of reaching and running are not considered, it being believed that a craft which excels in the former work, will be able to attain a speed on all other points that will bring her to the mark up to maximum. I think the victories achieved by our vessels show that this object has been secured.

The Valkyrie and Britannia are splendid vessels; the former the best all-round vessel that has ever challenged for the cup. Her hull is a magnificently-developed structure, and is capable of attaining a speed far in excess of anything I supposed possible in a yacht of the length; but she is disappointing in her windward work. She does not excel on that point. Why? Is it in the hull or in the sails? In the sails, undoubtedly! Give Lord Dunsraven's cutter a first class suit of American sails and she will make a grand race of it; send her out with a suit like those she uses here, and defeat awaits her. Unless she is the closest-winded boat, that it is possible to turn out at this day (for the American defender will be this), her chances of capturing the trophy are permit me to remark—little better than those of Thistle. —Thos. Fleming Day, in the Yachtsman.

The Cup Defenders.

PENDING the trial races next week the four Cup defenders have been busy with the final preparations. Vigilant and Colonia have been at Bristol, the former coming west and hauling out at City Island this week. Colonia has received no radical alterations, contrary to current reports, but has shipped a new hollow boom of elaborate construction, one of two made by the Herreshoff Mfg. Co., the other going to Vigilant. Colonia is 98ft. long and Vigilant is 101ft., each 30in. in extreme diameter, 18in. at the outer end and 15in. at the fore beam. Faine has contemplated some immediate alterations to Jubilee, but his plans have been interfered with by a strike of his crew, who have left the yacht in a body, the sole cause of complaint being that they did not like the mate, "Lun" Miller. Miller is considered a good officer and easy with the men, and they offered no reason for their objection to him, but threatened to leave the yacht unless he was at once discharged. Gen. Faine very properly declined to make any terms with them and has shipped a new crew. Wilson & Silsby are at work on the sails, making alterations.

The members of the Pilgrim syndicate have decided to put up the money for alterations in the way of more lead on the bulb and larger spars and sails, and she will be in the trial races. It is reported that the auxiliary centerboard which was removed will be replaced.

YACHT NEWS NOTES.

A very absurd report has been in circulation to the effect that Mr. Forbes was putting Puritan in commission for the trial races, but it is thus disposed of by that gentleman in an interview, as follows:

"I object most strongly to being placed in a false position, in a matter by any one who has no authority to speak for me, and who evidently does not understand the matter of which he speaks. To those who know me and my views on defense matters, the absurdity of my bringing forward the Puritan for cup defense at this late date is perfectly apparent.

"I recognized long ago the fact that she was outclassed by the Volunteer, and I have no doubt that the present cup defense fleet would go still further in this direction. Certainly, if I wished to come into cup defense competition it would be more reasonable for me to do so with the Volunteer, than to put her to a sloop, than to come in with a boat acknowledgedly her inferior. I have had the Puritan in commission all the season, and have used her for sailing about Naushon, simply transferring the crew from the Volunteer.

"I like the Puritan, and so do many others; but those who think her fit for cup defense belong to the same school that would not admit the superiority of the present American sloops over the old-time skimming Dutch boats, and are equally stuck to the Puritan as their first love, but she was outbuilt long ago."

On Wednesday of last week a cyclone of unusual strength passed up the Atlantic coast, its force being concentrated between Cape Hatteras and Montauk Point. A large seagoing tug was swamped and

sunk off Long Island, thirteen being drowned, and many other fatal disasters are reported, the New York fishing fleet being the chief sufferer. Several fishing smacks were lost with their crews, and others were so badly damaged that they are temporarily out of use. The yacht fleet suffered severe damage, the large yawl Nonpareil, owned by Vice-Com. Sanderson, Larchmont, Y. C., went ashore early Thursday morning on Pagoda Point, Larchmont Harbor, and was badly wrecked. The schooner Teller and the yawl Ione were wrecked at the Horseshoe, Sandy Hook, and dozens of smaller yachts about the Horseshoe and the Highlands were blown ashore or sunk. The shores of Communipaw and Greenville were swept by the storm, and many small yachts wrecked. At Black Rock the sloop Stella, Amita, Ginita and Hazel, with the schooner Meta were wrecked. At New Rochelle the schooner Vision was a total wreck. All along the Sound, New Jersey and Long Island shores the smaller craft were sunk and wrecked, the total loss to yachtsmen being very heavy. The Fall River Line steamer Puritan put into New Haven and lay there all night and all day Thursday, which is good evidence of the strength of the gale.

During the severe N.E. gale of Aug. 21 the yacht Volunteer parted her mooring and went ashore on the rocks in Hadley's Harbor, Naushon, near Mr. Forbes's home. She was lying at Merlin's moorings, with a heavy chain cable out, but the cable parted and nothing could be done in time to save her from the rocks. She pounded for some hours in a heavy sea, but was finally hauled off by the wrecking tug Right Arm, and towed to Wood's Hole. She was leaking badly and a steam syphon was placed on board. She was temporarily repaired and towed to Boston, reaching Lawley's yard on Wednesday. After hauling out the damage was found to be less serious than at first supposed. Several plates were removed and straightened. The rudder was badly bent and some rivets are started. The first reports that the yacht went ashore with no anchor watch set are contradicted by Capt. Norton. The yacht was launched in time for the race on Monday, but a leak was found, and she had to haul out again.

"LAIS," 40-RATING CUTTER.

Designed by Wm. Fife, Jr., 1893.

From a photo by West & Son.

The fifth annual regatta of the New York Yacht Racing Association will be sailed next Monday, Labor Day, Sept. 4, entries for which closed with George E. Gartland last Monday. It is expected that this regatta, while it may not surpass the number of starters of last year, when 101 started, will come very near it. Several of the yachts entered met with mishaps in last Wednesday's storm and the storm will undoubtedly prevent many more from entering their boats. The iron steamer Cygnus, chartered to accompany the yachts over the course, will leave West Twenty-second street, N. Y., at 9 A. M., Fifteenth street, Hoboken, at 9:30, Morris street, Jersey City, at 10 and Pier 1 North River, New York, at 10:30. The committee boat, Henry Hoelm, will leave Pier 4 East River at 9:45 A. M.

The steam yacht Columbia, J. H. Ladow, of New York, by Cramp & Sons, was launched from the yard of the sub-contractors, the Chas. Hillman Co., at Philadelphia, on Aug. 23, being christened by Mrs. E. Ladow. Her dimensions are 1 w. 1 180 ft., beam 22 ft., depth 15 ft. and draft 10 ft., with a displacement of 436 tons. Her engines are triple compound, of 1,800 H. P., and her builders have guaranteed a speed of 18 knots over the American Y. C. course from Wilton Point to New London, 80 miles nautical.

Valiant, Mr. W. K. Vanderbilt's new steam yacht, reached New York on Aug. 23, making the trip in 9 days and 3 hours in heavy weather most of the way. She is commanded by Capt. Morrison with a crew of 72 men.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc. of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

### FIXTURES.

#### SEPTEMBER.

2. Orange An., Arlington, N. J. 16. Red Dragon, Delaware River.  
4. Ianthe, An., Passaic River. 16. Toronto, International Paddling  
4. Holyoke, Fall, Holyoke, Mass. Trophy Race.

Mr. C. E. ARCHBALD of Montreal, the successor of Mr. Ford Jones as the champion Canadian canoe sailor, has under consideration a challenge for the New York C. C. Cup, and may visit New York in October with his new Mab.

### AMERICAN CANOE ASSOCIATION.

Fourteenth Annual Meet, Aug. 11-25, 1893.  
LONG ISLAND PARK, WOLFE ISLAND, ST. LAWRENCE RIVER.

- 1890—Crosbyside, Lake George, organized by N. H. Bishop.  
1881—Lorna Isle, Lake George—W. L. Alden, Com. N. H. Bishop, Sec.-Treas.  
1882—Lorna Isle, Lake George—N. Longworth, Com. C. A. Neide, Sec.-Treas.  
1883—Stony Lake, Ontario—E. B. Edwards, Com. C. A. Neide, Sec.-Treas.  
1884—Grindstone Island, St. Lawrence River—F. A. Nickerson, Com. C. A. Neide, Sec.-Treas.  
1885—Grindstone Island, St. Lawrence River—R. S. Oliver, Com. C. A. Neide, Sec.-Treas.  
1886—Grindstone Island, St. Lawrence River—F. S. Rathbun, Com. C. A. Neide, Sec.-Treas.  
1887—Bow Arrow Point, Lake Champlain—R. J. Wilkin, Com. W. M. Carter, Sec.-Treas.  
1888—Long Island, Lake George—R. V. Gibson, Com. F. L. Mix, Sec.-Treas.  
1889—Stave Island, St. Lawrence River—H. C. Rogers, Com. G. W. Hutton, Sec.-Treas.

1890—Jessup's Neck, Long Island—Henry Stanton, Com. F. L. Dunnell, Sec.-Treas.  
1891—Willsborough Point, Lake Champlain—W. U. Lawson, Com. R. F. Brazier, Sec.-Treas.

1892—Willsborough Point, Lake Champlain—C. V. Winne, Com. W. B. Wackerhagen, Sec.-Treas.

1893—Wolfe Island, St. Lawrence River—W. H. Cottou, Com. R. Easton Burns, Sec.-Treas.

Like all previous meets in the same locality, that of 1893, which ended last week, will be set down among the pleasant and successful ones; the camp ground and its surroundings were very good, the attendance was about the average, and though very many old faces were missed, a number of new members were added who are likely to be seen at future meets. The transportation was reasonably good, the mess was about up to the average, it might easily have been better, but has frequently been worse, the weather was fine, excepting for moderate rain on two or three occasions, and the camp was a bright, lively and interesting one with no great excitement, but plenty to amuse and occupy one at all times. As in previous meets, there is ample material for further description and criticism, but for this week we can deal only with the races.

Com. Cotton and Sec.-Treas. Burns have worked hard under somewhat disadvantageous circumstances, and they deserve every credit for the success of the meet. Com. Cotton has used the experience of the last three meets, while Mr. Burns is a new member, but being his first meet, he taking the office of sec.-treas. only to fill a vacancy caused by the resignation of the gentleman first elected. Under these circumstances, with the World's Fair taking away many, and considering in addition that they went into office with a balance of \$1 68 in the treasury, they would be fairly entitled to indulgence for any falling short of the usual standard of the meets. The camp as a whole, however, met with the approval of all present, and only pleasant recollections will be associated with the meet of 1893.

The racing, with which we deal particularly this week, compares very unfavorably with that of but a few years since, the number of competitors being small, as shown in the following entry list, while many were entered for but one race, leaving a mere handful of men to bear the brunt of the racing. Three years ago, for instance, there were seventy-one entries, thirty-two men finished in the principal paddling race, forty-eight entered and twenty-eight finished in the record sailing race, while there were fifteen men on the record. At the last meet on the St. Lawrence, in 1889, there were thirty-five men on the record, and this year there were just five. Even last year the full programme was carried out, with a fair number of starters, though so small as to excite general comment, but this year several races did not fill at all, and others had but two starters.

The head of the regatta committee this year, Mr. J. B. Carruthers of Kingston, was at a disadvantage in that, though a yachtsman, canoeist and hunter, he had attended no meet since 1886, and was entirely unfamiliar with the usual routine of the meet races, with its many details. In spite of this, and of the absence of two members of the committee, the races were run off promptly and very satisfactorily under his management. His steam yacht Marquis of Lorne was used as the committee boat, the work being thus greatly facilitated. The regatta committee and other officers were as follows:

Regatta Committee: J. B. Carruthers, T. S. Oxholm, E. B. Edwards, R. J. Wilkin. Clerk of Course, J. R. Kinghorn; Starter, R. Appollonio; Time Keepers: J. B. Mowatt, G. E. Sparks.

Messrs. Edwards and Wilkin were appointed in the places of the two absent members of the committee, and Mr. Sparks took the place of Mr. Stephens, who was unable to serve. The course for the sailing was a triangle with half mile sides, the start being off the camp wharf, and the easterly angle being very near the Spectacles, two small islands shown on the chart. The paddling courses were laid out from starting points in McDonald's Bay, the finish being off the wharf.

### A. C. A. REGATTA PROGRAMME.

#### REGULAR EVENTS.

No. 1. PADDLING AND SAILING COMBINED— $\frac{1}{2}$  mile alternately, total 3 miles. Time limit  $1\frac{1}{2}$  hours.

No. 2. PADDLING— $\frac{1}{2}$  mile, straightaway.

No. 3. SAILING— $\frac{1}{2}$  mile, same rig and ballast as in Race 1. Time 2 hours. These three races to constitute "Record" races.

No. 4. TROPHY PADDLING—1 mile straightaway. Exempt from one-man-one-canoe rule.

No. 5. PADDLING—Open canoes, not over 55 lbs. weight, minimum beam 30 in., minimum depth 11 in., single blade,  $\frac{1}{2}$  mile, straightaway. For special prize presented by Secretary-Treasurer.

No. 6. UNLIMITED SAILING—No limit to rig or ballast, 6 miles. Time limit  $2\frac{1}{2}$  hours. Starters in the trophy race to be selected from this race. See Rule V.

No. 7. TROPHY SAILING—No limit to rig or ballast, 9 miles. Time limit  $3\frac{1}{2}$  hours. Starters to be selected by Rule 5.

No. 8. NOVICE SAILING—No limit to rig or ballast, distance 3 miles. Time limit  $1\frac{1}{2}$  hours. No limit to members who have not sailed a canoe prior to Sept. 1, '92.

No. 9. CRUISING CANOE— $\frac{1}{2}$  mile, Time limit 2 hours. First three members of any one club to count. No club can be represented unless it enters at least three men; all men entered must have become members of the club they represent before the first day of the A. C. A. meet.

No. 10. CRUISING CANOE, SAILING—Commodore's prize. Open to "general purpose" or "cruising" canoes, distance 3 miles. Time limit 2 hours. Sail limit 55 lb., ordinary single drop centerboard or leeboards for open canoes. Open canoes to be classed as cruisers.

#### OTHER EVENTS.

No. 11. SAILING—The Orillia cup. Open to members of the Northern Division only,  $\frac{1}{2}$  mile, no limit to rig or ballast. Time limit  $2\frac{1}{2}$  hours.

No. 12. PADDLING TANDEM—Open canoes, single blades,  $\frac{1}{2}$  mile, straightaway.

No. 13. PADDLING WAR CANOE OR RACE—Conditions and details will be published in the official organs of the Association.

No. 14. CANOE RACE— $\frac{1}{2}$  mile, straightaway.

No. 15. SAILING UPSET AND MANEUVERING—No special appliances, no limit to ballast, at signal throw paddle over stern and recover; second signal, canoe to be heeled over until top of foremast touches the water; canoes to be righted and cross finish line under sail. Time limit  $\frac{1}{2}$  hour.

No. 16. PADDLING UPSET—Usual conditions, no special appliances.

No. 17. HURDY GURDY—Run, swim and paddle, short distances.

No. 18. GYMNASTICS.

No. 19. SKIFF SAILING—This race to be run under the management of and conditions to be named by the St. Lawrence River Skiff Sailing Association. It is added as an additional attraction and will probably come off on one of the open days.

No. 20. PADDLING TANDEM—Decked canoes,  $\frac{1}{2}$  mile, straightaway.

No. 21. JANDERVOY TROPHY—Open only to members of the Central Division, 2 rounds, 3 miles.

The list of entries for the races compares but poorly with previous years, being as follows:

#### CANOEES ENTERED AT A. C. A. MEET, 1893.

- Wasp. Paul Butler. . . . . Vesper. . . . . Lowell, Mass.  
Bee. . . . . D. S. Goddard. . . . . Vesper. . . . . Lowell, Mass.  
V. . . . . Howard Gray. . . . . Vesper. . . . . Lowell, Mass.

Mab. . . . . C. E. Archbald. . . . . Pointe Claire. . . . . Montreal, Que.  
Zerb. . . . . H. M. Kinghorn. . . . . Pointe Claire. . . . . Montreal, Que.  
George Napier. . . . . Pointe Claire. . . . . Montreal, Que.  
Canuck. . . . . Vincent Pelletier. . . . . Pointe Claire. . . . . Montreal, Que.  
Oota. . . . . A. H. O'Brien. . . . . Argonaut. . . . . Toronto, Ont.  
Kaillee. . . . . H. Ford. . . . . Corinthian. . . . . Toronto, Ont.

The names and boats are all old and familiar with one or two exceptions, and the old boats are again used from previous years save in a few details of fittings, such as longer slides to the decksides. Wasp, Bee and V have been raced so often that they are all well known; and Cricket, Passaic, Aztec and the old Canuck need no description, all save Aztec having raced at previous meets, while she is well known from her racing about New York. This spring she was altered, her centerboard tank being moved forward and shortened, and an after board added, the very large board formerly carried being replaced by a much smaller one. The bucket cockpit was, of course, retained, but the larger sail was shifted forward instead of aft.

Canuck is precisely as Mr. Ford Jones last used her, no changes being made, and she is consequently at a great disadvantage as opposed to the more modern canoes. Her new owner, Mr. Pelletier,

of Montreal, though a young man, is a very clever boat sailer, but new to a canoe, and lacks the necessary experience in canoe racing to compete against old hands like Butler and Goddard, but he promises to make a record at future meets. He has already done some very skillful work in the combined race, sailing on the bow and steering and unstepping his mainmast and large sail, and he very pluckily sailed the full six rounds of the trophy race, though hopelessly distanced.

The only new additions to the sailing fleet are Mab, Eel, and "1893." The former canoe is, as the name indicates, owned by Mr. Archbald, who has sailed very successfully at the last two meets in an older canoe of the same name. The new Mab is a very handsome canoe, designed and built by Nelson Gilbert, of Brockville, with quite an amount of deadrise, a good bilge, and moderately full hulls; the whole model being fair and well balanced. The construction is in narrow strips, much like the Ruggles boats. The hull is very neatly finished, the boat does credit to her builder. The mainmast is stepped as far forward as possible, and the foremast well amidships, the sails being of the skiff pattern, the hoist hardly longer than the boom, with radiating battens. The mainsheet has two travelers, one forward and one about the centerboard, a plate of hard brass, nickel-plated, about  $\frac{1}{4}$  in. thick. The well is small and watertight. The deck seat is 5 feet long, and a thwartship tiller of very light construction is used. None of the sails are fitted to lower or reef.

The new Mab, owned by Mr. W. Sparrow, and is a neatly built canoe of Spanish cedar, designed by Mr. W. I. O. Smith, of Toronto, an amateur, and built by the new Peterborough Canoe Company, the successor to the Ontario Canoe Company. The other new canoe was interesting mainly from her immense sail plan, over 300 square feet, and from the fact that she was designed, partly built, and sailed by a canoeist with but one arm. Mr. Kenneth Cameron, of Kingston, lost his arm some time since in a hunting accident, and he sails a canoe very skillfully. This new boat, the "1893," was set up and planked for him, but the decking and fitting was his own work.

The regular A. C. A. events were scheduled to begin on Monday of the second week as usual, but on Saturday the first race was called, the sailing race for the Orillia cup, open only to members of the Northern Division. The wind was moderate from N.W., and the course was five rounds of the triangle,  $\frac{1}{2}$  mile, with a time limit of  $2\frac{1}{2}$  hours. The start was a poor one, the fleet scattered all over the lot. Eel, with the big rig belonging to Torment, carried away her mainmast and was obliged to put in for a new sail, thus being a long way astern at the start, finally giving up a hopeless chase. Mab really had the race from the start, and gained steadily on every round.

Event No. 11.—Orillia cup, Aug. 19, Saturday, Start 2:52 P. M.									
	1st	2d	3d	4th	5th	6th	7th	8th	9th
Viator, T. W. Sharnon	3:17 02	3:40 35	4:00 00	4:32 13	4:58 19	5:24 25	5:50 31	6:16 37	6:42 43
1893, K. Cameron	3:19 34	3:42 47	4:05 26	4:35 00	4:58 19	5:24 25	5:50 31	6:16 37	6:42 43
Kismet, H. Cartwright	3:14 31	3:36 23	3:58 18	4:20 59	4:43 10	5:05 21	5:27 32	5:49 43	6:11 54
Eel, J. W. Sparrow	3:22 12	3:45 05	4:07 58	4:30 51	4:53 44	5:16 37	5:39 30	6:02 23	6:25 16
Mab, C. E. Archbald	3:11 00	3:30 40	3:50 35	4:11 38	4:32 37	4:53 36	5:14 35	5:35 34	5:56 33

Monday morning brought a strong and puffy wind, the river being covered with whitecaps. The first race called was the unlimited, with 13 starters, half of whom soon came to grief and withdrew, the five at the second mark menning at least a capsize to many. Mab led at the start, with Wasp in hot chase. Mab turned the buoy at the end of the first round, but Wasp was struck by a puff and refused to pay off, running off her helm and passing inside the buoy. She was in a bad place, and before she could work back V. Cricket, Myra and Fly had rounded. On the windward leg, however, Wasp made up a part of the loss and was third at the first mark of the second round. The second buoy was a hard one, and Wasp was knocked down flat. Mab continued to lead through the rough of the race, Wasp working into second place. Fly broke the solid cast sleeve of her deck tiller and withdrew.

Event No. 6.—Aug. 21, Monday. Start 10:05. Wind strong and squally.									
	1st	2d	3d	4th	5th	6th	7th	8th	9th
Mab, C. E. Archbald	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Wasp, Paul Butler	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
V. Howard Gray	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Cricket, G. P. Douglas	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Canuck, V. Pelletier	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Torment, F. C. Moore	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Eel, J. W. Sparrow	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Myra, H. W. Mott Smith	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00
Banshee, A. M. Adamson	3:10 21	3:30 06	3:50 00	4:10 00	4:30 00	4:50 00	5:10 00	5:30 00	5:50 00

The novice race followed the unlimited, but was uninteresting, there being but two starters, one of whom withdrew.

Event No. 8.—Aug. 21, Wednesday, start 11:55, wind moderate.									
	1st	2d	3d	4th	5th	6th	7th	8th	9th
Canuck, V. Pelletier	3:16 30	3:36 30	3:56 30	4:16 30	4:36 30	4:56 30	5:16 30	5:36 30	5:56 30
"1893," K. Cameron	3:16 30	3:36 30	3:56 30	4:16 30	4:36 30	4:56 30	5:16 30	5:36 30	5:56 30

After dinner there was less wind and fewer puffs; the record sailing race was called first with but five starters, the course being  $\frac{1}{2}$  mile, Mab winning easily.

Event No. 3.—Record sailing. Monday, Aug. 21. Start 2:35. Strong wind, very puffy.									
	1st	2d	3d	4th	5th	6th	7th	8th	9th
Mab, C. E. Archbald	2:50 10	3:05 38	3:21 48	3:37 58	3:54 08	4:10 18	4:26 28	4:42 38	4:58 48
V. H. Gray	2:50 10	3:05 38	3:21 48	3:37 58	3:54 08	4:10 18	4:26 28	4:42 38	4:58 48
Cricket, G. P. Douglas	2:50 10	3:05 38	3:21 48	3:37 58	3:54 08	4:10 18	4:26 28	4:42 38	4:58 48
Canuck, V. Pelletier	2:50 10	3:05 38	3:21 48	3:37 58	3:54 08	4:10 18	4:26 28	4:42 38	4:58 48
Eel, J. W. Sparrow	2:50 10	3:05 38	3:21 48	3:37 58	3:54 08	4:10 18	4:26 28	4:42 38	4:58 48

The final race of the day was the cruising canoe race, for Commodore Bolton's prize, a cedar box containing a handsome set of silk, white flags and a medal. Mrs. Com. Mab carried a standing sail lashed to the mast, and though warned by the regatta committee that he would be disqualified, Mr. Archbald started, subject to protest, claiming that he would fit the same sails to lower in another race. Mab won easily, as was to be expected, but her owner afterward requested to be dropped from the score.

Event No. 10.—Aug. 21, Monday, start 4 P. M., wind moderate.									
	1st	2d	3d	4th	5th	6th	7th	8th	9th
Mab, C. E. Archbald	4:35 20	4:55 20	5:15 20	5:35 20	5:55 20	6:15 20	6:35 20	6:55 20	7:15 20
Pert, C. E. Belman	4:35 20	4:55 20	5:15 20	5:35 20	5:55 20	6:15 20	6:35 20	6:55 20	7:15 20

Event No. 1.—Combined race. Aug. 22, Tuesday. Start 2:43:30. Clear, wind light.

	1st Round.	Finish.	Elapsed.
Cricket, E. P. Douglas.	3 07 57	3 20 00	0 45 30
V. H. Gray.	3 15 30	3 46 48	1 03 18
Canuck, V. Pelletier.	3 21 09	3 47 25	1 03 55
Mab, C. E. Archbald.	3 18 25	3 54 57	1 11 27
Eel, J. W. Sparrow.	3 19 15	4 01 05	1 17 35

The next event, the club race, lost all distinctive character from the fact that the New York team was only made up by the entry of Ghost, with two small cruising sails and her crew seated below, the canoe being an old Shadow model with no centerboard. Mr. Bennett entered to make up the required three, but was badly out-clasped by the racing canoes, and did not complete the course. The other two New York men, Howard and Moore, made a good second and third, losing by only one point. Mr. Butler won the personal prize for first boat, and the Vesper B. C. won the club banner.

Event No. 9.—Aug. 22, Tuesday.—Start 4:30. Wind light.

	1st Round.	2d Round.	Finish.	Elapsed.
Wasp, Paul Butler.	4 57 47	5 16 28	5 23 22	0 54 22

Bee, D. S. Goddard.	5 00 27	5 18 26	5 38 31	0 59 21
V. H. Gray.	5 00 10	5 19 37	5 39 31	1 00 31
Ghost, M. T. Bennett.	Withdraw.			

Wednesday was another clear day, with a fresh and puffy S.W. wind over the island, the course of six rounds, 9 miles, being sailed with all marks to starboard. It is not so long ago that the honor of a place on this list of 15 eligibles was eagerly sought for. In the past few years, however, not a few instances have been known of men who, after winning a place, have generously given it up to others who were debarred by some mishap in the trial races. This year there were no foreign competitors and only eight entries in all, Bee, Wasp, Mab, Aztec, V. Cricket, Torment and Canuck. Mr. Douglas was unwell and did not start. The wind was so squally before the start that the Vesper men, having the advantage of the breeze, were easily able to get on their standing sails and Wasp and Bee about the same. Mab, however, had up 138ft. in two large standing sails, and was greatly over-canvassed. Goddard and his friends of the Vesper B. C. had repaired very neatly the break in his deck tiller, but as it proved the whole fitting was too weak, and a second break resulted which soon threw him out of the race. The start was a fine one, the boats going over close together on the gun, Mab with a clear lead and Torment second. The first leg was a reach with a jibe at the end, then a run with a quartering wind and a beat in.

Mab led over the first leg, but she had more sail than she wanted down wind, and Wasp passed her, while V also went by her at the second mark, the Spectacle Island Buoy. Wasp and V had a pretty race to windward, Wasp holding her own. Mab had a clean capsize at the end of the first round, Mr. Archbald sliding or falling off his deck seat and striking the lee side of his boat. He dove under, came up to windward, and was quickly astride of his seat and away. Bee was fourth, but on the second round her deck tiller broke again and she was forced to withdraw.

At the end of the second round V led for a time, but Wasp soon regained her lead and was never headed, in spite of several bad capsize. She finished just as Canuck was completing her fourth round, she being partly filled. Aztec, having the lead, was working across in the right line. While the race was in progress, the spectators with those of previous years, it was well worth watching, and some fine exhibitions of skill were afforded by the many puffs and the consequent hiking. In connection with the unlimited race it demonstrated the absolute necessity for a small bucket cockpit, a hull of exceptional strength, a sliding seat of 5ft. length and a thwartship tiller of the same length and able to bear the weight of a heavy man at times without breaking. Compared with the successful canoe of today, the racing fleet at State Island in 1880 has no more chance of winning than the original Nautilus would have. The positions on the various rounds were as follows:

	1st.	2d.	3d.	4th.	5th.	6th.
Wasp.	1	2	1	1	1	1
V.	2	1	2	2	2	2
Mab.	3	3	3	3	3	3
Aztec.	4	4	4	4	4	4
Canuck.	5	5	5	5	5	5
Torment.	6	6	6	6	6	6
Fly.	7	7	7	7	7	7

Event No. 7.—Aug. 23, Wednesday, start 10:50, wind moderate, water smooth.

	1st Round.	2d Round.	3d Round.	4th Round.	5th Round.	Finish.	Elapsed.
Wasp, Paul Butler.	11 07 32	11 24 24	11 41 35	11 57 28	12 14 08	12 30 15	1 40 15
V., Howard Gray.	11 07 45	11 24 11	11 42 01	11 58 32	12 15 00	12 31 20	1 41 20
Canuck, V. Pelletier.	11 09 10	11 32 58	11 57 30	12 30 20	12 56 10	1 26 30	not timed
Aztec, W. W. Howard.	11 09 10	11 27 22	11 45 20	12 15 20	Not timed.

Torment, F. C. Moore.	11 10 15	Withdraw.					
Bee, D. S. Goddard.	Withdraw.						

Only three men started in the paddling upset, Mr. Douglas, in his decked canoe, winning in the paddling part of the race, the other two using open canoes.

Event No. 16.—Aug. 23; start 4:35:20.

	1st Round.	Finish.	Elapsed.
Cricket, E. P. Douglas.	3 58 33	3 20 59	4 49 59
Enoch Aston.	3 59 02	3 24 30	4 53 00
Canuck, V. Pelletier.	4 00 00	4 01 00	4 01 00

The race for the Jabberwock trophy, open only to members of the Central Division, was started after dinner, but was uninteresting from the few starters.

Event No. 21.—Jabberwock trophy. Start 2:36.

	1st Round.	Finish.	Elapsed.
Enoch Aston.	3 58 33	3 20 59	4 49 59
Belman.	3 59 02	3 24 30	4 53 00
L. G. Woodworth.	Withdraw.		

During Wednesday night the camp was favored with an echo of the great storm which wrought so much destruction on the Atlantic coast; nothing more than a light rain, which held until noon Thursday, accompanied by a fresh N. E. wind through the night and early morning. Two important events still remained on the programme, the race for the paddling trophy and that for the St. Lawrence skiffs. The latter craft, which are really enlarged canoes, have come into existence since the days of the Grindstone meets, and in order to show to the canoeists what such big canoes could do, a special race was arranged by Com. Harlow Wiser, of the St. Lawrence Skiff Sailing Association, the prize being a silver cup offered by the Skiff Association.

The racing skiffs, though evolved from the old fishing skiffs of the river, are totally different craft, the rule under which they are built is merely length multiplied by beam, the product not to exceed 88ft., the difference being from 20ft. x 4ft. up to 37ft. x 30ft. Sail area and crews are unlimited, the former ranging from 400sq. ft. to 650sq. ft., in two battened sails, hoisting with a gunter yard and with canoe reefing gear. From four to six men are carried. Three of these skiffs, Akabe, La Volta and Bonita, were present during the whole meet, and early on Thursday morning others appeared, making a fleet of seven in all.

There is a strong local rivalry among the skiff men and their friends along the river from Kingston to Ogdensburg, not alone between the American and Canadian sides of the river, but between the various towns, irrespective of nationality. Early in the morning the steamers brought to camp parties from Brockville, Ogdensburg, Prescott, Gananoque, Clayton and Kingston, and the merits of the respective favorites were loudly discussed. The starters were:

Skiff.	L.w.l.	S.A.	ft.	sq.ft.	Owner	Helmman.	Port.
Leprechaun.	24.00	650.	F. X. Laque.	Wm. O. Shea.	Gananoque		
Bertha.	25.00	410.	L. E. Fry.	B. Russell.	Clayton		
St. Lawrence.	24.00	360.	W. Nicholson.	Frank Jones.	Brockville		
La Volta.	25.00	435.	Jock Hart.	Owner.	Kingston		
Sunrise.	25.00	400.	E. Colon.	Thos. Pursell.	Clayton		
Bonita.	24.00	360.	Chas. Hardie.	C. E. Archbald.	Montreal		

Against the skiffs the two canoes, Wasp and Fly, started. The wind, which had been strong and squally during the morning, fell considerably by noon, and when the race was started at 3 P. M. six rounds of the triangle, it was but moderate from the north, making a beat on the first leg, a reach on the second and a run on the third, the boats at times being winged out.

St. Lawrence was at the line ahead of time and luffed along until the gun fired, when she was at once over, the others making a good start, the two canoes being last over but to windward. Even at the start there was not enough wind for the canoes to do their best work, and of course not enough for the skiffs. Wasp soon worked clear to windward of the fleet, St. Lawrence in the lead a good way, being further to leeward, so that she had to tack finally to weather the Spectacle Island Buoy, while Wasp and Bonita weathered it on the long port tack. Wasp was a little behind the big sails of Bonita, but took the lead on the reach and increased it on the first round, when the order was: Wasp, Leprechaun, La Volta, St. Lawrence, Bertha, Bonita, Sunrise, Akabe, Bee.

On the next leg to windward, in a still lighter breeze, Wasp continued to gain, and had a good lead when she rounded the second buoy. She winged out to weather to finish the round, but just astern of Leprechaun, with her huge rig, coming up in the light air, with the other skiffs closing in, and the five canoes sailed by on foot, stood no show. Leprechaun passed her just at the end of the round, La Volta also being close to her.

The wind was now so light that the race was spoiled, and after the third round it was merely a drift, some of the boats withdrawing on each successive round, and only Leprechaun and La Volta finishing. With a good breeze the race would have been the most interesting of the meet, it is hardly probable that the 16-30 canoes sailed by on the man could compete with the skiffs, of just one and one-half times their linear dimensions and with three times the sail area, with six men to tend sheets and hike, but at the same time a thorough test would have been very valuable:

	1st Round.	2d Round.	3d Round.	4th Round.	5th Round.	6th Round.	Elapsed.
Leprechaun.	3 24 25	3 32 25	4 17 14	4 32 53	5 18 30	5 50 51	2 50 54
La Volta.	3 24 43	3 32 56	4 18 28	4 54 55	5 20 09	5 53 50	2 53 50
Wasp.	3 25 51	3 32 40	4 17 50	5 25 34	Not timed.		
St. Lawrence.	3 24 42	3 34 00	4 20 14	5 03 05	Withdraw.		
Bonita.	3 25 03	3 36 11	4 25 47	5 10 22	Withdraw.		
Bertha.	3 25 00	3 35 27	4 24 46	Withdraw.			
Sunrise.	3 26 56	3 36 14	4 25 25	Withdraw.			
Bee.	3 28 40	4 01 09	Withdraw.				
Akabe.	3 27 45	4 46 00	Withdraw.				

The paddling trophy race yet remained, and when the wind died down during the skiff race it was called about 4:30 P. M. This race, in Canadian waters, the home of paddling racing, should have brought out a fine field of entries, but all of the Canadian cracks, Harry MacKendrick, Johnson, Muntz, Carnegie, Tilley, Leys, as well as the best of the American side, the five canoes sailed by on the mostly new men, Mr. Scott alone having raced for the trophy last year. Mr. O'Brien, the second man as it proved, was from Toronto, as was Mr. Ford. Mr. Rothwell paddled a famous old canoe, the Zulu, once a prize winner when owned by Mr. Jack Veller in 1884-5 at Grindstone. Mr. Scott had a very good racing paddler, but none of the canoes could compare with that used by Mr. Knappe last year. The race was well paddled, and the latter half being between Scott and O'Brien, the latter spurring hard at the finish but coming in a good second only.

Event No. 4.—Paddling trophy, Thursday, Aug. 24:

	R. d'Arcy Scott.	M. S.
R. d'Arcy Scott.	7 35	
A. H. O'Brien.	7 37	
Harry Ford.		
J. M. Mowat.		
J. Rothwell.		

The final events were the hurry-scurry, with but two competitors, won by Mr. Pelletier, a powerful swimmer, and the canoe gymnastics, in which Mr. Douglas alone took part.

Event No. 17.—Aug. 24, Thursday:

	V. Pelletier.	M. S.
V. Pelletier.	1	
A. H. O'Brien.	2	

Event No. 18.—G. P. Douglas.

Event No. 13.—No entries.

Event No. 14.—One entry, no race.

RECORD RACES, 1893.

	Paddling.	Combined.	Sailing.	Total.
G. P. Douglas.	4	5	3	12
H. Gray.	5	4	2	11
V. Pelletier.	3	3	2	8
J. W. Sparrow.	2	1	1	4

Messrs. Douglas and Archbald tied in the second, and as there is no provision in the rules for such an event a similar prize was given to each.

One innovation introduced by the regatta committee this year, was a meeting every evening at 7:30, to decide at once all protests and disputes which had come up during the day's racing.

The prizes were presented on Thursday evening at a meeting in the Peterborough Canoe Co.'s tent, the donors and winners being as follows:

Event.	Prize.	Donor.	Winner.
1.	1st.	General Oliver.	Geo. P. Douglas
2.	2d.	Miss Beatrice Winsor.	C. E. Archbald
3.	3d.	Miss Archbald.	Howard Gray
4.	4th.	Mr. Birmingham.	V. Pelletier
5.	5th.	C. V. Winne.	J. W. Sparrow
No. 1.	1st flag.	Mrs. G. J. Edwards.	G. P. Douglas
No. 2.	1st flag.	Miss L. Scott.	C. E. Archbald
No. 3.	1st flag.	Miss M. Scott.	G. P. Douglas
No. 4.	1st flag.	Hartford C. C.	C. E. Archbald
No. 5.	1st flag.	Miss Richmond.	Howard Gray
No. 6.	1st flag.	Mohican C. O.	R. d'Arcy Scott
No. 7.	1st flag.	Mrs. Leigh.	A. H. O'Brien
No. 8.	1st flag.	R. Easton Buons.	Harry Ford
No. 9.	1st flag.	Conkers C. C.	C. E. Archbald
No. 10.	1st flag.	Miss M. Birmingham.	Paul Butler
No. 11.	1st flag.	Miss G. Fredricks.	Paul Butler

No. 27.	1st flag.	Jobberwock Trophy.	E. Aston

Owing to the annoyance and trouble of the Customs regulations the Jabberwock trophy was not present, while the paddling trophy was won by Mr. House.

The only important business transacted during the meet was the election of the commodore and secretary-treasurer, for 1894, and of the officers of the Northern and Central Divisions. The fourteenth commodore of the A. C. A. will be Mr. Irving V. Dorland, of the Arlington, (N. J.) C. C., ex-vice commodore of the Atlantic Division. Mr. Dorland is well known and has known throughout the association as well as his position, and there is no doubt that he will do honor to the office. With him will be associated as Sec'y-Treas. Mr. Geo. P. Douglas, of the Ianthe C. C., of Newark, well known at all of the meets of late years, as a thorough canoeist and earnest racing man. The division officers elected were as follows:

Northern Division: Elected Aug. 11.—Vice-Com. H. M. Molson, Montreal; Rear-Com. George Schofield, Peterboro; Pursor, R. T. Torrey, Toronto; Ex. Com. W. H. Macnee, Kingston; W. L. Scott, Ottawa; C. E. Archbald, Montreal.

At the meeting of the Northern Division the following was passed: Resolved, That if meet be held in St. Lawrence, no other meet be held, otherwise a division meet.

Central Division: Elected Aug. 23.—Vice-Com. W. C. Witherbee, Port Henry; Rear-Com. G. C. Belman, Amsterboro; Pursor, C. E. Cragg, Port Henry; Ex. Com. C. V. Winne, W. R. Huntington,

## Chicago Cruisers.

CHICAGO, Ill., Aug. 18.—On Aug. 7 Mr. L. J. Marks, of the Chicago C. C., accompanied by Mr. Wm. Wilde, left for a cruising trip around the southern and eastern shore of Lake Michigan, with Muskegon as objective point. Their craft was an 18ft. St. Lawrence skiff. They are expected back next week, and should have an interesting log. E. H.

## Rifle Range and Gallery.

### Excelsior Rifle Club.

The third annual prize shoot of the Excelsior Rifle Club, of Jersey City, at the Greenville Schuetzen Park, on Friday and Saturday of last week, brought together many of our prominent riflemen. Among the early arrivals on Friday morning were H. M. Pope, of Hartford; Wm. Hayes, Newark; Louis Flach and A. Holges, New York, and C. E. Gensch, New Jersey.

The weather was extremely hot and the shooting house during the two days was a most uncomfortable place to abide in, so much so that the shooters were compelled at frequent intervals to resort to the cool spots in and about the park for relief from the excessive heat. The first flag at the opening of the shoot was made by Mr. Gensch, and all his friends in such affairs, all hands went out to see him. Louis Flach put up three scores of 71 each out of a possible 75 early in the day on Friday, and the other contestants were kept on the ragged edge all day trying to overcome this lead, but at the close of the shoot on Friday night Flach still held his position with Messrs. Pope, Hayes and Gensch each with only one or two points behind him.

With the opening of the shoot on Saturday morning there came a host of guests from north, south, east and west of New York. It seemed as though everybody had expected that everybody (else) would remain home on account of the weather conditions, and each individual came prepared to take advantage of the situation. From Port Chester came Messrs. Bachmann, Hess and Rudd; from Paterson came Messrs. Dietrich, Dutcher and Irons. Messrs. Begerow, Watts and Hayes from Newark; Messrs. Bird, Auerbach and Mehlenbrock, from Manhattan; Barnard, Buss, and Chas. Zettler, from New York. Among the local shooters were Messrs. P. Hansen, W. H. Robidoux, John Hill, C. H. Chavart, C. Boag, W. Weber, Michael Dorrier and Geo. Schlicht. In fact there were so many representative riflemen present that to name them all in this article would require enlarged space, and out of respect for the feelings of non-winners we are compelled to draw the line at this point. All day Saturday the shooting house was filled with as jolly a set of sports as ever came together. Each in his turn was striving to out-shoot the other, and as one individual would succeed in making a high ticket he became for the time being the center of a sweltering group, anxious to see his score and ready to extend their congratulations over his good luck, and thus the day passed and at the close of the shoot after the prizes had been distributed the greater part of the assembled shooters and ladies guests adjourned to the dining hall of the Hotel Armbruster, where several hours were devoted to social intercourse, feasting, etc.

Ring target, three shots per score, possible 75, three best scores to count for first five prizes, and two scores to count for all others: Geo. Schlicht, 73 71 62—213 R. Auerbach, 69 68—137 M. Dorrier, 72 71 70—213 B. Walther, 68 66—134 L. Flach, 71 71 71—213 J. Speicher, 69 64—133 W. Hayes, 71 71 70—213 F. Watts, 67 66—133 H. M. Pope, 71 69 62—202 C. G. Zettler, 65 63—128 C. E. Gensch, 71 69—140 C. G. Zettler, 65 63—128 H. Holges, 71 69—140 J. Hess, 60 55—118 L. P. Hansen, 71 68—139 Aug. Begerow, 61 57—118 Premiums for 5 best tickets: Wm. Hayes 352 points, L. Flach 351 points, M. Dorrier 351 points.

Bullseye target, 4in. disk, best center shot to count: L. P. Hansen 346 points, M. Dorrier 276, Wm. Hayes 29, Wm. Fischer 324, Walther 333, L. Flach 39, C. G. Zettler 42, Geo. Schlicht 44, W. H. Robidoux 47, C. Boag 48. Premiums for most bullseyes, L. P. Hansen.

### Columbian International Prize Shooting.

SHARPSHOOTERS' PARK, WEST PULMAN.—The following shooters were present and decorated with the Columbian Medal: F. Gehrich, Fountain City, Wis.; R. Tausher, La Crosse, Wis.; Rob. Bethman, St. Louis, Mo.; Wm. Ott, La Crosse, Wis.; C. F. Inden, Chicago; Mat. Gindele, Cincinnati, O.; Wm. Hasenzahl, Cincinnati, O.; F. M. Sec, Cincinnati, Wm. Randall, Cincinnati, W. M. Farron, Morgantown, W. Va.; W. M. Hayser, Alma, Wis.; H. Rottinger, Fountain City, Wis.; J. Sporri, Louisville; Henry Behrens, Grand Mound, La.; Gustav Muhl, Toronto; A. F. W. Tester, Alma, Wis.; Geo. Kuehl, Chicago; Wm. Fried, Fountain City; Fred. Graf, Chicago; F. Burkel, St. Louis; John Meunier, Milwaukee; Henry Bartling, Chicago.

Columbia target, Mat. Gindele 67, Wm. Hasenzahl 61, F. Ingersoll 64, W. Randall 63, F. Gehrich 62, Wm. Farron 62, H. Rottinger 58, J. W. Dexter 56, C. A. Johnson 57, F. M. Sec 55, H. Rottinger 58, Fred

**Des-chree-shos-ka.**

Mr. JOHN PARKER sends us the programme of his third international tournament, which will be held Sept. 5 to 8, on Des-chree-shos-ka Island, near Detroit, Mich. Among the events will be the following: First day, Montgomery Ward & Co.'s \$200 guaranteed purse, at 20 bluebirds; 1st \$60, 2d \$40, 3d \$30, 4th \$25, 5th \$20, 6th \$15, 7th \$10, surplus added. Entrance \$5.60. Second day (live bird day), International Medal Race, for international medal (value \$150), emblematic of the International Live Bird Championship of United States and Canada, open to the world. Winner 1891—L. T. Duryea, Glen Cove, Long Island; winner 1892—Rolla Heikes, Chicago; \$25 sweep in connection with medal race; 25 live birds, entrance for medal, price of birds; entrance for sweep, \$25 and birds. Third day, Cleveland Target Co.'s guaranteed purse, \$100, 20 bluebirds; 1st \$30, 2d \$25, 3d \$20, 4th \$15, 5th \$10. International Target Championship Race, 15 bluebirds for International Target Championship of United States and Canada, an elegant gold badge to be the property of the winner. Entrance \$2.45; also a guaranteed purse, \$100, at 20 bluebirds, entrance \$3.60. Fourth day, a \$100 purse (entrance, price of targets), at 25 bluebirds; 1st \$38, 2d \$32, 3d \$18, 4th \$14, 5th \$10, 6th \$8.

All the target events, except the guaranteed purses, free shoots, trophy and team races, shot under the Parker handicap. Handicap is as follows: Everybody starts each day shooting in first event, at known traps and known angles, at rapid fire system; those who win or tie for first money shoot first in next event at unknown traps and to first position and ready for second event at 10 birds when he is standing as he walks over

## Atlantic Tournament.

LYNN, Mass., Aug. 30.—On the 18th and 19th inst. the two days' tournament of the Atlantic Trap-Shooting Association took place at this city regardless of the disagreeable weather, and while this acted as a damper yet a good number of shooters were present. The weather was anything but good and great clouds of fog hung to the ground, making the shooting very difficult.

The Boston Shooting Association, Lowell Gun Club, Brocton Gun Club, Hingham Gun Club, Marblehead Gun Club, Androscooggin Gun Club and Lynn Game and Fish Protective Association were represented by a corps of able experts both days, and regardless of the unfavorable conditions high scores were made by visiting and local sportsmen. Mr. Will K. Park, representing the Wilkes-Barre Gun Company, was present, showing an excellent display of fine guns and making a record worthy of praise.

The grounds of the Atlantic Shooting Association are located at Lynnhurst, a distance of three miles from Lynn, and reached by the electric cars, and a finer shooting park could not be asked for. The scenery is very picturesque and the air exhilarating.

Shooting commenced at 10 o'clock each day and continued till dark. Dinner was served on the grounds by Messrs. Day and Fairchilds. Following are the scores:

No. 1, 10 targets:					
Martin.....	1100011110	6	Gore.....	1111011111	9

## Inter-State at Worcester.

Editor Forest and Stream: The sixth tournament of the Inter-State Manufacturers' and Dealers' Association will be given at Worcester, Mass., September 20 and 21, under the auspices of Worcester Sportsmen's Association. Programmes will be ready September 1.

The "Novelty Rule" will be used entirely, and will give satisfaction to the New England shooters. Manager: ELMER E. SHANER.

## Hell Gate Gun Club.

FOURTEEN members of the Hell Gate Gun Club were present at Dexter Park on Tuesday, Aug. 22. It was the regular monthly shoot at targets for the annual prizes in classes as handicapped. Each member shot at 20 birds, 20yds. rise, from 5 electric pull traps. J. Dannefelter was first, J. Voss second, J. Trostel and J. Schortmeier tied for third. Sweepstake shoots followed at 15 targets, same traps. J. Voss was the principal winner in the three. He also took first in the live bird sweepstake. The score:

C Webber.....	111110101010001000	12	J Voss.....	000011110101111111	14
J Linck.....	010000000000000000	1	A DeGraw.....	111000110010100001	9
C Brode.....	00100000110001000001	5	J Foerster.....	111011100011010000	12

Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4,100 miles of railway equipped in the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.

THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.

THE SALMON RESORTS of Quebec, New Brunswick and Nova Scotia (reached via Quebec).

LAKE ST. JOHN REGION (via Quebec).—For ouananiche trout, caribou, bear, moose, beaver, otter, etc.

THE RIVER ST. LAWRENCE (in the neighborhood of the line for 40 miles).—For mascalonge, pike, bass, whitefish, pickerel, perch.

THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, mascalonge, pike.

MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.

PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.). For black bass, pickerel, deer, partridge, bear, otter, etc.

AKES ONTARIO, ERIE, HURON AND MICHIGAN via stations at all principal ports.

LAKE SUPERIOR (via Collingwood, Warton, Sarnia in connection with steamship lines).

The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same are published in a pamphlet descriptive of the "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be forwarded free on application to the company's principal agents, or to the General Passenger Agent at Montreal.

Property For Sale.

FOR SALE.  
Camp Ground,  
SARANAC LAKE,  
Adirondack Mountains.

Point of land just north of Sweeney Carry and Hotel Wawbeek, well wooded, high elevation, large water front, with a superb view of the country to the north, east and south, easy of access, and one of the finest camping spots in this whole country, containing about 45 acres. Address P. O. Box 1,980, Boston, Mass., for further particulars.

TROUT LAKES FOR SALE.

I offer for sale a portion of my Adirondack preserve, from 1,000 to 2,000 acres of land, with four lakes. Three log cabins on the property, good road to two of the lakes, easy trail to the other two. This property is suitable for a club or for private resorts. One lake is stocked with salmon trout, the others with speckled trout, 30,000 planted last May, and shall plant as many more this year. Will sell any one lake with a portion of the land. Address DR. J. DE V. MOORE, 157 Park avenue, Utica, N. Y.

ALBEMARLE AND PAMPLICO CRUISING AND Hunting Association.—Bear, Deer, Wild Turkey, Quail, Swan, Geese, Brant, Duck, Curlew, Snipe. Finest fishing: Bluefish, Striped Bass, Weakfish, Drum, etc. Membership limited to 20. One more subscriber wanted. H. A. Weeks, 74 Murray st., N. Y.

THE BACON FARM, SITUATED ON THE Machias River, in the heart of the gunning and fishing region, will be open to receive guests on Sept. 1. The house is commodious and the services of an excellent cook having been engaged patrons may be assured of considerate attention. Particulars, apply to S. M. HOLWAY, Machias, Me. 15

Wants and Exchanges.

Advertisements under this head, strictly limited to Wants and Exchanges, will be inserted at the special rate of three cents a word each insertion. The money must accompany the order.

LIVE QUAIL FOR SALE.—W. VA. BIRDS—GAME a specialty. E. B. WOODWARD, Commission Merchant, 174 Chambers st., New York.

FOR SALE.

1 Greener hammer gun with two sets of barrels 28 and 30in. long, 12ga.; stock, 14 1/4; drop, 2in. x 1 1/2; weight, 7 1/4 pounds. With short barrels a splendid field gun; with long barrels one of the best and hardest shooting guns made. Cost to order \$400. Price \$200.

1 Greener 12ga. hammerless gun, 7 1/4 pounds; 14 1/4, 2 x 1 1/2. Cost \$250. With this gun I broke the world's record, beating Capt. Brewer in series of matches at Marion, N. J., November 12 and 13, 1891, making a run of 194 officially straight, making a grand total of 421 without a skip, officially and in practice. Price \$150.

1 Parker, with two sets of barrels, 28 and 32, with short barrels; no better field gun made; with long barrels a splendid trap gun. Length stock, 14 1/4; drop 2 x 1 1/2. Cost to order \$185; price \$50.

All of the above guns are in good condition and will warrant them every way. Will sell for cash only. 11 E. D. FULLFORD, 59 Steuben st., Utica, N. Y.

FOR SALE.—RAGGED ISLAND GUNNING ASSOCIATION.—one share. Situated on Back Bay, Princess Anne county, Virginia. About fifteen miles south of Virginia Beach. One of the best clubs on the Atlantic coast for canvasbacks, red-heads and other ducks; also swan and geese. Martin's Point Gun Club.—Oneshare. Situated on Currituck Sound, North Carolina, about twenty-five miles south of Virginia Beach. Very fine shooting at yellow legs, grass birds, plover, willet, curlew and English snipe; also ducks, swan and geese. JOHN S. LURMAN, Catonsville, Baltimore County, Maryland. 9

WINCHESTER repeating rifle, .45-60; first class condition; first \$12 takes it. F. M. THOMAS, Catskill, N. Y. 9

citizen. And inasmuch as the laws relating to game and fish are as a rule chiefly the fruit of the efforts of sportsmen-citizens, and as their observance and respect are as a rule chiefly to be secured by the active interest and co-operation of sportsmen-citizens, it is in a peculiar degree the duty of every individual sportsman-citizen carefully to observe such laws. That is a statement to which, as a general proposition, most people will subscribe. Most sportsmen, indeed, rightly make it a point to respect the game law, even when the provisions of the statute are not in all respects to their individual liking or opinion of what may be wise and proper.

But here is this Minnesota law, which does not appeal to any man, who knows a wild duck from a wild goose, as being in the least degree wise or proper, or calculated to protect game in a season when it ought to be protected. What is the duty of the individual sportsman-citizen of Minnesota with regard to such a law?

Three courses are open to him. He may join the shooters who shoot when the law declares it lawful to shoot, between April 25 and September 1. He may refrain from shooting then, but may shoot in the season forbidden, between September 1 and April 25. He may refrain from shooting at any time.

One who shall adopt the first of these courses may indeed justify his shooting by the plea that the law allows it; but claiming to be a sportsman, how may he reconcile himself to shooting at a time when those other laws of nature and sportsmanship forbid?

If he elect the second course of action, and go for ducks in the natural ducking season, but the illegal season, shall he reason with himself that the statute, which stands in the way, does not embody the intent of its framers, but serves the very opposite of their purpose; that therefore it is not worthy of respect and that he will not be bound by it?

These are not merely idle questions of casuistry, suggested here for passing thought. They are very real and live questions, which many a Minnesota sportsman has thought out for himself; and if the whole truth were known we probably should find that with different individuals each of the three several conclusions has been accepted as the rule to control personal action. Of one thing we may be sure. Every individual duck shooter who has determined the problem conscientiously has found satisfaction in the course thus decided upon. It will be two years before the law can be changed.

## A CONFERENCE OF FISH COMMISSIONERS.

IN connection with the Fisheries Congress to be held next month at the World's Fair, it is proposed to hold also a conference of the Fish Commissioners of the various States. In compliance with a request received from the Commissioners of Fisheries of the New England States, Col. Marshall McDonald, U. S. Commissioner of Fish and Fisheries, has sent out letters to the Commissioners of all the States, inviting them to meet in such conference on Oct. 18. All who are present at the Fisheries Congress will thus be able to attend the conference.

Mr. E. A. Brackett, of Winchester, Mass., Fish Commissioner of Massachusetts, has been appointed chairman of the committee on organization of the conference, and Col. McDonald requests those intending to take part in the meeting to announce to Mr. Brackett in advance the topics which they propose to bring up for discussion.

Meetings of fishculturists are always interesting, and many matters deserving attention may come up at this conference. Perhaps the most important of these is the regulating of our fisheries and the protection of our fish, which should have the fullest discussion. The maintenance of our fisheries now depends very largely on methods of artificial propagation, and but slightly on regulation and protection, but these last subjects are quite as important as propagation. To constantly replace captured fish by others, which in their turn shall be captured, is an effective but also a crude method of keeping up the fish supply. Bodies of water once properly stocked should be so protected and the fishing in them so controlled that they will restock themselves and continue to be productive for many years. The present careless and wasteful methods of fishing should be given up and their place be taken by more economical ones.

It is to be hoped that this conference may be fully attended by the Fish Commissioners from the various States, and that the subjects which will come up may have careful consideration in advance of the meeting.

The time given is ample, and those who attend the conference should come to it prepared for an intelligent and exhaustive discussion of practical matters. If wisely conducted the meeting should be productive of much good to the general public.

## THE KEEL CUP DEFENDER.

ALTHOUGH the Royal Yacht Squadron cup of 1851 was won by a keel yacht, from which it has taken its present name of the America's Cup, the defense of the trophy has, from the first challenge, been intrusted to center-board yachts.

The success of the little cutter Clara, in 1885, first suggested the possibility of a keel cup defender, and such a yacht was talked of at various times, especially in connection with the victories of Minerva and Gloriana.

Now the suggestion has become a reality, and a Herreshoff keel yacht will sail in the trial races; but it must be admitted that the long-looked for experiment, which should have been fruitful and profitable, has been condemned to failure from the start.

Colonia is in all ways a beautiful model, quite the equal in form of Gloriana and Wasp, well canvassed and ably handled, but she has one fatal defect in the lack of ample draft. This was well demonstrated in the cruise races, but no attempt was made then, while there was time to remedy it, the builders, as we understand, opposing the deepening of the keel. Now, at the last moment, an attempt has been made, but it promises to be both costly and ineffective. Lead has been taken from inside and bolted to the keel, but not where it is really needed.

The keel was originally elliptical in section, being slightly bulbed, and the new lead has been hurriedly bolted on each side for the full length, the addition being 6 in. thick in the middle and tapering out in all directions. The effect is to increase the major diameter of the ellipse by 1 ft. The fault to be remedied was not lack of power, the yacht was as stiff as the other three and carried her sail well; the real trouble was the failure to hang on. How this is to be remedied by a mere addition of outside weight on the same draft remains to be seen, but it looks now as though the whole costly experiment of building a keel cup defender would fail through an error in the selection of the original dimensions.

## SNAP SHOTS.

MR. F. H. THURSTON, of Central Lake, Mich., who wrote in our issue of Aug. 26 in defense of his claim of priority in the use of the pen-name "Kelpie," tells us that it was by inadvertence that he signed his communication "Kelpie" instead of by his own name. We improve the opportunity to remark, as we intended then to say, that Mr. Thurston is entitled to the *nom de plume* "Kelpie," which he has employed for many years to the pleasure (as "Kingfisher" would put it) of our hosts of readers who know this "Kelpie" and no other.

The course of many a life is determined by a trivial incident, something that appears to have been the merest chance. It was just happening to glance into a poulterer's window one day and seeing there exposed for sale some game in the close season that set Mr. A. C. Collins, of Hartford, Conn., to thinking on the violation of the game laws; prompted him to undertake the enforcement of the laws; and eventually made of him the best known, most efficient and uncompromising terror to game and fish poachers in New England. And now, because of his good record as a game warden, Mr. Collins is talked of as a candidate for the office of Hartford's chief of police. It would be a satisfaction to see him there, if for nothing more than to round out the story of what followed from that casual glance at game out of season in a Hartford show window.

It is curious how many people say Adirondacks for Adirondacks; people who live there, too, or who have been fishing up there, and ought to know better. It is likewise curious how many people write monies for moneys, people who have lots of money, too, and ought to know better. The mis-spelled "monies" appears frequently in trap tournament programmes, more often perhaps than the correct "moneys."

We have learned that three broods of Massachusetts prairie chickens were seen this year—fruit of the Massachusetts Fish and Game Protective Association enterprise.

exhibit in the Angling Pavilion at  
the entrance from the main hall  
of the Fisheries Building, in the  
World's Fair.

## A QUESTION OF DUCKS AND DUTY.

ONE of the amendments of the Minnesota game laws adopted last April presents a curious complication. It is the section relating to duck shooting. The intent of the framers of the law was to forbid the killing of wild ducks, geese and brant "except between the 1st day of September and the 25th day of April following." But somebody blundered—a copyist or a compositor or a proof-reader—by omitting from the printed copy of the bill the word "except," so that when finally the measure was adopted, this section declared that it should be a misdemeanor for anybody to kill wild ducks and geese "between the first day of September and the 25th day of April following." The error was discovered by Mr. W. P. Andrus, the very efficient Executive Agent of the Game and Fish Commission, who took such an active part in securing the enactment of the code. When Mr. Andrus sent in a copy of the new law then pending for the *Game Laws in Brief*, he called attention to this error and assured us that it would be corrected before the bill was put on its final hearing. The law as printed in the *Brief* accordingly contained the word "except."

The blunder, by which this one important word was omitted in the final draft, completely reverses and nullifies the intent of the statute. It makes the intended open season the close season, and the intended close season the open season. It renders what might have proved a good law an exceedingly foolish one.

In practical effect the statute has failed to protect the game when it needed protection, for a certain class of hunters have not been slow to take advantage of the license afforded, and have killed the fowl right and left at a time when, whatever the laws of the State, those of nature and prudence and sportsmanship and decency demanded that they should be unmolested.

And now that the days of September have begun and those of October and November with their "glorious weather for ducks" are on the way, what shall be the line of duty, if you will, or conduct or practice for him who claims to be a sportsman?

In Minnesota, as elsewhere in the United States, inasmuch as every man has a share in making the laws, it is the recognized duty of every man to abide by whatever laws may be enacted. This he must do if he is to respect himself and command respect from his fellows as a good

## The Sportsman Tourist.

### A GREAT DAY FOR BEACH BIRDS.

AUGUST is a crack month for beach birds. So I infer, at least, from the fact that my friends at Martin's Point, in Virginia, and down Currituck way shoot more dough-birds, graybacks, dowitchers and shore waders in that month than at any other time of the year. Besides, I have seen Mr. J. B. White, of Norfolk, and other club men down there, publicly credited with as many as 600 brace of birds in one brief outing of a fortnight.

Bearing these facts in mind when I was at the South Beach or Martha's Vineyard one day last week, I was on the *qui vive* for movements, especially on the day after such a storm as was experienced on the 22d of the month, when there was reason to expect something of a flight. It was a calm gray day, as you may remember, somewhat overcast, with intervals of sunshine and occasional whiffs of wind from the west. The surf at the beach was not running as high as was anticipated by the summer sojourners at Vineyard Haven and Cottage City, and the consequence was that whole train loads of excursionists who ran down on the narrow-gauge railway to see the sights returned quite disappointed. Old sea dogs, however, like the retired captains and whalers at Edgartown, had said that an easterly blow like that of Monday would not be likely to raise much surf, and the weatherwise took their "affidavy."

Nevertheless the meteorological conditions seemed to be unusually favorable for shore birds, and therefore, when I walked back from the beach to the hotel at Katama, which is scarcely a mile distant, I carefully scrutinized the bits of marsh and margins of the freshwater ponds which lie just inside the cordon of sand dunes by the seaside, though with hardly satisfactory results. On one mud flat which was covered with water at high tide, I did flush a brace of graybacks and three sandpipers, but they rose wild. The two graybacks hastily slipped over the crown of a sand dune and were lost to sight, while the three peeps circled around the pond twice and then settled again near where they first showed up. A little further inland I heard a familiar sound overhead, and looking up I saw three fine snipe high in the air steering due south, straight for Nantucket, though all of a sudden they tacked and flew nor'nor'west by north, as the seafaring men would say.

"Scap! 'Scap! they all cried, and it might have seemed a narrow escape to them, though to tell the truth under breath, I had no gun with me. To me it did not seem such a very close call. Later on I saw a flicker fly out of a patch of scrub oaks and light on the top rail of a neighboring fence. It was the only fence in sight, and I remarked to my female companion that it was a capital shot, and it was a pity that we had not come prepared, adding that it was a mighty good day for beach birds and the woods were full of game. However, to my disappointment, we did not see any more birds of any kind as we traversed the upland, except a robin and a chewink, which we flushed near the hotel verandah. These did not excite any great amount of enthusiasm of themselves, and as we slumped down into the great arm-chairs on the porch I could not help deplore the loss of opportunities in consequence of having no breechloader, and the lady herself (which was my wife) allowed that it was human nature to do so. At that time it was about 4 o'clock and our team was to leave at six.

Just at that juncture we happened to descry the figure of a man clad in black emerging from behind an adjacent point of scrub oak woods with a gun on his shoulder and a doubtful sort of dog following, headed for the beach. I could not repress an outburst of envy at the sight.

"There now," I exclaimed, "the birds are afield sure enough, and that man is bound to have some rare sport. These island gunners know a good day when it comes, and they let no opportunity slip that they know of. You heard me?"

Even while I spoke the figure halted and the dog in attendance sat down. Then a puff of blue smoke was projected into the atmosphere.

"He's got one already," I said.

We did not see him pick up anything at the moment, and the dog appeared not interested or else absent-minded. At all events, he kept quite still. At first we were inclined to wonder at this, but when the man with the gun presently shot a second time, and again, without moving from his position, we decided that he understood his business thoroughly, no doubt of it.

"The birds always come around back to the same place if you wait," I explained. "After he has shot again he will gather up the game."

"Don't the sportsman's dog usually retrieve the bird?" madam asked.

"Why-er—well, yes; that is, when they fall into deep water, out of reach, or into tall grass, where the man cannot find them himself."

This explanation did not seem to be accepted as a postulate by madam, who presently dropped into a brown study. Directly the brown became a shade lighter, and she remarked with some vigor: "For my part I don't see of what use the dog is any way."

"Neither do I," said I.

Just then the man shot again. He was so far off that we could see the smoke from the gun an instant before we heard the report. The air was still and the report distinct, and the glow from the western sun threw the figures of the sportsman and his dog into sharp silhouettes against the sky whenever they skirted the sand ridges. Wife said the dog's outline looked like a mastiff. We noticed that whenever the man raised his gun to shoot, the dog sat down.

"He is trained to drop to shot," I explained.

"That's all right," retorted madam, "but I don't see any birds drop!"

At this juncture the fusillade increased, and I insisted with much vehemence that where there were so many

shots there must be some birds. "That man cannot afford to waste ammunition so recklessly," I contended. "Why, those cartridges cost at least two and a half cents apiece, and he has fired at least a dozen times."

Then for at least ten minutes we watched the proceedings in silence. There were no other persons except ourselves on the south verandah. All the hotel guests seemed to have gone to the shady side. The air was so still that we could hear the pulsations of the surf upon the beach, and we gratefully sniffed the odor of the salt sea air, which seemed fresher and more invigorating every time a wave broke. At the same time, the reports of the gun were distinctly heard a mile away. Sometimes both barrels went off in quick succession. We noticed also that a second sportsman had taken the field.

"That's business!" I said. "Now they will keep the birds moving. They will drive the birds to each other. I dare say the day's sport will discount old Currituck itself."

I began to grow yellow with envy—which presently changed to a pale green. I never felt so restless in my life.

"Just my beastly luck not to have my gun!" I murmured. "Never had a gun at the right time. Here is the best day for shore birds I ever saw, and my gun five hundred miles away in Newberne, North Carolina! But who would have thought of bringing a gun at this season of the year? Such a chance don't happen once in a dog's age. You see, yesterday's hurricane has just covered the coast with flotsam, and the whole landwash is lined with food. Don't you notice the mackerel gulls a-flying? That's a nice sign. Fishermen always swear by the gulls. Of course, we were too early at the beach at noon. It was the wrong time of day. Birds don't begin to fly until the middle of the afternoon; and that is the reason we didn't see more. These sportsmen have just hit it. They know when to take them. Island gunners are hard to beat. There they go again! Another shot! two more! three together! Dear me! The beach must be alive with them."

Thus I remarked and brooded, nursing my disappointment. Wife looked sympathetic, but was silent and serene. Finally I could bear no more.

FIG. 5. RICHARDSON'S GROUSE.  
(*Dendragapus richardsonii*.)

"Come!" I said. "Let us go down to the inner shore and gather shells. Spent shells are better than no ammunition, even if they be but sea shells. I will wind sea weeds upon my hat, forsooth. Alas! more than one poor widow has donned weeds for sailors shipwrecked in yesterday's storm. Depend upon it, lives have been lost—lots of 'em. There will be sad tales of disaster when the reports come in."

Hand in hand we went to the land-locked beach of Katama Bay, where no angry sea ever disturbed its sands, all unconscious of a second storm which was so stealthily gathering for the morrow. We did not know that the deceitful calm was what the seamen call a "weather breeder." For our own enjoyment it was perhaps as well. Beautiful marine mosses and parti-colored pebbles lined the margin of the shore just where the wavelets lapped. Succulent algae clung to sunken bits of wreck, long since tempest-tossed, and spread their long filaments to the rising tide. Limpets and razor clams traced their furrowed trails upon the ooze which the receding waves had bared. Out in the channel quahaugs and giant clams peacefully reposed until the tong-men lifted them out with long forceps which reached to the bottom. We passed an hour in quiet abandon, gathering trophies which we did not want, until the whistle of the locomotive in the distance admonished that the train approached. Then we climbed up the bluff to the hotel verandah, and while we waited for the hour of departure a sportsman drove up in a buggy with a coach dog behind him. It was the same man we had been watching with so much interest. His face was flushed with exercise, and the sun had burned him to a red hot tan. He had a heavy 10-bore English gun with him, and as I approached him with eager curiosity to ascertain what success he had, he complained of being badly pounded. He said his shoulder was lame. "You fired many times," I suggested. "Yes; quite a few."

He looked so cheerful that I at once credited him with a very large bag. At the same time I did not see him lift any birds out of the wagon. Neither did the hostler, who came to take the wagon to the stable. The dog went away with the wagon, and the gentleman walked toward the verandah. I offered him a seat and he sat down beside me, readily. It was natural, I thought to myself. A fellow feeling makes us congenial. Birds of a feather, etc. Two hearts that beat as one, and all that sort of thing. Proverbs came pat and apropos.

"What were you shooting at?" I ventured to ask.

"Sand peeps," he answered.

Then the bottom fell out of all my sentiment. It fell with a thud, like dough.

"You must have seen a great number?" I pursued, gloomily.

"Yes. Quite a few."

"Get any?"

"I hardly think I hit a single one. I am not much of a

shot. Don't think the gun scattered enough," he added, after a pause.

"Choked?" I suggested.

"Well, I don't know about that. It was given to me for a good gun."

Evidently the term "choke" was new to him. He seemed to think it an affection similar to strangulation.

"Did the other fellow who was shooting get anything?"

"I believe he picked up one. Am not altogether sure."

"Did you see any beach birds when you were out? any graybacks, snipe, dowitchers, or dough birds?"

"I don't think it. I don't think I should have known them if I did."

This was painfully candid. After a little he explained that he had never done much gunning. Indeed, he did not remember of ever hitting anything in his life. He thought he would just try it to-day to pass time.

"Could you tell me how many cartridges you fired?" asked, anxiously.

He felt in his coat pocket and counted with his fingers. "I hardly know," he said, "I have four left. I must have had fifty in all."

Then I drew a long breath. My mind experienced an indescribable relief. I could almost have hugged the man for his candor. So it was not a good day for birds after all! Then I was glad that I had brought no gun.

CHARLES HALLOCK.

### SEPTEMBER LIGHTS.

SEPTEMBER brings Tidewater Virginia a charm and beauty of natural scenery which no other month of the year can excel. It is in the threshold of the great winter change, the season when the rank summer luxuriance of field and forest receives the first impressions of its beautiful dissolution.

Wonderfully enchanting as is the revivifying touch of spring, starting into life and development the vast world of verdure, and magnificent as is the effect of its creation's midsummer maturity, at no period of its existence is this same creation more superbly glorious than in the succeeding stages of its gradual decay. In early September actual frost has rarely fallen, but the vegetable world seems to possess an intuition of its advent, and a corresponding impulse to exert every effort for development before it is arrested by the inevitable doom.

So rankly and densely matted is the cover of the field and meadow, and so thickly interwoven are the masses of forest leaves that we could almost fancy nature making a maternal effort to shield and screen with her completed growth. The tender shoots and buds, too, recently started upon a career which can never be achieved. In this, the season essentially of lights and shadows, the highways afford vistas of most striking effect and contrast. Hard and dry the well-beaten roadbed stretches with many curves and bends, now across partially cultivated fields, and now between forest growth bordering its edges. On one side arises the densely columned pine wood, with its thick carpet of green tags and solemn roof of dark green. In the struggle for light and air the lower branches have all succumbed, and the straight rugged barked trunks rise many feet naked into the air, until they reach the heavy shadow crowning their summit.

Very little of the light green of deciduous growth relieves the uniform style peculiar to the upland pine forest, because the sun is too closely excluded, and the contrast with the totally different aspect across the way remains unimpaired. There the oak, the sassafras and the sweet gum claim precedence, and rich is the effect of the blended form and coloring of their foliage. The oak appears in many varieties, from the light green of the white oak, to the dark glittering leaves of the red oak, with their buff underlining of fuzzy coating. The sassafras interspersing its deeply cut leaves with its purple clusters of red-stemmed fruit, is already beginning to glow with the rich scarlet tints which are soon to absorb its verdure. But the sweet gum, the liquid amber of the florist, this is the tree which in the September light attracts particularly the attention of the observer. Tall and stately in its growth it adorns its star-shaped foliage of the deepest, glossiest green, with innumerable starry pendants, hanging upon long, flexible stems. Even now these leaves are darkening their edges, and each day will add a deeper shade until they clothe the entire tree in royal purple.

Curving away from the upland scene the road now descends into the meadow, with its brilliant beds of eupatorium and gayly blooming creepers, interspersed with the rich velvet crimson of the cardinal flower and the stately plumes of the golden rod.

A clear, rippling stream crosses the road, upon its firm bed of sand and white gravel, and near its brink stands the triumph of Virginia trees, the century numbering beech. Broad and far reach forth its spreading branches, each one as large as an ordinary tree in itself, and in the shelter of its enormous crown are the abodes of an entire animal kingdom.

The squirrel has its hollows filled with a varied store of nuts, and in the vast area of its branches finds ample space for sport and exercise. The bluejay builds among its leaves in summer and feeds upon its nuts in winter. The little ground squirrel dwells in the subterranean palaces of its roots and in delighted flights around his great circumference of the trunk trims its little sail like a boat upon the water. Summer birds of many varieties and exquisite plumage select the beech either for the actual site of their architectural labors or for a favorite haunt when weary with domestic cares or thirsting for a draft of the pure, clear water of the stream which bathes its roots. Even the leather-wing bat, that outcast of the animal creation, neither bird nor beast, selects the shadow of the beech's canopy for its retreat from the light of the sun, and adhering to the silvery bark of the great limbs, slumbers through the long summer day until the shadowy twilight restores its sunstruck vision and enables it to recommence its wanderings of the night. The insect host which shelters and feeds amid the leaves of the giant

beech are beyond all computation, but can be seen of every shape and form crawling upon the twigs and branches, or if winged, hanging in mistlike wreaths about the summit, or dancing in the tranquil radiance of the September sunlight.

Along one side of the flowery meadow, the road leads toward the river, and in the wild hedges, the bamboo and the wild grape climbing over every variety of native tree and shrub, festoon them with impenetrable drapery. Occasionally a large cedar grown within the hedge, and over this the wild grape builds a vast pyramid of its leaves, throwing out here and there toward the summit sprays of graceful tendrils, which stray out into the air, and dance lightly upon the passing breeze, or lie in silent repose against the deep blue of the sky beyond.

But for the finest effect of the September lights we will take a boat, and rowing across the calm water of the river, ascend one of the numerous estuaries, which creep through the vast marshes of the Rappahannock. The little creek which winds to and fro through the great reed-covered marshes, is not much wider than a row-boat in many places, but as its bends and elbows, it widens out into small lakes, and it is in these spots thickly surrounded by the wild marsh growth, that the fish select their favorite feeding grounds, and the wild fowl take their nightly repose. About sunset one of these miniature lakes presents a strangely fascinating appearance in the month of September. The water is silent and dark, not muddy and not clear, but seems to have assumed this peculiar opaque appearance, as if to conceal the mysterious lives which dwell beneath its bosom. Occasionally there is a splash, as a fish leaps up into the air, or a widening circle of motion upon the surface of the water reveals the presence of some great aquatic insect. The reeds and grasses rise in solid and almost impenetrable masses from the water's edge, and interspersed among their tangled growth are many lovely marsh flowers. The blue Pontederia rears its brilliant spikes of bloom from its groups of broad shield-shaped leaves, and the Martigan lily, with its crimson and brown blotched petals, surrounding the long and graceful stamens, throws out its clusters of handsome flowers above the heads of the lower grasses. Pink, white, yellow and red flowers of many shapes and varieties, throng among the coarser growth which surrounds them, and creepers loaded with clinging blossoms, wreath all within their reach in graceful embrace. Suddenly a croaking sound, followed by an audible rustling of the grasses, betrays the approach of a sora, that peculiar bird, making far more use of its legs than of its wings, which is such a prize for the sportsman. It is very difficult to excite to any effort to arise from the earth, and frequently it takes to the water and swims rapidly across the little creeks through the marshes. Above the average level of the marsh growth, tall feathery-headed reeds erect their strong stems, upon which the handsome yellow reed-bird sits, and grasps with its powerful claws the reed which it sways to and fro with the bird's weight. These birds at this season frequent the marshes in large flocks, and the rushing sound of their wings when they are startled strikes upon the air like thunder. The sun sinks slowly behind the cloud-flecked horizon, and against the changing tints of the sky rises a clearly defined forest of reed tops, standing with just sufficient intervals to admit of the clear tracery of their form against the glowing background of the sunset. The sun disappears in a deep crimson couch hung with golden drapery, which sends a flush of its roscate hues far up into the sky. The whole air seems to hang motionless and calm, as if absorbing the enchanting beauty of the scene, and then the glory of the West departs, and in the quiet pearl-hued horizon shines forth the evening star.

### MOUNTED GAME BIRDS IN THE U. S. NATIONAL MUSEUM.

BY DR. R. W. SHUFELDT.

(Continued from page 184.)

PERHAPS the bird best known to those who have hunted at high elevations in the Rocky Mountains from Central Montana to southern British America, is Richardson's grouse (*Dendragapus obscurus richardsonii*), and one of the Museum specimens of this variety is shown in Fig. 5. It is mounted in the act of leisurely walking, and the artist has been wonderfully successful in his attempt to show it. No wires are seen in the naturally elevated rear foot, while it would be very difficult for any person at all familiar with the general form of one of these fellows to refrain from admiring the correct lines Mr. Denslow has given to this well-handled subject.

Equally well done is the grouse shown in Fig. 6, where the bird is represented as gracefully resting upon one side, and it hardly requires any description from me to call attention to the marked naturalness of the attitude. The bird is just as lifelike as it can be, so much so that I warrant were it taken off the Museum stand it now rests upon and placed on the ground in a likely place in its native timber it would deceive ninety-nine per cent. of those who saw it. You may look at this specimen from any point you please, and its form is always seen to be absolutely correct and symmetrical.

Of recent years the U. S. National Museum has taken up with the general progress of the taxidermic art in another and very instructive direction. This is the mounting of large groups of birds, and imitating their surroundings as they occur in nature so closely that the effect is most pleasing. Some noble groups of this kind were forwarded to the World's Fair at Chicago, where they now are, and call forth the admiration of all who have the pleasure of beholding them. An entire bevy of prairie hens forms the subject of one of these groups,

while a bunch of snow-white ptarmigans make up another. A great hollow trunk of a tree with a natural opening in the side exposes to view quantities of the now rare Carolina parrot, all suspended by their bills and feet to the rough surface of the interior. In Florida years ago it was not uncommon to meet with just such a sight in the forest, as it was the custom for those lovely birds to retire to roost in that manner.

Flamingoes and their nests form another group, and three beautiful juncos still another. This group-building of birds and other animals is gaining a firmer and a firmer hold upon the minds of museum builders every year that goes by, and it is pre-eminently the correct one.

[TO BE CONCLUDED.]

### THE MOOSE BIRD.

THE Canada jay is known by hunters in the Maine woods as the moose bird, for what reason I do not know, unless because it seems to follow hunters; and when a moose is killed this bird feeds on the remains as long as a single scrap is left.

It is the tamest bird in the forests. It will alight on a bush near one's head, and the first you see of him he will sail through the air near you with no other noise than a low cooing sound; and being larger than his brother, the bluejay, he at once gives you the impression that you ought to shoot him; and you do, if you do not know him before.

He has other nicknames which are cast at him from time to time—"carrion bird" and "meat hawk," given him doubtless because of his voracious devouring habits. But for all that hunters and woodsmen in the Eastern woods have dubbed him with undignified cognomens, he is quite a good-looking fellow when in full plumage, with his dusky gray and black coat and prominent white collar about his neck.

This bird is associated with all my woods experience; it has camped with me, traveled with me, eaten with me, and if ever I shot one there were several sure to come to the funeral. The sound of the gun was sure to bring them, and they were equally sure to come hungry. If it had not been for the annoyance of their springing my traps, I should have enjoyed their social qualities; but

FIG. 6. DUSKY GROUSE.

they did bother me by stealing my bait and springing my traps, if these had not been set hard enough to resist their weight.

The strangest thing about this bird perhaps is the time it lays its eggs and hatches its young. They winter in northern Maine and Canada, and the last of March and first of April—be the snows 6 ft. deep, they lay their 4 to 6 eggs in evergreen trees in swampy places, not very high up, perhaps 15 to 20 ft. from the ground. The idea of a bird laying an egg in a down East snow squall would appear preposterous—but it is even so. When on snow-shoes traveling through the woods in April I have found their nest full of young birds.

This bird seldom occurs near the habitations of men, but builds a camp in the deep forest and occupies it, and these neighbors will be your first callers, and persistent ones, too, for they will never leave your domicile—making a business of watching for any possible bit of meat or bread that drops in your dooryard.

I have had them follow me through the woods all day while tending my line of traps, and when an animal was trapped and skinned the carcass became the moose bird's lawful prey. Their company, however, compensated for much of the trouble they gave me. I always found them waiting for me at my home camp, and they seemed pleased when I came, and would float about my head when I struck into the little opening in the woods where my camp was. As soon as I took off my pack they would watch to see what luck I had had, and if I took out a lynx they would seem to say, "Oh, you have had nice luck to-day," and they would coo and scale back and forth around my head in great glee. So I got to liking these spirits of the wilderness, and came to believe with the Indian hunter that it was bad luck to shoot them.

In view of the tameness of this bird it was wonderful to observe its sagacity and acuteness in hiding its nesting place. I have watched them for hours about my camp in their incubating season, to get the direction they would fly to their nests. They would fly into the nearest tree after taking the meal I had thrown them, and sit an hour at a time trimming their feathers, cocking up their eye at me as if to say, "What are you watching me for?" and after my patience had oozed out of my finger ends they would start on a swift bee-line through the tops of the trees back into the swamp, and it was impossible to tell whether they flew twenty rods or a half mile, so swiftly would they disappear.

They are not musical, it is only a croak or chatter that they indulge in; but it is a sound you never forget, and as you get familiar with them you can almost understand what they are talking about.

They may attack other birds for prey, but I have never known it. I think they feed on the leavings of other birds and animals, and are not themselves aggressive.

Their body is smaller than it appears, the long, loose feathery covering deceives one—an optical delusion not

unlike many other things of time and sense which appear of wonderful proportions at a little distance, but once possessed it vanishes like a shadow.

BETHEL, Me.

## Game Bag and Gun.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### TENDERFOOTING IN THE ROCKIES.—I.

WATKINS, N. Y.—One bright spring afternoon early in 1888, when the sun had taken on warmth enough to bring out flies and loafers on the sunny side of buildings on public streets, four of us were assembled in the office of one of the number, smoking our cigars, lazily exchanging bits of interesting gossip and telling various stories, when the conversation, through some inexplicable vagary, got off on to mining and speculating in mines in the far West. The four of us were lawyers, all over thirty years of age and all under forty. There were Irving W. Cole, a brother of the late Speaker Cole of the New York Assembly; W. F. Bishop, a criminal lawyer of eminence in these parts; F. W. Fiero, judge of one of our local courts, and myself, a young member of the bar and of minor importance except for the fact that I had been more or less of a tramp for years, had visited many of the States and Territories in my wanderings, and had enjoyed quite an experience in the mountains of Colorado, which State was the objective point upon which much of our conversation turned.

We were all of us enthusiastic sportsmen and had spent many a day together in friendly rivalry in the woods and on the streams adjacent to Watkins, where there is fair trout fishing and often excellent squirrel shooting, with a scattering of quail, partridge and woodcock to help fill our game bags. From telling them of the chances for and against getting suddenly rich in the mines, an idea that presented very pleasing possibilities to all of us, I naturally drifted into an account of the fun I had trout fishing in the Taylor and Gunnison rivers; deer stalking in the mountains, and the free and easy life one enjoyed going from place to place without care for the morrow, living in a tent and eating the bread of independence (more often flap-jacks), baked in a skillet before an open fire out of doors. As I rambled on from one reminiscence to another the breath of the pines of the far distant Rockies seemed once more to fill my nostrils, and I gave them story after story, until Cole, into whose eyes had come a far-off longing expression, broke forth with, "Say, fellows, what's the matter with our spending our summer vacation out there?" This was an idea. We sat looking at each other for a few moments, and then I remarked decidedly, "I will go for one." "How much will it cost?" chimed in the cautious Judge; and we immediately resolved ourselves into a "committee of the whole" and began to count up expenses, and finally putting the figure at about \$200 apiece, for a two-months' trip, we decided unanimously to go and to start about the first of the next July.

The first of the next July came and found Cole and myself as eager for the trip as when thought of, if not more so, but Bishop had taken it into his head that he would be the next county judge and Fiero had got a bee in his bonnet and thought it would be a nice thing to be next district attorney of Schuyler county; and neither could spare two of the short four months before election from his canvass. So Cole and I went alone. In the end both of our friends would have been better satisfied, if not money ahead, if they had taken Wolsey's advice to Cromwell in regard to ambition and had gone with us.

Well, we finally landed all right in Pueblo—stopped long enough to purchase our blankets, tent, books of flies and ammunition—and took the D. & R. G. to Buena Vista, where we intended to get pack animals and the balance of our outfit before striking into the mountains. We reached our destination early in the evening, and as we were looking curiously at the crowd of nondescripts that were lounging on the platform and returning our gaze with interest some one shouted out, "Well, if here ain't John R. and Irv Cole." It was Mack Hulett, an old Watkins boy, who had drifted West with his family and finally become the fat and lazy proprietor of a thriving hotel. We were soon occupying the best room in his house, with all the little accommodations that help make life pleasant to a tired and dusty traveler. If some of the roasted tourists of our Eastern watering places want to know what solid comfort is let them take the trip across the hot, dry, dusty alkali plains in July or August, from Kansas City to the Divide, and keep on going up into the mountains until he attains an elevation of from 6,000 to 8,000 ft.; then get off the cars and try a bed in an atmosphere so pure that there is hardly a show for decomposition, and so cold that mosquitoes and all other vermin hibernate from 4 P. M. to 10 A. M. We spent several days with Mack trout fishing in Cottonwood Creek, hunting jack rabbits and doves and making up the rest of our outfit. Before we were ready to start Mack had become as enthusiastic as we were and nothing short of being down sick could have kept him at home, so he started with us.

We bought two burros to pack our outfit. I wish their picture could be published with this article, and indeed the picture of the whole concern, for nothing I am sure has ever been seen like it before or since. Pack animals were scarce, high priced and hard to get; but we were bound to have them. Mack had a good little lump of a Jenny and a colt and we bought the pair and traded the colt for another that had been terribly injured in some way and turned out to die, but had lived and got better and could get along in pretty fair shape; when it came into our hands it was a little the thinnest and most ungainly specimen I had ever seen, and when loaded it humped up its

back like a camel and grunted like a hog every step it took. We named her "Old Spike" and she turned out a good bargain, for she was tough as whalebone and stood the tramp full better than the other, until in an evil moment a couple of mountain lions took a notion to dine off their bones; but of that in its proper place. With our camping and cooking outfit, a sack of flour, a side of bacon, coffee, sugar and with guns on shoulder, we started out bright and early on a Monday morning for the Cotton Wood Pass which opened up six miles from the village; and by sunrise we were fairly in the mountains.

Of that day's work I will say nothing except that it was a long hard tramp somewhat enlivened by Mack's boasts of how he was going to "put the tenderfeet through." I showed the boys a tree where eight years before I had seen a man hanging at the end of a rope with a card bearing the legend "Hung for stealing a mule" pinned on his breast; and in return Mack told us a horrible tale of the murder of a man named Osborne who had kept what was known as "Osborne's Rancho" or "The Halfway House," a kind of free and easy place of accommodation for man and beast—store, grog shop and hotel together—away up near the top of the pass, almost to timber line. Osborne had objected to the attentions of some fellow to his step-daughter and the fellow indignantly shot Osborne all to pieces one evening in the presence of his family, and now the ranch was deserted and had the name of being haunted by Osborne's ghost. I remembered the place and the man well, having staid over night there on two occasions. There was something so comical about the man and his proportions that it was hard to keep one's eyes off from him. He was built like a jug with a small top and an enormous belly, and his mouth was always puckered into an absurd grin; and yet you could not tell whether he meant to smile or not. Once seen he could never be forgotten. We found the place deserted, as Mack had said.

We built a rousing fire in the fireplace of one of the cabins, got our supper and having seen the animals well picketed where there was good feed, made our bed on the floor and in no time were all sound asleep. We were up early and soon had a good hot breakfast, with strong coffee. Coffee is the one thing that a man in the mountains misses more than all other creature comforts, when he gets out of it. He can do without the sugar and the milk, can make a good meal without meat or vegetables or bread, and can sustain a long, hard tramp without other grub if his coffee holds out, but without it everything else seems to lose half of its value.

The night of the second day out found us camped at the head of Taylor Cañon, on the west side of the Continental Divide. We were all tired. Mack's boasting had entirely ceased early in the day, and now he was heard to make some emphatic remarks about the condition of his feet. It did not take us long to catch all the trout we wanted for supper and breakfast, and notwithstanding fatigue, Cole and I felt ourselves supremely contented with the prospect ahead of us, and as we lazily reclined on our blankets enjoying well-earned rest, and peacefully smoked our pipes, taking in the grand proportions of the mountain peaks that loomed up in whatever direction we looked, and speculated on their mysterious contents of mineral wealth and what they might have in store for us, we grew eager for the daylight to come again, for the birth of a new day in which to explore their dizzy heights for mountain sheep and the depths of their forest-covered sides and ravines for deer and other game, and to follow up their torrents for the great trout that we knew lay hidden in the deep pools and on the foaming rapids.

I cannot attempt any description of the grand scenery that unrolled itself before us like a grand panorama, and was repeated day after day, and which never palled with sameness, for there is a never-ending variety of shape and height and proportion and color, which to me seem like a dream. I have read many descriptions of these wonderful works of the Creator, written by men whose powers of description were great, but when I came to see the reality I found their best endeavors poor and tame.

The next day discovered to us that we had neighbors, a couple of young fellows who lived some ten or twelve miles south of Buena Vista on the east side of the range. They had made the journey in a wagon and were to start for home that afternoon. Hearing this, it did not take Mack long to find out that he had done wrong to leave his wife and daughter alone in charge of the hotel without any man around to take care of them (there were twenty who would do anything for the ladies), and he seized the opportunity to ride back so near home, and bade us farewell.

"Well, we had our 'second wind,' and from this time on I do not remember ever being too tired to take my rod and whip the streams with my flies for trout, even after long hours of hard climbing. We stayed on Taylor River several days, and had excellent fishing, but we found game scarce and pulled up stakes and went to Tin Cup to interview some old friends of mine as to which direction we had better go in order to find deer and other large game.

On the way up the Park we ran across Stephen Pease, a miner of fifty years standing, with whom I was acquainted, and he told us of a friend, J. M. Cole, who had a cattle ranch on Piceance (pronounced Pe-an-se) Creek in Garfield county, in northwest Colorado, who had written him to come out there and hunt, where "deer were so plenty that they came down out of the mountains and hung their hides on the fences to save the hunter the trouble of going after them." He assured us of a hearty welcome, and when we decided to go, gave me a letter of introduction to Mr. Cole, which I knew from the general character of men who spend their lives in these remote parts meant for us a home as long as we wanted to stay. After several days more spent around Hillerton and Tin Cup we started to find "Jim," as Mr. Cole was familiarly called. We followed up Taylor River nearly to its headwaters, and we never ate a meal without trout if we wanted them. Every stream was full of them, and the fish were varied with doves and grouse and pine squirrels.

At Bowman's Ranch, where we stayed over night before crossing the Elk Mountains, we met a party under the guidance of an old mountain man they called Tom. He was hunter, trapper, guide and miner; and had ranged the country in every direction. He told us our nearest point for good hunting ground was Trapper's Lake. In the morning we began to suspect that our new acquaintances were slippery customers, for we found our knives, forks and spoons missing. Noticing that something was wrong, Tom asked us what was the matter. We told him,

He asked us where we had left them, and when we showed him, he called our attention to a collection of sticks and stones that we knew had not been there when we put the table utensils there. He then told us the thief was a rat, a sort of free trader, who took what he wanted but always left something in the place of what he took, though generally not of much value. He related that one of the richest mines in Colorado had been discovered through one of these creatures making a swap with some miners one night in the same way this one had with us; when it took a knife or a spoon it had left a chunk of ore in its place, which proved to be very rich with wire silver, and in hunting for the stolen property they found the ledge where the rat had got the ore. We did not have any such luck, but we found our cutlery very nicely covered with some old papers under a stump. Although we ran across him several times we never knew more of the man than that his name was Tom and that he had lost an arm in a fight with the Indians. The stub was fitted with an iron hook, with which he was very handy; and he was as genial, accommodating and good-hearted a fellow as one would desire to meet.

We killed a beaver the next morning, just after crossing the Elk Mountains, and that night camped within two miles of Aspen. From Aspen we kept leisurely on our way to Glenwood Springs, and on this part of the route we greatly regretted not having brought shotguns. We tramped by and through some splendid farms, where every field seemed to be alive with doves, that arose on every side of us, whirling overhead and going in every direction. We might have had some splendid wing shooting, but we had made up our minds at Pueblo that we would need nothing but our rifles, and had stored our shotguns there with our extra clothing. We shot enough, however, to get what we wanted to eat, but every other one would be a better subject for hash than for broiling, and a dove hit in the body by a .45-caliber ball is not worth much even for hash.

From Glenwood Springs we went down the Grand River, and when about eight miles out camped on the bank of a stream that comes out of Dark Cañon. Good grazing had been scarce for two days past, and at this point there was a flourishing farm all fenced in. Not knowing how far we might have to go before we found grass again, we made up our minds to buy some fodder for the burros and give them one good square meal. With this purpose in view I went to the house and found a man and woman eating dinner. I asked for the proprietor and was told he had gone to Glenwood. The woman was his wife. I told her what I wanted and was informed that they had nothing to sell. I said, "You have everything fenced in here, and may we go into your cornfield and pull some weeds for the animals?" Her answer was "No; we want them ourselves." I tried to work on her sympathies by representing the burros as at almost starvation point, but this seemed to please her. She was the one sole and isolated inhospitable person I have met in the mountains, and her heart seemed as barren of human feeling as the rugged rocks and burning sand that abounded in those parts. I had not joined my partner many minutes before the man came out of some bushes opposite us and said to me, "If you will go with me I will show you where you can get a good feed." He took me into a field on the opposite side of the creek, shielded from the house by a strip of timber, and here in a melon patch were bunches of oats all headed out not yet ripe. He told me to pull all I wanted, remarking, "I suppose the hog would give me the devil if she knew of this, but I don't care." I did not care myself, and soon laid before the burros all I could carry in my arms. Before they were through the woman came down and looked at what they were eating, and if ever an evil spirit glared from a woman's eyes one did from hers. She did not say anything, however, and we soon left her vicinity.

From here we went on to Elk Creek and up Elk Creek about fifteen miles, and then struck across to the south fork of Rifle Creek. Here a woman at a ranch, where we stopped for milk, wanted us to stay and hunt mountain lions, which were plenty and bold and had eaten up all the dogs in those parts but her own; and she had saved him only by keeping him in the house. Two miles further on, at the junction of the south and north forks of Rifle Creek, we found a small settlement, where, on the side of the store, were stretched five great bearskins that had been on live frames within a week. This began to look like business. So far we had seen only a few deer; but here, by going back into the mountains, we could find anything we wanted. We were told that if we wanted to find good hunting we must go to Meeker, and thence up the White River to Trapper's Lake, or branch off on the south fork of the White, about forty miles northeast of Meeker, and we would find everything the heart could desire in the shape of game and fish. As this had been the burden of the tale of every man we had met for a hundred miles back, we fully believed in the truth of it.

But we were bound to see "Jim Cole," the man to whom I had a letter of introduction from Mr. Pease. He seemed to be about the best known man in Colorado, for whenever we inquired for him the reply was invariably, with evident surprise at such a question, "Know Jim Cole! I reckon every one in these parts knows him." A man in Meeker told us "He is a devil-may-care-cuss who owns a large ranch covered with horses and cattle over on Pe-an-se Creek, and he comes over here once in a while and cleans the boys out of what loose change they have in their clothes." At the head of Piceance Creek we found Tom, the guide, again, and he told us to go down the creek to Morgan's ranch—about four miles below—and Morgan could tell us all about "Jim Cole," and whether he was at home or not.

That morning, just after we broke camp Irv made the best shot I saw made while we were out. We heard something crashing through the bushes to our left, and I looked around just in time to see him swing his rifle to his shoulder, and following its direction saw the head and shoulders of a large buck just as it came out on the top of a ridge fully 200yds. off. I had hardly sighted the buck before I heard the crack of his rifle, and the old fellow with one great leap in the air fell dead. We soon had his hindquarters packed on one of the burros and we went ahead, Irv's face all smiles.

When we came to Morgan's ranch we were informed that Jim Cole and his whole family had gone up on the south fork of the White River berrying. We decided at once to follow him, and turning north made a break for Meeker, then about thirty miles from us. Our way was

across what is known as White River Plateau, a fine, rolling prairie, probably 8,000ft. above sea level. A little while after leaving Morgan's we saw something skulking along which we at first took for a wolf, and we made for him. He holed up shortly and we found it was a badger. We laid down to see if he wouldn't come out, and soon up popped his head. We were not over 50yds. from him, and supposed of course we had both got him, but we had not. He popped up in another place and we tried him again. Then we took turns at him and shot holes enough at that badger to have made a skimmer of his hide, but he seemed to laugh at us, and we left him in disgust for some one else to practice on.

About half-way over the plateau we came upon another prosperous-looking ranch. We could see the men making hay two good miles away from the house, and when we went to the house for milk we found a pretty little girl some 17 or 18 years of age all alone in charge of affairs. She gave us all the milk we wanted and then went west Irv to the barn to see if she couldn't find some hens' eggs for us. The girl wanted us to stay over a day; said they did not see much company, and her father and brothers would be delighted to visit with us, as they were originally from "York" State. We were anxious to get on, however, and so did not stop.

The next day at noon found us in Meeker, a small hamlet a short distance from the historical site of the horrible Meeker massacre. Here we stopped for our mail and got our first tidings from home. I shall never forget the look of suspicion with which the postmaster regarded us as we tore open envelopes addressed to us, with the usual formality added to our names, "attorney, etc.," and "attorney-at-law." He had seen clerks and lawyers there before, but they had been attended by guides and came horseback or drove in, and had knickerbockers and dude things generally. The wild life we had been living had told on us and the days of hard tramping in the hot sun had given us the true cowboy color. We did not at all look the trim spruce fellows who had left the cars at Pueblo, and the appearance of the entire outfit was too much for the credulity of that postmaster. Finally he broke out, "You don't mean to tell me you fellers are lawyers?" We informed him that such, indeed, was the fact; told him where we lived, showed him our business cards and a mention of our going West in the *Watkins Democrat*, which was among the other mail matter. His suspicion changed to admiration and he was very curious as to how we had got along. He examined our animals and noticed that we had got the "right hang" of putting on their packs. Then we gave him a history of our trip so far and showed him the letter of introduction to Jim Cole, with whom he was well acquainted. He ended by complimenting us with, "Well, if you ain't two of the best tenderfeet I ever run across."

JOHN M. ROE.

#### AN UNCOMFORTABLE TIME.

SANTA FE, N. M.—Bright and early one autumn morning, Wit, Duke and myself started for a day among the quail in Sinagge Cañon. Wit was a man and Duke was a Laverack setter.

In an hour and a half we were on the ground; and giving our driver directions as to when and where to meet us below in the cañon, we limbered up and were ready for action.

In fifteen minutes Duke had a covey in front of him. As soon as discovered they started on a lively run up a side cañon. Duke looked at the birds, then at me, then whined. This was the dog's first experience with New Mexico quail. As they rose I dropped one and marked the flock down.

Calling Wit we followed them to where they had taken cover and soon Duke pointed one in his best style. I pushed him along with my knee, and he was fairly upon it before it flushed; and not allowing it to take sufficient distance I riddled it so that it was unfit for the bag.

Duke soon had another point and continued putting the birds up in great shape until we had almost the entire covey in our game sacks.

It was now time for our team to make its appearance. We concluded we would take the back track, meet it and enjoy our lunch. We soon found the wagon track, and following it discovered that our driver had taken the wrong road. We followed the trail along a flat-topped mesa, a distance of four or five miles, when we met a couple of Mexicans with several burros loaded with wood. They told us they had passed our team some distance back going directly from us.

Writing a note to the driver, telling him where to meet us, we gave one of the Mexicans \$2 to overtake him and deliver it. Then taking a turn into the nearest arroyo we were soon among the quail again, having good sport. At the expiration of two hours we concluded that it was time for us to be at the rendezvous. We were tired and hungry; but when we reached the meeting place no team was in sight and for the next hour we waited in vain. Approaching the nearest Mexican ranch we asked for something to eat.

We were soon consoling ourselves as best we could with a meal of chile con carne, tortillas and rye coffee, with thoughts reverting to the nice lunch our wives had prepared for us, and which we had carefully placed under the wagon seat. This was but an introduction to our troubles, however.

We could obtain no conveyance of any description at this ranch, and when the last shafts of sunlight were growing dim in the western horizon we took up our weary homeward march. Our feet were blistered and our guns and game bags were a grievous load.

Soon it grew intensely dark, and as the road was rough we would lurch from one side of the track to the other, groaning audibly. After tramping twelve miserable miles we reached the little town of Agua Frio, where we found every one in bed and every Mexican cur in the village at our heels.

We finally roused a Mexican who could not speak English and who was so suspicious of our appearance that he would not let us cross his threshold. Managing finally to make him understand that we wanted to find some one who could "talk United States," he took us down a back alley, over several wood piles and old wagons, to an adobe, where, after much rapping, we were able to hear signs of life within.

The sparks from the chimney soon gave evidence that some one was poking the logs in the fireplace, and the door was thrown open and we were bidden to enter.

On pallets thrown upon the floor were children and two

Mexican women. The women rose to a sitting posture as we came in and coolly rolled and lighted cigarettes.

Hastily explaining our situation we told the man of the house that we wanted a team to take us to Santa Fé. In the course of an hour an old wagon was produced with a span of miserable ill-conditioned ponies attached, and in this vehicle we were jerked and jolted into Santa Fé in the small hours of the morning, where we were pleased to learn that our illustrious driver had arrived at 6 o'clock the preceding evening. F. T. W.

## WITH THE DUCKS IN WARNER VALLEY.

FORT BIDWELL, Cal.—In the fall of 1892 I had had but five days vacation in as many years. A friend had frequently urged my wife to visit her in Warner Valley, Oregon, and to bring me with her. On Oct. 12 I threw my pen into the waste basket, left the store in charge of my most indulgent partner, and set out for Warner. We started in the morning at about 9 o'clock. We were both so anxious to go that the cold north wind and cloudy sky had no terrors for us. My wife, baby, myself, gun, two valises and 200 cartridges made quite a load for a single two-wheeled vehicle.

Our friends declared we would be "almost dead" before we had driven over thirty-two miles, but my wife had often ridden twenty-five miles after stock over the mountains, and I was always considered to be pretty tough while a vaquero, so we made the trip over the hills pretty comfortably, arriving at the Sessions ranch at 3 o'clock in the afternoon. Warner Valley is about fifty miles long and from four to six miles wide. It is surrounded for the most part by high run rocks. About fourteen or fifteen miles from the south end is a low line of hills and butts running east and west, dividing the valley into North and South Warner. The Sessions ranch is upon a hillside which slopes into the valley, and from the house can be seen a perfect network of lakes and sloughs.

The afternoon I spent in prospecting the ranch, but I was sorely tempted to try my luck by the white patches of snow geese, about half a mile from the house. That night we were awakened by a knock upon our bedroom door and were informed by Mr. Sessions that the dog had treed a goose. Wonderingly I put on my clothes, slipped two cartridges into my gun, some more into my pocket and followed my host out to the garden, from which proceeded the sound of the dog's bark, and what Charlie Sessions declared was an unmistakable goose smell. The dog in his zeal chased the game through the fence, in following jumped over the fence, on to it, and for the succeeding twenty-four hours was placed in durance vile. I shot the goose by the aid of a lantern, but never before was aware that geese had bushy tails, nor that they were sometimes black, striped with white, as Charlie stoutly declared they often were.

In the morning we rose at 7 o'clock, and the remark was made that I deserved to go home empty-handed for my laziness in not having gone to the lakes before daylight. My host excused me by saying that our goose hunt during the night had probably made me sleepy.

Fortune favored me, however, by sending a heavy west wind, accompanied by occasional snow squalls.

Arriving at the first water on the meadow about 9 o'clock, I bagged two mallards as they arose from the nearest pond.

I intended going direct to a round lake fringed with tules, which I had seen from the house; but I was delayed on the way by shooting at the ducks as they rose from the shallow pond in my course. They were very tame, and it is a fact that in one instance when I had killed two out of three as they rose, the third one returned seeking its companions, and I was compelled to touch it with my foot to make it fly.

Upon arriving at the Round Lake, I saw upon the water scores of mallards and teal, while others constantly sailed in over my head with the wind, seeking shelter from the passing squall and driving snow. Four of these wereshot out of a possible six, as they flew over me. I then started to try and wade to them. While walking up to my thighs in water, my forward foot came in contact with a snag; and I plunged forward full length into the lake, gun and all. Recovering myself by pushing with the gun on the muddy bottom, I waded boldly into the middle of the lake, up to my waist in water. As the storm thickened, the ducks continued to come in, and paid no attention to me. I soon became chilled through, and picking up my twenty ducks struck out for the house.

On the afternoon of the same day I passed the lake in which I had taken my morning bath, and going further north shot several ducks as they flew over, going from one to the other of the two largest lakes, the surfaces of which were literally covered with them. During the three days we stayed at the Sessions ranch I shot many ducks, and saw more than I had ever seen before.

On the third day I killed two snow geese as the flock arose, and upon pacing the distance found it to be 105 steps. My gun is a 9 lbs. 10-gauge, and was loaded with No. 6 shot. Pretty strong shooting, I thought it.

On the fourth day of our stay in Warner we regretfully packed our valises, and struck out for North Warner to visit friends whom we had promised to visit at our earliest opportunity. I say regretfully, because we had had a most pleasant visit and had been informed that there were not many ducks in North Warner.

The scenery on the way was grand, and it has been described in FOREST AND STREAM by my friend Mr. A. C. Lowell.

We drove over the twenty miles of road from the Session ranch north to Honey Creek, by twelve o'clock, and were warmly welcomed. After dinner Mr. Tonningsen (who had never shot a duck) and myself rode horseback to the lake two miles east of the ranch, and not expecting to see much game took only twenty cartridges. Tying our horses back from the shore, we walked to the lake and lay down in the tules by a cave, from which the noise of our walking through the tules had frightened several ducks.

The sun was shining and the lake, upon whose surface the mountains two or three miles distant was reflected, made a pretty picture. While we were conversing in a low tone, a small flock came in; and as they put out their feet to light I got one, scoring a miss with the left barrel.

We stayed about an hour, the ducks coming over frequently; and although I expended my twenty cartridges we took home only eleven ducks, having missed many easy shots. My friend retrieved the ducks, swimming his horse into the water to pick them up, and as he was

reaching for the last one the old horse, having gotten beyond his depth and being tired of that sort of thing, turned quickly and threw his rider on one side, wetting him to the waist.

On the following day, my two friends having work to do, I started out alone on the same horse I had used the day before; and as he stood fire well I felt that I would not be left afoot. Going straight to the lake I got only one mallard drake during the entire morning. At the discharge of the gun a large flock of Canada geese arose from the marsh before me, and as they flew leisurely away said *Ah-unk*.

Having noticed that all the ducks we had seen the day before were traveling north, I struck out in that direction. At the road going east to the Alexander and Wilson ranch, I fell in with Mr. Alexander, who told me to go northwest to the old slough and shoot ducks until I was tired. I accordingly rode straight toward the line of low buttes that marked the course of the slough through the sage-brush desert, up to the first butte, tied my horse to a large sage-brush and walked to the top overlooking the water. The summer having been a long, dry one, the slough had partly dried up, leaving a string of ponds from 100yds. to 250yds. apart. I had struck the first one and upon its surface not 50yds. from me were hundreds of mallards, teal, widgeon, etc. As they arose with a roar, a double discharge brought down four.

My horse pulled up the sage-brush and ran off to join a bunch of wild horses that had been grazing near by, and were now running from the sound of my gun. Knowing that it meant a walk of four miles in my hip boots, carrying my gun and what ducks I would kill, but realizing that such shooting was seldom experienced by any one, I philosophically concluded to enjoy it. The ducks wheeled and wheeled again, flying over me at close range; but their number was only two less after six discharges. Not very good shooting, you think? No, I am not much of a shot. I walked to the next pond, keeping behind the greasewood knolls, and as I gained the top of the ridge there was another roar of wings, as the ducks arose by hundreds. For two hours I simply loafed around those ponds shooting and watching the ducks fly around me. I shot 25 shots and took home only 15 ducks. If I had had plenty of ammunition and the inclination to do so I could have killed scores of ducks, but I never did enjoy killing birds simply to let them rot.

This string of ponds was about ten miles long. There were about thirty ponds from 100 to 200yds. wide and they were only about 2ft. deep.

The following day Mr. Tonningsen, my wife and I went horseback to find the horse that had gotten away from me the day before. We rode the entire length of the string of ponds and there were certainly thousands of ducks—many more than I had ever seen, even on Chesapeake Bay. We rode about twenty miles and upon our return to the ranch were greeted by a friendly neigh from the horse for which we had been hunting. Having become hungry, and not being able to eat with a Spanish bit in his mouth, he had come home.

We drove the entire distance to Bidwell next day, and on the way through North and South Warner saw thousands of geese and ducks. I have thought of my experience many times since and I believe that I am right when I say that North Warner is the very best place in America to hunt wildfowl. G. H. A.

## COURSING AN OLD TRAIL.

YES, it's great sport, and as we live over again in memory the delightful days we have only to regret that there were not more of them, and that there are so plaguey few of them nowadays. We are apt, at this distance, to forget the hardships and the perils, and remember only the fascinating, exhilarating sport; the noble antlered buck, the fair doe, the wily fox, the toothsome 'possum; what cared we for the hours spent knee deep in snow, the toil through pathless wood, for summer's heat or winter's cold?

Our little party stood together upon a knoll that commanded a view of a heavy piece of woodland upon one side, a neat farmhouse and outbuildings to the right, while far away to the northward stretched a vast swamp, a grassy marsh bordering its southwesterly edge. The light frost of an October morning lingered upon the fresh fallen leaves, and the scene as it lay stretched before us was an inspiring one. The blood tingled in the veins and each was impatient to strike the winning pace.

"We had best drive the swamp first," said Bob, "for just north of the orchard I crossed a fresh trail leading directly into it, and the streakers would have gone away with it if I hadn't flogged them off."

"What for a trail would it be now?" asked doubting Thomas, the Falstaffian owner of the 20-pound rifle, as he brought it to the ground with a bang, "a striped squirrel or a field mouse, for I don't believe there's a deer within a mile of this plantation."

"Just one buck and two does, old Falstaff," replied Bob, "and I want to say to you right here that my hounds don't follow vermin—no, nor pork either."

"Now, don't get hot under the collar at trifles, Bob," said Falstaff, shaking his fat sides with a jolly laugh; "I didn't mean nothin' personal, you know, and if you say them's deers in the swamp, why let's drive 'em out and butcher 'em by powder!"

"I hope you don't call yourself a trifle," muttered Bob, as he moved away toward the dark trees, calling his dogs after him.

Ah! those hounds! How sleek and supple they looked! How plainly I see them now through the soft haze of thirty-five years! How many times have I listened to their fierce cry, driving the quarry to its death, and scattering the thick fur of Sir Fox. Here, yonder they go, trotting demurely at Bob's heels, wagging their feathery sterna as though they meant nothing but good will to all on earth. Smooth, sweet-voiced hypocrites, how we all love them! As they follow their master toward the upper end of the swamp, let us take a glance at the bipeds of our party. First in weight and condition is the redoubtable Thomas, already noticed, who in consideration of his physical ponderosity, places himself at the point nearest the knoll. Next beyond him and further out in the open marsh is the stand of our young Connecticut friend Barker, gotten up in a stunning manner as to wardrobe and equipped with a double rifle. Beside him, and nearly hidden by the branches of a fal-

len oak, is the post of Jack Stevens, at that day perhaps the most unerring shot and the most accomplished woodsman in the Old Dominion. Dressed in a suit of gray homespun and leaning motionless on his rifle, his spare form is scarcely distinguishable from the dead branches that surround him. Lastly, and furthest from the original point, is the station of old Jim Skinner, the greatest fox hunter of that section, with his hounds and his long wooden-stocked rifle, which was a terror in his accustomed hands.

Hardly had they reached their respective posts when Bob's voice was heard hallooing to his hounds: "He-e-e-r-e, back, Vaughan! to heel! Back, Minnie, back, I say!" But in vain did he call and lash; two or three of the quick-scented creatures straying too near the swamp had their more than suspicions aroused, and throwing up their heads had plunged into the thicket and were soon followed by the rest, regardless of Bob's voice and commands and whip. After the first moment of tumult all was still. Dick had gone in to hunt the dogs; the standers had sunk silently into the alder bushes that skirted the marsh, and I was left standing upon the knoll alone in my glory, the solitary spectator of the scene. Presently a disturbed jay flew chattering from the tamaracks to the northward of my post, and directly after a doubtful whimper from a familiar voice came floating up the air. That was Max; then came a bold, decisive note of challenge from another throat; that was Locksley. Directly Fidele gave tongue, followed by voice after voice accusing in turn the scent, until the whole pack, opening into full cry, came away southward with their game, making the woods ring with the mad music of their trumpet tones. How the blood goes coursing through our veins again at the revived picture upon memory's tablets! How clear is each familiar voice, each voice that, often as it has spoken to us—has never once lied. No, there was never even an equivocation there—there was conviction in every syllable.

Ha! there was a shot, well meant, but badly executed, and as the smoke cleared away far down the swale, a doe broke cover and made to cross the marsh to the land beyond. Puff! puff! A clean miss, young Barker, a little too high, to judge from the quick dodge of the active deer, who dropped at the first barrel and jumped back toward the swamp at the second, tail flying and head well up, leaping long and high. Another pipeful of white smoke—ha! there's no mistake about that sign. The sudden dropping of the flag, the convulsive contraction of the limbs in midair, the headlong plunge into the tall grasses of the marsh, tell, before the crack of Jack's rifle reaches me, that his bullet had been winged by death. But the hounds have gone back to the north once more, and the echoes of their fading voices are

"Faint from farther distance borne,"

until all is still again, and nothing but the long thin line of smoke floating across the open, remains to betray the actors in the finished scene of Act 1. With rifle quickly reloaded with his nicest care, Jack came out of the thicket to bleed his game, but scarcely had he withdrawn his knife from the sheath when his arm was held suspended and his whole form as rigid as a statue. Struck motionless by the charm of a bell-like note wafted on the light wind from the distant swamp, and then leaving the forest stiller than before. Hark, again! it is the full organ tone that swells through the gothic arches of the woods, constantly *crescendo*, until it develops into the grand orchestral crash of the full cry, flatted suddenly by the report of Bob's rifle in the distance, and then bursting forth into fresh fury as if the pack would rend the very heavens with their frantic melody. Noble and abundant cause had they! From up the tufted ground streams the reeking scent of as lordly a buck as ever foiled a hound. Straight away before them he dashes, proud in the security of his speed, recking naught of his dead love at Jack's feet, naught of the other that Bob's rifle has already brought low, far away beneath the tamarack. Onward he comes, flag and antlers high in air, his bounding flight to be compared to nothing in the world save the long swelling lines of ocean billows rushing to shore. Broken cover! and as the ounce ball from fat Falstaff's rifle crashes through the branches, the gallant stag falls earthward, as if its last plunge had been made. The pace of the fat man, as he rushes toward his game, knife in hand, is a killing one, but just as he reaches out to strike, his ponderous body is overthrown by an unlucky branch tripping the hurrying feet, and the animal springs once more to its feet, giving its sprawling foe a parting salute with its hind legs—fairly snatching itself from the very jaws of the leading hounds, that are at the heavy-weight's heels, when the miracle occurs. The bullet, as is sometimes provokingly the case, had just chipped the upper edge of one of the vertebrae at the neck, and stunned the animal for a moment, which, now sound as ever, is coming at a rattling pace directly up my knoll, the hounds running at sight, and well nigh mute from very excitement. Of course, as the mark is running straight at me, I fail to kill, though the bullet rips up the hide on the left side and causes him to double quickly upon the dogs, and make for the cover whence he so lately issued. To reach it he must pass within 100yds. of Falstaff, who is to mad too shoot. On he goes, past Jack and gets another touch of lead but cannot fall, for the bitter threats of his fast approaching foes drive him past Jim Skinner's stand, where another wound awaits him. Still he struggles gamely down the swale, though evidently growing feebler at every stride, and as the hounds gain on him, their full-mouthed chorus proclaims their victory. Now Fidele is at his flank; one last struggle and he shakes her off and wins; no, for Locksley and Max come dashing at his throat; the beaten stag totters as the pack closes in, and with a final rush and yell of triumph, they pull him down, smearing their white teeth with his gore.

Ten minutes more and we are grouped around him, each man pointing out upon the buckskin the red seal of his particular shot; all save Falstaff, who rubbing his battered nose, rails against "the cursed deceivin' critter;" until Bob's mocking voice silences him with: "Don't get mad at trifles, Tom; he didn't mean nothin'!" which came so pat that he could not withstand the drollery of the thing but joined in the loud and long laugh at his expense.

It is indeed many a long year since those deer were done to death; long since I listened to the music of that noble pack; but often

"When the hours of day are numbered,"

fancy calls up the scenes of their stirring victories; the deer flit like shadows past the forest glades, and the well remembered voices of those faultless hounds float upward through the memories of the past, FRANK HEYWOOD.

## THE MUSEUM MOOSE.

"You say, Doc'or, you want um big moose, berry big?"  
 "Yes, Nuel, want a very large one for a museum. Want two, male and female."

"And you say you give um me half crown day while me go hunt um wid' you. An' w'en we kill um big moose, fine blanket for self an' one for squaw, an' clof for papoose, an' you fine ebery'ing for eat? Is dat it?"  
 "Yes, that is it, Nuel."

"An' now me wan' to know dis: Sposum me kill um big moose an' you miss um, is it all same?"

"Yes, Nuel, it is all the same. You shall have the blankets and cloth if you get me a chance to shoot or if you kill a moose yourself. And if we get a nice moose you are to have five crowns ext., and if we get two then you are to have ten crowns. Now do you understand?"

"Ugha! Me hope me get um. Me go nex' moon. Two week. Good time for call um. Nice day. Nice night. Soon fros' come. You be ready? Me have good canoe on river. You bring f'ings for eat—gun, blanket?"

"Yes, Nuel, I will be ready and have everything at your camp the day you name."

These arrangements were made for the last week in September, and the morning of the day appointed found Nuel and myself making our way up the river.

He had a good canoe. Rather larger than the usual size. It was strong and well braced, and in its center was pushed the baggage.

When I thought of the portages we would have to make I said to him: "Why, Nuel, this is a very heavy canoe. How are you going to carry it?"

"Ugha!" replied the good fellow. "You'll help um me, sposum we wan' you. Dis my huntin' canoe. Hope we bring um back two moose. We wan' um big canoe."

All this was said with a peculiar smile that at once won my heart and at the same time convinced me that I was with a man who "meant business."

Although I had been much with the Indians, I had never been with Nuel. I knew him only by reputation, and he had the reputation of being a mighty hunter and a most expert fisherman. Or at least he always knew where to go for fish. As it was now, I felt satisfied with my guide. My great wish was to make my guide feel satisfied with me. I knew he would try me in different ways before we had been many hours together. The question was how was I to come out in these trials.

Very little was said for the first few hours. Nuel stood in the stern and forced the bark up against the current, while I sat in the bow to look out for rocks and ward off in case of need. Several times it seemed as though the Indian was on the point of pushing us upon a sunken rock that came just to the surface, when with a stroke of the paddle I kept the canoe away. One not accustomed to Indian strategy might have thought that he was doing good service, or that his guide did not know where he was going, but as I turned around and looked at my guide (who seemed utterly unconcerned) I knew at once that he was trying my nerves or my skill.

About 12 o'clock we landed for dinner. The only remark the Indian made as we turned a sharp bend in the river was, "Now we comin' good places for eat. You wan' um big trout. No fros' yet. Them bite. Here good places. I hungie."

I could easily believe what he said of this place. We were at the upper end of quite a pool that had a gravel beach sloping down gradually to the water. On the opposite side, 20 yds. away, were perpendicular rocks, rising up to the height of 30 ft. or more. The foot of these rocks was now in the shade and much of the froth that floated down from above seemed to have collected here.

While Nuel was making a fire I jotted my rod. Had I not seen him look out from under his old cap several times as I ran the line through the rings, I might have thought he was as disinterested a spectator as he seemed to be, but this made me think, "trying me again." However, I had not much to fear if the trout were really there. I knew what I could do if I had a chance.

Nuel had just got his fire started, I observed, as my leader was straightened. My first cast sent the red and yellowish green flies more than half way over to the rocks and I had scarcely drawn them six feet before two trout were on.

"Ugha," said the Indian. "You got um fish. Two of um. Me tot so. Take um care. Don' break um line. Me lan' um for you."

I had no net, and was only too glad to have his help. He stood a silent spectator until the fish were nearly drowned. Then, as I drew back with my rod, he led them in shore one after the other and tossed them upon the beach. They were both nice fish, weighing, perhaps, a pound or more apiece. The only remark that Nuel made was, "You catch um more. Me eat dees."

Before I made another cast I took off one of my flies. I felt anxious about the line and the rod too. The second cast brought another fish larger than either of Nuel's, and now I was prepared to stop. "Doc'or not goin' to wine in yet, is he?" said Nuel. "Wan' more for tea. Ingin eat much. Ugha."

"O," said I, "we will have ducks or partridges for tea. You said we would see plenty, or we can catch some more fresh trout."

"Berry good," replied Nuel. "I s'pose you can shoot um duck on fly. Maybe partridge, too, but da go on tree."

"O, yes," said I, "any way."

Then said Nuel: "I guess we no starve, eben if big moose scare away."

The dinner was not eaten in silence. Indeed, the coffee seemed to loosen Nuel's tongue. He told me a good deal about the river we were on, what we would come to before night, and the salmon and the others that he had caught when he was a boy, just where we were camping. By his advice I was to have my gun ready for ducks, if we should see any. There had not been much in our morning's journey to interest either of us. We had seen a good many kingfishers and one sheldrake, several sand-pipers, and occasionally a bluejay or a wood pewee, or one of the warblers would fly across the stream. But there had been nothing to cause remark, while the river itself with its occasional rifts and rapids absorbed the most of our attention. Then it ran through a region that had been cut off for its lumber many years before, and a second growth had never matured to any extent by reason of the fires that from time to time had run through it.

But now things were changing. We appeared to be

going into darker and wilder regions, and there were more giant trees lying along the bank of the river. An hour had not passed before we came to the first carry. It was a short one, to escape a rapid that almost amounted to a fall. Nuel did not want my help and I followed him up the bank with my two guns and the saddlebags. We returned for the rest of the baggage, and in less than half an hour were launched again. As we were about to push off a partridge flew up, and then several followed it. This was too much for Nuel. "You give um me gun," said he, "and I get um tea for you." With this I handed him my double-barreled with the accoutrements. He was not gone long before I heard him shoot twice in quick succession, and then again a third shot a few minutes later. In all he was absent twenty minutes, perhaps, and returned with three nice partridges. He seemed pleased as he took his place in the canoe and said, "We make um up time fore sundown and get second lake morrow night." And we did make up time passing the falls and another carry before the last rays of the setting sun had left the distant hilltops.

While Nuel was cutting wood, and breaking twigs for my bed, I carried up the baggage. The Indian then went down and brought up the canoe. The twigs he turned over the twigs he had collected, placing it on edge and saying as he did so, "Doc'or you no mine sleep um canoe dis night. Have good camp morrow night. Dis be comfortable?" Nuel called me to "bring um rifle." He was standing by the shore when I reached him. Pointing along the water up to the far end of the pond he said: "You see um fat musquash sittin' on stick dare. Me wan' for tea. Me like um. You hit um in eye. He no dive den."

The muskrat was not really beyond point blank range. The only difficulty was that I did not consider myself a very good marksman, and had been out of practice for several months. I tried to get Nuel to shoot the rat himself. His excuse was, "Me no use to gun; you kill him." Seeing there was no way for me to get out of the trial, I just drew up the rifle as we used to, in making snap shots and fired. To my astonishment, and I think very much to the Indian's too, the muskrat seemed to jump to the shore, where he remained kicking and turning on his back in a circle.

"Ugha," said Nuel, "You kill um. You make almose so good shot as Ingin. Dat kill um moose. You shoot um otter for me, if we see um." I did not agree to this proposition. I simply said, "O, no, you shoot otter, I might miss him."

But now Nuel was bound to have his "musquash," so the canoe was brought down and he went for it. When he returned he simply said: "You break um bofe foreleg." And sure enough, the ball had entered in one side and passed out the other, tearing away the breast bone in its passage.

In a few minutes the rat was skinned, and it and a partridge were roasting on spits before the fire. Before the darkness really closed in and the owls began to hoot, we were regaling ourselves. Nuel's tongue was loosed again. Among other things he said: "I think we get um big moose. You mits' hav' shot. I once kill um moose ober dare (nodding his head to indicate the hill across the river). Dat owl say all same—good luck."

Indeed Nuel seemed to be quite elated for a quiet Indian. He appeared to think that he must entertain me. And he did so—both by his talk and by imitating every owl that hooted and every strange noise that he heard. How long he would have talked I do not know had I not shaken the ashes out of my pipe and put it in its case.

At this he said: "Me tired, too, all we wan' to make um early start in mornin'. Me fix um fire and you go sleep." With this I crawled under the canoe while—after Nuel had put some large sticks on the fire—he wrapped his blankets around him, lay down with his feet toward the blaze, and was soon asleep.

As for myself, it was some time before I slept. The strangeness of the surroundings seemed to impress me. I thought of myself, so far from my family, in the wild woods and going further into them. Then with only one man and he an Indian, and a stranger to me at that. I had never been in such a situation before. But we wanted two moose, and we wanted them large and fine, and it devolved upon me to secure them.

These were some of my reflections as I looked out from under the canoe and saw the sleeping Indian, and the fire burning low. But before the last stick had fallen apart and its brands were burned, I slept. I must have slept well, too, for I was not conscious of anything until I heard Nuel's voice saying: "Big Doc'or sleep well in woods. He beat Ingin. Moose got breakfas' cook."

"Yes," said I, "but Doctor did not get to sleep so soon as Ingin. He watched Nuel, for fear bear carry him away."

"Ugha!" replied the Indian at once, "an' he go sleep while watchin'."

To this I had nothing to say. I soon crawled out from under my cover, had a slight bath to get my eyes open, and was ready for breakfast.

We were through this by daylight, and by the time it was light enough to see well were on our way again.

As we took our places in the canoe Nuel remarked, "We good way go deday. Not get up morrow mornin' so soon. You get um gun fix for duck. Maybe see um black ones in lily pads. Get um many you can. We wan' um. Day keep."

This was just the prompting that I wanted. I felt like shooting, and knew that with such weather as we were then having game would keep for a week. As we came out from the shore everything looked still and somber and wild. There was a slight mist upon the water and a little fog seemed to rest upon the highest hill. We heard something scrambling away among the underbrush as we neared the place where the muskrat was killed. This led the Indian to remark in a low voice, "Mink smell um musquash blood." And immediately after he added, "Now, Doc'or, look um sharp when we come roun' poin'."

Nor was his caution a moment too soon, for sure enough as we came around the short bend with considerable speed, we went a flock of two dozen black mallards. They were within good shooting distance, and to the astonishment of Nuel and the joy of myself five fell at the report of the two barrels.

"I tote you we have good luck," said Nuel. "Owl say so las' night. I tot ducks here. Hear um quack dis mornin'." You make um good shot. We get some more fore night."

After the ducks were retrieved I had nothing to do for some time but to look around and advance. We were on a narrow lake, perhaps three miles long by less than a mile wide. Its sides were well wooded, even to the water's edge, except an acre or so of lily pads and marsh, just where we had entered it and where the ducks had been shot. We kept near its western shore, and I could in places look under the hemlocks and spruces that grew near the margin. They gave me an impression of wildness and solitude such as I had never had before.

I had been told by Nuel to have my rifle ready for "calleebo" (caribou), but now we were almost at the upper end of the lake and yet none had made their appearance. There were a great many grebes and loons on the lake; several had called in their prolonged and dreary notes and I could hear hermit thrushes and other birds calling to each other as we passed along. Then we saw several Canada jays and a red-shouldered hawk fly across the lake.

But the head was reached at length and now more poling had to be done. The river came in here and ran through the lake. There were a good many miles of this poling and some of it was quite difficult before we reached our first carry. Some of this journey was entirely without interest, except as Nuel told me "to watch for otter" and pointed out several of their "slides" as he poled us upward. There were not many kingfishers, but I could see the different migrants as they flitted from side to side of the river or explored the boughs above our heads.

About 2 o'clock we reached the first carry; it was quite a long one to avoid some rapids and a small fall just above them. It must have been nearly 11 when we launched this time and before half an hour we were out on the land again. This time, though, we were only half a mile from the lake, at the upper end of which we expected to spend the night, and perhaps all our time, but that upper end was many miles away.

As we came in below the rapids Nuel said, "Sposum we have fish for eat now. Not take so much time for cook, and den big feas' for tea." I understood what he meant. It was to get through now, and then make a glut of himself when night came. However, I said "Yes."

Then he replied, "You catch um fish here plenty big. Me go look for partridge in bush dare." The place to which he pointed was to all appearance a wide road, cut right along below the hill. The only thing that told me that it was not a road was that I could see the dead and moss-covered trees leaning at all angles against the bordering forest, and telling at once that in the distant past a whirlwind had visited the place and ruined its primitive glory.

After Nuel had kindled the fire I fitted him out with gun and fixings, while I myself began casting where he had directed. The second cast brought me a nice fish, not so large as we had caught the day before, but large enough for a "pan fish." I had six of them before I heard Nuel's gun. This was followed by four shots in quite rapid succession. Meanwhile I had seven more fish before Nuel returned. Four of them were in the pan when he came back.

He had five partridges. His first words as he dropped the birds on the ground were, "Dare! You shoot um duck—me kill um partridge."

It was not long before the dinner was eaten, and 2 o'clock found us in the canoe again. We had half a mile to pole before we entered the lake. This was like a mirror, and as you looked along its waters the frowning hills and trees seemed to cast their image in its depths.

It began to thicken up. Nuel said, "Me 'fraid we goin' to hab rain denight. It look like it. An' I hear um loon call much. Spos you take um paddle and help um me. Me tell you w'en we come duck place."

I was only too glad to help the poor fellow, for he had a hard day of it. He said, "Hab um gun handy."

So I took the paddle and we moved along faster. It was after five when Nuel said, "Now we turn in here," and brought the bow of the canoe to shore, in a little cove on a beach of coarse white sand. "Dares where we wan' go," said Nuel, pointing; while at the same time he landed the things out of the canoe and added, "Now we hurry, me smell um rain comin'. You not get wet; me got bark cabin up dare."

I hurried up the little bank with the saddle-bags in 660 hand and the guns in the other, while Nuel simply drew the canoe on shore, turned it over and then securing an armful of things, hurried up after me. "Dis way, Doc'or," said he, leading off to the right while I was taking a left hand course. Before I reached him I heard him say, "Ugha," and when I got to where he was, "See dare," said he, "see what ol' bear do," pointing at the same time to a piece of bark that had been torn from the roof of quite a snug little shanty. "Mus' fix dat," continued Nuel, "fore rain come. We put ebery'ing in dry end. You put um dare. Me fix um roof—you call um."

I soon had everything up, and it was not long before the roof was repaired as well as the Indian could do it at the time.

He then said to me: "Doc'or, you don' mine work um leetle fore rain come?"

"Oh, no," said I. "I will do all I can. What do you want me to do?"

"Den you break um bush for bed while me get um wood? Me bring um you branch."

In a few minutes he returned with an armful of hemlock boughs, and then with another and another. Meanwhile I had cleared out the old flooring, or bedding, of the shanty. I had no idea of having any remnants of Indian debris about me. I did not see anything offensive, however. The place appeared not to have been occupied for a year or more.

By the time Nuel had his wood cut, the twigs were broken. It was dark now, and I had felt a few drops of rain.

The Indian now went down and brought up the canoe, remarking, as he laid it down opposite the camp: "Me like to have um canoe where me can see um. Bear might scratch um, or win' blow um on stone."

I must say I liked Nuel's precaution. I felt it was safer near us than on the beach. What a horse is on the plains, or a camel in the desert, just the same is a canoe on lakes or rivers. There is no getting along without it. Before darkness had regularly settled down upon us Nuel had brought up a kettle of water and raised a piece of old spruce bark on two crooked sticks above the fire, not large enough to shed all the rain that would soon

pour upon it, but sufficient to protect a part and keep a portion from being drowned out.

While we were engaged in picking the ducks Nuel said: "I berry hungie. Mus' have two." One I thought would satisfy me.

It took considerable time to prepare this meal. We wanted to have a good one—at least I did—and I thought Nuel was "nothing loath." The ducks were cooked "to a turn." We spitted them in forked sticks and "toasted" them before the fire. The "flapjacks," too, were good. This was before the days of prepared flour and condensed milk, and it required some skill to know the proportions of soda and cream of tartar to use. An old family cook had taught me these things when I was a boy, and an out door life of "roughing it" had made me quite proficient.

Nuel seemed to enjoy my cooking very much. After devouring two plates full of flapjacks, or equal, I should think, to enough to satisfy at least two ordinary men, he said, "Doc'or, me like camp wid you. You make um good pancake. You show um me how. You beat um squaw."

But long before we were through our supper the rain had settled into a steady downpour. There was no wind with it, but just the monotonous moaning of dripping leaves and falling rain. Not even a loon was to be heard, nor was there an owl to break the stillness. Outside of the little shanty the blackest night prevailed. Even the light of the fire did not seem to penetrate it. We appeared to be closed in on all sides by a wall of the blackest blackness.

Such was the state of affairs when Nuel, after knocking the ashes out of his pipe and giving his stomach a few gentle pats, said, "Spomus we go sleep now. I watch fire. I 'fraid we no have good day on morrow."

It was long before we slept. Of course I was awake a long time after Nuel commenced to breathe that quiet and long breathing for which I think the Indian is proverbial. How long I had slept I do not know, before I was conscious of a pain in my back. It was not sufficient to regularly wake me up, but I felt a disposition to turn over, and when I had done so I wanted to turn back again. And then when I did sleep there seemed to be an uneasiness somewhere.

It was not until I opened my eyes in the broad daylight and attempted to rise, that I fully understood the truth, an attack of lumbago. I knew what to do with it, but it would necessitate my being quiet for a day or perhaps two of them.

Nuel was still sleeping and I thought it best to let him sleep. On the previous morning I had been debating in my own mind, how long our supplies would last, if his eating powers continued as he had then displayed them. I concluded, in the event we found no game, I had enough for five days and a half, and now I thought it would pay me best to let him sleep. I saw there would be no chance of hunting that day. It was raining just as hard as ever, and I knew that during the night there had been no let-up to it.

Nuel did the cooking this morning alone. He seemed much concerned about me. Wanted to do everything for me that a white man would do. He said, "Shall me rub um your back? Put water on um?" And I do not know how many other things. When I declined all his kind offers, he said, "Den me keep um you warm." This I had told him was the best thing, and that when the weather cleared up, I thought I would feel better.

It was a tedious day. The rain continued with few intermissions until nearly night. Nuel slept and ate and smoked and talked. But he did more than this. He did as he had promised, and while it was wet and damp outside, within the shanty all was as warm as one could wish. He did keep a good fire going. Then his talk helped beguile the weary hours, and a red squirrel that seemed to regard us as intruders on his domain, assisted him.

This squirrel was a source of entertainment in himself. It was curious to watch the caution with which he first put his nose inside the roof of the shanty, and then the familiarity at which he finally arrived. He seemed to be less afraid of the Indian, though, than he was of me.

Then of course there were the usual Canada jays around, and I had a glimpse of several smaller birds. The bottom of the canoe was the playground of three bedraggled squirrels that were not allowed to come any nearer.

The darkness set in again as usual at 6:30, but before it came Nuel said to me, "We goin' to hab um fine day 'morrow. Hear um loon call. Hear um owl hoot. See um white line in wes'. Smell um good smell. All same. Make um one fine day."

Nor was he wrong. Before we went to sleep he told me, "See um star, Doc'or," and later on in the night I caught a glimpse of the setting moon.

This morning he was awake in good season, and so quietly had he gone around the camp that he had the breakfast almost ready before I woke up. His first remark on seeing my eyes open was, "Ah! How you feel? Have um nice partridge for you. Come, eat um breakfas'. Make um you feel strong."

I was ready for this. The pain had nearly left me and now only a weakness remained.

While at breakfast Nuel proposed the following plan. Said he, "Doc'or, you no hunt um deday. You no walk far. You be near camp. Fish um off poin'." Hunt um partridge right here on islan'. One flock, maybe two, mose always in dis place. You got um some. Me go look um moose. Fine a place for call. Den mor' night, if good moon we try."

This suited me; so after breakfast I saw Nuel set out. He took the canoe and passed up the lake some half a mile and landed on the west shore. Meanwhile, after resting for some time and busying myself about the camp, I felt prepared to put into execution his suggestion respecting the partridges.

My back did not feel strong, but it did not ache; and I felt satisfied that, for this time at least, I had escaped a severe attack.

My first effort was to seek the shore and look at our surroundings. I wanted to see where we were. And then after that I determined to cross over through my hunting grounds and give them a most careful examination. This plan I carried out, though there were many places where I could not follow the shore. The low banks abutted too closely on the water to allow me to pass. I had gone nearly half way around, stopping from time to time to admire the solitude and grandeur, when, it seemed to me almost beneath my feet, up went a partridge, and then several more in quick succession followed it. By the

time the last one arose, I had gained my presence of mind and brought him down before he had alighted on a tree near the others. These I had to shoot as they sat motionless on the limbs, taking off the heads of two, since there was no chance for me in the low bushes to get a wing-shot, nor could I get further away from them in such thick underbrush.

It seemed almost profane to disturb the stillness of this place with the report of a gun. I could hear the loons call all around the lake. Whether they knew what the noise was I could not say, to me their notes sounded like a prolonged o-o-o-o with an inflection on the last letter.

But there was no help for it. We wanted birds to eat, and science has little regard for the feelings of nature or her solitudes either, when they stand in her way. She breaks in upon them as a hawk upon the fledglings. Six birds were secured here before I proceeded, and then I had gone but a little way before another was brought down. I could look off in almost any direction over the lake and see a loon, and I thought in the far distance (by the marsh we had passed on our coming) a flock of ducks feeding. The hills to my right were wooded to their summits. Only here and there was a portion of the rock visible, with the usual number of dead trees, their great branches stretching out white and gray in the sunlight, and a few red-looking spaces among the pines and hemlocks that looked as though they had been only recently killed.

Near me were a few crossbills, chickadees and nut-hatches feeding. They all seemed busy as usual and made the only familiar sounds that I heard.

It was noon before I returned to the shanty. It looked more solemn around there than ever. The fire was out and there was neither Nuel nor canoe to remind me that I was not utterly alone in the wilderness. I suppose it was this sense of loneliness that drove all thought of hunger from my mind and led me to determine at once to try for fish off the point.

I must have been here an hour or more fishing and admiring the solitude and wilderness that surrounded me, before I thought of eating. Only a dozen fish had been secured, none of them remarkably large, and some of them quite small considering the place where I was casting. I learned here that there may be small trout even in large and wild waters, though the lateness of the season no doubt was against me. But, as I landed my last fish, I began to think that something to eat would not come amiss and then it occurred to me that most likely Nuel, when he returned, would be hungry.

This ended my sporting for the day. I came back to the camp, cleaned my fish, picked four partridges, and soon had birds on spits and fish in pan, frying and roasting. These were laid aside when they were cooked and three pans of flapjack shad been piled up on a bark platter when I heard the usual Indian grunt—"Ugha"—behind me, and there stood Nuel.

His first words were: "You bees berry good to hungie Ingin. Me like um you much. Hab um big fea'. Tell you 'bout t'ings w'en we eat."

The coffee had only to be made and then all was ready. It really did me good to see my Micmac eat, although I knew at the same time that provisions might get scarce before we reached civilization. I said nothing about his morning's work, knowing right well that his tongue would be loosened before long. It only wanted two mugs of coffee with plenty of sugar to do that. I could see, however, that he was disappointed. His face had a thoughtful expression very different from the look that was upon it when I caught the trout and shot the muskrat. At last he commenced: "Doc'or, you able go trabbil now? No get sick?"

"O, I am all right now, Nuel. Only have to be careful for a day or two."

"Well, we must leab here sartin. Walk all mornin'. Long way. No see um moose. No see um moose track only berry old ones. No big moose roun' here. Spomus morrow mornin' we go udder place me tell you of. Must have um. You go?"

"Yes, Nuel, anywhere you like. Must get big moose," S.

[TO BE CONCLUDED.]

## MONTANA GAME, WILD AND TAME.

PIEGAN, Mont., Aug. 26.—The shooting season in this State opened Aug. 15. Grouse of all kinds are more numerous than they have been for some years, especially the dusky and sharptail varieties. I for one do not understand why they should be plenty one season and scarce another. The weather apparently has nothing to do with it here. The past spring was very cold and backward, with gales of sleet and snow, which should have had the effect of chilling the young birds to death.

As yet there has been no hunting in the mountains this season. The attractions of the World's Fair, together with the hard times, have caused most sportsmen to forego their annual outing in the Rockies. As a consequence the guides are dejected, and the grizzly is roaming about in happy security, and the white goat squats on the lowest shelf of the mountain.

The employees at the Blackfoot Agency have a number of interesting pets. Mr. Callahan has a badger which is the cutest as well as the clumsiest thing I ever saw. It is now three-fourths grown and as playful as a pup. It delights to roll about with the dog and visits from house to house every day. When in particularly good spirits it backs away from one, raises its head and laughs. Other pets are a coyote, and two swifts (kit foxes). These are not so tame as the badger, but will come up to one for food and can always be seen at the door about meal time.

At Mr. Kipp's ranch the other day I saw a tame wolf which the boys had clipped in imitation of a lion. They left the long hair on the neck and a big tuft at the end of the tail, which gave the animal a very grotesque appearance.

Mr. Irving Cook, Dr. Martin and several others spent a few days at St. Mary's Lake last week. Mr. Cook was on Kootney Mountain one day hunting sheep and would have killed one had he left his horse behind. He was leading the animal along, making considerable noise, when a big ram jumped up in front of him. Mr. Cooke had a snap shot and missed. The sound of the gun scared twenty or more sheep not far away, and they lost no time in getting around the mountain.

Some fine fish were caught in the lake and river by the party, including lakere, Dolly Varden and red-throated trout. The largest Dolly Varden weighed 4 lbs., and was

caught by Mr. Cooke. Dr. Martin got the largest laker. Dr. Walter B. James and Dr. Draper, of New York, are expected here the 30th for a month's outing. Wm. Jackson will guide them. They are going up Cut Bank River and across the summit, where game is very plenty. Their main object, however, in going there, is to scale a certain mountain known as "Flinche's Peak." Dr. James attempted the ascent last season, on the north side, but some perpendicular walls headed him off. He thinks now that by trying the south side he may be able to reach the summit.

Antelope are said to be very plenty in the Sweet Grass Hills. Since the Indians settled down on their reservations no one has hunted them, and as a consequence they are increasing every year. J. W. SCHULTZ.

## RAIL SHOOTING HERE AND THERE.

HACKENSACK, N. J., Aug. 31.—*Editor Forest and Stream:* So far there is little of interest to report with regard to the rail shooting. The season has opened and a good many boats have been out, but as a rule they have little reward for their efforts. The very high tides which followed the easterly storms of the past two weeks made shoving easy, and enabled the boats to cover a good deal of ground, but the birds were not plenty. On one of the days when the tide was good Mr. Geo. Van Buskirk, of this place, made the best record of the season, boating 49 rail and one yellowleg in the tide. A shover from Palisades Park, on the other hand, reports 10 birds in a good tide, and others who have gone out have returned with smaller numbers. Ex-Senator Griggs was here yesterday and tried the birds, but the tide was a poor one and no feathers rewarded his labors. HACK.

STRATFORD, Conn., Aug. 31.—*Editor Forest and Stream:* I wish that I could tell you that the rail were plenty, but I cannot tell a lie. Practically there are none. Dr. Blake, of New York, has been here for some days with a yacht, and has gone over the grounds almost daily with small returns. Other gentlemen have been up to the meadows, but all make the same report.

To-day I went up the river with four other boats, but for most of the time the flats were as silent as the grave. The tide was not high, and it was impossible to get in to the cat-tails, and if there were any birds they were hidden in these refuges. I shot at seven birds and boated six; the seventh was killed, but not recovered. Another boat, which started from the same landing with me, got eight birds and another one. The best score yet made is 26 birds, obtained during the recent very high tide, which enabled the boat to go over the highest grass.

The corn grass—wild rice—is heading out and the seeds are falling a little, although as yet they are not fully ripe and hard. There is rather more grass than usual, but it is thin and has a yellow frost-bitten look, which is unusual at this season of the year. This may possibly be due to the summer drought, or to the recent high tides which must have brought up a good deal of salt water.

It is extraordinary how the rail have diminished in numbers of recent years. Nowadays there is not one where there used to be fifty. I believe that this scarcity is largely due to the early opening of the season, which admits of the killing of all the birds on a marsh before the beginning of the migration. Everywhere the slaughter begins long before the first flight, and the birds of each feeding ground being cleaned out, there are none left to start when the time for migration comes. Thus, the only shooting is at the native birds of each marsh, and this lasts only for a few days, as the birds are tame and feeble and are soon killed off. These views were expressed editorially some years ago in *FOREST AND STREAM*, and since that time I have been watching the thing for myself, and believe that this explains the deplorable lack of this delightful sport.

If I were the Emperor of the United States I would chop off the head of every man who went rail shooting before Sept. 15, and the result of this decapitation would be that in about three years we would have such shooting as we used to have twenty years ago, when a man thought birds were scarce unless he got forty in a tide. In those days ninety to one hundred birds was a good score, though much larger ones were often made.

I never expect to see good rail shooting again. ONYK.

## Evil Deeds of Tenderfoot Days.

FLORISSANT, Col., Aug. 19.—*Editor Forest and Stream:* An article in your paper of recent date, referring to a certain party who had killed woodcock out of season and sent their bills to the game warden to taunt him, and your correspondent's wondering "Why such cattle lived," brings to mind a circumstance of equal, or worse, butchery which I took a hand in a few years ago; and I now wonder "Why such cattle [as we] lived." A friend and I arrived from Pennsylvania in the month of June. Our first ambition was for a hunting and fishing trip. We were soon in camp, twenty-five miles from town. The next morning we started on our bloody career. A few hundred yards from camp a deer (which we took to be a five-point buck) slowly walked out on a cliff near by and looked at us with the innocence of an old mule. Our first action was to blaze away, both of us, shot after shot, until the animal lay down to die. On our reaching it we found we had crippled a poor old doe, but this being our first deer we cut her throat and dressed her mangled carcass with great pride. We did not have sense enough to look for the fawn, but hurried into camp with our meat. The next morning we started again. When near the same place I heard John shoot and found he had shot a little doe fawn, probably a week old. Just then its twin jumped up close by and I captured it, as it did not attempt to run. We took it to camp, stuffed it full of flour and water, and in a few hours it died. In two days we had murdered this happy family of innocent deer, killing the mother in a most cruel manner and ignorantly and brutally destroying the little spotted twins. Pennsylvania tenderfeet should not be allowed to handle a gun until they have lived in this State at least five years. S. T. S.

## Protection for Dead Skunks.

*Proceedings Chenango County (N. Y.) Supervisors.*

At the regular annual meeting of the Board of Supervisors of the County of Chenango, convened at the Court House in said county, on the 14th day of November, 1892, doth enact as follows:

Section 1. No person shall catch or kill, or attempt to catch or kill (except upon their own premises, or upon the lands or corporations of villages), or have in their possession after the same has been killed, any mink, muskrat, coon or skunk, which was killed out of season,

## IDAHO HUNTING RANGES.

MOUNTAIN HOME, IDAHO, Aug. 23.—*Editor Forest and Stream:* In looking over a copy of your journal, so very interesting to the sportsman, I have been impressed with the duty of calling attention to a few of the attractions to the hunter of large game, offered by this section of Idaho. Located at the base of the foothills of the Sawtooth range to the north and northeast, this place is most favorably situated as an outfitting point from which the hunter may have ready access to the mountains. Mountain Home has among its inhabitants many mountaineers whose lives, or many years of them, have been spent in this country and who are familiar with the great and interminable mountain ranges to the north which offer such inducements to the hunter. In the fastnesses of these rugged mountains may be found the black, brown, silver-tip and sawtooth grizzly bear, deer, antelope, mountain sheep, elk, mountain lion, cougar, lynx, wildcat, wolf, and small game in abundance, such as ducks, geese, grouse, pheasants, sage hens, etc., while the streams and lakes abound in trout and other fish.

Only a few days ago a resident killed three black bear on Bennett Mountain, twenty-five miles distant. Deer are in great abundance in the mountains, and as soon as snow appears work down to the foothills for feed, and are then plentiful within from fifteen to twenty-five miles.

A party coming here with the object of hunting any of the kind of game mentioned may obtain comfortable hotel accommodations during their stay, and secure the necessary supplies to outfit them. Pack horses, vehicles and guides may be employed at reasonable rates, as these people have yet to learn the art of extortion.

The hunters who yearly visit this immediate locality from the East are comparatively few, have their acquaintances or friends who take charge of them upon their arrival, and at the close of their vacations the visitors return to their homes satisfied with what they have found and seen and the treatment they have received.

It is the simple purpose of this letter to call attention to this locality, and the writer will cheerfully and promptly reply to letters of inquiry which may be addressed to him, and if requested will give the names of hunters and guides who may be employed and the prices at which they will agree to furnish their services and that of animals and vehicles, and make arrangements so far as may be done on behalf of correspondents, and will do it gratuitously, as he knows that by bringing this locality to the attention and knowledge of the people of the East, good to the country is likely to grow out of it. E. C. CURREY.

## BOSTON SHOOTING AND FISHING REPORTS.

FRIDAY, Sept. 1, was the opening day on game birds in Maine. Reports are not very satisfactory thus far. Two or three Boston hunting parties went into Maine Thursday evening in order to be on hand the first morning. Some of the hunters were to remain over Labor Day, Monday, and consequently they have not been heard from. Mr. Samuel Roberts, who is very fond of woodcock shooting, started for the vicinity of Bridgton, where on former seasons he has obtained some birds, rather to the surprise of the natives. But this time he got no birds, and, with his friend, he is somewhat disgusted with bird shooting in Maine. He says that every boy has his flocks of partridges marked before the opening day, and early that day he heard their guns. He saw no partridges, and is under the impression that they are very scarce. In the vicinity of Paris and Norway, in Oxford county, there are some birds reported. But there the boys have the broods all located, and the outside gunner has "got to get up early in the morning" to get ahead of the country boy. One boy in Hebron, a graduate of the Edward Little High School, in Auburn, has six flocks of partridges located, and he has already obtained several. Lewiston and Auburn gunners were early out after the birds on the opening day, but reports say that they have found only a few. Partridges are reported more plenty than last year in the vicinity of Dixfield and Weld, and at the head of the Portland & Rumford Falls Railroad.

A number of Boston gunners were to spend Labor Day in the woods of Maine, New Hampshire and Vermont, and it is possible that some good bags of birds are yet to be heard from. In the neighborhood of Vernon, Vt., Mr. J. O. Frost, well known in the Boston flour trade, says that he has seen more partridge this year than for several seasons. Last year, in riding over the same grounds, he scarcely saw a single ruffed grouse, and no flocks at all. This year he has seen a number of flocks, with many single birds. Several coveys of quail have also been seen, and Mr. Frost thinks that they may be the offspring of those he put out several winters ago. These birds disappeared at the time, but there are quail in the vicinity now, where such a bird was rare previous to the stocking, which Mr. Frost, in the liberality and good-heartedness for which he is noted, undertook. Some of the Chamber of Commerce boys and also the newspaper boys, are pretty sure of an invitation to hunt in Mr. Frost's vicinity this season.

The Inglewood Club's preserve in New Brunswick has been well patronized this season thus far and now the shooting season is about to begin. Members of the club and invited guests are getting ready for shooting trips. Partridges are reported plenty on the club's preserve. A good number of fish have been taken this season and matters with the club look prosperous. A big sea salmon has been seen by one of the camp keepers just below the lower dam in the Musquash River, the outlet of the club's lakes. This fish was a monster and he was up the river some five miles from the salt water. The club has provided a fishway past their lower dam and it is believed that the big salmon may have gone up into the club's waters to spawn. This, if it is the reality, is making progress even faster than the club's officials had hoped, although they had stocked the lakes and streams with salmon fry two or three years ago. These fry they had expected to return to the club's lakes and streams to breed after maturity, but they have scarcely expected a run of sea salmon so soon, though the waters were the breeding grounds of these fish before the dams in the river were constructed.

In spite of the hard times, hunting and fishing parties, en route to the woods and waters of Maine, by special Pullman cars, are very common this season. Money may be tight, but the sportsmen seem to have enough to pay for special palace cars. An official of the Maine Central

Railroad in Boston the other day, says that there has been a good deal of travel into Maine this year by special cars. Anybody can have a special car by paying \$45 for the privilege, and eighteen regular fares. Then he can invite seventeen of his friends to accompany him, if he chooses, or he may occupy the car alone; it matters not to the railroad company. The last special car into the Maine wilds, from Boston and vicinity, went in by way of Hartland.

City Editor W. D. Sullivan, of the Boston *Globe*, with a friend, has been into the Maine woods on a hunting and fishing trip. What their success was I have not yet learned, but presume it to be good, since Mr. Sullivan is almost always successful. Mr. M. W. Thairwall, of Boston, has a very handsome and commodious camp on Boot Pond, in Plymouth, and he delights in taking his friends down there. A jolly party of fishermen left for that camp on Saturday, composed of Mr. Cobb, of Brewster, Cobb & Eastabrook; Mr. March, president of the Inglewood Club, and Mr. Donnam, the well-known Boston singer. They are the guests of Mr. Thairwall and they speak in the highest terms of his entertainments. They will try the bass and pickerel fishing in Boot Pond, and the other ponds in that vicinity. The camp is in fact in the midst of the many Plymouth ponds, a town which is said to have a pond for every day in the year. The party will remain over to Wednesday.

Mr. Cook, of John P. Squire & Co., and a brother-in-law of Walter Hill, has been trying the codfishing again in the neighborhood of the Isle of Shoals. It will be remembered by the readers of the *FOREST AND STREAM* that with Mr. Hill and their ladies they had a rather rough codfishing trip to the same grounds early in the summer. It was on that trip that Mr. Hill declared that he would rather catch a 3lbs. trout on a nice rod than to catch a dozen 20lbs. codfish. But Mr. Cook is becoming an enthusiast in codfishing, and well he may be. With his son and the skipper of the boat they took nearly 1,000lbs. of codfish off the Second Ledge the other day. Mr. Cook tries to make Mr. Hill understand that the fishing was something magnificent.

It has been a dull August at the Rangeleys, so far as fly-fishing is concerned, but the region has been pretty well patronized by tourists and summer boarders. Sportsmen and frequenters of that region are expecting a season of good fly-fishing in September. Mr. N. G. Manson, Jr., of Bellows & Manson, expects to go to his camp early in September. He has a beautiful spot on Cherry Tree Point, at the upper end of Richardson Lake. His friend Mr. Bynner, of Cambridge, also in the iron trade, will doubtless go with him. Mr. Manson has added a guide house to his camps this summer. Oscar W. Cutting, of Andover, will doubtless guide Mr. Manson, as usual.

Mr. C. Z. Bassett, of Appleton & Bassett, will make his usual gunning trip to his special spot in New Hampshire about Sept. 25. A friend will doubtless accompany him, and the friend's name would be mentioned here but from the fact that the friend does not like to be advertised as being away from an extensive practice. SPECIAL.

## Trajectory of the Remington .40.

*Editor Forest and Stream:*

Your readers who love the rifle, as I do, may be glad to know the trajectory of the Remington No. 3 match rifle, .40-65-330. I had this rifle out in the Maine woods in 1891 and with it bagged a noble moose, whose antlers now grace the dining-room of the New York Athletic Club. Your report of trajectory trials gives the flight of bullet from this rifle for 200yds.; but the hunter in the Maine woods needs to know the trajectory for a longer distance than that. By order of the Ordnance Department this rifle was tested at the Frankford Arsenal, Philadelphia, Aug. 10 last, under the eye of Lieut.-Col. I. S. Farley, U. S. A., by Capt. Charles H. Clark, U. S. A. The following are the figures obtained:

Distance from Firing Point.	Rise of Bullet, with 65.1grs. Powder, 331grs. Lead.	Rise of Bullet, with 68.1grs. Powder, 331grs. Lead.
100ft.	1.685ft.	1.585ft.
200ft.	3.246ft.	3.233ft.
300ft.	4.558ft.	4.504ft.
400ft.	5.681ft.	5.589ft.
500ft.	6.596ft.	6.508ft.
600ft.	7.344ft.	7.134ft.
700ft.	7.790ft.	7.650ft.
800ft.	7.888ft.	7.703ft.
900ft.	7.874ft.	7.609ft.
1,000ft.	7.356ft.	7.114ft.
1,100ft.	6.588ft.	6.412ft.
1,200ft.	5.557ft.	5.343ft.
1,300ft.	4.085ft.	3.914ft.
1,400ft.	2.274ft.	2.145ft.
1,500ft.	0.0ft.	0.0ft.

The initial velocity with the charge of 65.1grs. was 1,405ft. per second. Remaining velocity at 100yds., 1,249ft.; at 200yds., 1,098ft.; at 300yds., 1,000ft.; at 400yds., 929ft.; at 500yds., 858ft.

The initial velocity with 68.1grs. of powder was 1,406ft. H.

## The New York Woodcock Season.

CORTLAND, N. Y., Sept. 2.—I can indorse H. W. B.'s opinion expressed in last week's *FOREST AND STREAM*, as to the size of woodcock killed in the early part of the New York season. The birds are pretty small, weak, floppy things, and don't afford half the sport they will a month later. I think the same rule applies to ruffed grouse. The young birds one gets up now are not full grown by any means; at any rate a good share of them are not. It does not take a shooter of tried and true experience to get a few birds now, when their abiding place is found. But a month later it will take a quick eye, a lot of experience and a good shooting gun to bag the stiff-winged grouse. The two-thirds grown bird of August is a slow imitation of the royal crested grouse of October.

I am not expecting much sport yet awhile. From advice just at hand I should say the woodcock crop is light hereabouts, and the supply of grouse just "fair to middling," as the grain market reporter would say.

M. C. H.

## A Lucky Accident.

FOR years and years I "rot" hunted; but during the whole period I did not succeed in bagging one ruffed grouse. I never attempted to "crawl up on" an old drumming cock, but once I got a shot at one that was sitting upon a log beside the path I was treading. But with thumping heart I saw him take wing and plunge into the forest. Indeed my boyish fancy pictured the

felicity of that moment when with my own eyes I might see one of these thunderers tumble to the report of my gun.

For a particular reason I need not mention I ceased shooting for several years, not expecting to take it up again. But one day one of my old schoolmates came to me and asked me to take a hunt for grouse, "For" said he "I got a partridge the other day which old Uno treed. We'll take the dog along and he may treesome more for us." I consented. Well, we got among the—to us, noble birds sure enough; but not one of them took to tree. At last, from the pure impulse of chagrin, I poked my gun in the direction one was flying and pulled trigger. The bird fell. Great was my astonishment as well as delight. From that time I took to shooting on wing, and with this kind of game I was, through practice and a knowledge of the bird's habits, a successful gunner. With two wing-shooters in several hunts we got 19 grouse, I scoring 17. So pot-hunting lost its charm for me. N. D. E.

## A Schenectady Panther.

A PRESS despatch from Schenectady, N. Y., dated September 3, announces the killing near that city of a full-grown male panther weighing 140lbs. In these days of fake stories about wild beasts, one regards the tales printed by the daily newspapers with a good deal of suspicion, but there is nothing inherently improbable in the main features of this story. The animal is said to have been annoying the farmers of Glenville, N. Y., by destroying calves and sheep, and at last to have been killed at Mohawk, a suburb of Schenectady on Sunday night. It is supposed to have wandered down from the North Woods.

## Lake Surprise in Texas.

OFFICE OF COUNTY CLERK OF CHAMBERS COUNTY, Texas.—Wallisville, Aug. 26.—Lake Surprise in the southern part of this county, well known through your columns as a resort for waterfowl, especially for canvasbacks, and which has hitherto been reserved from sale by the State, has now been patented to private parties. An earnest endeavor will be made by the owners to make such a preserve of it as will induce the clouds of canvasbacks feeding here in former years to return. J. R. WOOTEN.

## "FOREST AND STREAM" AT THE FAIR.

## Around the Pavilion.

ANOTHER big tarpon has been put on exhibition by the Exposition authorities, but it weighs only 196lbs. and is not "in it" with the *FOREST AND STREAM* fish. The *FOREST AND STREAM* tarpon would whip it with one hand tied behind its back. The Wisconsin trout have been moved out of the sun. Many of the large trout both of Wisconsin and Pennsylvania have disappeared. Of the small trout which Col. Gay had trained to climb a fishway in the Pennsylvania exhibit, many have climbed the golden stair. The lake water is just a degree or so too warm for the best trout results.

Col. Gay's whiskers have grown three inches longer since the opening of the Fair, and while seeking him the other evening to talk this over with him, I met one who informed me that Col. Gay was, on July 15, appointed on the board of the Pennsylvania Fish Commission, vice Mr. Welshons. Under Gov. Pattison's earlier administration Col. Gay was president of the board. Not long ago Gov. Pattison was elected again, and last month, while the Governor and staff were out visiting the State exhibit at the fisheries, the Governor called Col. Gay up, complimented him highly for the manner in which he had represented the State at the Fair, also complimented him upon his improved personal appearance since coming to Chicago, and told him that he was again a fish commissioner of the State of Pennsylvania. So far as the anglers' pavilion contingent is concerned, this is a popular selection.

## Hard For The Fish.

The long summer season is proving hard for the fish. Under their new conditions many of them are distinctly changing their colors. The bass in the pavilion are becoming decidedly "tucked up" in appearance, and seem to be off feed. Cool weather may help them.

## Old Kentucky Reels.

One of the most valuable features of the *FOREST AND STREAM* exhibit is the case of old Kentucky reels kindly lent by Dr. Jas. A. Henshall. There are among these some valuable curiosities indeed, one reel being sixty-five years old, to say nothing of the odd and rough-looking specimens of reel making attempted in early days by village blacksmiths, who had not the skill of the old Kentucky watchmakers like Snider, the Meeks, Milam, etc. It is astonishing how well and honestly these old reels were made. Mechanically they were well nigh immortal. Out of Dr. Henshall's case of ancient ones you can find several which even now twirl merrily as ever, and are practical tools to-day. It is certainly established that a reel can live as long as a man.

In the case of Milam reels exhibited in the Pavilion, not far from Dr. Henshall's collection, there is another interesting, if more modern collection of Kentucky reels, of all sizes, and up to \$65 in value. Here also, by the way, is an imperishable, of which the label says it "passed through the Southern Hotel fire, and is as good as new."

## Other Reels.

I may perhaps earlier have said something about the case of reels shown by A. F. Meisselbach & Bro., of Newark, N. J., but these should not be missed. The goods, consisting chiefly of large single-action reels, with a few rod-holders, landing-nets, etc., are nicely arranged for easy grasp of the eye. As interesting as any to the freshwater folk is the "Expert" reel No. 18, a black bass reel, made with adjustable click and back sliding drag. The unnecessary side metal is all cut away in these reels.

## A. B. Shipley &amp; Son's Exhibit.

When I was a boy and used to go fishing with my father, we caught our minnows in a dip net such as my father said they formerly used back in old Virginia. It had a flat bottom stretched tight by four bows, whose heads were wedged tight in a head-block. To this block

we tied the pole with which we raised and sunk the net. These nets we used to make ourselves, using mosquito bar for netting, which tore rather easily. I see that Messrs. A. B. Shipley & Son, of Philadelphia, are making just about such a minnow net, only they have a linen netting.

There are also other good things in the general line of angling appliances which Messrs. A. B. Shipley & Son show in their two cases in the pavilion. The bulk of the exhibit consists of their specialty of bethabara rods, of which they show among others a bethabara tarpon rod, a Henshall bass, a combination, and a clever-looking tool with reversible butt for combination work. The most elaborate rod is the full-jeweled and gold-mounted beauty in the special case, valued at \$250. Yet another handsome double enamel bamboo is interesting and fine, and you have the more confidence in it after examining the sectional showing the process of making, in which the whole piece used is made up of the flint or enamel of the bamboo, which is not only used in strips, but in a veneer, doubling the fabric throughout. The firm show, also, numerous knick-knacks and handy things for the craft; a novel hand support; tarpon snoods, one made of rawhide; "hawser-laid" leaders; a gaff, a fisher's knife, a hook holder, with flies, books, reels, nets, useful tools, etc., etc., in all a very useful and businesslike display of sterling goods.

A Bit of Color.

Those passing by on their way to the Anglers' Pavilion may see to the left of the main portal as they pass west, a bit of color which catches the eye and might hold it for a moment well enough. This is a modest case which contains just nine flies, all salmon flies and all beauties, radiant as only the salmon fly can be. This handsome display, all too small though it is, came all the way from auld Scotland, and was sent by Wm. Turnbull, of Edinburgh town.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Sea and River Fishing.

Visitors to our Exhibit in the Angling Pavilion at the World's Fair should not fail to examine the stock of "Forest and Stream" books which will be shown by the attendant.

### WHERE FISH TEEM IN MICHIGAN.

ASHLAND, Wis.—*Editor Forest and Stream:* As I am a regular reader of your paper and a crank on one subject—fishing—and having fished a great many lakes and trout streams in northern Wisconsin and southern Michigan, I have concluded to try and repay some of my brother anglers in the way of a fishing score. For some time I had wanted to try Thousand Island Lake for lake trout, having seen fish taken from there which were beauties.

On a May Monday I set out, taking tent, boat and camp utensils. At Watersmeet, Mich., I picked up Wm. Revoy as guide, and at State Line was met by Geo. A. Deland. He loaded my boat and other things into his wagon and we started to his camp, twelve miles distant. Thence, the next morning, we started out in our boat for Thousand Island Lake, Mich., going through Mamie or Chain Lakes for about three miles, making a portage of about 100ft. into another chain of lakes, and then about two or three miles, arriving at our destination by 10 A. M.

And what a lake it is. There are sixteen islands; each island has rocky bars running out in some direction or other, and always to deep water. We camped on the first island we came to and put up our tent and made arrangements for several days' stay. While the guide and I were doing this, Mr. Delano said he would see if the fish would bite. In an hour's time he returned with two lake trout of 4½ lbs. and 8 lbs.

At noon started out to test the water I had so long wanted to try. I had a No. 11 Bristol steel rod, a No. 1 Natchaug silk line and a 4½ Skinner spoon. Mr. Delano said, "Rather light for such fishing as we have here." But the following will show that it was heavy enough for the work laid out.

Score. May 16.—Just let out about 50ft. of line. Something struck rather heavy, and at noon I took one lake trout of 6½ lbs., 1 P. M. one of 6 lbs., 1:35 one of 5½ lbs., 1:48 one of 4½ lbs., 2:35 one of 3 lbs., 2:55 one of 2½ lbs., 5:40 one of 2½ lbs., 5:55 one of 2½ lbs., 6:20 one of 8 lbs., 6:35 one of 4½ lbs.

While I was doing this Mr. Delano turned up with one which weighed 12 lbs.

May 17.—Commenced at 6:05 A. M. At 6:35 A. M. one lake trout of 2½ lbs., 6:57 one of 3½ lbs., 8:27 one of 5½ lbs., 10:00 one of 5½ lbs., 10:10 one of 5½ lbs., 11:05 one of 5½ lbs. Started out at 1 o'clock, after dinner: 1:25 one lake trout of 7½ lbs., 1:35 one of 5½ lbs., 1:45 one of 5½ lbs., 1:55 one of 2½ lbs., 2:10 one of 4½ lbs., 2:28 one of 3½ lbs., 2:47 one of 8 lbs., 3:00 one of 5½ lbs., 3:23 one of 4½ lbs., 4:03 one of 3½ lbs., 4:23 one of 3½ lbs., 5:45 one of 3½ lbs., 6:05 one of 6 lbs. Then I was tired out and went to supper.

Thursday, May 19.—I began at 7:10 A. M. At 7:35 one lake trout of 2½ lbs., 9:50 one of 4½ lbs., 10:03 one of 2½ lbs., 10:12 one of 8 lbs., 10:35 one of 3½ lbs., 10:42 one of 3½ lbs., 11 one of 3½ lbs., 11:03 one of 4½ lbs., 11:11 one of 9½ lbs.

At 11:30 went to dinner and commenced at 2:45 P. M. At 2:55 one lake trout of 3½ lbs., 4:05 one of 3½ lbs., 4:37 one of 3½ lbs., 6:30 one of 4½ lbs., 7 one of 8 lbs.

May 19.—Commenced at 5:57 A. M. At 6:06 one lake trout of 2½ lbs., 7:20 one of 2½ lbs., 7:27 one of 4½ lbs., 7:50 one of 3½ lbs., 9:15 one of 2½ lbs., 9:35 one of 12½ lbs., 10:35 one of 2½ lbs., 11:03 one of 3½ lbs., 11:10 one of 3½ lbs., 11:20 one of

3½ lbs., 11:30 one of 2½ lbs., 12 one of 4½ lbs., 12:17 one of 9½ lbs., 12:38 one of 2½ lbs., 1:07 one of 2½ lbs.

I quit fishing at 1:10, having in the four days hooked 64 fish and landed 59. I then broke camp and returned to Delano's; stopped all night and returned to the railroad with 25½ lbs. of fine lake trout, which were distributed among the M. L. S. & W. boys between Watersmeet, Mich., and Ashland, Wis.

The waters between Delano's and Thousand Island Lake are beautiful and beyond description. Large and small-mouthed black bass, green bass, brook and lake trout are all found close to Delano's; and mascalonge may be had within four hours. These make it a desirable place for such cranks as I am. Lake trout will not bite good from June 15 until after Sept. 1, nor until the water begins to get cool, but fishing will then be good until it freezes up.

J. B. C.

### ANGLING NOTES.

#### A Wrinkle.

I CAME across in my tackle trunk a device, if it may be so termed, that I once improvised and have since used to save leaders. It is such a simple thing that I presume I never before thought it worth mentioning. For bait-fishing I use what our English brethren call a "trace," which is a gut leader (although a trace may be of gimp), with several swivels tied in between the gut lengths. The trace is intended in England for spinning, but I have found it the best kind of a leader for bait-fishing for black bass or any other fish lured with a live bait, be it in still-fishing or trolling. Long ago I discarded cast sinkers in still-fishing and live minnows were to be used, as a couple of split shot on the trace with the swivels were enough to keep the bait fish below the surface, and at the same time this weight did not prevent the bait, when hooked under the back fin, from roving over quite a bit of water. On occasions I have found my tackle book to be without traces when I have desired to use bait fish in my fishing, and I have been obliged to use leaders intended only for fly-fishing. Such a leader, after it has had split shot pinched together on it, is ruined for fly-fishing, for if the shot are removed and the strength of the leader is not impaired, the flat places left by the shot make it appear weak, and they are unsightly. In a trace it is of no consequence, for once the shot are on it there they remain until the trace is done for.

On one occasion I was fishing for landlocked salmon where the fish grow to upward of 15 lbs., and found it prudent to put on a new trace, and found I had none in the boat heavy enough. I opened a fly-book and the leaders were nearly all light ones, and I was forced to use one of Forest & Son's salmon leaders made for fly-fishing. It seemed to me to be little less than sacrilege to squeeze together on it a lot of split shot that would take my bait to the bottom. I had some gut lengths looped at each end for attaching looped bass flies to a leader in trolling, and I took one of them and put the shot on it and then fastened the snelled hook to one loop and the leader to the other, and thus saved my leader. The gut length with the shot on it may be taken out or put in as occasion demands, and it is a convenience as well as a saving of leaders.

#### From Over the Sea.

English newspapers quite generally recognized the fact that Izaak Walton was born 300 years ago the ninth of the present month of August, and *The Sketch*, of London, issued on Aug. 9, very appropriately devoted several pages to "The Walton Tercentenary," all profusely illustrated with subjects relating to Walton's life or death. The text consists of an interview with Mr. R. B. Marston, and it is quite apparent that the writer and interviewer is no less than the famous "Red Spinner," Mr. William Senior, angling editor of the *London Field*. The interview concluded by making reference to an announcement which lately appeared in FOREST AND STREAM, and the following is an extract: "In the course of further conversation Mr. Marston, sounded as to his opinion of American editions (of Walton), said that on the whole Dr. Bethune's notes were the most practical, and Lowell's preface to a more recent edition a delightful essay. 'The Compleat Angler' is only a classic, however, among English-speaking people; the only translation has been a German rendering of the 'Ephemer' edition. As to cheap issues, the price of the first edition in 1653 was 18 pence, but the cheapest ever published was the 3 penny publication in Cassell's National Library, edited by Henry Morley. 'You know,' said Mr. Marston, 'that the only portrait we have is Huysman's painting in the National Gallery, and that has been copied and worked up in all manner of ways. My photographs speak for themselves.'"

Mr. Marston refers to the illustrations in his "Lea and Dove" edition (the 100th) of Walton, which is the most sumptuous even issued, and which cost \$10,000 and upward to publish. Continuing, the writer in the *Sketch* says: "When the type of the 'Lea and Dove' edition was distributed, and the decks generally cleared after the work was done, the plates were converted by Mr. Marston into a few presentation boxes. The unregenerate, I believe, use them for cigars. As a brother of the angle one came my way, and it is sacred to the choicest salmon flies, in which moth enters not, nor does rust corrupt. Faint outlines of the etching still remain on the burnished sides of this copper coffer and an inscription on the lid tells the story: 'This box is made from the plates from which the illustrations of the 100th edition of the "Compleat Angler," by Walton and Cotton, edited by R. B. Marston, were printed in 1889.'

"Leaving the editor fondling his treasured editions, I caught a glimpse through the door of a group of five bonnie boys and girls with *Mater* and governess on the lawn, which prompted the remark: 'So they have been making an increase to your family, have they?' My victim looked so startled that in mercy I added, 'I refer to that new Canadian trout which our old friend Cheney has, in your honor, christened *Salmo (Salvelinus) marstoni*. I saw it all described in the American press, and it is said to be the most beautiful of the charrs. You are really a most fortunate young man. You edit a paper, have brought out the best edition of Walton, kill trout when others fail, go a-fishing with William Black, name your eldest girl Lorna out of friendship to Blackmore, have a new fish fastened on you, and are dialogued for the *Sketch*.'" Mr. Marston has stated in the quoted interview the price at which the first edition of Walton was issued, and I have given the cost of Mr. Marston's one

hundredth edition, and on Aug. 9, last, the anniversary of Walton's birth, Pickering & Chatto, the London book-sellers, wrote to Mr. Marston that they had that day sold a copy of the first edition of Walton to a bookseller at Cleveland, O., for £235, or about \$1,175.

This reminds me of the very last letter that I received from the late Thomas Westwood, peace to his ashes, and may kindly, loving thoughts of this "Nineteenth Century Walton" ever abide in the minds of men, in which he told me of the sale and dispersion of his books, his "little ones," as he called them. He said: "I scattered my thousand volumes over the world. New York got the best of them. I think New York gets the best of most rare and curious things now-a-days. I have never ceased to regret having parted with my collection. Blackstoned be the day when that insinuating and pertinacious Ellis of Bond street rang at my bell and found me at home, and administering a philter to my unconscious self (he must have administered a philter!) which so steeped my senses that he appropriated then and there my 'little ones'—all my little ones, and left me desolate. \* \* \* Moral. Never part with a collection if it is a good one. Good things, rare things, curious things, are sure to increase in value, besides being a joy forever." The advice of the author of "The Chronicle of the Compleat Angler," "Bibliotheca Piscatoria," etc., etc., is safe, surely, to follow.

#### Fisherman's Luck.

I read a dispatch a short time ago which stated that Robert Lenox Banks, Jr., of Albany, son of Gen. R. L. Banks, president of the Lake George Fish and Game Protective Association, which has done so much to restock Lake George with lake trout, had made the largest catch of lake trout ever taken from Upper Saranac Lake. He caught in one day twelve trout weighing 120 lbs., the largest weighed 18 lbs. A few days later he caught four trout, weighing respectively 20, 14, 15 and 9 lbs., or a total weight of 58 lbs. Reading this remarkable score took me back in memory four years to another day of trout fishing on Upper Saranac Lake, when Mr. Banks was also high hook. Early in the morning seven boats were drawn up on the float at Saranac Inn and seven guides waited for the appearance of their fishermen, who were Dr. S. B. Ward, his brother, Mr. Grange Sard, Mr. R. L. Banks, Jr., Col. A. H. Belo and Wm. D. Cleveland, of Texas, and the writer. The time was May, but the sky was cloudless and the sun hot with no prospect of wind, and altogether the prospect was so unpromising for fishing in comfort that Dr. Ward, his brother, and Mr. Sard turned back from the float. The others put off in their boats with the water like glass. In about half an hour Mr. Banks said he would leave me to broil if I liked it, and he turned back. Col. Belo, Mr. Cleveland and I fished all day and caught together nine trout weighing 53½ lbs., the largest 13½ lbs., falling to Mr. Cleveland. It was a blistering day, but when we looked at our fish that night we were rather glad that we had been blistered. While we were at supper at the Inn Dr. Ward sent word to come to his boat house as soon as we had finished, as he wished me to hold an inquest. Arriving there we found stretched on two towels on the carpet a lake trout of 19 lbs. 1 oz., which had been caught that afternoon after 5 o'clock by Mr. Banks. He told me that he was coming down the lake to meet us and find what luck we had had and struck the fish directly in front of the inn and only a pistol shot away from the float.

#### Hudson River Salmon.

A gentleman from West Troy tells me that a number of salmon have been caught in the Hudson below the Troy Dam within the past few days. The fish were caught on the West Troy side of the river, near the canal of the Roy Mills. The largest salmon weighed 28 lbs. and was killed by John Oathout, of West Troy. The water has been well "up" in the river for a week, and it has given the fish a chance to go as far up stream as the present fishways permit.

#### A Big Yellow Perch.

Whenever I meet Dr. Edward Eggleston I feel sure that I shall draw a fish item out of him before I leave him. I met him to-day and he surprised me by saying that he himself had broken a fish record in Lake George by catching a yellow perch from the waters of Dunham's Bay that weighed 1½ lbs. This is, to the best of my knowledge, about three-quarters of a pound more than any perch ever before taken from the lake.

A. N. CHENEY.

#### Lake Wayagamack Trout.

MONTREAL, Aug. 28.—On the 12th inst., at Lake Wayagamack, a beautiful island-studded sheet of water sixty miles in circumference and situated in the territory of the St. Maurice Club, 100 miles north of Three Rivers, there were caught by four rods in three hours' fishing fourteen speckled trout, weighing from 3 to 6 lbs. each. Four fish killed (consecutively) by one rod scaled 5 lbs. apiece. The weather was, for the season, unpleasantly cold, with occasional heavy showers of rain. This lake unquestionably contains in its waters a greater number of large-sized speckled trout than can be obtained in any similar body of water on this continent; and the visiting party confined their fishing entirely to one small bay. The largest fish—a 6-pounder—contained in its stomach partly digested portions of whitefish, apparently the true whitefish of the Western lakes; and to this exceedingly nutritious food is due, no doubt, in great measure, the superior size and general qualities of the Wayagamack trout. W. H. D.

#### Greenwood Lake

LAKEVILLE, Greenwood Lake, N. J.—Mr. B. Hamburger, of New York, caught on Aug. 20 a black bass of 7½ lbs.; Mr. A. Courtin, of New York, on the 26th, one of 7½ lbs.; Mr. J. C. Jacobsen, of New York, on Aug. 26-27, forty bass averaging 2½ lbs.; Dr. R. Vandenhenden, of New York, is credited with an average daily catch of four or five, running 2½ lbs. average; and Mr. Nat. Rogers on Aug. 26 took twenty-one bass running 2½ lbs. There is a promising outlook for September fishing. R. L. PATTERSON.

#### Where to Go.

ANYBODY desiring information with regard to the hotels advertised in FOREST AND STREAM, such as rates, routes, fishing and hunting opportunities, should address FOREST AND STREAM Information Bureau, where all reasonable inquiries will receive prompt answers.

## THE BASS OF CROOKED LAKE.

FORT MEADE, Fla.—The individual who first promulgated the doctrine that "all work and no play makes Jack a dull boy" was undoubtedly a benefactor to a certain portion of the human race, and has an enthusiastic disciple in myself. Consequently when it was suggested to me by two friends that, after planting my corn, plowing and fertilizing the grove and getting some land ready for other crops, I really ought to take some recreation, my feelings were completely in accord with the suggestion.

The recreation decided upon was to take the form of an excursion to a well-known lake about twenty miles off, which is a favorite resort for fishing parties. It is appropriately named Crooked Lake, for its shape is that of a horseshoe that has been run over by a freight train. From point to point its extreme length is about 11½ miles, and its greatest breadth about 2½ miles. Numerous other smaller lakes surround it, all more or less picturesque and beautifully clear.

Our two boats were put on the wagons, and stores, tent, fishing tackle, etc., being stowed in them, off we started on a good road, with a nice cool breeze and bright sun. A halt of course was called at noon for refreshment for man and beast. Owing to our late start and a mistake as to the road on the part of our self-constituted guide, we found ourselves at sundown on the shores of a small lake about two miles north of our intended camp. However, we heard that where we were fish, although small, were plentiful. The spinners were soon at work, two of us undertaking to catch supper, while the third, assisted by a small negro brought along as general assistant (and scapegoat in case of things going wrong), rigged up the tent and put things into shape generally. In a very short time half a dozen bass ranging from a half to three-quarters of a pound were in the cook's hands, and a delicious meal they made.

As usual, a good night's rest followed. After a cup of coffee at sunrise, one of the boats was launched and two of us went to obtain breakfast. During a short trip we secured enough for both that meal and dinner also. As the fish were all about the same size—a large half pound—and as we were in search of nobler victims, it was decided after satisfying our hunger to go for our original destination without delay.

It was a heavy pull our beasts had over the steep, sandy hills between the two lakes, but our tent was again pitched about 11 A. M., and we were soon reposing inside it. Such a comfortable tent really deserves a short description.

It was imported from India a couple of years ago and cost pretty heavy—but it's a dandy to borrow. It is double, the outer one being of ducking lined with thin blue cloth, the back part coming down in a semi-circle with flaps to peg down if required, and the front of similar shape without flap forming a verandah. The inner tent is lined with pale yellow and is virtually the ordinary A tent with sides two feet deep. Every available spot is utilized for pockets, and altogether with such a tent one can really enjoy a camp-out most thoroughly. A painted canvas floorcloth to guard against damp is a great idea, and with the sides triced up for the breeze to circulate, some interesting matter to read, good tobacco to smoke and—well, what do you think?

That evening we were at work again, and we soon found that we had every chance of tiring of a fish diet, for it was literally no trick at all to catch them. Nothing over 2½lbs. resulted from that day's work (we unfortunately took a spring weigher along, so it's no use lying about it), but the next morning my partner caught one of 6½lbs., which gave us a lot of fun. We were trolling on a dead lee shore, and a very stiff breeze was blowing, which took all my strength to keep the boat clear of the weeds, which grew around the edge, when my straw hat blew off. After the customary remarks on such a subject I let the boat drop to pick it up.

Just as my partner had hold of it, whirr-r-r went his reel, and throwing my hat, full of water, into my face he began to explain forcibly that he wanted that boat kept out of those weeds, and he had his own way of putting it. It was no time for recrimination though, and by sheer hard work I got her a few yards clear and kept her there about fifteen minutes, our fish fighting very game and the tackle being light. He came to gaff finally and though unquestionably a good fish we, as usual, thought he looked bigger in the water. We lost two more beauties that morning through our tackle being too light, and to make things worse our supply of spinners (the best bait for bass in these parts) was slim to start with.

Four most enjoyable days were spent much in the same manner and at last our tackle got down to bedrock. We had lots of lines and hooks, but that was all. A happy thought at last struck one of the party and chopping up a condensed milk can with a hatchet, punching the requisite holes with a nail, tearing a piece of red cloth off a bed quilt (not his own) and wiring on some hooks, he made a fearful looking thing, which, however, got in some good work and reflected more credit on his ingenuity than on the sense of Crooked Lake fish.

During the afternoon of the fourth day when resting in the tent we were surprised by two visitors in a buggy—one a gentleman from Michigan and the other an agent who was taking him round to show him the boundaries of some land the former had bought—I believe 1,200 acres—with the intention of starting a town and growing winter vegetables, especially tomatoes. We invited them to share our camp, both of them being immensely struck with our snug quarters. Very pleasant companions we found them. They were anxious to catch a fish or two, so we lent them a boat and one of our patent milk-can-bed-quilt spinners, and they shortly returned, having hooked a good fish, which had broken the line.

Our Michigan friend was very enthusiastic about the joys of camp life, and we sat up talking till well on to midnight on various subjects, when we decided it was time to turn in. His companion was no stranger to a night in the woods and snored lustily as soon as his head touched his pillow (our sack of oats), but no such luck was in store for our Northern friend, who hardly slept a wink all night. I expect he thinks more of civilization now.

After breakfast next morning, having bade our guests adieu, we took our last swim in Crooked Lake. We then loaded up our boats and with deep regret turned our horses' heads toward home, arriving without accident soon after dark.

I can confidently recommend such a trip to any one wanting a little change, but as to physical rest I don't

know that it's a success. My back and arms are still stiff and sore with so much rowing, and I should have got along much better with a cushion on the boat's seat. One of my comrades advises me to warn every one who may read this not to take such a trip in a shirt which buttons up the back. His spine is one long blister. However, we enjoyed ourselves heartily and intend going again—there or elsewhere. R. F. B.

## CANADIAN ANGLING NOTES.

The letters of Eugene McCarthy and Kit Clarke, recently published in your columns, were read here with deep interest, and are justly considered as acts of justice toward a game fish that has been by others sadly misunderstood or met under most unfavorable circumstances. There is but little time left now to fight the ouananiche this season, which closes, so far as he is concerned, on Sept. 15, but just prior to that date there is always splendid fishing in the Metabetchouan.

A large influx of anglers is expected at Lake Edward, and in fact all through the Lake St. John country during September, when the grandest trout fishing of the entire year may be looked for, and red-bellied specimens of *fontinalis* in their handsome spawning costume are freely taken in favored localities up to 4 and 5lbs. in weight.

Dr. C. M. Daniels, of Buffalo, N. Y., and the party of friends that accompanied him up the Peribonca to Lake Tschotagama, as described in my last letter, have returned home, after luring some very heavy fish in the northern lake. Dr. Daniels also shot a large bear in the neck, but the wounded animal managed to get away among the rocks on the side of a mountain where he could not be followed.

Mr. J. S. Mason, of Boston, who fished the end of July with Dr. H. F. Hamilton, a chain of waters connecting Tschotagama, has returned to Lake St. John, from Boston, accompanied this time by Mr. M. E. Haviland, of New York, to endeavor to obtain some of the same sport he had on his former trip. This time he has ascended the Little Peribonca, intending to portage thence into Lake Aleck, and down the stream of the same name into the main Peribonca. The waters through which they are passing are reported to be teeming with trout.

Messrs. Amos Little and H. C. Butcher, of Philadelphia, have recently arrived from their waters on the Metabetchouan, where, as usual, they secured a fine catch of large trout.

Hon. D. A. McMillan, of Buffalo, N. Y., has shot, under government permit, three caribou at his camp on Lake Edward.

Sir A. P. Caron, Postmaster General of Canada, has had, recently, some splendid sport upon the trout preserves of the Ouichehouan Club, and the Peribonca has afforded good sport to Dr. Oscar H. Holder, of Boston, Dr. Dickinson, of New York, and Mr. Robning.

Mr. Walter Brackett, the noted angler and fish artist of Boston, returned about ten days ago from his fishing lodge on the Marguerite, where he has spent the greater part of the summer every year for the last eighteen years. Mr. Brackett reports the salmon growing scarcer every year in his stream, despite the work done by the Tadoussac hatchery, and much of this decrease is attributed to the netting at the mouth of the river.

The sardine fishing has been very abundant this month at St. Andre Kamouraska and the canning factory there is now in full operation. The scarcity of the fish in the early part of the season is by some attributed to the presence at that time in the river of an unusual number of porpoises, and these have, no doubt, had their influence too upon the salmon that usually frequent the rivers emptying into the lower St. Lawrence and Gulf.

Winslow Homer, the well-known American artist whose picture of "Fox and Crows" appears in the August *Century Magazine*, has been fishing the waters of the Tourilli Club with marked success, accompanied by Com. J. U. Gregory, of Quebec. E. T. D. CHAMBERS.

QUEBEC, AUG. 31.

## CAMPS OF THE KINGFISHERS.

CENTRAL LAKE, Mich., Aug. 23.—The Camp of the Kingfishers broke up Aug. 23. In Platte Lake, on which we camped, we found the bass fishing better than we expected, as also in Round and Little Platte. We had no difficulty in supplying the camp. Our largest bass weighed 4½lbs., Mr. Geo. C. Payne of Frankfort, Ky., being "high hook." Platte River is a fine trout stream, broad, swift and sandy, so far as I have seen it, which is only a mile or two from its mouth (at Platte Lake). It seems to be fished a good deal, but we heard of some good catches of large trout. The north branch of the Platte contains a good many trout, but is much obstructed by timber, and the use of the fly is out of the question, except for cranks.

A word about canvas boats. We had two, the Ben Harrison, a Kalamazoo 16ft. canoe, the same we used last year in Canada. I think this a good craft after you get it properly set up; which is not as easily or as rapidly done as one is led to expect from the advertisements. I believe, however, that a 12ft. canoe of the same model would for our uses be much more satisfactory. There should not be more than two persons in a boat for bass fishing, and the 16ft. craft is too large—sits too high on the water with such a load, and is too easily affected by the wind. Its weight is also an objection on portages.

The Osgood boat was in use for the third season. Its model is good and it is a capital sea-boat, and very steady. The canvas covering however is wretchedly poor, and although I am not unusually timid in a boat, I have seen so many holes punched in this craft during the last three seasons, that I would not again venture to use it. The brass bands around the gunwale strips amidships are also too weak, and are giving out on both sides.

I have great faith in good canvas as a material for canoes. I would sooner have trusted myself in the old "Kelpie" than in a wooden boat of any description to run a dangerous rapid among rocks and snags, but this was because I had thoroughly tested her, and knew that she could be relied on.

I take great interest in canvas boats, and the more portable the better, but it seems unwise to sacrifice safety to any ordinary consideration.

In closing these notes, I beg leave to express my thanks to the officials of the Chicago & West Michigan and the Toledo & Ann Arbor Railroads for courtesies which did much to render agreeable and to lessen the discomfort of the journey to and from our camping ground.

KELPIE.

## A LITTLE PROSE ABOUT BARNEGAT.

WITH all respect to the taste of your correspondent as shown in his "Idyl of Barnegat" published in your issue of Sept. 2, and without criticising his literary ability, it seemed to me on reading his article that either he didn't know half or he didn't tell half of the pleasures of that quaint old city by the sea. He was satisfied with a little evening fishing for blues in company with his favorite Captain Peckworth, of the catboat Minnie.

Did he never cast in the surf from North Beach for "stripers?" He has yet time, for the next two months will be the best of the year. Let him use shedder crab or beach fleas, and if he does not get a new experience I will have to go down and show him where they hang out. They are there, lots of 'em. I got seven one day last fall, that weighed over 80lbs.

Did he ever think Boston mackerel were worth eating? Lots of them in that quiet little bay between the light house and the surf. He can use his trout tackle and have lots of sport with them some day when he can't get outside.

Did he never try chumming for his bluefish? It beats trolling, to my mind, in every way.

Did he ever find a day when there was not wind enough for sailing? Let him try drifting for weakfish just south of the bar. He will find them bigger there than they used to be when he was a fish hog and caught 400 in one day in the bay.

He is right in loving that quiet, lonely village, but did he ever see it when he could walk from there across the bay on the ice? I staid a week on the "Clam Island" last winter gunning. He can see the "Sedgemoor Hotel" if he will row over, and if he will look I think he will see the row of nails where we hung up from day to day about sixty fine ducks. I also bore away in triumph that trip a magnificent Asiatic gull 5ft. 2in. from tip to tip, and I have it mounted and it hangs in my library now.

Even now, if he guns, he can bury in the sand on Sea Dog shoal, and find excellent sport with the willet and longlegs.

One thing more, if he wants to make another bluefish match, let him say so. I am going there again this season and will go with Captain Morse, and we'll catch two bluefish to his one, trolling or chumming, or treat.

BILLY.

## "FOREST AND STREAM" FISHING POSTALS.

Send us a postal card report of your own luck, your partner's luck, your neighbor's luck, your father-in-law's luck. And—her luck.

MORRISTOWN, N. Y., Aug. 22.—Geo. Gerard, of Ogdensburg, and Dr. Finnegan, of Edwardsville, caught 15 black bass and 4 wall-eyed pike in one hour's time in Black Lake. Total weight 47lbs. CLAUD CAPRON.

ATTEAN LAKE RESERVE, Attean, Me., Aug. 31.—Dr. Louis L. Seaman, of New York city, has taken 15 brook trout, largest 3½lbs. Dr. F. W. Halsey, Boston, 100, largest 3½lbs. J. M. Bassett, Boston, 30, largest 4½lbs. Mrs. J. M. Bassett's largest brook trout 4lbs. M. H. Camp's largest brook trout 6lbs. ITHAMAR HOWE.

STEAMER AL FOSTER, New York, Sept. 3.—We beg to bring to your notice the extraordinary good fishing we have had the past Thursday, Friday and Saturday on the Cholera, Angler and S. W. banks. Sea bass from 2½ to 6½lbs. and sea porgies from ½ to 4lbs. Average per hook, about 20 fish; largest number caught on Thursday, 48; Friday, 36. CAPT. AL FOSTER.

## Nets in Lake Champlain.

SYRACUSE, N. Y., Aug. 26.—Last month I took an outing at the north end of Lake Champlain, on the east side of the lake called Missisquoi Bay, a part of the lake where fishing used to be excellent, and I believe would still be good and continue to improve if net fishing were prohibited. The bay referred to extends into the Province of Quebec, north probably five miles, and these waters as well as those extending along the Vermont State side of the line are the natural spawning grounds of the lake fish. I understand that net-fishing has been carried on for a number of years on the Canadian side of the lake, with the knowledge and consent of the Dominion Government; and I was told by a friend in St. Albans, that their State Legislature granted licenses last season to certain parties to take fish in Vermont waters with nets, and that during the months of March and April this season, there were taken through the ice with nets by these parties, and shipped to Boston and New York markets, from seventy-five to eighty barrels of all kinds of lake-fish every day for a period of about six weeks. I was told that one fisherman cleared \$1,500 in four weeks. C. R. W.

## Two Fish on One Hook.

SCHROON LAKE, N. Y., Aug. 31.—Mr. Geo. W. Robinson, Jr., of Albany, N. Y., caught one bass 3½lbs., and one pickerel 8lbs. on same line and on same spoon-hook at same time last Tuesday. O'CONNOR BROS.

## Fishculture.

## California Salmon.

U. S. COMMISSION OF FISH AND FISHERIES, Baird, Shasta County, Cal., Aug. 22.—Editor *Forest and Stream*: The salmon spawning season opened here to-day with the taking of 104,000 eggs. The eggs are very large and fine looking, and the salmon are more numerous below the rack than they have been for ten years. We have made several hauls of three or four tons of salmon each. One striking peculiarity of the fishing this year is the unusual number of enormously large male salmon. We have caught great quantities of males weighing between 40 and 50lbs., which is a heavy weight for spawning fish of the Sacramento.

LIVINGSTON STONE.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Sept. 11 to 15.—Toronto, Canada. C. A. Stone, Sec'y. Entries close Aug. 31.  
Sept. 19 to 22.—Mount Holly, N. J. H. I. Budd, Sec'y. Entries close Sept. 11.  
Sept. 19 to 22.—Rhode Island State Fair Ass'n at Narragansett Park, Cranston, R. I. D. C. Collins, Sec'y. Entries close Sept. 4.  
Sept. 25-30.—Kausas City, Mo.  
Sept. 29 to 30.—Ottawa, Canada. Alfred Geddes, Sec'y.  
Oct. 3 to 6.—Minneapolis K. C., at Minneapolis. H. T. Van Duster, Sec. Nov. 21 to 24.—New Jersey K. L. at Newark. Dr. W. F. Seidler, Sec. Dec. 12 to 15.—R. I. Poultry and Pet Stock Ass'n, at Providence.

#### FIELD TRIALS.

Sept. 4.—Northwestern Field Trial Club's second annual trials, Manitoba. Thos. Johnson, Sec'y, Winnipeg.  
Sept. 12.—Manitoba Field Trials Club's Trials, Souris, Manitoba. R. J. Gallagher, Sec'y, Winnipeg.  
Oct. 20.—National Beagle Club trials, at Nanuet, N. Y. Geo. Laick, Tarrytown, N. Y., Secretary.  
Nov. 6.—United States Field Trials Club's Fall Trials, Bicknell, Ind. P. T. Madison, Sec'y, Indianapolis.  
Nov. 7.—New England Beagle Club trials. W. S. Clark, Linden, Mass., Secretary.  
Nov. 7.—International Field Trial Club's Fourth Trials, Chatham, Ont. W. B. Wells, Sec'y, Chatham.  
Nov. 15.—Ohio Field Trial Club's Second Trials, Canton, O. C. V. Lellinger, Sec'y.  
Nov. 20.—Eastern Field Trial Club's Trials, at Newton, N. C. Members' Stake Nov. 16. W. A. Coster, Sec'y.

1894.

Jan. 29.—Southern Field Trial Club's Trials, New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 19.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### LEXINGTON DOG SHOW.

The members of the Blue Grass Kennel Club can congratulate themselves on a very much improved show over their first attempt in 1891. The building in which the show was held, Aug. 30 to Sept. 2, is quite a handsome one and could hardly be better adapted for a hot weather show. At no time, although the weather was trying outside, were the dogs unduly affected. There were many windows and the floor is hard earth, and this being kept well sprinkled was refreshingly cool for the dogs, which were benched most of them a couple of feet above it. The building is that used by the Tattersall Co. for their horse sales, and the stands for buyers in front of the auctioneer's desk were used for benching the terriers, so that one could see the whole show from almost any part, the others being benched in wings at each side.

One would not be doing his duty if attention was not drawn to the haphazard manner in which the dogs were benched and the go-as-you-please sort of way the dogs had of putting on their tags. Many of the dogs sought variety and did not confine themselves to their own classes and breeds. When the anxious reporter would find a fox-terrier among the collies, a Gordon among the Irish setters, and this sort of thing, while it added to the picturesqueness of the show, it upset the harmony. But then how can one have the heart to find fault when Roger Williams worked so hard to straighten things out and please everybody. There was hardly a foxhound with a number on it and it would have taken a man gifted with clairvoyance to get a dog right that had a wrong tag on and was in some other dog's place—"because he fights." There was no division between the dogs, but there were few fights. The floors were kept clean and tidy and there was little smell. The feeding was good, Austin's dog biscuits being used mixed with soup, and "Sanitas" was liberally applied on the smells.

The judging ring arrangements might have been much better, a small ring being set up with a lat fence, when in front of the building there was an open grass lot of a couple of acres, and if judging had been done there and admission charged at the gates, the public would have been attracted in passing to and from the Fair that was going on in the race track grounds a short distance away. This will probably be done next year. As stated, Roger Williams was the life of the whole concern, and he went about his duties as he does his judging—with his coat off. Geo. Hill was always there, and it was not his fault if things got mixed sometimes. One cannot argue with men who don't understand bench show formalities, and don't want to. Among the other workers were Treasurer Fred V. Bartlett, Vice-President G. K. Boulden and Assistant Secretary A. C. Gutzell. With the irregularity of benching there were necessarily numerous delays in judging, but this, on the whole, was well done by Messrs. Davidson and Wheeler. There was some grumbling by the regulars in some cases, and we have drawn attention to the cause in the criticisms of awards. The foxhound exhibit was, of course, a feature, and their melodious voices were often a welcome note in the untuneful barking of other dogs.

The attendance was better than in 1891, though far from what it should have been, as the local papers did well by the show. The club will probably have to shoulder a deficit, though expenses were probably not very large. The entry of 561 will go a long way toward helping out, at \$2.50 apiece. Judging was concluded on Thursday afternoon. Among those present were Dr. Sauveur, Dr. Hoyt, W. J. Porter, A. Eberhart, John Hawkes, A. B. Whitlock, Dr. Miller, H. L. Goodman, J. Farley, Tom Blake, E. B. Elliott, B. F. Lewis, W. C. Goodwin, C. M. Carlin, W. Huffstetter, W. S. King, Walker Brothers, Will Connors, J. Taylor Williams, J. B. Castleman, B. S. Coyle, J. W. Royster, Redd Brothers, Bourbon Kennels, J. H. H. Maenner, J. W. Walker, R. S. Hatcher, and I think there were more local exhibitors than at any other show I remember, and at the same time there were more absent dogs—114 in all. Mr. G. Perrin, chairman of committee, also took a great interest in the show, and Dr. Smith, the vet, although one or two escaped him, sent back several dogs that failed to pass muster. The criticism of awards follows.

**MASTIFFS** (Frank C. Wheeler, Judge).—Ethel took care of the challenge class, the only entry. In open dogs two very ordinary dogs and one fairly good one turned up and the latter won; his body is his worst feature; should be deeper; his depth and squareness of muzzle is rarely excelled, skull not volume enough in comparison, nice small ears, good bone and legs, better than are generally met with; shown thin. Chum, second, and Wafe, vhc., are both very poor, but I thought Chum should have given place to Wafe, as the latter's head shows more mastiff character than the other, which is a long, snipy, characterless one; inferior in body but straighter in front, as Wafe is somewhat bowed there; both are local dogs. In the next class we saw a mastiff in every respect, Minnie Beaufort, but she had no competition. Her coat was out of order and her hindlegs are straight, otherwise she lays over anything there. There was no kennel prize and Minnie took the specials.

**ST. BERNARDS** (Frank C. Wheeler, Judge).—No smooths were shown, and in this we are surprised. Southern people who desire to keep this breed should turn their attention to the smooths, they will undoubtedly stand the heat much better. The roughs never can hope to put on the coats they should have. I was surprised to see Ch. Plinlimmon, Jr., on the bench again, although a shadow of his former self, and his always faulty expression is not improving any, still his grand frame and excellent legs will always bring him to the front row. He was shown thin. In open dogs the winner, Beresford, had no great victory over Mose, both are shelly in

body, and with exception of a better muzzle the winner has no advantage over the others. The other entries, five, were absent. I had a ramble in the bitch class, having only Lady Challymeade and Lady Bute to dispose of, and this she does easily in skull, body, bone, action, etc. I like her expression no better than I did at Chicago, it is still a trifle bulky, if one could use such an expression, for a St. Bernard. She had just weaned seven pups, but looked exceedingly well. She afterward beat Plinlimmon, Jr., for special, and this she, in the latter's present condition, can do. Lady Challymeade, second, was out of coat, head is rather long and should be broader and deeper throughout, a well-ribbed bitch standing on good-boned legs; Lady Bute is a plain-headed shelly bitch; the card over Nellie might well have been kept back, for she has a long, sour, mean head, snipy, and is a sort of half-smooth, with good legs and fair body. Dixie is all wrong and was nursing six pups who, judging by the smell in their neighborhood, will never see another Blue-grass show. Beresford won again in novices, same entries as open. There was no kennel prize, and I won the specials.

**GREAT DANES** (Frank C. Wheeler, Judge).—This show will be known in history as the only one this year where Imperator and Melac came as near together as they probably ever will do. They each posed on specially erected benches at each side the entrance. Imperator did not think it worth while to compete; besides, a possible defeat might dull the luster of that "diamond" collar. Anyhow, Melac as usual came to the scratch, but he was anything but the Melac we have seen on other days. He is in Nashville summer condition. His bones spoke for themselves. Imperator, on the other hand, was a little too gross, but I never saw him looking healthier, and he is improved behind. Prof. Maenner, of Baltimore, took a trip to the blue grass region and for company brought his new dog Moreau that is a nicely formed dog from head back. He is not heavy, loin nicely arched, good neck, legs in front good, but hind should be more bent in stiffer, good skull, but a little cheeky, and muzzle, while well formed, is a trifle short. He is a nice type of dog, nevertheless. Jeff, second, I thought lucky; falls away behind, flat loin, throaty, plain muzzle and light eye. Norman, well known, vhc., was beaten in condition by the second winner. Caesar, vhc., is a big, coarse, heavy dog, with little to commend him, bowed in front, throaty, etc., and did not deserve his letters. Cumberland Kennels showed Zella in the next class and won; a rather plain lemon ice cream-colored bitch that carries its tail faultily, curls it, is not true at elbows and was shown fat, is straight behind and heavy in shoulders. I thought Norinberger a better one, although faulty, in many respects was in better condition and better head and body. Cumberland Kennels and Melac took all there was in the way of specials.

**NEWFOUNDLANDS** (Frank C. Wheeler, Judge).—One really cannot agree with the decision here. The Cincinnati dog Flora L. has not the slightest pretension to Newfoundland form with the exception that she is black and not so curly as some "Newfoundlands" I have seen. The Philadelphia dog Carlo excels in head, bone, coat, legs and character, though small and far from a good one. The other is snipy, long-headed, sour expression, light bone and a mixed coat. Carlo was said to have been lame when shown, but was not at all so the next day, whereas Flora could not put one foot down. Jack Shepard, the only entry in bloodhounds, was absent.

**RUSSIAN WOLFHOUNDS** (John Davidson, Judge).—A glance at the catalogue gave promise of a fine display in these dogs, but with nine of the Seacroft entries absent, Danicheff, belonging to Mr. Williams, was the only one of the race to show up. He was dead out of coat, but is a rather well-formed dog, straight in front, hardly deep enough of chest for the breed, good quarters and nice scimitar stern; he looks more of a bitch than a dog at present.

**DEERHOUNDS** (John Davidson, Judge).—Old champion Olga seemed delighted to hear her name in familiar greeting in this far-off country. She was not looking tiptop in coat, but ragged. Bruar II. is a strong, nice-made hound; good coat; he had no competition. In bitches, Lassie Jean, out of coat, shelly in body, not true in front, a sort of "seen-better-and-seen-worse" dog, upheld the breed for Lexington and Mr. Williams. The kennel prize did not fill, and Olga won the special.

**GREYHOUNDS** (John Davidson, Judge).—Master Rich did not fill his engagement in the challenge class. Open dogs saw a big, well-made dog in Cheeky, said to be a half brother to Young Fullerton, to the fore. He is heavy in shoulders and wide in chest, but well ribbed and strongly made throughout. The second prize winner is light in loin and not ribbed up enough, front good, but quarters fall away too much, and he should have more bend of stifle. Ingleside, vhc., I think was lucky to get one more letter than Jim Crow, as the former is a plain dog, out at elbow, big, heavy ears, badly carried, a dog of little character. Jim Crow, while he could do with more rib and is fine in muzzle and does not stand square enough in front, is a better dog than Ingleside, and especially so behind, where he is very good. The ladies' division introduced us to a capital bitch and one that is sure to place herself high in the records in any company; her toes might be a little closer and muzzle slightly stronger, and that is about all the fault one can find, beautiful ribs, spread of quarters, nicely placed shoulders and forelegs like gun barrels; she could do with just a little more substance throughout, though a bigger bitch than Bestwood Daisy. Miss, second, loses considerably to the winner, and especially in condition, being with whelp. Minnehaha, vhc., is a rather nice bitch, nearly all white, a little straight behind, but body, ribs and quarters are commendable, should be stronger in pasterns. Nellie, hc., loses in fore parts and ribs especially. Kennel prize did not fill and Maid Marion won the specials easily.

**FOXHOUNDS** (John Davidson, Judge).—It requires considerable nerve to come down to Lexington and judge these hounds. There are several packs around the city and naturally each ardent hunter thinks his the very choicest. However, Mr. Davidson was very urbane and diplomatic, and if he didn't please everyone he was so nice about it that no one took offense, though the man from Michigan talked quite some. Someone said there was a special electric car waiting to waft the judge up to Manitoba directly the judging was over, but this must have emanated from some jealous brain as Mr. D. has distinctly stated that he fears nothing with hair on it. However, to get down to business. Modest Girl was alone in challenge class, and was soon disposed of. Not so the open class for dogs where there were thirty-six entries and but four absent. These were judged in the grass inclosure behind the stables, and the sight would have charmed the heart of any man however inexperienced he might be in the world of sport. After the line up and the walk round, Commodore, Kit, Frank II, Sam, and Frank were drawn out of the rack, and finally the ribbon fell to Commodore, a nice type of American hound, good legs and feet, hardly rib enough, and a bit long cast, but excellent action and carriage of stern; Kit, second, I think excels the winner in body, but is not by any means so good in head, being very snipy, good bone, forelegs and feet, but faulty in hocks; reserve to Frank, a hound more on the English type, and judged in that direction the best in the lot; good running gear, excellent body, and beautiful feathery carriage of stern. He is a light English type of hound; as the class was, I suppose, for American type the winners were correct. Frank II, from the Bourbon Kennel, had a better muzzle, is a well made hound all round with excellent hound expression. Among the commended lot I liked Bob of the Redd Bros. pack; he is a nice type of hound, though hardly rib enough, and should be better bent in stifle. Sam, of the Coyle pack, has good legs and feet, but is faulty in head and body, and

is more of a shaggy hound than any of friend Whitlock's. A lot of just ordinary hounds received cards that it would be useless to particularize.

The bitch class was a hot one, and the entries numbered thirty-six, too, with few absentees. The judge soon sorted out Patsey Powell, Swift, Fanchon and Fannie Gay, and after considerable work placed Patsey Powell, a queer name for a bitch, first. Strictly speaking this decision is not consistent, as this bitch is built on all fours with Frank, of the Strodes Valley Kennels, and is not of the same type as the second bitch from same pack, which is built more after the style of the winner in dogs. If the decision is correct, and I see no reason why it should not be, as she comes nearer the only standard there is for foxhounds, the English one, then Frank should have won in open dogs. The winning bitch is a capital-made one and may be defined as English type on lighter lines. Swift, second, also from the Strodes Valley pack, is fine in muzzle, but in running gear cannot be beaten, but loses in bone and substance to the winner, who is also better ribbed. Fanchon, reserve, is light throughout, but typical of the native hound; would do with more rib and substance. Fannie Gay, vhc., is also a nice, typical hound that well deserved her letters, if not more, as she is better ribbed than Fanchon and equally as good elsewhere. Among the two-lettered ones I liked Dolly, a black and tan hound, a little big in eye and straight-faced, but back of this is a well-made hound that looks like getting to the front. Topsy has a very pleasing expression though head should have more stop and toes should be closed; a nice, all-round hound all the same. The rest of those mentioned deserved cards, but in many cases they were far from good on their pins; they run to snipy heads, feet are open and ribs, which should have a nice swell, were in many cases as flat as a board.

In the special for best hound the judge showed his preference for the English type in placing Patsey Powell over Commodore, and the division was right if the proper build of a hound is considered. For best pack Strodes Valley Kennel Club had a clear lead, for while they had a few culls, after these were out they were a pretty sorry lot and more of them than any other exhibit. There were novice dog and bitch classes, but the awards all through were the same as in the open. The puppies one need not say much about, they were all three locals from Mr. Coyle's pack. Taken in all the show of hounds was better than in 1892, there seemed to be a more uniformity of type, the weedy ones having been kept at home. A few more shows here will do a lot of good for the foxhound, as far as type and good looks go, these questions evidently not having been considered heretofore from a bench show point of view. Of course, this will all depend on the judges, who must not be chosen in any haphazard way. For instance, Redstone, the last show winner, was nowhere this time and is distinctly as stated then, not right type, he partakes more of the old Southern hound, with bloodhound characteristics.

**SHAGGY FOXHOUNDS** (John Davidson, Judge).—Mr. Whitlock showed ten of these hounds, but the old saying "What's in a name?" does not apply here in its usual sense, for without this name these dogs would have to go into the regular classes. Some of them were as smooth as pointers. The strain has been bred over thirty years by this kennel and the roughness has evidently worn off. Clara II, that won at last show, had matters to herself in challenge class; hindlegs are a bit straight, otherwise she is a likely type, with the best head in the strain. Ormonde won in dogs; he beats Wallace in head; not so straight-faced, better loin and ribs. Rip, vhc., is beaten in muzzle, body and hindlegs. Pansey, the winning bitch, is a fair type of native hound that should be truer set in feet and thicker through the pads; snipy in muzzle, good body, but short of coat. Whitey is open in feet and should have more stop; otherwise a fairly well-built hound. Fury, vhc., should be closer in toes and not turn them out, but is more of the shaggy than any of them. White Eyes, hc., has what her name denotes, and this oddity runs through the whole pack, originating from the Ben Robertson strain, introduced to the kennel thirty years ago. White Eyes is a nicely built hound, but a little out at elbow, has a nice head of Clara's stamp, and though toes not close enough, should have had more recognition.

**POINTERS** (John Davidson, Judge).—There were some fine dogs here, Glamorgan being the only challenge representative, and was shown in anything but his usual bloom; hair off ears and red skin behind. Open dogs saw the Indianapolis winner, Rush of Lad, again to the front; his head is plain; is throaty, but his legs and body are always to be considered. Admiration, that was described at Philadelphia, came next; better head than winner, but not so good in hindlegs. Krupp, reserve, is too heavy in brow and cut out before the eye, is fairly commendable in body and legs, but his neck should be cleaner. Hugh has a good set of legs, and body all right, but head faulty, light eye, and has a piece off his tail, but between this dog and Judge II. we are uncertain, as numbers were mixed, and we may have seen the wrong dog. Open bitches had Kent's Pearl, whom diligent search failed to find, but she was shown at Indianapolis. Verra, second, is faulty in feet and pasterns; head would be good if it had more stop and was squarer in muzzle; eye should be darker; nice body. Nellios deserved her letters; muzzle should be squarer and front better, but a fair one all round nevertheless. Pride of Kent has a light, shelly body, crooked forelegs and a stary, full eye; she also won in puppies. John B. Castleman had the only kennel, and Rush of Lad came in for specials.

**ENGLISH SETTERS** (John Davidson, Judge).—There were no challenge entries. In open dogs there were thirteen entered, but some were absent. A strong, vigorous-looking, heavily-built dog in Worsley Dude, from Harry Northwood's kennel, just won from Paul Hill. Dude has a head somewhat on the Count Howard order; he stands a bit bowed in front sometimes and is a little throaty; otherwise good. Paul Hill has a capital head and expression, though eye shows haw too much; might be straighter in fore bone, though better in front than winner, but not so well-ribbed. The well-known Benzine came in for reserve. Buekey Ben has a plain head, with a big eye showing haw considerably, good bone and front, but should be deeper in chest and more bent in stifles. Sport, hc., is very plain-faced. Cal, c., is leggy and has a long, snipy head, no ribs to swear by, and is a plain dog all through. In bitches, Flight of Riverview shows a lot of quality, hardly clean enough in neck, and had she a better swell of rib little fault could be found with her, as her legs and feet pass muster. Lady Rodrigo is a fairly well-formed bitch without any glaring faults, muzzle might to advantage be a little squarer. Nora Gladstone, vhc., has a rather common head and ears should hang better, in body and ribs she is excellent. Lady Howard, whom I should have mentioned as reserve, has a good profile, but head too narrow throughout, shows quality, and is well up with the winner in body, legs and coat, and shows more character than the second winner. Lucy M. is a commoner. There were six absent in this class and thirteen entries. Flight of Riverview took the specials. The show of this breed was not so good as that of 1891.

**IRISH SETTERS** (John Davidson, Judge).—Irish setters were poor as a class in 1891, but this time there was little to complain of in this respect when the Seminole Kennels showed their strength. They of course supplied the challenge entries with champion Tim, the winner, and Pride of Patsy in dogs and Elfreda in bitches; Laura B. was entered, but absent. Tim never looked better, considering his age. In open dogs the two juniors, Blarney, Jr., and Montak, Jr., and Young Tim fought it out again, and the decision was as at Wissahickon with regard to the first two, Young Tim coming in between. The Seminole dogs were well shown; in fact all through Will Connors had his dogs in excellent

shine and finish for summer wear. Kildare Beverly came in for reserve; these are all well-known dogs and need no detailed description. Seminole, Jr., got hc.; he was at Wissahickon, and Seminole Blarney was c.; they do to fill up, but not to win with. In bitches the well-known Delphine scored over Forest Moss, a bitch with rather a good head, and well shown, good color, a little faulty in hocks. Lady Cleveland is another we have repeatedly spoken of before; she is small, of good color, but head plain and short. Biddy, of the Seminole lot, is a taking little bitch, typical in head, feet might be truer set, but good bone, and when furnished in body will prove a winner. Nellie M. is very throaty, but has a good head, bit strong, good body and color, a little straight in hocks, should have beaten Molly and had two more letters at least; her coat needs attention. Biddy won nicely in bitch puppies over Lady Sarsfield, better front and head; she has just had a litter and lost them all through distemper, they were by Elcho, Jr., II. Seminole won the kennel prize.

**GORDON SETTERS** (*John Davidson, Judge*).—A better show of these dogs than last time. Ivanhoe, Duchess of Waverley and Lady Waverly furnished the challenge entries, and were placed in their classes as named, Lady Waverly was out of coat. In dogs it only took half an eye to see that Heather Lad, shown in the pink of condition, was an easy first over the coarse-headed Duke of Wellington, and is also much better in tan; he afterwards beat Ivanhoe for the special. Dr. Dixon farmed the bitch class with Princess Louise and Katherine, and of course took the kennel prize, and with the Duchess of Waverly the special for best in show.

**COLLIES** (*Frank C. Wheeler, Judge*).—The challenge class brought out The Squire, Sir Walter Scott III. and Roslyn Dandy, so it will be inferred that the collie display was much in advance of that in 1891. Of course The Squire, being in good condition and boasting a pretty good coat for this time of year, was rightly placed first, beats Sir Walter in head, ear, size, bone and carriage of stern. In challenge bitches Metchly Surprise, always the same, blow hot or cold, took the prize. In open dogs the struggle for first lay between Curzon and Chesterford Hero, neither were in condition, but Curzon beats the other in size, head, especially in length between eye and ear, and bone, both light in body and Hero has an advantage in coat and quarters; Royal Monarch, reserve, is coarse in head and not correctly formed in body; Mack, vhc., I could not find; old Meadowthorpe Reality was also shown and got vhc. He is a relic of the "Scotch" Baillie Lexington venture. Chesterford Marvel, shown for kennel only, is a more likely dog than Hero that seems to have not recovered from his spring set-back.

In bitches Bertha II. won nicely from Chesterford Lilly, a nearly all white bitch; dips in back and long cast; head fairly good, though cheeky; in nice coat. Crissie, vhc., is well known. Mattie, reserve, is rather round and full in skull; ears hang down, but she is good in body, coat and legs. I thought Stonehurst Lassie could have had another letter; she has excellent legs; feet could be better; nice body, but coat soft and short; ears are not as good as they might be, either. Chesterford, late Maud Marion, is open in toes, faulty body and only moderate head. Max, a son of Squire Scott, won in puppies, is flat-ribbed, big ear, too much brow and altogether was lucky. Seminole Kennels took the kennel prize without much trouble, beating Chesterford Park's in condition and uniformity of type.

**SPANIELS** (*John Davidson, Judge*).—There were several entries in Irish waters, but Trouble was the only one that looked like one; he is well known. The other prizes were withheld. No Clumbers shown, and Roderic Dhu was the only field spaniel, but entered as a cocker. He is a fat, way-coated animal, with a heavy, coarse head, fairly good in legs and body.

There was one entry in challenge cocker dogs—Bendigo, who has made his winnings in the West lately; he was well-shown, but is heavy and coarse in head for a cocker, and light in eye. The winner in open dogs was the well-known Pickpania, who beat Brantford Rufus in all but depth of body, the latter dog, a red, being snipy, and heavy in brow, and shown fat; the other two entries were absent. In bitches Lady Dufferin won; she is cut out too much before eye, skull good, well ribbed, legs all right. Second went to Cherry Blossom, a nice little red, faulty in muzzle. Stella G., vhc., is too long cast, nice front. The winning puppy, Constance, is throaty; long in body and scarcely true enough at elbows. Concord Kennels took the kennel prize.

**POODLES** (*Frank C. Wheeler, Judge*).—There were only two classes of these provided at first, but when shown they were divided into French and Russian. In the former division Parisian, nicely shown, had no competitor, he is a little long in loin, good head and ears. In bitches, the winner, Queen Zip, is promising. In corded dogs the winner turned up in Black Jack, a fairly well corded dog, short in muzzle. Czar II. is very narrow in front. Corded bitches saw Czarina once more a winner, droops too much in quarters, fair bone and cords.

**BULL-TERRIERS** (*Frank C. Wheeler, Judge*).—There were several entered but few chosen. Crisp, the Chicago dog, getting cheeky, won hands down from a lighter weight dog, with too much stop and a bulky head, bad feet and in anything but show shape; prize should have been withheld. The other entries were of the business order. Bitches had for winner Lady Velmer, a rather nice one, though stop too defined and muzzle short, good legs and body, but coarse tail. Countess of Dufferin, looking well, came next; better in head than winner. Puppy prizes withheld.

There was one so-called Boston terrier shown and it was given first, Mr. Davidson judging by request.

Dachshund entries from Mr. Loeffler were absent.

**BEAGLES** (*John Davidson, Judge*).—This is evidently not a beagle country, as all the entries came from the North. In challenge dogs, Doctor, looking well, placed another win to his credit. Open dogs had three entries. The winner, Mr. Winkle, has been described before; he has a sweet head and ear, elbows might be truer and body shorter. King, second, I was not certain about, as he was not in his proper place. Tony Weller II. is not correct type, a long-cast, weedy hound, his forelegs are the best part. In bitches, Snowflake won over Jennie Lind, the latter being shown too fat. The winner was locked in its box, being in season. Jennie has a nice head, but body should be a little shorter. Bessie, vhc., is very weedy and shows very little type, and takes very little after her parents. Oakview Jennie is another of the same sort; bad front. Oakview Kennels took the kennel prize, and Mr. Winkle the special, though Doctor runs him close.

**FOX-TERRIERS** (*Frank C. Wheeler, Judge*).—A formidable entry of fifteen appeared in the catalogue, but what with absences and bad ones, the judge's task was not so difficult. Grouse II. was absent from challenge class. Open dogs had Lansdowne Poverina, an improving dog, an easy winner; he was at Wissahickon and beats My Fellow in neck and shoulders, and the way he showed himself; it was reported this dog is deaf, but as he was kept locked in his box we did not verify the rumor. Ginger, reserve, is too straight-faced, body a bit long cast, open in feet, though straight in front. Woodale Driver pushes him close, a little full in skull and wide in front, good legs, body and hind parts; ears well carried. George Bell, vhc., was not in the usual fine condition that we find his illustrious namesake; he is a likely terrier though, capital body, good legs and feet and fair lead, in condition would be higher up. Spot and Belvoir Toaster, each vhc., are not the sort; Toaster is thick in skull, straight in hocks, but good forelegs and body; Spot is also faulty in head properties, round in skull, light shelly body and out at elbow.

Bitches had another large entry of fifteen, but poor as a

class, the winner turning up in Flurry, not at all a crack, straight face, poor front and long in body, that is if I got the right one, and I think I did, but as the fox-terriers were benched and numbered it was a matter of great difficulty to get the right ones right if the owner was not on hand. Gyp, second, has little to commend her. Tartars, reserve, is coarse in skull and heavy in front, nice body, but was lame. Friday, vhc., is a poor, weedy sort that I am surprised her owner should waste the entry fee over. Miss Victory, hc., is fat, too much brow, full in eye and wide in front; letters on such terriers as these are an insult to the good ones. Belvoir Toaster, winning in novices, shows what the rest were like—a poor lot. Columbian Kennels showed the winning puppy, Brisk, but its record will never be a big one. The bitch winner was Flurry, already mentioned. Columbian Kennels won the kennel prize, and the Lansdowne dog was far away the best in show.

**IRISH TERRIERS** (*Frank C. Wheeler, Judge*).—Galtees, the winner in challenge class, is familiar to all, while Ben Lewis showed the winning dog Mick, one of the terriers that is called an Irish terrier for the lack of a better name. In bitches Mary Jane is only a moderate one.

**SLY TERRIERS** (*Frank C. Wheeler, Judge*).—Sir Stafford once more proved his superiority, for the other terrier, any Sir Thomas, in open dogs, is not up to his form by any means, though his son, is small and not so good in head as he might be. Yorkshire terriers were poor, mixed in color.

**BLACK AND TAN TERRIERS** (*Frank C. Wheeler, Judge*).—With the exception of Broomfield Sultan there was not a good one here, and it is wonderful how this dog keeps in shape with the knocking round he gets during the year, these terriers being proverbially difficult to keep right in this respect. Rochelle Oolah, a big coarse dog, won in dogs; he is not flat enough in skull. In bitches Mr. Elliott took first and second, with Rochelle Mab and Betsy, two big, coarse bitches; Mab better in head, but Betsy beating in tan markings. Bloomfield Madge, vhc., is a better shaped one, but faulty in head and tan. Chesterford Park Kennels took the kennel prize with a half toy, Billy Button, devoid of hair, to make up. Two fair little toys, as they go, were shown and rightly placed. Campbell & Blake showed a couple of whippets, Ben and Winnie, both well formed ones.

**PUGS** (*Frank C. Wheeler, Judge*).—Fifty entries in pugs, we believe, just about caps the record. The challenge class for dogs was a good one, with Sprake, Bob Ivy and Cashier, and the former's advantage in ear, body and general type could not be denied, and he won, while champion Midget took the prize for her sex. Bo-Peep II. and champion Judy III. were absent. In open dogs there were eleven entries and Patsy Bolivar scored neatly; he was in great shape and is an improving dog, has about the best curl we ever saw, nice, cobby body, good legs and feet, might be straighter set on, but toenails correct color, might be fuller in skull, but wrinkle and muzzle and ears are good. Little Jewel, well-known, came next; he loses in body, head and curl to the other. Douglas II., reserve, loses much in head and ear. Happy Toby had gone home early, contrary to the rules; this Dan McGinty should have had a card for his fairly good head and straight forelegs. Mabel E., a niceish stamp, won in bitches, her feet are open and turn out, and muzzle should be shorter, deeper and squarer, nice body, trace and curl. Lady Verne, from same kennel, has a nice square muzzle, fair skull and ear, but is coarse in coat, feet crooked, good curl. Lady, vhc., is only ordinary; six were absent in this class. Sir Douglass won in novice dogs, excellent wrinkle, but bit frog-faced, deep, short body and nice curl, big in ear. Chesterford Punch is long in muzzle, fair wrinkle and skull, but ears not well carried and turns feet out. In bitches Lady Verne took the prize, followed by La Belle Senora, small-faced, faulty in ear and not a level-topped one. Lady Venus, from same kennel, is big in ear and body, half curl, good bone, fair wrinkle. Colleen Bawn should keep her ears down, nice front, but head too small. Some fair pups were shown, Seminole Banker II. winning in dogs and Lady in bitches. Eberhart Kennels about farmed these classes, and while they have got bodies and tails much improved, should now pay attention to shortness and squareness of muzzle and more volume of skull. Eberhart took the kennel prize.

**ITALIAN GREYHOUNDS** (*Frank C. Wheeler, Judge*).—Quite a nice exhibit of these, the well-known Lavender being the only challenge representative. Byron won in dogs without competition, his skull is too full and round and is too much cut out before the eye, but otherwise a nicely-made dog. Dr. Hoyt also won in bitches with the well-known Trilix and Infanta; Trilix, while better in legs and size than the other, loses to Infanta in head. Dr. Hoyt and Mr. Mack divided the puppy prizes with Infanta and Iona. A fair Mexican hairless won without turning a hair, though quite large enough. The Colored Preacher won in Scotch terriers; out of coat and the only one shown. H. W. LACY.

#### LIST OF AWARDS.

**MASTIFFS**—CHALLENGE—1st, B. F. Lewis's Ethel. —OPEN—Dogs: 1st, Albert Geis's Webster Judge; 2d, E. T. Warner, Jr.'s Clum. Very high com., Frank G. Ott's Wafe. Bitches: 1st, Laurelcelt Young-husband's Minnie Beaufort.

**ST. BERNARDS**—ROUGH-COATED—CHALLENGE—1st, Gustave Fox's Ch. Philimmon, Jr.—OPEN—Dogs: 1st, George K. Boulden's Beresford; 2d, F. B. Bartlett's Mose. Bitches: 1st, J. B. Lewis's I; 2d, Lewis Finch's Lady Challymede. Reserve, I. L. Amberg's Lady Bute. High com., John Price's Nellie and Henry Kruse's Dixie. —NOVICE—1st, George K. Boulden's Beresford; 2d, F. B. Bartlett's Mose. High com., Henry Kruse's Dixie.

**GREAT DANES**—CHALLENGE—1st, Cumberland Kennels' Melac —OPEN—Dogs: 1st, J. H. H. Maenner's Moreau; 2d, Dr. L. A. Anderson's Jeff. Very high com., Cumberland Kennels' Norman and E. Eugene Leigh's Caesar. Bitches: 1st, Cumberland Kennels' Zella; 2d, George W. Schenk's Norinberga.

**NEWFOUNDLANDS**—1st, Martin Simon's Flora L.; 2d, Phil J. Walsh's Carlo.

**BARZOIS**—1st, Rookwood Kennels' Danicheff.

**DEERHOUNDS**—CHALLENGE—1st, W. Howie Muir's Olga. —OPEN—Dogs: 1st, W. Howie Muir's Bruar II. Bitches: 1st, Rookwood Kennels' Lassie Jean.

**GREYHOUNDS**—OPEN—Dogs: 1st, Phil J. Walsh, Jr.'s Cheeky; 2d, Hamilton Scott's Sir Roger. Very high com., Hart Gibson, Jr.'s Ingleside. High com., Levi Crow's Jim Grow. Bitches: 1st, Rookwood Kennels' Maid Marion; 2d, J. N. Gregg's Miss. Very high com., S. C. Lyne's Minnehaha. High com., Bryan Hewitt's Nellie. Com., Matt Oliver's Nellie. Puppies: Matt Oliver's Nellie.

**FOXHOUNDS**—CHALLENGE—1st, A. L. Goodwin's Modest Girl. —OPEN—Dogs: 1st, J. M. Downing's Commodore; 2d, William Huff-stetter's Kit. Reserve, Strodes Valley Kennel Club's Frank. Very high com., Bourbon Kennels' Frank II. and B. S. Coyle's Sam. High com., Redd Bros.' Riley and Bob, Strodes Valley Kennel Club's Strauger and Rockcastle, Bourbon Kennels' Redstone, and B. S. Coyle's Ball and Olive. Com., Strodes Valley Kennel Club's Strodes Valley Kennel Club's Trip, Speed and Dillard, and Bourbon Kennels' Rare. Bitches: 1st, 2d, very high com., high com., and com., Strodes Valley Kennel Club's Patsy Powell, Swift, Fannie Gay, Peri, Slipper and Betsy. Reserve, very high com., high com. and com., Redd Bros.' Fanchon, Flossy, Dolly, Topsy, Lajoya and Maid Marian. High com., com., Bourbon Kennels' Ida, Nightly and Nancy. High com., Woodson Royster's Sugar. Com., F. W. Samuel's Fannie and B. S. Coyle's Alice. Notice awards the same as in open classes. PUPPIES—Dogs: 1st, B. S. Coyle's Bunton. Bitches: 1st, B. S. Coyle's Lil.

**POINTERS**—CHALLENGE—Dogs: 1st, R. A. Riddle's Glamorgan. —OPEN—Dogs: 1st, A. F. Hochwalt's Lad of Rush; 2d, J. H. Winslow's Ad-miration. Reserve, John B. Castleman's Krupp. Very high com., George Land's Judge. High com., J. H. Laws's Hugh. Com., J. L. Berkeley's Duke. Bitches: 1st, F. W. Kuehn's Kent's Pearl; 2d and very high com., John B. Castleman's Verra and Nellis. High com., E. S. Fishback's Pride of Kent. Puppies—Bitches: 1st, E. S. Fish-back's Pride of Kent.

**ENGLISH SETTERS**—OPEN—Dogs: 1st, Harry Northwood's Worsley Dude; 2d, J. Taylor Williams's Paul Hill. Reserve, W. C. Down-ing's Benzine. Very high com., E. S. Fishback's Buckeye Ben. High com., Ben Kenny's Sport. Com., H. C. McDowell's Cal. Bitches: 1st, J. Taylor Williams's Flight of Riverview; 2d, Felix Lowry & Co.'s Lady Roderigo. Reserve, C. H. Corbett's Lady Howard. Very high

com., Dr. Littleton's Nora Gladstone. High com., Miss B. Murray's Lucy M. Puppies: 1st, Thos. Morgan's Maggie R.

**IRISH SETTERS**—CHALLENGE—Dogs: 1st and reserve, Seminole Kennels' champion Tim and Pride of Patsy. Bitches: 1st, Seminole Kennels' Effie, vhc.—Dogs: 1st, Townsend Sharpley's Blarney, Jr.; 2d, very high com., high com. and com., Seminole Kennels' Young Tim, Mantauk, Jr., Seminole, Jr., and Seminole Blarney. Reserve, W. L. Washington's Kildare Beverly. Bitches: 1st and very high com., Seminole Kennels' Delphine and Biddy; 2d, Walter Shaw's Forest Moss. High com., B. F. Lewis's Molly. Com., Luzboro Kennels' Nellie M.—NOVICE—1st, Seminole Kennels' Biddy; 2d, Jos. C. Richards's Lady Sarsfield.

**GORDON SETTERS**—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Ivanhoe. Puppies: 1st, S. Hatcher's Parisian; 2d, Dr. S. G. Dixon's Duchess of Waverley and Lady Waverley. —OPEN—Dogs: 1st, J. R. Oughten's Heather Lad; 2d, Dr. S. G. Dixon's Duke of Wellington. Bitches: 1st and 2d, Dr. S. G. Dixon's Princess Louise and Katherine.

**IRISH WATER SPANIELS**—CHALLENGE—1st, E. G. Fink's Trouble. —OPEN—Prizes withheld.

**COCKER SPANIELS**—CHALLENGE—Dogs: 1st, C. Backus's Bendigo. —OPEN—Dogs: 1st and 2d, Concord Cocker Kennels' Pickpania and Brantford Rufus. Bitches: 1st and very high com., Concord Cocker Kennels' Lady Dufferin and Stella G.—PUPPIES—Bitches: 1st, C. Backus's Lady Constance; 2d, Seminole Kennels' Cherry Blossom.

**COLLIES**—CHALLENGE—Dogs: 1st, Seminole Kennels' The Squire. Bitches: 1st, Seminole Kennels' champion Metchly Surprise. —OPEN—Dogs: 1st, Seminole Kennels' Curzon; 2d, Chesterford Park Kennels' Chesterford Hero. Reserve, Seminole Kennels' Royal Monarch. Very high com., A. Christman's Mack. Bitches: 1st, reserve and very high com., Seminole Kennels' Bertha II., Mattie and Crissie; 2d, Chesterford Park Kennels' Chesterfield Lilly. High com., Seminole Kennels' Stonehurst Lassie and Chesterford Park Kennels' Chesterford. —PUPPIES—Dogs: 1st, W. Metcalf, Jr.'s Max.

**FOODLES**—CHALLENGE—1st, L. H. Biddle's Beri. —FRENCH—OPEN—Dogs: 1st, S. Hatcher's Parisian; 2d, Dr. S. G. Dixon's Czar II. Bitches: 1st, Eberhart Pug Kennels' Queen Zip. —RUSSIAN—Dogs: 1st, Mrs. R. J. Carter's Black Jack. Bitches: 1st, Dr. S. G. Dixon's Czarina.

**BULL-TERRIERS**—Dogs: 1st, Luzboro Kennels' Crisp; 2d, M. Graves's Turk. Bitches: 1st, Lansdowne Kennels' Lady Velmer; 2d, Wm. J. Bryson's Countess of Dufferin. —PUPPIES—Dogs: Prizes withheld.

**BOSTON TERRIERS**.—1st, E. L. Graves's Susie.

**BEAGLES**—CHALLENGE—Dogs: 1st, B. F. Lewis's Doctor. —OPEN—Dogs: 1st and very high com., Oakview Kennels' Mr. Winkle and Tony Weller; 2d, C. A. Parkinson's King. Bitches: 1st and high com., Oakview Kennels' Snowflake and Oakview Jennie; 2d, C. A. Parkinson's Jennie Lind. Very high com., B. F. Lewis's Bessie.

**FOX-TERRIERS**—Dogs: 1st, Lansdowne Kennels' Lansdowne Poverina; 2d, T. C. Oulette's My Fellow. Reserve, Columbian Kennels' Ginger. Very high com., Cumberland Kennels' George Bell, W. F. Porter's Woodale Driver, H. Lackman's Spot L., Dr. G. F. Snyder's Belvoir Toaster. Bitches: 1st and reserve, Columbian Kennels' Flurry and Tartarress; 2d, W. B. Gyp. Very high com., F. T. Foote's Friday. High com., Dr. G. F. Snyder's Miss Victor. Com., W. R. Millward, Jr.'s Seardsdale Folly. —NOVICE—1st, Dr. G. F. Snyder's Belvoir Toaster; 2d, H. Lackman's Spot L. Reserve, J. Oldham's Russell. Very high com., Columbian Kennels' Black Eye and H. T. Foote's Friday. High com., C. Rossell's Toosa, Dr. G. F. Snyder's Miss Victor and F. Weight's Dot. Com., T. D. Kelley's Red. —PUPPIES—Dogs: 1st, Columbian Kennels' Brisk. Bitches: 1st, Columbian Kennels' Flurry.

**IRISH TERRIERS**—CHALLENGE—1st, H. O'Connor's Galtees. —OPEN—Dogs: 1st, B. F. Lewis's Mick. Bitches: 1st, F. P. Smith's Mary Jane.

**SKYE TERRIERS**—CHALLENGE—1st, C. A. Shinn's champion Sir Stafford. —OPEN—1st, S. Bart's Sir Thomas.

**YORKSHIRE TERRIERS**—Dogs: 1st, J. Farley's Teddy. Bitches: 1st, W. Mahon's Princess Floss.

**BLACK AND TAN TERRIERS**—CHALLENGE—1st, Dr. H. T. Foote's Broomfield Sultan. —OPEN—Dogs: 1st, Chesterford Park Kennels' Rochelle Oolah. Bitches: 1st and 2d, Chester Park Kennels' Rochelle Mab and Betsy.

**TOY TERRIERS**—OTHER THAN YORKSHIRE—1st and 2d, Dr. De John's Daisy and Faust.

**WHIPPETS**—Dogs: 1st, Campbell & Blake's Ben. Bitches: 1st, Campbell & Blake's Winnie.

**PUGS**—CHALLENGE—Dogs: 1st, Sarah E. Davis's Sprake. Bitches: 1st, Seminole Kennels' champion Midget. —OPEN—Dogs: 1st and very high com., Eberhart Pug Kennels' Patsy Bolivar and Happy Toby; 2d, Seminole Kennels' Little Jewel. Reserve, J. W. Mack's Doug II. Bitches: 1st and 2d, Eberhart Pug Kennels' Mabel E. and Lady Verne. Very high com., J. W. Mack's Lady. —NOVICE—Dogs: 1st, Eberhart Pug Kennels' Sir Douglass; 2d, Chesterford Park Kennels' Chesterford Punch. Bitches: 1st, 2d, reserve and very high com., Eberhart Pug Kennels' Lady Verne, Labelle Senora, Lady Venus and Colleen Bawn. —PUPPIES—Dogs: 1st, Seminole Kennels' Banker II. Bitches: 1st, J. W. Mack's Lady; 2d, W. Hutchinson's Lady.

**ITALIAN GREYHOUNDS**—CHALLENGE—1st, J. W. Mack's Lavender. —OPEN—Dogs: 1st, F. H. Hoyt's Byron. Bitches: 1st and 2d, F. H. Hoyt's Trilix and Infanta. Puppies: 1st, F. H. Hoyt's Infanta; 2d, J. W. Mack's Iona.

**MISCELLANEOUS**. —1st, Chester Park Kennels' The Colored Preacher.

**SHAGGY FOXHOUNDS**—CHALLENGE—1st, A. B. Whitlock's Clara II. —OPEN—Dogs: 1st, 2d and very high com., A. B. Whitlock's Or-monde, Wallace and Rip. Bitches: 1st, 2d, very high com., high com. and com., A. B. Whitlock's Pansey, Whitey, Fury, White Eyes and Lany.

#### SPECIALS.

Best mastiff, Winnie Beaufort. Best St. Bernard (2), Io; Great Dane (2), Melac. Collie, The Squire. Fox-terrier, Landsdowne Poverina. American foxhound, Patsy Powell. Best collie in open bitch class, Bertha II. Best greyhound, Maid Marian. Deerhound, Ch. Olga. Russian wolfhound (2), Danicheff. Foxhound, Patsy Powell. Pointer, Rush of Lad. English setter, Flight of Riverview. Irish setter, Ch. Tim. Gordon setter, Ch. Duchess of Waverley. Cocker spaniels (2), Pickpania. Gordon setter dog, Heather Lad. Beagle (2), Mr. Winkle's English setter dog, Worsley Dude. Pug dog in open class, Patsy Bolivar. Mastiff bitch in open classes, Winnie Beaufort. Bull-terrier, Crisp. Foxhound owned in Bourbon, Clark, Jessamine, Woodford and Fayette counties, Commodore. Best dog or bitch owned in Canada, My Fellow. Largest number of foxhounds entered by one exhibitor, Strodes Valley Kennel Club. Best dog or bitch owned in Louisville, Ky., pointer, bitch Verra. Best fox-terrier owned in Lexington, Russell. Best pug bitch in challenge class, Seminole Midget. Best pug bitch owned in Ohio or Kentucky, Mabel E. Best pug bitch in novice class, Lady Verne. Best pug aired by Eberhart's Cashier, Patsy Bolivar. Best pug bitch in show, Tennessee Midget. Kennel prizes—Irish setters, Seminole Kennels; Gordon setters, Dr. S. G. Dixon; black and tan terriers, Chesterford Park Kennels; Great Danes, Cumberland Kennels; pointers, John B. Castleman; cocker spaniels, Concord Cocker Kennels; collies, Seminole Kennels; fox-terriers, Columbian Kennels; pugs, Eberhart Kennels. Exhibit of ten foxhounds, Strode Valley Kennel Club. Handler's prize, A. G. Eberhart. Collie Club medal for best collie in open classes owned by a member of the club, Bertha II.

#### American Fox-Terrier Club.

AT a meeting of the Board of Governors of the American Fox-Terrier Club held July 13 at Hillside, the residence of John E. Thayer, Esq., Lancaster, it was voted that the treasurer prepare and send to each member a statement of the exact standing of the club to date, and that since the American Fox-Terrier Club had been unable to give its regular fall show for the past two or three years, that this year the stakes which would be decided at the club's show should be decided at the bench show held by the Rhode Island State Fair Association at Narragansett Park, Providence, Sept. 18, 19, 20, 21 and 22. The stakes which will be decided at this show are as follows:

The seventh division of the Seventh Grand Produce Stake, which is for puppies whelped between May 31, 1892, and Jan. 1, 1893.

The Yankee Stakes of '92, which was wrongly judged at New York, which is for puppies whelped between March 1, 1891, and March 1, 1892.

The Yankee Stakes of '93, which is for puppies whelped between May 1, 1892, and March 1, 1893.

On account of the irregular manner in which these stakes have been judged at the different shows it was voted that the entry for these above be kept open until the date of the closing of the entries for the Rhode Island State Fair, which is Sept. 4. James Mortimer, Esq., of New York, will judge and the State Fair Association will have a separate judging ring for the use of the Fox-Terrier Club.

H. W. SMITH, Sec'y-Treas. American Fox-Terrier Club.

## DOG CHAT.

## New Jersey Sales.

In transferring to Mr. G. Mead, of Maywood, N. J., the Gordon setter Mr. Morris recently imported, he has secured for the breed the interest of a gentleman who is devoted to the gun, and in selling to Mr. Prasse, of Weehawken, a son of champion Rexmont out of a daughter of old champion Beaumont, Mr. Morris has enabled another to enter the field with a team of four Gordons; and this is highly desirable for of late the prizes have been going all one way. Mr. Morris wishes us to state that he was unfortunate with the litter of fourteen Gordons out of Salmont by Beaumont, Jr., and there are no more for sale. In pet dogs Mr. Morris, in addition to importing a Blenheim spaniel, has sold Twinkle, the King Charles spaniel bitch, to Mr. Jean Roberts, Albert, of Audubon, Ia., who has a fine dog of this variety in Max; and now intends to go into breeding these very attractive little pets. In poodles, a transfer of champion Dexter's mate Dot (a winner of two firsts) has been made to a New York gentleman, who intends to exhibit, and we understand this is preparatory to relinquishing the breed.

## American Fox-Terrier Club.

The American Fox-Terrier Club have decided that the following stakes will be judged by Mr. Mortimer at the Providence show: The second division of the Seventh Grand Produce Stake, which is for puppies whelped between May 31, 1892, and Jan. 1, 1893. The Yankee Stakes of '92, which was wrongly awarded at New York this spring. The Yankee Stakes of '93, which is for puppies whelped between May 1, 1892, and March 1, 1893. The entries for each of these stakes will close with the entries for the Rhode Island State Fair, which is Sept. 4. The club's ledger, posted up to Aug. 25, shows the club to be in a flourishing condition, the balance in bank being \$382.16. The example of this club in introducing so many special stakes at shows is worthy of imitation by other specialty clubs. It is an incentive to breeding that is not reached by the mere offering of club medals for best of this or that, and with whose breeding, etc., the exhibitor probably has had little, if anything, to do.

## Mount Holly Show.

The Mount Holly show people, realizing that a healthy prize list draws the entries, have materially increased the stakes. Five-dollar specials will be given the best in nearly all the breeds, and kennel prizes of \$10 for the most important. The following additional classes have been made: Russian wolfhounds—Challenge dogs and bitches, \$6 each; open dogs and bitches, \$6 and \$3. Cocker spaniels—Challenge dogs and bitches, \$6 each; open dogs and bitches, \$6 and \$3. Poodles—Corded dogs and bitches and curly-coated dogs and bitches, \$6 and \$3. Toy spaniels, except King Charles, \$6 and \$3.

## Puppies at Shows

What did the A. K. C. make the rule for forbidding dogs to be shown under six months of age? The improvement there might be in the health of a show were this rule strictly enforced cannot yet be discerned. It is quite as hazardous to allow bitches with litters of eight or ten pups to occupy stalls in a show; it matters not whether they compete or not, the nuisance and odor is just as great. No puppies, and especially nursing pups, should be allowed in a show. It is exceptional when their stall is kept clean, and generally it is one to hurry past and is an eyesore.

## Teat on a Dog.

We noticed a most peculiar growth on the second prize winning mastiff dog at Lexington. On making a closer examination it was found to be a perfectly formed teat on the outside edge of the flank. It was quite an inch and a half long and correspondingly thick and was perfectly formed, even to the hole in the end. Some people will expect us to say that there was milk in it, but we are sorry to disappoint them; there will be, possibly, when Wafe has whelps. How about the influence of previous dams? Here is a subject quite as interesting and vague as the other.

## New Jersey Kennel League.

The last meeting of the club was not of the importance expected because the premium list was not ready and judges were not selected. The premium list was debated and replies from judges read. Committee on guarantee fund reported progress in collecting first instalment, and all are enthusiastic. A regular meeting of the executive committee will be held at Molten Hotel, Newark, N. J., Wednesday, Sept. 6, at 8:30 P. M.

## The Rutherford Kennels.

Mr. Donald Munro sends us a capital picture of Tip-Top, owned by the Messrs. Rutherford. He is proving a capital stud dog, as Mr. Munro says they have about seventy pups, most of them by this young dog and First Flight, and 1894 will see some winners from them. All fox-terrier men should be pleased to hear this, for America contains no more enthusiastic and consistent breeders of fox-terriers than the owners of this kennel.

## Trotting Great Dane.

There was shown at Lexington a rather good looking great Dane, Jeff by name, who is quite a clever dog in his way. He will lead and trot a horse anywhere, and accompanies his master, a "vet." in Cincinnati, on his rounds and holds the horse for him. He is trained to sulky, and can do his mile in 3.36.

## Beagle Club.

It is proposed to form a beagle club in England. It is a matter for surprise that such a club has not been started long ago. In America we have three clubs devoted to the interests of the merry little hound, and one for Canada is on the tapis.

We draw attention to the good things provided in our business columns this week. George Bell offers a grand lot of spaniels and champion Dusky Trap for sale; G. P. Wiggin offers pups, his Judith, the noted St. Bernard dam, has just whelped to Altoner; C. W. Tway, some trained English setters and pointers; P. M. Carman, trained rabbit hounds; E. H. Rummele, Jr., beagle bitch; J. M. Kelly, English setters; Toon & Symonds, well bred Irish terrier and bull-terrier pups; W. Downing, foxhounds; William H. Hyland, young pointers; J. T. Mayfield has room for several dogs to train at Bicknell, Ind.

The St. Bernard bitch Judith should be honored by the St. Bernard Club. She has had four litters and produced 57 whelps, and the oldest is not two and a half years old, yet several of them occupy foremost positions in the records. She has just had another litter of 16, by Altoner, and 10 are alive.

The premium list of about \$1,500 for the Minneapolis dog show is guaranteed by the exposition authorities and the show takes place Oct. 3 to 6. The show will be under A. K. C. rules and application has been made for admission. The entrance fee for St. Bernards, mastiffs, great Danes and New foundlands is \$3, toy terriers, pugs, toy spaniels, Italian

greyhounds and whippets \$1, and the others \$2. Entries close Sept. 23. There is a sulky, value \$50, for best American bred mastiff. The regular premiums are \$10 and \$5. The Minneapolis Kennel Club gives the show and the officers of the club are: S. F. Carpenter, President; F. W. Eastman, Vice-President; H. Y. Van Dusen, Secretary; W. M. Brackett, Superintendent, and H. E. Rowell, Veterinary Surgeon.

Joe Lewis has just received a letter from George Langran, Yonkers, N. Y., in which he states that his Irish setter bitch Juno has whelped a litter of sixteen puppies, nine dogs and seven bitches, by the celebrated champion Kildare, Oak Grove Kennels, Moodus, Conn.

We regret to hear that Mr. Fiske's noted English setter brood bitch Donna died Aug. 26. She was chloroformed, being afflicted with several tumors.

One exhibitor, who really should know better, had a first prize card over his terrier cage. On our wondering how this could be when the space against its name in the judge's book was a blank, he informed us that the dog had won first prize in one of the winning kennels. We live and learn, but we had to go a good way south for it.

What's the matter with the Boston Terrier Club? We do not hear of so much enthusiasm lately. It is said internal dissension has set in. It would be too hard on the little dog to leave him alone among the bluebloods so early in his career.

An innovation that might be followed to advantage by other shows was the reprinting of the premium list at the end of the catalogue at Lexington show. Of course there is no necessity for this when the prizes are given over every class, but this is not always done, and exhibitors do not always find a premium list to hand when wanted. Altogether the Lexington catalogue was well gotten up, there were a few typographical errors, but few transfers had to be made.

One of the chief items of interest to the public who visit a dog show is to see what dogs have won in a class. Therefore the prize cards should be tacked up on the return of the dogs to their benches. There was little to guide the public in this respect at the Blue Grass show.

The proprietor of the Seminole Kennels, Dr. Sauveur, shows no signs of releasing his hold on "caniculture," rather is he going deeper into it, in spite of puppy losses and other hard luck. The Wissahickon show loss was something like \$2,500, and the Doctor had to stand the best part of it. All this is ancient history now, and finding his present quarters too small he has purchased Commodore Kitson's stock farm, near his present residence, and here will erect some very handsome kennels. On this place he will have ample room, there are a couple of trotting tracks and a large residence for himself and another for Will Connors, whom we must congratulate upon his joining the order of Benedicts. Seminole Kennels have recently purchased the pug Ivy Boy from Mr. James Bowden. The Doctor tried to buy Patsy Bolivar at Lexington, but Al Eberhart wants to keep him. He is on the lookout for a world-beating pug.

Mr. R. S. Hatcher is a poodle enthusiast, owning a neat little dog in Parisian who, if you lift the flap of his ear and whisper ever so softly, will forthwith return and shut the door after you. During the show another prize winning poodle, Queen Zyp, was bred to Parisian. Mr. Hatcher fell in love with one of the St. Bernard lo's pups and paid \$100 for it.

## California Canine Matters.

Mr. H. M. TONNER, of North Ontario, Cal., in a letter of recent date, among other things, mentioned the following: "We are exerting ourselves to make this State in dogs what it has been in horses—a perfect training ground. Our dogs can have work the year round, for there is always a surplus of cock quail which do not pair off, which afford excellent sport (without a gun) for young dogs. They are rank runners. A puppy which has a month on them knows how to handle running birds."

"I inclose you a few pedigrees, and I think that you will agree with me that I have some good ones. As they are all first-rate in the field, I expect to breed some puppies which will render a good account of themselves. I sent to Mr. R. E. Gardner, San Francisco, Cal., a brace of English setter puppies, by Shelley out of Estella, and he says he will wait a year to get another one."

Mr. Tonner mentions the names of Amaryliss, Lilia Gladstone, Estrella, Sergeant and Shelley Hudson. The pedigrees show the blood of Monk of Burness, King Noble, Elsie Belton, Maximus, Count Gladstone, Don, Drab, King of Kent, Babe Graphic, Gladstone and Dido II. With such blood, our California brethren should be in the van before many years roll by.

This office was favored with a pleasant visit on Sept. 1 by the veteran judge, Mr. John Davidson, who was on his way from Lexington to Morris, Man., to act as a judge in the N. W. F. T. C. trials. Thence he hies to Toronto, thence to Rhode Island, to fill engagements. He was bronzed and ruddy from outdoor exposure, and his health was as good as his good looks would imply. He survives all the dangers of the dog world with an ease which prompts the query as to whether there are any real dangers in existence in said world. May his trip be pleasant.

Dr. Otto Moebes, in a most pleasant, friendly letter, writes recently, as follows:

"I am working four youngsters for the U. S. Derby at Grand Junction, three pointers and one setter. One Osborne Ale—Croxie pointer is remarkably fast, has a splendid nose, and is a great ranger. The others are also promising youngsters. I will have one or two pointers in the All-Age Stake. I am indeed sorry that the field trials are going down hill. I hope they will come out with new vigor next year."

A gentleman asked me recently what had become of the English Setter Club, had it been lost, strayed or stolen? I told him I didn't know. I don't know. B. WATERS.

## Madge Gladstone, Winfield Noble and Another.

CHICAGO, Aug. 28.—*Editor Forest and Stream:* The three dogs advertised by W. M. Wroten, Magnolia, Miss., do not belong to him. The bitch Madge Gladstone is shy and a blinker. Winfield Noble is both ganshy and birdshy. The Gath's Hope bitch cannot be registered. No one outside of myself can furnish a breeder's certificate for her. Wroten or any one else cannot give a title to these dogs. I warn all sportsmen from purchasing any of these dogs as I shall replenish them at the first opportunity. J. E. ISGRIG.

## The Ohio Field Trials Club.

CANTON, O., Aug. 29.—At a meeting of the board of directors of the Ohio Field Trials Club the time for Derby entries has been extended to Oct. 1. Mr. John Bolus was appointed judge of the trials. Information secured from owners of the land on which our trials will be run state that we will have plenty of birds, and they will protect the same until after the trials. G. V. L. MELLINGER, Sec'y.

## Manitoba Field Trial Club's Entries.

EVERYTHING points to their having a successful and enjoyable meeting at Souris. The number of entries is greatly in excess of last year's, and all good dogs, so that they should have a superior trial.

The following are the entries for All-Aged Stake to be run at Souris, Sept. 18, 1893, W. Tallman, judge:

## ENGLISH SETTERS.

MISS CAMBRIA—F. G. Simpson, Winnipeg.  
BELLE—E. James, Moosomin.  
KENWOOD—Chas. Proctor, Union City, Ind.  
DICK BONDHU II.—John Wootton, Manitou.  
ATLANTA—L. A. Smith, Morrison, Ill.  
HOODOO—W. F. Ellis, Manitou.  
CHIVALAR—Avent & Thayer, Hickory Valley, Tenn.  
LOCHINVAR—Avent & Thayer, Hickory Valley, Tenn.  
KINGSTON—Avent & Thayer, Hickory Valley, Tenn.  
KINGSTON—Avent & Thayer, Hickory Valley, Tenn.  
BETTIE S.—Avent & Thayer, Hickory Valley, Tenn.  
COUNT GLADSTONE IV.—Avent & Hitchcock, Hickory Valley, Tenn.  
ROB NOBLE II.—R. J. Gallagher, Winnipeg.  
RANGER—J. H. Rose, Winnipeg.  
NORA T.—J. A. Telford, Winnipeg.  
JOE—Roberts & Young, Souris.  
RUSH—J. H. Brown, Souris.  
VESTA—J. H. Brown, Souris.  
BOB WILSON—F. W. Scott, Winnipeg.  
BRIGHTON LOBE—T. G. Davey, London, Ont.  
DON—W. T. Barrett, Moose Jaw.

## IRISH SETTERS.

ZERO—Roberts & Young, Souris.

## POINTERS.

SPOTTED BOY—Chas. Proctor, Union City, Ind.  
KENT ELGIN—T. T. Ashford, Birmingham, Ala.  
SPOTTED BELLE—F. W. Scott, Winnipeg.  
IGHTFIELD BANG—J. Simoneau, Somerset.  
IGHTFIELD DIANA—John Cain, Virdon.  
IGHTFIELD BLOSSOM—John Cain, Virdon.  
SAM—Thos. Stone, Calgary.  
JONE—T. G. Davey, London, Ont.  
The following are entered in Amateur Stake, open to members living in Manitoba and North West Territory. Dogs having won in any previous event and professional handlers are barred from participating in this stake:

## ENGLISH SETTERS.

DUCHESS OF MANITOBA—Alfred Connor, High Bluff.  
DOROTHY A.—J. R. Brigham, Moosomin.  
DAISY A.—J. R. Brigham, Moosomin.  
BELLE—Edward James, Moosomin.  
MINNIE—John Wootton—Manitou.  
ZEULIKA—W. F. Ellis, Manitou.  
BELLE—J. D. McMurray, Winnipeg.  
BOB WILSON—F. W. Scott, Winnipeg.  
BOBBY—J. Simoneau, Somerset.  
RANGER—J. H. Rose, Winnipeg.  
NORA T.—J. A. Telford, Winnipeg.  
JINGO—E. McKenny, Manitou.  
RUSH—J. H. Brown, Souris.  
VESTA—J. H. Brown, Souris.  
ROB NOBLE II.—R. J. Gallagher, Winnipeg.

## POINTERS.

SPOTTED BELLE—F. W. Scott, Winnipeg.  
VIRDON PRINCE—R. Adamson, Virdon.

## Flaps from the Beaver's Tail.

TORONTO, Canada.—The annual meeting of the Canadian Kennel Club will be held at Richmond Hall, Toronto, on Tuesday, September 12, at 8:30 P. M. An executive meeting will be held on Monday evening, same time and place.

Mr. A. E. Elmer, Kingston, undeterred by his late hard luck, has imported a black and tan terrier dog from England. Pedigree and particulars not yet to hand.

Messrs. Lindsay and Wetherall, of Montreal and Compton, Quebec, have received an Irish terrier brood bitch from Mr. Jamieson, of Belfast. She was bred by Mr. Weiner, and is supposed to be in whelp to Poor Dick, a brother of Poor Pat.

Another recent arrival in "reds" is Jack, by Doctor II., (Mick McQuade—Nettie Dhu) out of Peggy (Benedict—Mary Dhu). Mr. Reginald Northcote, of Toronto, bought him from Mr. P. Cosgrove, of Dublin, and he was bred by Mr. J. J. Mallory, of that city. He will make his bow at Toronto.

Mr. A. D. Stewart is expected home to-morrow (Saturday, September 2). H. B. DONOVAN.

## "Tasted a Good Thing."

## Editor Forest and Stream:

Will you please send me copy of last (Aug. 26) week's issue? I received my paper, but two spaniel pups in their pursuit after knowledge got hold of it and left me about half, which I have read and now desire to finish the other half. There were half a dozen other papers which the pups could have had and welcome, but I think they displayed good taste, and must be dogs of discernment in being so young and yet so ready to appreciate a good thing. Send along another copy, for which I inclose 10 cents. A. J. B.

Oodensburg, N. Y.

## Hunting and Coursing.

## FIXTURES.

Oct. 3.—International Coursing Meeting at Huron, S. D. J. Herbert Watson, 26 Court street, Brooklyn, N. Y. (chairman).  
Oct. 17.—Kennore Club meeting at Goodland, Kan. Frank L. Webster, Sec'y. Entries close Oct. 16.  
Oct. 24.—American Coursing Club. Ira D. Brougher, Sec'y.  
Nov. 7.—The Cowley County Coursing Association, Winfield, Kan. J. R. Ballard, Secretary.  
Mix. Lotio. A little to be poured into the ears twice a day. You might also wash the dog in a solution of creoline (1 to 60). Repeat purgative in a week.

## National Fox Hunters' Association.

THIS association was successfully launched at the Blue Grass Kennel Club show in Lexington, Ky., Thursday afternoon, Aug. 31. There were present Judge J. W. Perry, Roger D. Williams, B. S. Coyle, Bourbon Kennels representatives, Redd Bros., Woodson Royster, C. M. Carlin, of Lexington; W. C. Goodwin, Paris, Ky.; Strodes Valley Kennel Club, Winchester, Ky.; Wm. Huffstetter, Carlisle, Ky.; W. S. King, N. C.; A. B. Whitlock, Sekitan, Ohio; Walker Bros., Point Lovell, Ky., and H. L. Means, Louisville, Ky. Many who were prevented from attending sent letters of regret and expressing good wishes for the association, and an intention of becoming members. Of course this was only a preliminary meeting to start the association, and nothing was done in the way of constitution and bye-laws. The members present elected the following officers: President, Admiral James Jouette, Washington; Vice-Presidents, E. F. Clay, R. D. Williams, Wm. Huffstetter and Francis J.

Hagan; Secretary and Treasurer, Harry L. Means; Directors: Mr. Walker, Kentucky; Mr. Goodman, Kentucky; N. O. Pope, Maine; G. V. Young, Mississippi; George Garrett, Georgia; Leroy C. Wilson, Indiana; R. H. Pooler, Illinois; Mr. Lewis, "Wild Goose Pack," Tennessee; Dr. A. C. Hef-fenger, New Hampshire; W. J. Pierce, Brattleboro, Vt.; B. S. Turpin, Massachusetts; W. L. King, North Carolina; Mark Durrett, Virginia.

The meeting was a thoroughly enthusiastic one and the laugh and joke passed freely round the room as it should do in a gathering of fox hunters. Here were men who own some of the best packs in "Ole Kentucky," and to show the spirit that animates these men we may quote one joke that passed. Somebody said that the FOREST AND STREAM representative could not enjoy a hunt because he could not hear the hounds, when Judge Perry remarked that a true fox hunter could hear the hounds three days after he was dead. We at once became a member of the association. The membership list is already upward of one hundred, and it is thought that before long it will be three to five hundred. A meeting will probably be called the latter part of November at some central point, when constitution, by-laws and plans for a national hunt and trials will be formulated. There was a good deal of discussion between those present, and Judge Perry, an enthusiastic hunter, made a good speech in which he said the association should try to get proper legislation for the protection of hounds in the different States, many stray hounds having been shot while running a fox or finding their way home.

### The Northwestern Beagle Club Trials.

*Editor Forest and Stream:*

A meeting of the Executive Committee of the Northwestern Beagle Club was held Aug. 27 at 3 P. M., at Milwaukee, Wis., the following members being present: H. A. Dillingham, Chas. Niss, Jr., G. A. Buckstaff; by proxy, Louis Steffen. Other gentlemen present: E. H. Rummell, J. H. Cambler, Rud. Engelman, A. Hirtreiter. H. A. Dillingham in the chair. It was voted to make the following classes for the coming field trials: Class A, for dogs, all-age, 15 to 13in. Class B, for bitches, all-age, 15 to 13in. Class C, dogs and bitches, all-age, 13in. and under. Class D, Derby, for dogs and bitches, whelped on or after Jan. 1, 1892.

These trials are open to all comers; and, in order to give all a chance and get as many entries as possible, the entry fee was set very low, \$2 to nominate, \$3 to start; the nomination fee to be paid at the time of making the entry, the balance at the trials before starting. Entries close for these classes Oct. 14.

The prizes are 40% to first, 30% to second, 20% to third.

It was also decided to run a Champion Class E, open to all dogs and bitches that win first at these trials. Entries close after the other classes have been run. No entry fee will be charged.

Mr. John Davidson has been engaged to judge.

The secretary was authorized to correspond with some other judge in regard to terms, etc.

A place for the trials has not fully been decided on yet, but several first-class places were suggested, and Messrs. Dillingham and Rummell were appointed a committee to inspect them and report.

It is the desire of the club to hold the trials where it will be easy of access to all, and where good accommodations can be had at reasonable rates.

The club colors are black, white and tan.

The following gentlemen were admitted as members: E. B. Elliott, Maywood, Ill.; Rud. Engelman, Milwaukee, Wis.; Robert Neumeister, Sheboygan, Wis.; J. H. Cambler, Milwaukee, Wis.; L. Boorse, Milwaukee, Wis.; Fred. Hinricks, Manitowish, Wis.; Truman Sears, Pine River, Wis.; F. W. Bender, Oconomowoc, Wis.; Edward Bender, Oconomowoc, Wis.; Theo. Zschetzsch, Sheboygan, Wis.; A. Hirtreiter, Milwaukee, Wis. LOUIS STEFFEN, Secretary. MILWAUKEE, Aug. 31.

### The Koon Club.

A club was organized among the exhibitors at the Lexington show, whose influence for good, if properly managed, may be far-reaching. Conceived in a sportive moment it evolved eventually into a tangible and stern reality. The object of the club is the remedy of abuses, unity of interests, mutual benefit, and the encouragement of social intercourse. The following officers were elected: President, Dr. L. C. Sanveur; Vice-President, Harry L. Goodman; Secretary-Treasurer, Al. G. Eberhart; Veterinarian, Dr. F. H. Hoyt; Sergeant-at-Arms, E. Bardeoe Elliott; Inspector of privileges, H. W. Lacy. The executive committee includes the above officers and Prof. Maenner, A. B. Whitlock, J. W. Walker, W. J. Comstock, and another to be elected in the East, probably at Providence. Officers serve for one year. The fee is \$3 for charter members, limited to twenty-five members, who subscribe before Sept. 31. After this the annual dues will be \$5.

Application will be made for admission to membership in the A. K. C. Messrs. Goodman and Lacy were elected a committee to select a club badge, several designs were suggested, but nothing definite decided upon. The motto of the club will be "Prevention is Better Than Cure." At the next meeting, probably to be held in Providence, R. I., a constitution and by-laws will be adopted. The society or club is a secret one, and its transactions will not be made public, its influence alone will be felt. The club had not been organized two hours when one of the members found that he had lost his pocket-book. The club at once convened and decided to assume the financial responsibility for this member's return home. Happily the pocket-book was found, but the spirit animating the members had been shown.

### N. E. B. C. Stakes.—Correction.

*Editor Forest and Stream:*

Will you please correct a mistake I made in report of the last meeting of the executive committee. I stated that the prize money in the 13in. and under class would be \$50 for 1st, \$30 for 2d and \$20 for 3d. It should read \$75 for 1st, \$50 for 2d and \$25 for 3d, the same as is offered in the 15in. class. Running rules and entry blanks are now ready, and have been mailed to a great many beagle owners, and any one that has been overlooked will please write me and they will be furnished at once. Those who intend entering dogs will please take notice that entry to the Derby closes September 16. W. S. CLARK, Sec.-Treas.

LINDEN, Mass., Sept. 2.

### International Meet.

From two or three reliable sources I learn of the intention of some prominent coursing men not to enter their dogs at Huron, in the International coursing meeting. It is rumored that the American Coursing Club has not paid some of the prizes won at the last meeting. The American Field "cup," so-called, which is a cup or \$100 cash at the option of the winner, I am told remains unpaid, though repeatedly applied for by the winner of it at the last meeting. My informant tells me further that letters on the subject are ignored by the "cup" donor. B. WATERS.

### The National Beagle Trials.

LINDEN, Aug. 31.—I read the account of the N. B. C. meeting and think Mr. Tallman did a wise thing in mentioning Mr. Turpin's name for one of the judges. I have known

him a long time and I don't believe there is a more honest, courteous and conscientious sportsman in America than he, and there is no one living can say a word against his character. The club will look a long way before they find his equal, and his superior is not to be found. He does a lot of hunting and knows a good one in the field as well as any one I ever saw. He and Joe would make a good team and would pull well together. W. S. C.

Mr. T. W. Bartels, of Denver, Col., writes us that their Pearl of Pekin has come in season and so had to stop work. However, they have Monk Bishop, Boomerang and Irish Lass that are doing well, and if nothing happens they will start at Winfield and Goodland.

Several of our friends write congratulating FOREST AND STREAM upon starting a hunting and coursing column, and promising news as it crops up.

The National Beagle Club, if it should be successful in securing Mr. Turpin's services as a judge at the coming trials, may congratulate itself on having one of the most practical beagle hunters in the country to decide on the work done. Acting in connection with Joe Lewis, whose ability in this direction is well known, beagle owners can rest assured that it will be the fault of the dogs and not the judges if they don't win.

Like many an enthusiastic new fancier, Mr. Roberts thought dog breeding was a joyful undertaking with no dark clouds. A change has come to try his strength of purpose; he will have many such experiences in coming years, but if he is made of "fancier metal" such reverses will only make him the keener to succeed. The beagle litter he wrote of recently in FOREST AND STREAM, by Racer, Jr. ex Miss Rogers, has gone the way of all flesh, notwithstanding the help that Prudence afforded him. Mr. Roberts reports his stud advertisement in our business columns as doing excellent work, Racer, Jr., having several services booked, the latest being Hia, a winner at New York this last spring in 13in. class.

The sixteen puppy dog stakes at Ocean View, San Francisco, Cal., resulted in a victory for Harkaway, who defeated Lady Napoleon in the final.

A meeting was held at Stockton, Cal., Aug. 20, in which the prize was a pony and saddle and a purse. The result was undecided, the cash stake being divided between Dolly Dimple, Red Prince and Sting. The pony will be run for later.

After the judging of the foxhound dog class at Lexington Mr. Roger Williams purchased the winning hound Commodore from Mr. Downing, and fully expected to win the special for best in show, and the laugh went hard against him when Patsy Powell scored.

## Yachting.

### FIXTURES.

#### SEPTEMBER.

- |   |  |
|---|--|
| 6. Corinthian, Atlantic City.                             | 14. Mos. Fleet, Open, Cash, South Boston.                  |
| 7. NEW YORK, TRIAL RACES.                                 | 15. New York, autumn sweeps, New York.                     |
| SANDY HOOK.   | 16. Royal Nova Scotia, Special Class, Edwards Cup.         |
| 9. Knickerbocker, Ladies' Day, College Point.             | 16. Larchmont, Special, Schrs. and 85ft. Class, Larchmont. |
| 9. Beverly, Marblehead.                                   | 16. Royal Can., 30ft. Class, Tor.                          |

ALTHOUGH the idle and illusory nature of such calculations have been long since fully demonstrated, the yachting writers and not a few practical yachtsmen are now engaged in the occupation of "drawing lines" between old and outclassed and new and untried yachts, by which each proves to his own satisfaction that his pet yacht must win. The basis for such work is of the slightest, as there is nothing which tends more to befog a man's judgment of the merits of a yacht than a comparison of records made at different times and under varying circumstances. The most extensive and elaborate effort of this kind has recently been made by the Boston *Traveller*, which devotes about half a page to the mathematical proof of its proposition that Puritan is actually faster, without time allowance, than Mayflower and Volunteer, to say nothing of the new boats, and advocates her selection as the defender of the Cup. But little good can come of attempts to forecast the future, but if any one feels impelled to do it, let him steer clear of drawing tortuous lines through Puritan, Genesta, Irex, Thistle, Meteor, Iverna, Navahoe and Valkyrie, and avoiding all records and times, and all attempts at detail make a rough but comprehensive summing up of the principal factors in international racing, the general progress of design on each side as exemplified in smaller yachts, the ownership and handling of each boat, the advantages of preparation and trial and the disadvantages of the ocean voyage and of sailing in foreign waters.

WHILE the ultimate end of all such speculation is the future possession of the Cup, the interest for the present centers in the four yachts which will this week dispute the honor of defending it. Each of them has made a certain effort at improvement, the exact details in each case being unknown, and this must bring an element of doubt into what was looked upon as almost a certainty at the end of the New York cruise, the selection of one particular yacht. While the odds are still in her favor, it is not impossible that a material improvement may have been made in one or more of the others which will lend new interest to the trial races and result in the final attainment of a higher speed.

THE conditions at the beginning of the present trial races are quite different from those existing in previous years since such races were first established in 1881, and this difference is decidedly on the wrong side. In all previous trial races the yachts have been well through the two preliminary stages of experimental tests and of subsequent working up to form, and the trial races have served but two ends, the final tuning up and the selection of one Cup defender. The first trial trips had been made in June, the almost inevitable alterations to ballast, spars and sail followed after the June regattas, and by the beginning of the August cruise the yachts were closely up to racing form. By the end of the cruise they were sailing considerably faster, having been tuned up through the competition with each other

and incidentally with the whole fleet, leaving comparatively little to be done before the trial races in September.

This year the case is totally different; instead of being ready in June, the four were only in the "trial trip" stage at the beginning of the August cruise. The races of the cruise were, unfortunately, of such a nature as merely to indicate the existence of serious defects of some of the yachts, and this in an indefinite way that gave little aid in locating and remedying them. The cruise races assumed the function of the June regattas, giving the first rough trial of the yachts; but whereas in June there remained two full months and many races in which to make experiments and improvements, and to get each yacht in shape, the time between the end of the cruise and the beginning of the trials has this year been of necessity devoted entirely to new experiments.

No yacht, however perfect, can be at her best without a series of hard races which shall disclose any serious defects and especially shall teach her skipper her proper trim and many individual peculiarities, enabling him to develop the speed which in default of such work lies latent. Each of the previous Cup defenders has owed much of her ultimate speed to the thorough working up which was done between May and September; even Volunteer, though ready later than the others, had two known boats as trial horses by which she was worked up.

Never was such testing and working up to form as necessary as this year; each of the four boats is an experiment of greater proportions than has ever been attempted in yachting, and yet, within three weeks of the actual races with the challenger, they are no nearer to the final realization of their true form than most yachts are after the June regattas. Whatever the reasons may be for this state of affairs, the danger of such a course is indisputable; it should not have occurred this year, and if another challenge comes next season the holder of the Cup must take some active measures to secure at least as long and thorough a preparation as is enjoyed by the challenger. This year we have thrown away one of the greatest of the natural advantages which pertain to the position of defender of a trophy, the opportunity for long and thorough trials, unbroken by such an ocean voyage as the challenger is now engaged in.

The worst that can happen is that those to whom the task of selection is intrusted may be misled by the prevalent ideas of the alarming speed of the new yachts, ideas which may or may not be correct, but which should not be accepted until proven. It will not be sufficient that one yacht shows herself unquestionably superior to the others, but the trials should continue until there is reason to believe that the winning yacht has been tested under all normal racing conditions, and further, has been worked up to the highest possible racing form in rig and crew; not until this is done, and it may take a good many hard trips to the Hook, can the committee announce the selection of a champion with the knowledge that they have done their whole duty.

THE past month has been marked by an unusual loss of life on the water, the death roll running up into the hundreds if the reports from the South are true. Sad as are some of the stories of hardship and death in the fishing and coasting fleet, there is a certain consolation in the fact that the loss came in the natural course of events and was beyond human power. Sadder by far are the three disasters which are chronicled in another column, in that all were due to a disregard of well known dangers, against which we have repeatedly and only recently raised a warning voice. The disaster on Lake Champlain is a typical one in all its features, the boat was a wide, shoal centerboard sloop, open fore and aft save for the usual deck and narrow waterways, weighted down with pig iron, and with a large rig, carrying a topsail on a pole mast. The waters are noted as most treacherous, surrounded by mountains and subject to sudden flaws, and the party included six boys, none much over twelve and presumably most of them unable to swim. The owner of the boat, who nobly gave up his life in the effort to save one of the drowning boys, was accustomed to her and a skillful sailor, but the conditions all invited a capsize sooner or later, and it happened at the worst possible time, with a party of helpless children on board. Such craft as the Alpha are dangerous at all times, and where a necessity exists for their use no one should be allowed in them save strong and experienced sailors and swimmers. The other two disasters are of the same class and carry the same vital lesson.

The first of the Cup defenders to be measured was Vigilant, Mr. Hyslop measuring her at City Island on Sept. 1. Her waterline is 86.34ft., or 36ft. under the limit. The rumor that she was 88ft. is thus disposed of, but there is no doubt she was lightened to the utmost to bring her within the limit. Colonia and Jubilee were to be measured on Sept. 6, when they were launched from the railway.

The Colt cup has shared the fate of the Seawanhaka and Atlanti cups, and the race is off, the four Cup defenders being unable to find time for it. It is a curious state of affairs when thousand dollar trophies go begging with no one to race for them.

THE work of Queen Mab on the New York Y. C. cruise was very creditable to her, and quite up to what might reasonably be expected from her proportions of hull and sail. Now she has given a good beating to the two 70-footers Katrina and Bedouin in a fair sailing breeze, winning on elapsed time, though 11ft. shorter. If such a yacht as Queen Mab is the result of classification by corrected length, the rule cannot be quite as bad as it has been represented.

### New Jersey Y. C. Annual Regatta.

HOBOKEN, N. J.—NEW YORK BAY.

Wednesday, Aug. 23.

THE twenty-second annual regatta of the New Jersey Y. C. that failed for lack of wind in June last, was resailed on Aug. 23. The entries were divided into 5 classes, B being cabin sloops and cutters, 27 to 31ft.; C cabin sloops and cutters, under 27ft.; D cabin cuts; E open sloops, 23 to 31ft.; F open sloops, 18 to 27ft.; and G open cuts under 18ft. The courses were from Liberty Island around Can Buoy No. 9, off Swinburn Island, leaving on port to finish line, for classes B, C, D and E. Classes F and G had as an outer mark Can Buoy 11, leaving it on port, thence inside of Fort Lafayette, to finish.

In June, when the last attempt was made, there were 33 entries, but when the committee took up their position at the starting line, but three yachts were ready to go over the course, being Mr. John G. Treaney's Jeanie, Vice Commodore Wenzel's Wanderer and Commodore Ketcham's Charm. The lack of interest and starters cannot be accounted for in any other way than that it was a postponed regatta, which latter are rarely a success.

The preparatory signal was given at 11:33 A. M. and that to start at 11:43, all going across within the 10m. allowed. The tide at the start was strong ebb, the wind being from the northeast, a good whole sail breeze which freshened before the finish to a close reef. It will be remembered that it was on the evening of this day that so much damage was done to the shipping, of which this was a forerunner. Buoy 9 was rounded as follows: Charm 1:06:30, Jeanie 1:14:40, Wanderer 1:15. Just before rounding Buoy 9 the rudder of the Wanderer carried away, which practically put her out of the race, they coming back steering with oars. The full times were:

CLASS C, CABIN SLOOPS UNDER 27FT.				
	Start.	Finish.	Elapsed.	Corrected.
Jeanie	11:49:28	2:58:00	3:08:32	3:08:62
Wanderer	11:49:40	Broke down.		
CLASS E, OPEN SLOOPS, 23 TO 27FT.				
Charm	11:53:00	2:30:45	2:37:45	2:37:45
Com. Frank S. Ketcham, Edward W. Ketcham and Louis Wunder comprised the regatta committee				

Eastern Y. C., Weld Cup Regatta.

MARBLEHEAD—MASSACHUSETTS BAY.  
Monday, Aug. 23.

The first race for the memorial cup presented to the Eastern Y. C. by the widow of the late Wm. F. Weld, was sailed on Aug. 23 in competition with the fall regatta of the club, prizes being offered in all classes. The Weld cup was offered for the larger schooner class, over 75ft. l.w.l. The day was clear and warm, with a smooth sea and a moderate breeze from south to west, the course selected being, for all over 30ft. l.w.l.: From starting line with Halfway Rock on port, leaving Outer Breaker buoy (off Pig Rocks) on starboard, to and around the Nahant mark, leaving it on port; thence leaving Graves, Martin's Ledge and Boston Ledge buoy on starboard, around the stakeboat off Minot's leaving it on starboard; thence return by the same course, leaving each mark on the opposite hand, to the finish line, 35 nautical miles; and for the 30ft. class, from starting line, leaving Outer Breaker buoy (off Pig Rocks) on starboard to and around the Nahant mark, leaving it on the port; thence leaving Graves buoy on starboard, around Three-and-a-half-fathom Ledge buoy, leaving it on starboard; thence return by the same course, leaving each mark on the opposite hand, to the finish line, 35 nautical miles.

The entries were, schooners, Volunteer, Constellation, Marguerite, Mayflower and Yampa; cutters and sloops, Wayward, Harpoon and Carmita, and in the 30ft. class Handsel, Fancy, Hawk, Chieftain, Tomboy and Gracie G. The repairs on Volunteer had been hurried at Lawrence's, but on launching her a leak was still unstoppered, and she was again hauled out. Wayward did not start, leaving Harpoon, the old Beartribe, to meet Carmita, the Waterhouse fin-keel. The latter has been cleaned and painted since the New York cruise, and is now in better shape than ever before. Handsel, the Herreshoff cruising fin, was matched against Hawk, the centerboard 30-footer, and Fancy, the last keel 30 designed by Mr. Burgess.

The first leg of the course was a beat of 7 miles, then a close jam to Minot's, 10½ miles, naut., a free reach and a run home. The shorter course was the same in direction. The starters were:

Sailing Length.	
Mayflower, W. A. Gardner.....	88.71
Marguerite, H. W. Lamb.....	83.74
Constellation, Bayard Thayer.....	110.10
Yampa, H. P. Whitney.....	

FIFTH CLASS.	
Harpoon G. C. & C. F. Adams, 2d.....	54.61
Carmita, C. H. W. Foster.....	54.20

SEVENTH CLASS.	
Handsel, J. B. Hooper.....	33.22
Fancy, C. F. Lyman.....	36.67
Hawk, Gordon Dexter.....	36.85
Chieftain, Aaron Brown.....	
Tomboy, R. K. Lothrop.....	
Gracie G., M. J. Sushrie.....	

The various classes started at 11:15, 11:25 and 11:30. Constellation led at the start, but Mayflower worked close inshore and came out

The race was sailed in a light southwest wind, the times being:  
FIRST CLASS—SLOOPS AND CUTTERS, 21 to 25ft.

	Start.	Finish.
Gunvar, F. S. Grant.....	1 55 55	5 15 00
Caper, P. S. Howard.....	1 54 40	5 02 00
SECOND CLASS—BOATS UNDER 18ft.		
Senta, F. B. Jones.....	1 57 35	5 40 00
Jaut; Howard Herrick.....	1 56 35	Did not finish.
THIRD CLASS—OPEN CATS UNDER 15ft.		
Vitesse, Percy Hicks.....	1 58 20	4 05 00
Less, C. A. Becker.....	1 55 40	4 40 00
Kittie, Hazen Morse.....	1 55 00	4 32 30
Presto, H. Watson.....	1 56 25	Did not finish.
Cynero, Mr. Smedley.....	1 55 25	4 12 30

The winners were: First class, Caper; second class, Senta; third class, Vitesse. Vitesse also won the Center trophy and the cup for the fastest time over the course.

The regatta committee included Messrs. F. B. Jones, C. M. Collopy and J. D. Sparkman. The fleet has prospered this season under the care of Com. Grant and the club station has proved quite a success.

The American Sloop.

"The magnificent performances of the yacht Vigilant in last week's races on the Sound indicate that she stands a very good chance of being selected to defend the America's Cup against the Valkyrie. I hope she may be, as she is distinctly American in type and is not either an imitation of the English cutter or a mere racing freak. She is undoubtedly faster than either the Jubilee, Pilgrim or Colonia in light wind; while all the reports of the races I have read say that she stands up to her work in a blow like a stepple.

"I hold that next to the pleasure and recreation afforded by yachting its object should be to develop types of boats, sails and rigging which will benefit the marine of the country. This being the case a boat of the design of the Vigilant is of infinitely more benefit to the country than one of either the deep cutter or shallow hulled, fin-keeled styles. The centerboard is the best form of vessel for most of our coasting trade. The English racing cutter and the American fin-keeled, canoe-shaped yachts are merely racing machines, and are practically valueless for other purposes. Therefore, again I say I am glad the Vigilant has done so well, and I hope she will do even better hereafter."

Such nonsense as the above, which we clip from the New York Advertiser, would call for no comment were it not for the fact that a great many papers are taking up the same song, and lauding Vigilant as a typical American centerboard sloop, the embodiment of all that is good in naval architecture. In reading such a statement one is led to wonder whether the writers are aware that the America's Cup was first won by a keel yacht drawing some five feet less than this typical centerboard boat.

This same Vigilant also draws more water without her board than any British cutter or schooner save those built this year; and even these are not much deeper. Every objection which has ever

British Racing.

In the races sailed abroad during the last few weeks Britannia has been winning regularly, while Navahoe has done nothing remarkable, being beaten at Satanita and Calluna. Satanita has continued to sail very fast at times, when reaching and in strong winds, while Calluna had held her usual luck of accidents and groundings. Captain Crocker has been in command of Navahoe since August 23, and his regular racing is now over, and Navahoe has been fitting for the Royal Victoria Y. C. gold cup. Her mast has been shortened 23in. and her bowsprit 18in., reducing her rating to nearly that of Britannia, who will defend the cup. The first race will be sailed on September 6. The courses proposed are:

First Race.—From the Warner Lightship to the Nab Lightship, then ten miles to windward or leeward and return, twice round.

Second Race.—From the Warner Lightship to Owers Lightship, thence to a flag boat off Dunnoe, east of Princess buoys, and then to and around the Nab Lightship and back to starting point.

Third Race.—From the Warner Lightship to and around the Cherbourg (France) breakwater and back.

Fourth Race.—Around the Isle of Wight.

The time limit will be 5 miles per hour.

Captain Charles Barr, discharged New York on the Paris on September 2. The discharged seaman, Charles Nelsen, has also returned. Capt. Draper has also left the yacht.

A Second August Gale.

The cyclone of Aug. 23-4 was quickly followed by another of even more destructive force, though most of it was expended below the domain of yachting. The storm struck the coast of Georgia and the Carolinas on Sunday, from the sea, accompanied by a tidal wave that wrought inestimable damage and very heavy loss of life to the sea ports and especially on the low islands along the Carolina coast. The warning of the Signal Service had been heeded by yachtsmen, and special precautions had been taken, but in the various anchorages of the smaller craft, as off South Boston and along the shores of the Jersey peninsula from Jersey City to Constable's Hook, a great deal of damage was done.

Nautilus, 46-footer, Com. W. B. Dickey, Marine and Field Club, was at anchor off Bay Ridge, but dragged aboard of Emerald, Lasca and a couple of other yachts, sustaining some damage and being towed to the Erie Basin for repairs. Signal schooner, went ashore in Gravesend Bay and was beached. The float and yachts of the Pavia Y. C. were badly damaged.

The Morgan—Iselin Cup defender Vigilant had a particularly narrow escape. She was anchored on Monday night just off Mr. Iselin's residence, on Davenport Neck, New Rochelle, and toward morning the gale struck her and she began to drag toward the rocky shore and the surrounding reef. All of her anchors on board were dropped, but they failed to hold her, and lead ballast was broken out and lashed to the cables to increase the holding power. The gig was sent ashore for aid, but was swamped near the beach, though all hands landed in

"NAVAHOE" IN THE DRYDOCK.

FROM THE YACHT. DRAWN BY L. FILLIO.

well ahead at the end of the windward work, the times at the Nahant mark being:

Mayflower.....	12 29 09	Yampa.....	12 49 30
Constellation.....	12 30 05	Harpoon.....	12 47 00
Marguerite.....	12 38 50	Carmita.....	12 51 45

Harpoon pointed higher than Carmita, making a good gain in the 7 miles. Handsel, sailing under three lower sails, her pole-masted rig permitting no topsails, showed a decided superiority to the others, though their topmasts and full cutter rigs enabled them to set club-topsails.

On the long reach Constellation passed Mayflower, and though no time were taken, at the outer mark she gained steadily, going out and returning to Nahant. Carmita also did better with Harpoon in the reaching than on the wind. Handsel had nearly 5 minutes on Fancy, the second boat, at the second passing of the Nahant mark. The only times taken there were:

Constellation.....	2 24 57	Marguerite.....	2 45 40
Mayflower.....	2 35 15	Yampa.....	2 47 48

Booms were jibed over and spinakers set to starboard for the run in. Constellation led, but failed to save her time on either Mayflower or Marguerite. Yampa went into harbor instead of continuing to the finish. Fancy passed Handsel off the wind but lost in allowance. The full times were:

		SCHOONERS.			
	Start.	Finish.	Elapsed.	Corrected.	
Mayflower, .....	11 18 16	3 26 32	4 08 16	3 55 07

Gracie G.....	11 31 06	Withdraw.		

Mayflower wins the Weld cup and Marguerite wins \$25. Harpoon wins \$75, Handsel wins \$50 and Fancy \$25. The regatta committee included Messrs. W. S. Eaton, P. T. Jackson, A. N. Rantoul, Thos. Nelson and H. H. Buck. The annual cruise of the club began on Saturday last, the fleet sailing for New York to witness the trial races.

Corinthian Mosquito Fleet Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.  
Saturday, Aug. 26.

The Corinthian Mosquito Fleet was a sufferer by the storm of Aug. 24 and its annual regatta on the following Saturday brought out only nine starters owing to the damage to the fleet, and to some of the entries being unable to reach the station at New Rochelle. Prizes were offered by Com. Grant and Messrs. Connolly and Jones of the regatta committee, while Com. Center, Seawanhaka Corinthian Y. C., offered a special trophy for boats sailed by not more than two men, the points in the award being speed 45%, rig 15%, handling 15% and condition 15%.

The courses were:  
For all boats over 18ft. l.w.l.—Across line between a stakeboat and the race committee's yacht to the spar buoy off western end of Execution Reef, passing same on port hand; thence to the spar buoy off Delancey Point, Orienta, passing same on port hand; thence across the starting line. Seven miles naut.

For all boats 18ft. l.w.l. and under.—From the same starting line to the spar buoy off western end of Execution Reef; thence to the spar buoy off southwestern end of Hen and Chickens; thence to the starting line. Five miles naut.

been made against the cutter on the score of excessive draft and general usefulness, save for offshore cruising, applies with double force to this American sloop, which, by the way, is cutter-rigged. A fine model this for a fisherman or coaster, and a fine yacht she will make when the one special purpose for which she was built is served.

Stamford Y. C. Special Cup.

The first race sailed by the Stamford Y. C. took place on Aug. 26, the prize being a handsome silver cup costing \$200, offered by the club for sloops and cutters of 36 to 43ft. sailing length by the Seawanhaka rule. The entries were:

Sailing Length.	
Daffodil, J. R. Whiting, Stamford Y. C.....	40.0934
Alcedo, William A. Hamilton, Riverside Y. C.....	40.09
Eurybia, Chas. Pryor, Horseshoe Harbor Y. C.....	40.0216
Kathleen, P. M. Hoyt, Stamford Y. C.....	37.0542

The course was from Cow's Buoy, off Shippin Point, to Matinecock Point, then to Eaton's Neck, and back to the starting line, 25 miles, naut.

The wind was very light S.W., but the three boats made a very close race over the whole course, being together all the time, Kathleen in the lead. At the finish she managed to work over the line just as the wind fell, leaving the other two to drift for over an hour before finishing. Kathleen was sailed by Mr. Whitlock, her original owner, and his old crew of 1889. The regatta committee included Messrs. Archibald N. Smith, Edward E. Bruegherhoff and Geo. F. Hoyt.

Cape Cod Y. C.

On Aug. 26 the Cape Cod Y. C. sailed the last of its Town Cove races, the times being:

FIRST CLASS.	
Puritan, H. K. Cummings.....	20.00
Bessie, Capt. Pennington.....	31.00
Wave Crest, D. L. Young.....	

SECOND CLASS.	
Sea Fox, C. Smith.....	18.00
Inez May, T. Nickerson.....	15.09
Henritta, J. B. Rich.....	14.06
Grover, Dewitt Record.....	16.00

THIRD CLASS.	
Nausett, E. Horton.....	33.00
Josephine, P. D. Smith.....	34.00

Wawasee Y. C.

The fourth annual race was sailed on Aug. 10 on Wawasee Lake, Indiana. Course, triangular, 7 miles, twice around. Weather fair. Wind, west by north:

	Length.	Elapsed.	Corrected.
La Cigale (bouncer), Hicks & Brown.....	18.104	1 46 43	1 44 09
Margaret (bouncer), Huey & Lyon.....	19.023	1 47 09	1 47 09
Eugenia (cutter), J. F. Wright.....	18.05	1 57 30	1 54 02

Egret (sloop rig), J. F. Wright.....	19.05	2 19 09	2 02 30
Florence (catboat), V. Griffith.....	19.05	2 19 09	2 10 29
Dione (sloop rig), A. Ludlow.....	15.083	2 28 32	2 11 58
Big Four (skiff), Morse & Co.....	13.09	Did not finish.	

La Cigale won first prize. Large boats handicapped. The boats in this race were not classified. Regatta committee—Wm. Staub, Cary Cowgill, J. F. Wright. Judges—Bundy, Groves and Cowgill.

The second supplement to Lloyd's Yacht Register, containing alterations and additions to July 31, 1893, has been issued.

Corinthian Y. C. Championship.

MARBLEHEAD—MASSACHUSETTS BAY.  
Saturday, Aug. 26.

The third championship regatta of the Corinthian Y. C. of Marblehead was sailed on Aug. 26, the times being:

SECOND CLASS.	
Susie, Keith.....	2 07 15
Ariel, Barrett.....	2 10 37

THIRD CLASS.	
Reaper, Benson.....	2 03 47
Freak, Cochran.....	2 06 50
Gigi, Kemble.....	Withdraw.

FOURTH CLASS.	
Madge, Thayer.....	1 43 24
Koorall, Robbins.....	1 34 30

SPECIAL CLASS A.	
Verena, W. O. Taylor.....	1 37 19
Hawk, G. Dexter.....	1 26 00

Pinta, E. Y. C.....	Withdraw.
Jane, C. W. Parker.....	2 22 28
Kraken, Chase.....	1 39 04
Nina, E. Y. C.....	Withdraw.
Carl, C. W. H. Foster.....	2 41 07

The Fisher Cup.

The arrangements for a match between Onward, the holder of the Fisher cup, and the challenger, Zelma, of Toronto, were finally completed after much delay, and Aug. 26 was set as the date. Zelma crossed to Charlotte and the race was started in a light breeze. Zelma finished in 40min, over the 8 hour limit, making no race. On Aug. 28 a second attempt was made, but with the same result. The weather varied from a flat calm to a violent thunder storm during the race. Onward led all day, but Zelma kept within her allowance. Both gave up when it was impossible to finish within six hours. Next day the coast cyclone struck the Lake, driving all the yachts far up the Genesee River for shelter. The race was indefinitely postponed and Zelma returned to Toronto.

## Larchmont Y. C. Races.

THE Larchmont Y. C. has had on hand a very full programme of races for the past two weeks, but owing to bad weather and other causes several of them have failed. The principal event, the Colt cup for the Cup defenders, was abandoned, as none of the yachts could compete, being busy preparing for the trial races. The race for the Flint cups, valued at \$100 and \$50, for cabin cats, presented by Mr. F. W. Flint, was hardly more successful, being postponed from July 29 to Aug. 24, and then, on account of the gale, going over to Saturday, when it was sailed in a drifting breeze.

The oyster boat race on the same day, Aug. 26, was also a failure, the fleet being unable to finish; and a special match between the schooners Viator and Triton was also abandoned after the start. The following times were taken in the catboat race and the oyster boat race:

## New York Y. R. A. Fifth Annual Regatta.

NEW YORK YACHT RACING ASSOCIATION

Monday, Sept. 4.

THE New York Yacht Racing Association sailed its fifth annual regatta on Labor Day with the usual large field of starters, though the effects of the two recent storms were seen in the absence of quite a number of racing boats which had been unable to make repairs in time. The courses were:

For the schooners and for classes B, C, D, E and F of sloops from the line between Oyster Island and Buoy and a stakeboat anchored to the east, around Buoy No. 12, 1/4 mile northwest from the point of Sandy Hook—27 miles. Classes G, H, I, 2, 4, 6 and 7 rounded the red bell buoy at the northerly entrance to the Swash Channel—21 miles.

Classes 3, 5, 8 and 9 rounded black buoy No. 9, near Swinburne Island 15 miles. Class 10 rounded black buoy No. 11, three-quarters of a mile S. by E. from Fort Tompkins, 12 miles.

Monday was a day of thick haze over the water in the early morning, the wind being light westerly. When the start was made at 11:50 the haze had lifted but the wind was still moderate. A good start was made, some eighty yachts going over the line. During the day the wind fell and the fleet was left drifting. Those which finished by evening were timed as follows, but many were left behind with an ebb tide.

The winners in the various classes were: Schooners, Loyal; class G, Lurline; class 1, Maud M.; class 2, Clara S.; class 3, Mosquito; class 4, Mary; class 5, Hit or Miss; class 8, Arrow; class 9, Gertrude A.; class 10, Chip.

The many details of the race were very ably handled by Messrs. George E. Gartland, C. E. Simms and Wm. Cagger. The members and their guests followed the race on the Cygnus.

## Lake Champlain Y. C. Annual Regatta.

BURLINGTON, LAKE CHAMPLAIN.

Wednesday, August 16.

THE great event of the season on Lake Champlain, the annual regatta of the Lake Champlain Y. C., was sailed very successfully on Aug. 16, the courses being on the lake in front of the club's handsome house at Burlington. The full programme was as follows:

1. First race, open to all sailing yachts of 35ft. and upward. First prize, silver cup; second, yacht ensign.

2. Second race, open to all yachts of 30ft., and less than 35ft. First prize, silver cup; second, yacht ensign.

3. Third race, open to all yachts under 20ft. First prize, silver cup; second, yacht ensign.

The winners in this race shall also be considered the winner of the first of a series of races for the "Whiteside Medal," to be sailed during the seasons of 1893, 1894 and 1895.

4. Fourth race, for the "Ladies' Cup," value \$500, open to all yachts whose owners are members of the club.

5. Canoe sailing race. To be sailed under the rules and regulations of the American Canoe Association. Prize, marine glasses.

6. Canoe paddling race. Same rules. Prize, marine glasses.

7. Seventh race. Open to all steam yachts and naphtha launches under 50ft. waterline, to be steamed for under the Isherwood rules. First prize, silver cup; second, silver cup.

8. Rowing race, single scull or rowing boats—no outriggers allowed. First prize, \$5; second, \$3.

9. Tub race. First prize, \$5; second, \$3.

There was no start in the "Nauticus" in the first class, so no start was made. Classes 2 and 3 were started together, the result being:

ledge Cup, held for two successive years by the Nautilus. This year it was won by Thetis, designed by J. Borden, of Fall River; and owned by H. W. Putnam, of New York. The course was sixteen miles, the wind fresh northwest, and the times as follows:

lost their lives. They were: Carrie Hammond, Wauconda; Grace McDonald, Chicago; Fred. Roome, Chicago; —Roome, Chicago.

A pleasure party of seven young people had gone out for a sail in a little boat managed by Elmer Golding, a son of one of the most prominent men of Wauconda.

When about 300 yds. from the landing a panic among the occupants was caused by a gust of wind striking the sail as a tack was being made. The boat capsized.

Young Golding succeeded in reaching the upturned boat with Miss McDonald, and the two, with Fred. Roome, were rescued by boats from the shore.

The other four members of the party were drowned before assistance could reach them. The bodies were recovered.—*Chittanooga, (N. Y.) Times, Aug. 18.*

## YACHT NEWS NOTES.

The dangers of the sea are fully illustrated by the following clippings from local papers:

"A party of ten of the New Brunswick Boat Club Regulars yesterday morning started off in Vandy Voorhees' yacht *Ida V.* for a cruise to Perth Amboy. The yacht has just been rigged with new sails, and the canvas proved too heavy. Just below the Sayreville dock a strong wind caught the sails full and the pull of the canvas was so strong that the spar, running from topmast to the stern was broken about two feet from the top. The entire rigging came down on the boat, but fortunately no one of the occupants received injury. The spar which broke was a new one and had only been put in on Saturday. It was too light for the heavy canvas. Mr. Voorhees went to New York to secure a new spar."

"On Sunday last, as the yacht *Laurel* was sailing off North Beach, Capt. Daniel Hurley, skipper of the famous yacht *Angry*, and the *Harlan Y. C.* met with a ducking. He undertook to go out on the bowsprit to hoist on the toptail when the rope gave way and he was tossed overboard. George Dowdell, the cool-headed captain of the Hell Gate Club, threw him a line and quickly pulled him aboard. The party were then landed at North Beach."

The new *Valiant*, Mr. Vanderbilt's steam yacht, is not owned by him individually, but by a company which, according to the London *Fairplay*, is arranged as follows:

"Steam Yacht *Valiant* Company, Limited.—Capital, £100,000 in £1 shares. Objects, to purchase, own and work, for the purposes of pleasure only, the steam yacht *Valiant*, of the port of Liverpool, to enter into an agreement with W. K. Vanderbilt, and to carry on the business of a ship owner with respect to the above yacht only. The first subscribers are:

"Mr. W. K. Vanderbilt is to be the governing director of the company until he resigns office, dies, or ceases to hold £50,000 of the capital of the company."	

In celebration of its twenty-fifth season the South Boston Y. C. will hold an open regatta on Saturday, Sept. 9, for yachts of not under 15ft. and not over 35ft. sailing length (l.w.l. plus 1-5 total overhang). Prizes will be given in each of seven classes, keels and centerboards being classed together. Entries must be made to G. F. Clark, 43 Milk street, Boston, not later than 3 P. M. on Sept. 8.

The Massachusetts Institute of Technology has now a successful course in naval architecture, covering four years. It is under the immediate direction of Cecil H. Peabody, S. B., with an able corps of assistants.

*Siesta*, steam yacht built for H. H. Warner, of Rochester, by the Herreshoff Mfg. Co. in 1882 at a cost of \$35,000, was sold on Aug. 20 for \$4,000 by the assignee of Mr. Warner. The yacht was purchased by her captain, John Davis, who sold her later to George Green, of New York, for \$7,000. Over \$3,000 have lately been spent in repairs to her machinery.

*Vamoose*, steam yacht, has been sold by W. R. Hearst to Mr. Davies of Brooklyn, the price stated being \$30,000.

The new *Yankee Doodle* is being fitted with triple compound engines designed by John Haug, the Philadelphia marine engineer. Her owners have issued an open challenge to the other fast steam yachts for a race of one to fifty miles.

The "new" steam yacht *Rex*, now on her way to Chicago, is better known as the *Dandy*, a fast launch that has been rebuilt this summer and rechristened *Rex*.

The cruising steam yacht *Embla* has shown even a higher speed than her builders hoped for, and promises to be an exceptionally fast yacht.

## Canoeing.

Secretaries of canoe clubs are requested to send to *FOREST AND STREAM* their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to the *FOREST AND STREAM* their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

## FIXTURES.

### SEPTEMBER.

16. Toronto, International Paddling 16. Red Dragon, Delaware River, Trophy Race.

MEMBERS of the A. C. A. who were present at the two meets at Willsborough Point will remember Mr. George P. Witherbee, whose untimely death is described on another page. Mr. Witherbee was present both years, his yacht *Alpha* lying with the canoes in Indian Bay.

## Glenwood and Milwaukee.

Our attention has been called to the comments on the speed of the canoe *Glenwood* (Electric) in a report of the Western Canoe Association meet, to the statement that she was the fastest canoe present. As we are informed, *Glenwood* has thus far sailed six races with her chief competitor at Ballast Island, the new canoe *Milwaukee*, owned and sailed by Mr. F. B. Huntington, of Milwaukee. Of these six races *Milwaukee* has won five, that won by *Glenwood* being sailed by Mr. Nat Cook, of Chicago, the best canoe sailor in the West.

*Milwaukee* is a duplicate of *Avis*, built last year by the St. Lawrence River Skiff, Canoe and Steam Launch Co., and was built this year by the same concern for Mr. Huntington. *Avis* is known as the "fin-keel" canoe, though not a thorough fin-keel in the common application of the term. She was specially designed for the St. Lawrence Co., by Mr. Wm. Gardner, the yacht designer, and is similar to Mr. Whitlock's last canoe *Damocles*, also designed by him. The greatest depth is amidship, where the keel is straight, the deadwood tapering out away in front. In *Avis* and *Milwaukee*, the oak keel is carried down quite deep and a lead cigar is fastened to the bottom; the centerboard working through this bulb. There is no separate metal fin, as in the fin-keel yachts, but the construction of the oak keel approaches to it, and the lead is disposed at a low point. Such a construction would not be possible under the rules of the A. C. A., but the W. C. A. rules are less stringent. This year *Milwaukee* has won the W. C. A. trophy, the record prize and the Gardner cup. The latter prize goes however to *Avis*, the winner of one cup being barred from taking another under the W. C. A. rules. Last year *Avis* won the Gardner cup and record.

## A. C. A. Membership.

EASTERN DIVISION: Clarence B. Mather, Charles B. Robertson, Auburndale, Mass.

## CANOE NEWS NOTES.

MR. L. S. HICKMOTT, of the Hartford C. C., has purchased the well known *Owl*, formerly owned by Dr. J. A. Gage, of the Vespers.

The *Rochester Union and Advertiser* of Aug. 26 publishes an excellent article on the Rochester C. C., illustrated by a number of reproductions from photographs.

## AMERICAN CANOE ASSOCIATION.

### Meet of 1893.

Our story last week related chiefly to the races, and in order to give a complete history of the meet it is necessary to go back to the beginning, on Aug. 10, on which date the camp formally opened. Com. Cotton and Sec. Treas. Burns were frequent visitors at the island in the days preceding the opening, and when they pitched their tents permanently the preliminary arrangements had been all completed. Among the first to join them were the Vesper party, Paul Butler, Mr. and Mrs. Howard Gray and D. S. Goddard. The Vespers set up their tents on the east shore of the point, overlooking McDonnell's Bay, and as other men came in they pitched mainly in the same locality, filling the portion of the grove along the wharf.

This, the main portion of the camp, was within a very convenient distance of the wharf, mess shed, headquarters and post-office, but at the same time it was well out of the way of travel to and from the wharf and the ladies' camp. Although there was no lack of room in the grove, many tents were pitched along the beach of McDonnell's Bay, making a very gay sight as seen from the river. As usual the Toronto men gravitated to the extreme end of the camp, theirs being the last tents.

The middle of the peninsula was high and clear of trees, and in the center of this plaza facing the head of the wharf and about a hundred yards from it were the tents of the officers and the flag poles, with the large A. C. A. flag, the American and British flags and the code signals. The small house marked D on the map, was occupied by the ladies, with a tent or two nearby, but the real "Squaw Point" was beyond it, in the grove indicated, a beautiful spot. Along the shore of the little bay inside of Knapp's Point was a row of tents, all well shaded. Just in the rear of them was a second row, pitched on a rocky terrace about 4ft. higher than the ground in front. From this central portion the camp spread out each way, extending into the woods to the west, and on the east, toward the main camp; showing a line of tents just within the shade of the woods, with a fine meadow in front. Those who wished company were camped in the main group, but those who cared for seclusion and retirement found it readily within the grove. The rocky ledges added much to the picturesque look of the camp, which was beyond comparison the finest "Squaw Point" ever seen at a meet.

While the entire camp extended along a well defined line, the configuration of the ground was such that the wharf, mess shed and headquarters were within reasonable reach of all parts, and further, the main and the ladies' camp were well separated. We have visited

ST. LAWRENCE RIVER SKIFFS.

ST. LAWRENCE RIVER SKIFFS.

From Photos by Murray & Son.

every camp site save one which the A. C. A. has occupied and have no hesitation in pronouncing the last one the best in point of natural advantages, abundance of shaded and open space, freedom from undergrowth, dry soil with no swampy ground, and permitting a convenient arrangement of the wharf, camps, etc.

In the matter of scenery, neither the camp itself nor its outlook were quite as beautiful as Willsborough Point; but at the same time the camp was a picturesque one, showing to good advantage from all points on the river, and as to the river itself, he must be hard to please who would ask anything more beautiful than the St. Lawrence and its islands. While there were no hills to climb in the whole camp, the ground was sufficiently high to be dry at all times, and what rain fell disappeared almost instantly in the open sandy soil, in marked contrast to the submerged meadows of Willsborough last year.

The first week of the meet passed as the first week always does, quickly and most pleasantly, with no special incidents; every day brought half a dozen steamers to the wharf, the new arrivals meeting with the warmest greetings from those already in camp. While there were many old members, or at least those who had attended one or two meets, there were very many new arrivals, especially from the Northern Division; and the attendance from the States, and especially of old campers, seemed less than it really was from the fact that there were no large parties, and in meeting one man a person missed half a dozen from the same club who had been seen together at previous meets.

The attendance from the States was scattered; there were representatives from all directions, but none of the large clubs were represented properly, the Vespers turning out about half a dozen, the New York C. C. hardly as many. Among those of the older members present were Winne, Lawson and Edwards, all ex-commanders, Butler, Goddard, Gage, Gray, Robertson, E. H. Barney, J. K. Hunt and W. H. Peabody, F. H. Moore, J. N. MacKendrick, C. V. Schuyler, Judge Dartnell, Messrs. Scott, of Ottawa, "Ghost" Bennett and W. P. Stephens. Com. Woodruff and Mr. F. B. Huntington, of the W. C. A., also spent a short time in camp.

The list of absentees would include most of the names made familiar by the Grindstone meets, Whitlock, Vaux, Munroe, Seavey, Stoddard, Burchard, Oliver, Gibson, Andrews, Wackerhagen, Wil and Phil, Grant Edgar, Brokaw, Neide, Bailey, Ford Jones, Andrews, French, J. W. Cartwright, Palmer, Christie, and even the old Captain with his famous "tin telescope." Each year emphasizes the changes which time makes in any body of men. The men who really constituted the A. C. A. in the years from 1884 to 1890, a certain set who were seen at every meet and gathering, have largely dropped out, being seen on alternate years or even less frequently, and their places being taken by strangers.

Pleasant as it is each year to jump ashore amid a group of familiar faces, to those who have attended the meets from the first or nearly so it becomes each year a greater disappointment to see the lessened number of old friends, and to miss so many whose companionship has been the chief charm of the meets. Of those who were with us at Lake George in 1890 not one was present this year, and it was a real treat to greet again two familiar faces from the second camp, of 1881, Edwards and Tyson.

The proximity to Canada this year naturally brought in many new members, as well as many who have not been seen of late years, and there was a specially large attendance at Squaw Point. Introductions on the part of the old members soon made all at home, and entertainments and excursions were arranged for each day. Those from the States who wanted to get a glimpse of Canada were able to reach Kingston easily from the camp, returning in a few hours. Open canoes were scattered about the beach in abundance, and they were launched at all times for fishing, picnic parties and idle paddling, many being used by ladies. Camp-fires were held in the evenings, each bringing out some new performer, hitherto unknown, but soon famous throughout the camp.

The great event of the first week was the arrival of ex-Com. Winne on Thursday. When the steamer reached the wharf the entire camp was awaiting him; he was picked up and carried off, his duffle following, to the place selected for his tent. Thursday was the first rainy

day in camp, the rain falling all day, and Friday likewise was blessed with a heavy shower toward night. On Saturday the forecast for the Orillia clip, was held, and in the evening the water parade and illumination came off. A meeting of the Northern Division was held on this evening, Vice-Com. MacKendrick being present; but owing to some of the delegates being absent the election of officers was postponed to Monday evening. After discussion, however, an important resolution was passed to the effect that if the next general meet should be held on the St. Lawrence River, the Northern Division would not hold a Division meet, but that if the general meet went elsewhere a Division meet should be held as usual. On Sunday service was held by Rev. C. F. Lowe, of Kingston.

Monday was one of the best of the racing days, the unlimited, record and cruising races being sailed. The wind was strong and squally in the morning, but lighter in the afternoon. The postponed meeting of the Northern Division was held in the evening, E. B. Edwards presiding, and the following officers were elected for 1894: Vice-Com., H. M. Mobson, Montreal; Rear-Com., George A. Schofield, Peterboro; Purser, H. R. Tilley, Toronto; Ex. Com., W. H. Macne, Kingston; W. L. Scott, Ottawa; C. E. Archibald, Montreal. After the meeting a ladies' camp-fire was held, with vocal and instrumental music and recitations.

Tuesday was a clear, bright day, and the races went off without interruption, the 14th of the 15th of the 16th of the 17th of the 18th of the 19th of the 20th of the 21st of the 22nd of the 23rd of the 24th of the 25th of the 26th of the 27th of the 28th of the 29th of the 30th of the 31st of the 32nd of the 33rd of the 34th of the 35th of the 36th of the 37th of the 38th of the 39th of the 40th of the 41st of the 42nd of the 43rd of the 44th of the 45th of the 46th of the 47th of the 48th of the 49th of the 50th of the 51st of the 52nd of the 53rd of the 54th of the 55th of the 56th of the Since the first Indianstone meet in 1884 one of the popular institutions of the camp, and in fact of all A. C. A. gatherings, has been the big Hiawatha and her owner, the able and willing leader in all amusements, among his many triumphs are the Indian tableau on the hill side, the "Coo'ee" band, the "Coon" and parade of 1890, the great sea serpent of 1891 and the "Tiger" find of 1892. This year, the "As You Like It" tableaux and the storming of the fort and general illumination. This year Mr. Searcy was absent, for the first time after nine successive meets, and it is needless to say that he was a simple and impromptu kind which brought the entertainments were of the same character as those of last year, the ladies instituted substituted a pretty fashion of afternoon teas, all friends gathered were very pleasant. On one occasion the camp attended a garden party given by Dr. and Mrs. Garrett at their home, just opposite the camp on the main land, a steamer carrying the guests over and back to the camp, and the ladies enjoyed the camp-fires and entertainments, ever ready in his efforts to amuse.

One of the purposes was to prove the extremely faulty condition of the racing rules, due to careless amendments, continual and unnecessary tinkering and typographical errors. Again and again questions arose which could not be answered by a reference to the book, and the Regatta Committee was taken at the next meeting to correct the many errors and also to make amendments to improve the altered condition of the racing. The regatta committee is now fully awake to the importance of this work, but members may assist in the work by bringing attention to errors or necessary changes which may come to their notice.

honor of being the king of this great tournament. The following shooters received the Columbian medal: L. E. Danser, Independence, Wis.; F. A. Fuller, Omaha, Neb.; J. H. Lohmeyer, Baltimore; S. G. Dornan, St. Louis; C. M. Se ell, Lawrence, Mass.; J. F. Kutsch, T. Kutsch, Dubuque, Ia.; Andrew M. Bean, John Morf, E. Schottlander, Louis Schwarzhoefer, St. Louis; Alex. Kersher, Buffalo, N. Y.

The Pistol Club of San Francisco has evolved into the Rifle and Pistol Club, and will hereafter hold monthly medal contests with both arms. The standard American target will be used, 50yds. with pistol, and 200yds. with rifle. Any rifle will be allowed. Some fine scores may be had for a while, the organization expects.

## Sigourney Second Annual.

SIGOURNEY, IOWA.—The Sigourney Gun Club (composed of the following officers: A. O. Schipper, President; P. Josbaker, Vice-President; L. B. Oliver, Secretary; C. B. Dobie, Captain; L. B. White, A. E. Johnston, and E. J. Schipper, Directors) held their second annual tournament at Sigourney, Iowa, Aug. 8, 9 and 10, and, to say the least, was a grand success. The club have one of the finest shooting grounds in the State, a clear background enabling shooters to make good scores. The novice shoots, of which several are published each day, show the improvement of parties never having shot at the trap before. The first and second days the shooters gave the bluebirds a hot reception.

The plunge trap for the 25 live bird contest between Mr. Marshall, of Keithsburg, Ill., and Mr. Peck, of Cincinnati, O., for a purse of \$25 a side, lost the club the greater part of the forenoon of the third day, as it took about five-sixths of the shooters to make the trap or boss the job.

Wind and rain combined spoiled the great event of the afternoon. The 75 live bird match between C. W. Budd, of Des Moines, and C. M. Grimm, of Clear Lake, for a purse of \$100 a side, 5 unknown traps, 30yds. rise. American Association rules governed.

The result, Budd 74, Grimm 73, is considerable above the average live bird shooting.

## First Day.

No. 1, 15 targets, entrance, 50c.:  
Dobie ..... 11111-5 Oliver ..... 01001-2  
Hinkley ..... 00011-3 Budd ..... 11111-5  
White ..... 11110-4 Lewis ..... 01011-3

## Vernon Rod and Gun Club.

ONLY four members of the Vernon Rod and Gun Club were present at the regular monthly shoot at Dexter Park on Thursday, Aug. 31. Each shot at 7 birds, 28yds. rise, for a subscription prize and best average of the season. Dr. Little was the winner with a straight 7.

The score:  
Dr. Little ..... 121212-7 W Thompson ..... 0121211-6  
G Osterhout ..... 211110-5 F Thompson ..... 211011-6

## Nassau Gun Club.

The old Nassau Gun Club, which has been virtually out of existence for about six years, was reorganized on Tuesday, Aug. 29, at Dexter Park. Messrs. George U. Forbell, W. Selover and John Y. Van Wicklen were the only three members of the old club present. The other ten members that competed in the first club shoot were from the Parkway, Glenmore and Coney Island clubs. It is proposed to make the club a purely social shooting one, for the purpose of enjoying the sport of trap shooting, and have a good day's fun every month. A subscription prize will be shot for at each shoot, the highest score to be the winner.

Thirteen members shot at 8 birds each on Tuesday. E. Helgans and J. Bennett tied with straight scores, and as the birds gave out a throw of the dice was made to decide the winner of the prize given by Wm. Selover. Helgans was the lucky one. Score:

Chas Magee ..... 0101021-4 R Borell ..... 01201111-6  
Geo U Forbell ..... 1111001-5 John A Still ..... 01201121-6  
W Selover ..... 01211212-7 E Helgans ..... 21112311-8  
M E Hayden ..... 1201231-6 J Bennett ..... 11112311-8  
John Young ..... 1112011-6 H Selover ..... 0021212-5  
W A Hartye ..... 2021232-7 F Von Duele ..... 1123101-7  
J Borell ..... 0120200-3

After the shoot a meeting was held for the election of officers and transaction of other business in connection with the new club. The following were unanimously elected as officers for the year: President, John Y. Van Wicklen, Vice-President, Wm. Selover; Treasurer, Charles Magee; Secretary, Wm. A. Forbell; Executive Committee, Geo. U. Forbell, E. Helgans, John A. Still, Steward, Louis Miller.

It was decided to hold their regular club shoots at Dexter Park on the third Tuesday of each month of the year. The Nassau Gun Club promises to be one of the best shooting organizations on Long Island, and will soon have a team that will be hard to beat.

## Atlantic Rod and Gun Club.

The races at Sheephead Bay were the cause of the small attendance at the postponed shoot of the Atlantic Rod and Gun Club held at the West End grounds, Coney Island, on Thursday, Aug. 31.

Only ten shot for the two silver cups and added money at ten birds each, club handicap. American Association rules. Ira McKane and C. Furgueson tied with ten straight and had a good race in the shoot of Furgueson won on the seventh round the first cup and C. E. Morris won the second with nine. A sweepstake shoot followed, miss and out. C. E. Morris and J. B. Voorhees divided.

A match at five birds each between C. Furgueson and his son, C. Furgueson, Jr., took place. The boy is only ten years old and shoots with coolness and judgment; he tied his father with five straight. In the second match with a novice at three birds the boy won easily. The scores. Club shoot at 10 birds:

C E Morris ..... 2112212021-9 C Furgueson ..... 112111111-10  
J B Voorhees ..... 2110101112-8 C Furgueson, Jr. .... 0120210212-8  
Ira McKane ..... 222121211-10 R Dwyer ..... 1100111122-8

H Fales (25) ..... 001 C Furgueson, Jr (25) ..... 121

## West End Gun Club.

OTTUMWA, Ill.—The West End Gun Club held their regular Friday afternoon shoot at the club grounds in Central Edition, Aug. 25. The shooting was not up to the average, as the score will show. After the regular shoot two extras were shot off, which were about the same as the regular.

Regular shoot:  
Young ..... 11111011111111110101011-19  
Powell ..... 010111110110111011111-20

## Mr. Grinnell's Indian Books.

## BLACKFOOT AND PAWNEE.

These two volumes treating of two different tribes of Indians are full of fascination for lovers of outdoor life. Each contains a number of the stories current in the tribe to which it relates, and these are followed by a series of graphic pictures of the old wild life which is now only a memory. The stories deal with hunting, war, love, ghosts, magic and natural phenomena. They are given just as related by the old men who told them to the author, and show Indian life from the Indian point of view.

The Art of Shooting on the Wing.  
Shooting Dogs—Breeding and Breaking.  
Pigeon Shooting.  
Trap Shooting Rules.

FOREST AND STREAM PUBLISHING CO. 318 Broadway, N. Y.

## NEW EDITION.

## Lancaster's Famous Book, THE ART OF SHOOTING.

LONDON, FOURTH EDITION, 1892. PRICE \$3.00.

## AUTHOR'S PREFACE.

At the special request of many gentlemen who have placed themselves in my hands for instruction in the Art of Shooting, I have written this treatise. I have endeavored to meet the special requirements of those who are anxious to become proficient in the art, and who have hitherto been unable to obtain, in a precise form, the information necessary for studying the first principles of shooting at moving objects.

I have had the honor of coaching many gentlemen, and have carefully studied the points especially requiring attention that have cropped up from time to time while giving instruction. I hope that those who favor me by studying this treatise may quickly gain the knowledge so essential for the making of an average if not brilliant shot.

I have purposely refrained from touching on the several merits of any class of gun—being a gun-maker myself; and, indeed, so many good works on the subject have been written, that it is really unnecessary.

I trust that authors from whose writings I have made extracts will pardon me when they recollect that I have at heart one object, viz., the advancement of a manly sport which gives pleasure, health and occupation to many, and to the patronage of whose followers I am indebted for many pleasant days.

Forest and Stream Publishing Co., 318 Broadway, N. Y.

fect them, but this would amount to very little in a thickly settled country if they were permitted to be shot and sold from the end of one breeding season to the beginning of next.

A reason sometimes advanced against the shortening of the season on ducks and snipe is that they are migratory, and that even if protected in one State they will be killed in those adjoining. This is only another way of expressing the selfish sentiment, "if we do not kill them some one else will." So long as every gunner is trying to kill the last bird, we can only look forward to shooting that will constantly yield smaller returns, to a more general buying up and leasing of the best shooting grounds, and to a contraction of the free shooting.

We all of us need more public spirit, a greater willingness to sacrifice a little present pleasure for the general good, and until sportsmen generally are willing to make such sacrifices no very hopeful view can be taken of the recovery of our shooting. The matter is one which interests gunners alone, and the remedy, if there is one, lies with the gunners. If our shooting absolutely disappears, they will be the sufferers, and they cannot say that they have not had fair warning of what is to be expected, for each one has seen with his own eyes the decrease in the birds.

## THEY CLANK THEIR CHAINS.

NOW IS THE time for the chained big game hunter to clank his fetters and rebel against fate. As the nights grow longer and cooler and the autumnal haze thickens the air, as the golden rod makes the old fields and the roadsides yellow, and the cardinal flowers flame in the wet runs, the hunter becomes uneasy. He takes out his rifle and looks it over to see that the barrel is bright within, and that the sights have not been changed. He counts the cartridges left over from his last trip, to learn if he would need to purchase any more if he could go on a hunt this year, and feels the edge of his knife, which needs grinding. Then he sighs and puts his things aside, realizing that this year it is hopeless to think of getting away. Yet though he gives it up with keen regret, he thinks of it often through the day. Every time he goes out of doors he sees some sign in the sky, or catches some odor, or hears some sound that reminds him of the blue arch of the far-stretching prairie, or of the pungent fragrance of the sage plain or of the sounds of the mountain and the forest.

He remembers that now the bull elk, round of body and hard of antler, are whistling on the mountain side, and how morning and evening, and all through the moonlit night, challenge answers challenge from park and forest and rocky point, interrupted sometimes by the sharp rattle of clashing antlers, as two great bulls come together with a rush, and push and tug and strain, glaring into each other's angry eyes, while the columns of white steam from the four distended nostrils mingle on the ground between them. Or perhaps he recalls some successful stalk of years gone by, when starting at gray dawn from his camp well up toward the edge of the timber he made his way toward the heights above in pursuit of bighorn. He remembers the toilsome climb on foot through the thick timber, then up the slippery grass slopes, and then over the loose and unsteady slide rock; how he faced the cliffs, worked along the ledges and clambered up the waterways. At last the game was sighted, higher still beyond the snowdrifts, a little band of rams feeding along a mountain meadow, carelessly, to all appearance, yet, as he well knew, alert and watchful. How well he remembers each detail of the hunt, how carefully he climbed, looking well to wind and cover until at last he reached the coveted point and found himself within rifle range of the game. All had lain down save one noble beast, the patriarch of the group, who stood on a point taking a last look over the mountain side. Alert yet unmoving he stood there, outlined against the sky, a model for artist or sculptor, yet one that neither artist nor sculptor could ever hope to reproduce. What feelings passed through the hunter's mind; how much of hope and excitement he felt. Yet his nerves did not tremble, and he lay there waiting for his breath to come back to him after the labor of the climb, and at length with a steady hand he sighted at the old ram's heart. At the shot, how mighty the leap that the monarch gave, and how brave his bounds down the slope through the flying slide rock, while the frightened band disappeared behind a ledge, and made their hasty way up the mountain side. But the great ram, ere he reached

the slide rock's foot, staggered, and when he disappeared the hunter knew that the noble game was his. Then came the toil of preparing the carcass, and the slow journey down the mountain side bowed under the weight of a heavy load, the return to camp, the hearty meal, the story of the successful hunt and the well-earned rest beside the fading camp-fire. All this he remembers.

Or it may have been his first white goat, which he had followed to dizzy heights and along the face of beetling cliffs until at last he got the shot; or perhaps his first moose, carefully hunted through the dense timber; or the bear that he saw at evening digging roots in the little park and killed by a single well-aimed ball. These memories come back to him, and he longs to revisit the well-known spots and again to take part in such scenes with a feeling so strong that it can hardly be put into words.

But this year he is chained to business and can only rattle his fetters, weep and read FOREST AND STREAM. But let him not sorrow as one without hope. So long as he has the memory of these glorious days to look back upon, he is not altogether unhappy. Nothing can take from him the joys that plain and mountain, lake and forest, peak and far-stretching snow field have yielded to him in years gone by, and if he cannot look forward to like days in the future, he can at least live over again in memory the pleasures of the past.

## UNWISE THREATENINGS.

THAT men are but children of larger growth has been said so often that it is hardly worth repeating, but every now and then in the affairs of our daily life we see something that emphasizes this truth. In a letter printed in another column, a correspondent expresses the dissatisfaction of his local gun club with a particular game law, and says that if its objectionable features are not changed before another season, no effort will be made to enforce the present game and fish laws.

Some allowance may be made for natural irritation over a law that seems unfair or unwise, but how shortsighted, selfish and childish are such expressions as this. We do not know whether our correspondent—an old and valued one—is expressing his own views or those of some members of the club, but at all events the sentiments are unworthy ones. It is just in this way that the small boy when the game that he is playing does not go to his liking declares that he "won't play," and, however natural the feeling to boys, it ought not to be acted on or even expressed by grown men.

Resistance to injustice is always justifiable, but the means to be employed, if such resistance is to be successful, must be those which appeal to the sense of right of the community. To refuse obedience to game laws because they favor one special section against another will never tend to the righting of any wrong which may have been done. Such a course will only stir up bad blood between the sections without benefitting either, and so long as the quarrel lasts the interests of game protection are sure to suffer.

## SNAP SHOTS.

A MAINE correspondent sends us an interesting note of a colt's straying in the dense forest of the upper St. Johns. In the spring of 1890 John Hunter, who lives on the upper St. Johns about ten miles below the Seven Islands, turned out in a back lot an old horse and a two-year-old. When he came to take them up again, a few days later, the colt was missing. Hunter and his neighbors spent several days in a fruitless search, and the colt was given up as a probable prey to the bears. Two years afterward, in August, two moose hunters at Round Lake on the Allegash came upon the strayed animal, which was in company with two bull moose. They secured help, captured it, built a raft and rafted it to its owner. It had become very wild, and no doubt had fraternized with the moose from the first, living with them in their yards in the severe Aroostook winter. When found it was sleek, well developed and in good condition, and had grown a coat of hair which for thickness and length would have done credit to a range horse or a marsh-tackey.

A library in one of our principal cities desires to complete its files of FOREST AND STREAM, and applies to us for a copy of August 13, 1874. We are unable to furnish this, and have been authorized to offer \$1 for a copy of that date. We should also be glad to obtain a few copies of the Boyhood number (Jan. 7, 1892) to complete files, and will pay 20 cents each for a limited number.

For Prospectus and Advertising Rates see Page 245.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## HOW LONG CAN THEY STAND IT?

THE complaint made by a correspondent last week about the rail shooting calls attention again to the very great diminution in the numbers of these birds within the last twenty years. While a marked decrease has been noted in the numbers of all species of game birds, in no groups has it been more apparent than in the rail, the snipe and the duck families, and these are just the groups of birds which receive least protection from the law and from the public sentiment which the law represents. On the other hand, while there are not so many quail and ruffed grouse as formerly, the diminution of these birds has been relatively much less than that of the water fowl.

As remarked by our correspondent, the opening of the rail season late in August or early in September results in the killing of all the birds of the tidewater breeding grounds before any flight commences, and when the time for the migration comes, the only birds left to move south are those which have been reared in localities where it is impossible to shoot them on their breeding grounds. If the rail bred only on tidewater marshes, a single season would be enough to exterminate the species. As it is, the result of the unseasonable shooting is clearly seen in the lessened numbers of the birds brought to boat each succeeding season.

With snipe and shore birds the conditions are not quite the same, though they are similar. As soon as they set out on their southward migration the birds begin to be shot, and the pursuit is kept up until the approach of cold weather drives the survivors away, or the opening of the season on other birds divides the attention of the gunners. Laws for the protection of snipe and shore birds are found on the statute books of most of the States, but these laws in most cases have little practical effect for the reason that they afford protection to the birds only while they are absent from our territory. To prohibit the killing of certain species of birds during the period when they are rearing their young in British America sounds well perhaps, but it means very little.

As with the snipe so it is with the ducks. They are in season from the time of their coming in the early autumn until their departure in the late spring. During all this period of nearly eight months every one has license to kill all the ducks he can. Only one result can follow this unrestrained destruction for so long a period of each year. The birds must diminish in numbers, and yet people wonder what has become of the ducks, and ask why they are not as plenty as in old times!

Over a considerable part of the United States the grouse and quail are protected for nine months out of the twelve, and as one result of this, they have held their own against the shotgun far better than the other groups mentioned. Their habits, too, tend in a measure to pro-

## The Sportsman Tourist.

### THE LAIR OF SOMETHING STRIPED.

THAT rock's awash, aswash. Tighter draws the mussel on his byssus. The tide has turned. A thousand kelp streamers point the way the flood must go, and eagerly, not drooping as at last of ebb when obedience had seemed to satisfy their importuning.

The seeping barnacles make merry and clap their valves, for diatoms are coming, the sweet, the beautiful, food for the rough and ugly; coming from the devious gardens that they glorified among the schist splinters and boulders, beneath the swelling and subsiding and unceasing flow of green illumined sea waters.

The rock is yet uncovered. No 'tis not. And then once more it seems to sink, till the lolling pelage of wrack lifts up a sign for help to the slow sweep of an engulfing wave, and welters disconsolate though the saved rock again appears. It is not to disappear for long, this archaic boulder of granite. It has never moved but once 'e'en though the mammoth rubbed it with his woolly ear or the heedless elasmosaurus bounced against it in the chase. It moved but once, and then the straining glacier dropped its load at the foot of the cliff. Up the bold gray cliff the autumn breaker bounds, roaring and splurging with hoarse challenge, till clouds of spray separated in the churning turmoil float up to higher ether to make sunset nimbus, and show the October foliage what gentle beauty may come from harsh parentage as well as from homes of peace.

At the foot of the cliff purling summer combers smoothe the hard walls that resist.

The boulder, sunken but a fathom at the ebb, rises not enough to arouse the ire of forceful antagonists, and unmoved as sphinx to the questions of the changing seas, it needs not to turn before the brunt, not topple to the wooing. Now the tide runs smoothly over it. Caught in an eddy a red seaweed whirls and spreads its shoots, and a sertularia colony swinging near has descended to mimicry of botany without putting on any air of condescension. The tremulous algae waving from cliff to boulder and from boulder to cliff, make in the water a clear arcade, a runway. Out from a crevice glides a cautious chogset into the runway, now poisoning by a crimson sponge, then backing slowly underneath a translucent green sheet of sea kale. A crab makes haste to cross the round yellow bottom pebbles, carrying a burden that he fain would hide, for this is a lair, and he knows it. What is his burden, though? Oh, look, you unbelievers in disinterested friendship. 'Tis a stranger crab that had to shed its armor, and unprotected needs the guarding of a friend for two whole days or more. There's nothing "in it," as the politicians say, for the faithful protector, and yet he will not weary, but fight valiantly if necessary, and lose his very life, and for that there is no reward nor other life.

Like silver arrows a troop of spearing nervously dart from rock to wrack and from algae to the surface, not stopping, but alert, leaving a lazy enemy no hope. What is it they fear in this quiet aisle? A slow tautog drops with the current into the runway and then as deliberately has gone.

A shrimp escaping from the sprightly pilot-fish stupidly backs straight into the clutches of a dull sea anemone at the bottom of the boulder. This is what might be called a turn in affairs. The pilot-fish knew how to catch a shrimp. The anemone did not. The anemone has the shrimp, and possessing now a fortune it withdraws from old friends and becomes exclusive and disagreeable.

A sinuous eel slides in and out among the rocks, searching for love-lorn nereid, or for mantis praying for relief from danger, which is granted till danger comes, and then he is lost in spite of supplications, for nature cares no more for the backsliding mantis than she does for sleek eels. The eel keeps near the bottom, as though fearing. He dreads not the bluefish nor bonita nor swift squeteague, for the runway between the boulder and the cliff is not deep enough for them. See them further out, though, rising in the curl of a mounting billow till the sun has shot through beneath them, leaping with an energy that goes with fish that fight strong tides for life, not resting, never lagging. How dangerous such needing maws are theirs! An ink-laden squid pumps faster with his siphon engine as he steers in graceful curve through the runway. He too suspects that it is a lurking place. What shadow slowly moved across the bottom then? Was it from some pausing cormorant or circling tern? From this jutting storm-bleached jag of cliff I dare to look up, but no bird flies overhead. 'Twas but the shifting of the kelp perhaps, for down in the runway waters I see almost as clearly as through the north wind. 'Twas but the waving of sea fronds.

Why though has all sign of life stopped in the runway? The shadow falls across the bottom, and following it from behind the curtain of fronds there comes forth a fish so stately, so dignified in bearing, that surely he deigns not to notice these lesser fish that flee from his presence. Like a wolf he is. Not in outer likeness perhaps, but in demeanor, and in weight, and that great weight made up of all the sorts of things that swim the tide or crawl the bottom, collected by him and made to form a fish of wondrous strength, with dark straight stripes to mark the shapely sides. A clear stern eye has he, and jaw like any trap. His glistening scales are white where white, and black they are where black. Resting upon broad fins he balances beneath the sea arbor of his lair and shows no fear, but seems to be among familiar surroundings. I'll quietly toss to him a choice bit of menhaden. It slowly drifting sinks. The film of oil rises. He takes the bait and looks for more. I'll give it to him. There's a hook in it, and fastened to the hook 600ft. of hard-laid line. Down the current it settles. He spreads a broad tail and turns quizzingly sidewise to take a look, then back he bends, and turning a finely outlined nose into the tide rests again, and lets the baited hook slide by.

The sun sinking below the horizon takes one last look into the sea by a trick of angular refraction, and finding the bass all safe calmly moves away to make day elsewhere for awhile.

The chirp of a migrating finch overhead, the chirp of a cricket, are evening sounds, and their harmony is not marred by the splash of a hooked bass.

The moon rises. It makes a straight and lighted road through the midst of dark heaving waters. The fishes are

moving on beneath the waves, the birds are flying southward overhead. I'll hoist my sail and follow the moon road between the fishes and birds and think of ways to catch the striped bass.

ROBERT T. MORRIS.

NEW YORK.

### THE MUSEUM MOOSE.

(Continued from page 209.)

AN early hour the next morning found us on our way again. Nuel said, "We hab long way to go, an mornin' best time for duck."

As we were about to enter the creek in the marsh he said, "Now Doc'or, hab um gun ready. Shoot um musquash too, s'pos' you get um chance."

Hardly had we got inside the outer line of rushes when my eye caught sight of three black mallards not more than twenty yards in front of us, with their necks stretched out and looking at the approaching canoe in every attitude of surprise. "See um," said Nuel. "See um quick. Goin' fly." They did fly, but two of them fell within fifty yards of the canoe.

"Dat good," said the Indian. But he had hardly got the words out of his mouth when up went a flock of nearly a hundred teal, not more than a gunshot away.

"Ugha!" exclaimed he. "Me no see um. But neber mine, we get um some. Da come back soon. You load um gun."

We had no breechloaders in those days and it took some time to load. However, this was done and I was soon ready for another shot. Meanwhile the teal had gone out of sight and Nuel had paddled the canoe nearer the place where they rose. He had just pushed it into a bunch of tall bulrushes, when he said to me in a low voice, "Da comin' dis way like win'. You ready?"

It was as he said. They were coming in from the lake as fast as they could fly, in a good, compact flock, and low along the water.

I had not much time to think. All I said to myself was, "Nearly three feet ahead of the leader and both barrels." They went off almost as one report, but I swung around and felt as though I had been struck in the shoulder. Nuel's exclamation was, "Ugha! What heap you kill."

And indeed there was a heap. There were ten of them, and we had not gone a quarter of a mile before we found one more, stone dead. But we saw no muskrats, though there were plenty of places where they had commenced to build their winter houses. Nor had we any more shots at ducks. We might have had, if we had gone but a little way off our course. But it was moose that we were after, and it was very necessary that we should make the most of our time. My desire was to reach the new ground, that Nuel had spoken of, by night. So all our energies were bent upon this.

We passed through several ponds or arms of the lake, then up a narrow stream, then into another pond, and about 11 o'clock found ourselves apparently at the foot of a range of low hills, clothed with the thickest spruce and fir, it seems to me, I had ever seen.

"Now we get um dinner," said Nuel, as he brought the canoe to shore. I knew he must be hungry. He had worked with his paddle all the morning. The way at times was so intricate and the water so shallow that I could not give him much help, and now I felt glad that he was to have a rest.

We had hardly stepped ashore, though, and handed the baggage out, when I heard Nuel utter his usual exclamation, "Ugha!"

"What is it, Nuel?"

"You come see. Sartin moose come here. See um track, one, two, tree, one leetle one."

And sure enough, there were their marks in the soft moss, not twenty feet from where we landed. The tracks were a day old, perhaps, but as Nuel said, "Da show moose been here."

The Indian was all excitement now. He said, "We hurry. Hab um chance dis eben. Not much mor'an mile 'cross."

We did hurry. The dinner was cooked in a very short time, and before 12 we were ready to start on our way. The ducks and partridges were tied together in a bunch and hung up on a tree before we started, and all our provisions suspended in the same way. Nuel's caution was, "Bear or fisher might fine 'em."

I could hardly see where he was going, but I knew he was following a trail. How he could steer his canoe through those thick woods was a mystery to me. And yet he did, only having to stop once and take a few steps backward before we rested.

When we came to a halt he said, "Mor'an half way. Berry tick wood. We go um down hill now. Soon come to lake. Hab um hunt de night."

But it was a good while before we came to the lake. I could see where it was before we reached the water. As we came to the edge of it, Nuel gave his usual grunt and remarked, "Now worse ober. We hurry back. Put sad-bags up here on limb an' guns 'side 'em. We no wan' um gun."

With this he started back again as lively as though he had carried nothing in coming. Two more loads brought all. And we were launched again by 3 o'clock.

As we pushed off Nuel said, "Me berry glad me here. Now we get um moose. Maybe dis night. Big barn [barren] od dare. Not rain de night. You no mine sleep um un'er canoe? Me make good camp morrow. Me wan' to hab hunt."

"All right," said I. "Let us get a moose, then, and never mind the camp."

This lake did not seem to be very long, but it was quite wide, and in the center of it a rounded point made out some distance from the main land. This, I could see, was Nuel's destination. Before we reached it, he said, "We lan' on poin'. Den moose not smell um fire, tobac' smoke. Nice dry place. Me camp here most ebry year. Kill um many moose in dem wood."

The place was very much as Nuel described it. There were some dead trees upon it, with bits of old dried up skin and some bones lying around. Here we prepared the evening meal, and as the sunlight left the hills pushed off from the shore to what seemed to be a cove on the other side of the lake.

It is hardly necessary to say that before our going Nuel had provided himself with a birch bark horn. The instrument was one which (something like the bagpipes to a Scotchman) had music in it only for a moose. The grunt of a pig and the trumpeting of a bullfrog and the squawk of a goose—all these combined and drawn out. This

would be the nearest that I can come to the sound he made with it.

As we left the shore his remark was, "We hab go dis side enight. Win' come dat way. Mus' take care moose not smell um us."

We landed on quite a straight shore, some half mile in length. Near the center of it a small hill abutted on the lake. The whole shore was well wooded. When we had passed up over the hill, though (so far as I could see), there seemed to be a barren. At least there were patches of low growth, with blueberry bushes scattered here and there among scrub birches and bushes of larger growth.

In one of these largest openings I was placed, or rather on the edge of one. There was a large rock at my right, and at my left the overturned roof and trunk of some old forest tree. As the Indian left me he said, "Dis good place for you stan' an' sit. Watch um dat open. Me go back dare in woods. Call um moose. He come. You see um in moonlight. You hear um come. Make big noise sometime. Hook um tree. Don't miss um. Hope he come."

With this Nuel was off in the direction we had just come, and it was not long before I heard the wind goose-hog-and-frog sound from that neighborhood. After a time it seemed to be answered by a sound with no more music than in that from behind me. This appeared to come nearer for a time, but at length it ceased. Meanwhile I thought over the day past and what I had seen—the water, the wilderness, the variegated woods. The day had been perfect, the very climax of an October day. There had been a slight haze in the atmosphere, and that peculiar smell of ripened and decaying vegetation that is so hard to describe. And now here I was, with desolation itself around me. Not a sound to be heard except the occasional hoot of an owl or the call of a loon, and that weird and monotonous lamentation that Nuel was making. The evening itself was perfection. There was a three-quarter moon in the heavens, without a cloud to hide its face, and the air was so quiet that one could almost hear himself breathe.

I had listened and listened and heard nothing but Nuel's call since he had received his last short faint reply some two hours since. I was getting chilled and the moon was casting her shadows pretty well on my back when Nuel said to me, "No use enight, Doc'or. He no come. Maybe he got cow roun' here. No wan' nudder one. We go camp."

I was not sorry to return, though I must say I regretted that we could not entice that moose further. My back was beginning to remind me that warmth and rest would do me no harm, and that the exertions of the day had not been light.

It was between 12 and 1 when we reached our camping place. Here a fire was soon kindled and we warmed up some cold tea, which with some pilot bread constituted our supper.

Nuel was very silent this evening. He had hardly spoken a word on our way over except to say, "Doc'or, me disappoint." Me tot sartin we get um." Now he simply said, "Ingin tired. He go sleep. You go too?"

"Yes, Nuel," replied I, "better luck next time. I hope we will always have such nights." With this I crawled under the canoe and knew no more until I awoke the next morning with the sun shining in my face under the edge of the canoe.

Nuel was still asleep and I thought I would let him be until the breakfast was nearly ready. I felt as fresh as a lark myself and I was particularly anxious that he should be rested. However, I had hardly got the fire lighted when he opened his eyes and said, "Doc'or, how you feel um dis mornin'?" Ingin feel um good. Wan hab big feas'. Eat um tree duck. You get more and big fish eday."

"All right. You pick the ducks then, while I get the things ready."

It was not long before the breakfast was prepared, and Nuel was scarcely through his second duck when he began, "Now, Doc'or, sartin one moose roun' here. May be two. I tink two. But sartin one. I take you for duck and fish, and den me go look for dem. Much time, all day. Goin' to be fine."

So soon as breakfast was over Nuel said, "Come now. We go hab hunt. You bring um gun, fish rod. We get um sumfin eat for all day."

When we got into the canoe he paddled almost directly the same way he had the evening before, remarking as we started out, "I tink somefin. Wan see. Wan go long dat shore. You fish in stream. Me look."

It was not long before we landed near the mouth of a brook that poured its waters into the lake, a few hundred yards above the place of our landing the evening before. Nuel had hardly left me before I heard him grunt out, "Ugha. I tot so."

"What is it now?" I called out.

"You jes' come an' see, Doc'or."

When I reached him he pointed down to the sand on the shore and said: "You see um dat track? Dat track of big moose, berry big. An' debble moose, too, you call 'em. Berry cunnin'. Not come roun' dare, but swim 'cross. Come up behine. Smell um me. You come 'ing. You see um track. Him make no noise las' night, w'en walk um 'long here."

I was led to follow him, and sure enough we soon came to a place about 100 yds. from where Nuel had been calling, where it was very evident the moose had stood, turned around several times, and then made off, taking the water not far from where the canoe was drawn up.

"I tell you, we have cunnin' moose to get dis time. But neber mine, I know him ways now. I guess we get him. an' him cow, too. He got cow roun' here. No big moose like him widout cow somewhere."

We soon had all the trout we wanted, I thought more than we really required. But Nuel said: "Hab um plenty," and I kept on until there must have been nearly 12 lbs. I think the Indian took great delight in seeing them rise to the fly. When I failed to hook my fish he would say, "Dat wise fish. He wan' to smell um bait 'fore he bite um."

Before noon we were back to the camping place, and by 5 o'clock had a nice shanty built, everything was made ready for our evening expedition, and half an hour before sundown we set off.

This time Nuel changed his direction. He went toward the head of the lake and on the same side we were. Indeed when we landed we were not half a mile from where we had taken the lake two days before. Here the Indian drew up the canoe, and after lifting out my heavy coat

and still heavier rifle said, "Now, Doc'or, you come wid me. Me fine good place for you stan'."

We went up through the woods for nearly half a mile. Near the lake it was composed of maples, beeches, ashes and other hard woods. These gave place to spruce and firs, and in one place quite a grove of hackmatacks. Then we reached a small barren tract. At least it seemed small in width, though how far it extended I had no idea. Coming to the edge of this and at one end (it seemed) Nuel said, "Now, Doc'or, me fine you good place for stan' here. Have rest for gun. Good place for sit. Cover over head. Nice place for watch um moose. He moose like come up dare. Be sure you hit him if he comes. No more chance if you miss."

It was indeed a nice place, as the Indian described it when he placed me. A fallen tree was just in front, supported on its decaying branches and about 4ft. high. Then a still older fallen monarch and much lower than this was just behind it, so as to form a capital seat just behind this. When we had trimmed some of the limbs off it made a capital back to my bench.

No sportsman ever had a nicer place to watch from. I was perfectly screened and in as easy a position as a man could ask. The only thing was that should I hit a moose and wound him it would be utterly impossible for me to get to him. I could not climb over all the dead trees that were around me in the dark nor push my way through the dense underbrush.

As Nuel left me he said, "Now, Doc'or, me go long way from you. When you shoot, me come. You stay here. Gun load wid ball. Rifle, too. Hope you hab tuck."

With this he was off, and left me alone again to my reflections. It was still light enough for me to see the scarlet of the maple trees around me (especially the smaller one that grew a little way out on the barren) with the yellow of the birches and the red of the blueberries; that seemed to complete the landscape in one direction.

I do not know how long I had been sitting here before I heard Nuel's first call. It seemed to me a very long time though, and the call appeared very distant. I only concluded that it was Nuel's from the direction he had taken when he left me, and from the fact that it was in the opposite direction from which the moose was to come. But what was that sound that came from far off, over by those shadowy hills to my left, *quo-oh, quo-oh*, and echoed so singularly on the evening air? I must listen. I must listen.

After quite a pause then comes the call, and then the reply again, only much nearer. He is coming, I say to myself. Again and again I hear the call, and then the reply. I think I hear the breaking of branches in the distance, as though some one was thrashing the limbs of a dead tree with a stick.

But now all sounds cease to my right. I hear Nuel, but he gets no reply. The moon is shining out brightly; it is only two nights from the full, and is nearly behind me now, throwing her light out on the barren and leaving my hiding place in almost total obscurity.

Just at my right, where the moose was expected to come from, the barren sloped down quite abruptly, until it met the trees that grew by a small water course. I had been trying to watch this edge of taller growth very carefully, so as to be prepared should a moose walk out. As it was now I could not keep a good eye on it. The moon from her position, and a tree that cast its shadow near me, obstructed the view. And there would be no time to prepare if a moose should come out from behind the objectionable tree, he would see a motion at once, if he did not scent my hiding place. But fortunately the wind, that sighed over the barren and just shook the birch and poplar leaves, was in my favor.

But now I am nearly tired of watching and waiting, and I guess Nuel is, too, for he has not called for some time. But I think I hear something. It is something like the swish of a bush when it is bent down and then allowed to resume its position, as it springs upward. I have thought I heard the same thing a dozen times since I have been sitting and standing here, and have got all ready again and again, only to be disappointed. However, I will get ready again, I say, and bring my gun to bear upon that objectionable tree. May be the fact that I had made ready so often, only to be disappointed, steadied my nerves now. I certainly did not expect to see anything.

But what is that tall thing with branching horns that walks out so quietly just as I have brought my rifle to bear in the direction that it has pointed so many times to-night? What an immense size! See those ears bent forward to catch every breath of sound! See that head slightly turned aside! See that stealthy listening attitude! But steady. Now! Far and near the report echoes, and I hear the loons call upon the lake. My moose vanishes within the shade of the woods, and the smoke of the powder rolls back in my face.

I listen to my would-be victim for a few moments as he goes crashing through the underbrush. The noise gets fainter and fainter in the distance. Then all is quiet again, except the loons. The question is, have I hit him, or have I not? I am only conscious of the fact that when I fired the moose stumbled, or seemed to. This might have been from fright or astonishment. And then I thought I heard a choking as he turned. I must wait until Nuel comes. I say within myself, "No man ever had a better chance to kill his game—not a hundred yards distant—in full view, and a rest for his gun."

It was not long before I heard Nuel coming to me from the direction he had taken in the early evening. His first words were: "Well, Doc'or, you hab um shot? What luck? You hab um shot afer me give up call—was comin' for you."

I explained everything. When I got through his remark was, "I 'ope you kill um. We go see."

This was not such a very easy thing to do though, even for an Indian. We had to climb over a perfect barricade of dead trees, besides wending our way through the scrubby bushes—that seemed as thick as jackstraws. However, we had not far to go. We had hardly reached the place before Nuel exclaimed, "Ugha, what dat?" And holding up his hand in the moonlight, said: "You hit him. See dat blood." Then he added, "More blood. You hit um bad." And as we turned around facing the moon, and saw the blood glistening on the leaves all around, he went on to say: "Doc'or, me dink you kill um dat moose, sartin. You shoot um neck. He not run berry far. You come see wid me. Me make um you bark light in big wood."

"O yes, I will go anywhere with you." And I do not know that I ever felt more pleased to follow any one.

I followed his steps to the edge of the woods, while every little while he would repeat to himself, "Much blood." When he reached the deep shade he said: "Now make um bark light. Dat moose not go far. He bleed um dead."

However, he went further than he thought he would. We had to make a good many bark torches, and it was not until after twelve o'clock that Nuel said, "Dare he is, Doc'or—stone dead."

And sure enough, there he lay, with his forefeet doubled under him—in a hollow—and his neck stretched out, and resting on a little rise, close beside a large beech tree. The ball, very much as the Indian had said, had struck the neck near the shoulder and nearly separated the jugular vein. It had not passed out the other side of the neck, but ranged upward and embedded itself in the bones.

"Dare. Me more please 'an if me do it myself. Dat berry big moose. Big as Capin' kill—you know, Sogerman—no, bigger moose dan dat."

But I must measure my prize, while it is warm, so as to know how large he is, and how large to make his limbs and body when I set him up.

So Nuel was directed to make a fire, and in less than half an hour our work was completed. It was, indeed, a large moose. Very few have been killed (that we are sure of) much larger. And the horns were perfect.

When we had measured him Nuel proposed that we should begin the skinning at once. "Skin come off easy," said he. But I had to object. I wanted to see my prize by daylight, while I knew that the most the Indian thought of was stuffing himself with fresh meat. "No, we will get some sleep," said I, "and in the morning begin the work of skinning."

I saw that he consented to this with reluctance, and I feared that I might have to watch my prize if I would preserve it. However, he did lie down and went to sleep, and so did I, and he restrained himself the next morning until we had skinned down below one of the hindquarters. Then we had a "good feast," as the Indian called it.

It was all-day work to transport our prize home. And a hard day's work it was, too. The first load of course was the skin and head complete. These I was anxious to prepare with my own hands. We got them to the camp about 11 o'clock, with sufficient meat, it seemed to me, for a dozen men. But a good part of this disappeared before Nuel was through his dinner. How one man could hold such an amount of meat was a mystery to me. However, he ate nothing else. Just at sundown he reached the camp with his last load. As he came up the bank he grunted out, "Ugha, dare. Now Ingin hab rest. And berry glad he is. Lots for eat—for whole moon."

The day had been lovely again. Indeed, with the exception of the rainy night in the peninsula, the weather had been charming ever since we left home. There was a haze in the atmosphere almost like the Indian summer. But it was too early for this yet, though there had been light frosts, and I could feel that the evenings especially were getting cool. This one was the coldest of them all. I suppose it was this that led Nuel to remark, as he rolled quite a log into the fire, "We hab fros' denight."

We lay down after tea. Nuel had hardly smoked his pipe out before I saw his eyes closing. He had little or nothing to say as we ate our supper, only I could see a look of great satisfaction on his face as his eyes wandered over toward me and the skin and head that were on my side of the camp. I used to say to myself, "He is thinking of the crowns." But it may be that I was wrong. Perhaps he was thinking of the meat hanging up outside the camp, that had come out of that skin.

But soon he slept. I was not so ready for sleep. I had been under too much strain and excitement to fall asleep at once. A review of the way we had come and the scenes we had passed through, and the success I had met with, and the wilderness and solitude that surrounded us, all seemed to press upon my mind as it had never done before. Then I had killed the moose myself, and when I looked at him, standing in the museum, would think of the pleasure that it gave me and the circumstances attending his death.

All these things were gone over and over again, and although I felt so tired and relieved in mind and body, no sleep came to me for several hours. However, at last it came, and I knew nothing until I heard the Indian's voice, "Doc'or, you beat Ingin go sleep. You not usum up, are you? I wan' go hunt deday. We hab um breakfas'."

"Oh, no, not used up. Feel first-rate. Have breakfast any time."

I found that the sun had been up for some time and that Nuel had everything ready. We were about half through when he said, "Doc'or, you big hunter. You kill great moose. Me berry glad. But me wan' cow now. You wan' um, too. I go look deday. Dat moose hab cow roun', hab some place. He not make much soun', did he? He come from same way bove time. Good place ober dare—tween mountains. We got plenty meat. What you say we try get cow, too? No freezum up for more 'an two week."

I thought it was a good idea, and I knew I had enough to keep me busy for several days, so I said, "All right; you go and I will wait. See what you can do."

[TO BE CONCLUDED.]

#### Homing Pigeon Killed.

Editor Forest and Stream:

Having some carrier pigeons, many of which leave me as they mature, I this morning concluded to splice out a short reed bird supper with a pair of squab pigeons.

My son showing me one which he said was a squab, I killed same with a .22 rifle. Greatly to my surprise and regret I find the bird is tagged, as follows: On left leg was a gold or brass band (my son says right leg) fully 1/4 in. wide, enameled in light blue; on outside marked 1892; inside, Rd. 182427. The 1892 figures are on white enamel.

Presuming the owner would like to know of No. 182427, the above furnishes the information.

This is the first of the flock I have killed, and am singularly unfortunate in having killed another's, and what may have been a valuable bird.

I will gladly mail the ring to the owner if he will furnish his address.

HOWARD GARRETT.

301 DELAWARE AVENUE, Wilmington, Del., Sept. 6

## Natural History.

### BRUIN AND THE REDFISH.

Editor Forest and Stream:

Since I have been in the Okanagan Mountains I have been a constant reader of your valuable paper, and can say that I derive as much pleasure in reading it as I do in the pursuit of game. I have carefully watched for some sportsman to give us a history of the redfish of Payette Lake, in Idaho.

A few years ago in September, on going over the trail from Warm Spring to Boise, in company with a couple of men, we camped one night on the Payette above the lake. The redfish were running at that time, and it was difficult to get a horse that was nervous to cross the stream, for the fish would strike their legs, and my horse came near throwing me.

I was riding a short distance ahead and came over a small hill in plain sight of the river. About 100 yds. below a log was lying across, and on the log was a black bear watching redfish. I stopped and waited until my companions came up, when I pointed to the bear, which was so much interested in his study that he did not notice our presence. We had waited and watched but a few minutes when the bear made a plunge. We could see fish; the water was about 2 ft. deep. The fish had come up nearly under the bear when Bruin made his plunge. But this time he missed his prey. He kept making plunge after plunge until he had the water in great commotion, and finally he gave up the chase and climbed upon the log again to await another school. My companions wanted to shoot the bear, but I persuaded them not to, as we did not want the meat and the fur was not good then.

As soon as we moved he saw us, and after a very short survey ambled off up the side of the mountain. We saw some very big tracks of others, but that was the only bear we saw. Some one who has fished there should give the readers of FOREST AND STREAM the true history and habits of the redfish.

LEW WILMOT.

[The redfish of Idaho is the blueback salmon (*Oncorhynchus nerka*). The identity of the redfish was first determined by Capt. Chas. Bendire, U. S. A., who in 1879 sent specimens to the National Museum and drawings and a description to FOREST AND STREAM.]

### A Chipmunk Corn Planter.

Editor Forest and Stream:

I would like to know if any one has heard of a chipmunk that plants and grows corn? If not I shall claim the right of discovery. I have found one. I can swear that he plants corn, but I would not like to swear that he intends to grow the same with the intention of harvesting a crop. One cannot tell what is in the mind of a chipmunk.

The chipmunk in question has been planting corn in my garden for five years. I will give his method, and the readers of FOREST AND STREAM can sit in judgment on his intentions.

I throw out corn to the squirrels and bluejays, and chipmunk works like a beaver to get his share. He can carry away sixteen kernels in his pouched cheeks. When he has supplied the home larder he plants the balance in the garden, no two loads in the same spot. After the corn sprouts and shows above ground, chipmunk pulls it up and carries it away. It sounds strange to tell it, but it is a fact, he leaves one kernel, or stalk, in each spot. At the present time there are twenty stalks, thus planted, growing in my garden. The chipmunk, as a rule, leaves but one stalk. During five years I think there have been only three exceptions.

It is only through the months of May and June that he leaves the growing corn.

I watched him yesterday while he was carrying away planted corn, and not a stalk was left from four lots.

These little animals possess enough intelligence to cause them to lay by a store of food for the long cold winter, and, perhaps, they know more about the growth of such food than man is willing to admit.

HERMIT.

### Crow Blackbirds' Nests.

DENVER, Col., Sept. 4.—There was recently a discussion in FOREST AND STREAM relative to the nesting habit of the crow blackbird. One writer, and I believe it was Brother Blines, asserted incidentally that the bird in question sometimes took possession of the nesting place of a woodpecker—a hole made by the latter in a dead tree—and there made its nest and reared its young. Then various fellows jumped on to Blines, or whoever it was, and said it was "no such thing," and that old "blackie" had been slandered. I rise merely to remark that fifty years ago, in the State of Ohio, where dead elms and the like still grew (?) all through the cornfields, the crow blackbird did very often make his nest in the hole of the red-headed woodpecker and the yellow-hammer. Not so often in the former because it was seldom large enough. He also found many other odd and seemingly unnatural places for nests.

WM. N. BYERS.

### A Congregation of Night Hawks.

Editor Forest and Stream:

Did you ever hear of night hawks flocking? I have noticed them in fairly large numbers, especially in Virginia, where they are called bull bats, but I never heard of such multitudes being seen at once as passed over Cummington, Mass., last week. There were thousands of them. The flight took place early in the afternoon and attracted the notice of gunners in the vicinity. Was it a migration?

CHARLES HALLOCK.

[It is a migration, and they do it every year about the last of August or first of September. Often they are seen by thousands, usually in the afternoon of still bright days.]

### An Albino Squirrel.

KENDALLVILLE, Ind., Sept. 2.—Sidney Sayrez, of this city, brought in a pure albino red squirrel which he shot within the city limits to-day. He nearly succeeded in capturing it alive. It is perfectly white, with pink eyes, and is the first ever caught in this vicinity. Are they rare? I have never heard of a perfectly white specimen before.

W. H. T.

[Instances of albinism are met with occasionally in many species of animals and birds.]

## MOUNTED GAME BIRDS IN THE U. S. NATIONAL MUSEUM.

BY DR. R. W. SHUFELDT.

(Concluded from page 205.)

SCARCELY an ornithological writer who touches upon the group of birds we now have under consideration that does not, first or last, essay to point out to his readers the difference between a pheasant and a partridge, and between a partridge and a quail; and so, to be in fashion if for no other reason, we will just for a moment fall in line with our distinguished predecessors in this time-honored custom. A good example of a typical pheasant is shown in Fig. 2 of this series of articles, and where they exist in the United States they have been introduced from abroad. All of our indigenous birds called common quails are partridges, examples of which are seen in Figs. 7, 8 and 9. A good example of a true quail is seen in the ordinary quail of Europe, known also as the Messina quail (*Coturnix dactylisonans*), a bird which not long ago was turned loose in numbers in certain localities in this country, as in New England, but I have not heard recently how it has thriven there. Possibly some day it may become permanently naturalized.

Notwithstanding all that has been written on this question, it must be distinctly understood here, however, that this Messina partridge appears to be, both structurally and in general appearance, more like our partridges (*Colinus*, etc.), than it is like the true partridge of Europe—the *Perdix cinerea* of science. This being the case, my friend Doctor Coes seems to think that in reality for our United States partridges "the term 'quail' is rather more appropriate than 'partridge.'"

As for grouse, we show a typical one in the blackcock, Fig. 3, and for an American form in the dusky grouse, Fig. 5.

*Bonasa* approaches our partridges (*Colinus*, etc.), while ptarmigans (*Lagopus*) are more nearly allied to the grouse. The whole group is included in the suborder *Gallinae*, which with us includes the turkeys and that interesting form found in the valley of the Rio Grande of Texas, known as the "chachalaca," which is a guan (*Ortalis vetula macalli*). A great many other remarkable birds of the suborder are found all over the world; and the pheasants of the greatest beauty come from Asia. All of our common fowls (*Gallus*), including peacocks and guinea hens, also belong to this group.

Returning to the collections of the National Museum, we find many mounted species of our partridges that are wonderfully lifelike, and present us with admirable ideas of the birds themselves as they appear in nature.

The California partridge shown in Fig. 7 is a pretty fair example of them, but not so good, in my opinion, as the birds shown in Figs. 8 and 9—that is, in so far as their taxidermy is concerned.

These partridges of ours all belong to the subfamily *Perdixinae*, of the family *Tetraonidae*, of the suborder *Gallinae*; and there appear to be about four well-marked genera of them, including a good many species and subspecies. The first of these latter is the genus *Colinus*, which contains the common Eastern partridge or "Bob White" with its subspecific forms—the Florida and the Texan partridge. It also contains two other very distinct species, viz., Grayson's partridge and the masked partridge, both of southern Arizona and Mexico southward. Our second genus is designated as *Oreortyx*, created to contain *O. pictus* and *O. p. plumiferus*, or the mountain and the plumed partridge respectively.

*Callipepla*, the third in order, has been assigned to it *C. squamata*, the scaled partridge, *C. s. castanogastris*, the chestnut-bellied scaled partridge, and then the very distinct species *C. californica*, the California partridge (Fig. 7), with its subspecific type, the valley partridge (*C. c. vallicola*). Lastly, this genus contains the Gambel's partridge, or *Callipepla gambeli*. In the fourth genus we

find but one species, a specimen which is shown in Fig. 9, it is the Massena partridge or *Cyrtonyx montezumae*, a bird that ranges over northwestern Texas, New Mexico, Arizona, and northwestern Mexico.

In speaking of our Eastern partridge or "Bob White," Newton has said that "Many attempts have been made to introduce this bird to England (as indeed similar trials have been made in the United States with quail from Europe); but, though it has been turned out by hundreds, and has been frequently known to breed after liberation, its numbers rapidly diminish until it wholly disappears. The beautiful tufted quail of California, *Lophortyx californica*, has also been tried in Europe without success." This authority also calls attention to the fact that all "these American quail or colins seem to have the habit of perching on trees, which none of the Old World forms possess."

Noticing what Professor Newton says about the transporting these partridges reminds me of the fact that some of these birds make very charming pets when kept in confinement. At this writing Mr. Wood, of the National Museum, has a beautiful specimen of a male Gambel's partridge which he keeps in a large cage, and it is the most gentle, winning little pet I ever saw. He will walk up and down your arm, eat out of your hand, and has
